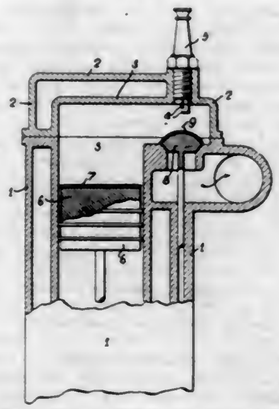
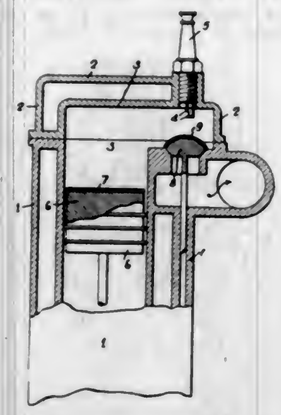
1. In combination in a fuel supply and carburetion system an air tight fuel chamber, a fuel tube leading from the lower part thereof up toward a mixing chamber which is in direct communication with said fuel chamber, said direct communication keeping the pressures in mixing chamber and fuel chamber always substantially equal and holding the fuel in balance, and an air nozzle surrounding the fuel tube and having a passage between itself and the fuel tube for receiving and directing air at high velocity along and by the end of the fuel tube for drawing fuel therefrom, a supplemental nozzle extending into the lower part of the main air nozzle and spaced apart therefrom to provide an annular air inlet for air at high velocity at the lower end of the first mentioned air nozzle, the upper end of the air nozzle being flared outwardly to provide a restriction between itself and the wall of the mixing chamber to increase the flow of air by the fuel tube when the high velocity air is not available.

2. In combination, a mixing chamber, a fuel chamber, a fuel pipe, a main air nozzle within the mixing chamber and surrounding the upper end of the fuel pipe and spaced apart therefrom, a supplemental nozzle within the mixing chamber, surrounding the fuel pipe and having its upper end discharging its air into the lower end



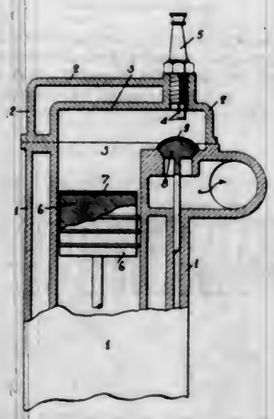
of the main nozzle, said nozzles having an annular passage between them for the induction of air from the space between the supplemental nozzle and the wall of the mixing chamber, an anterior valve to control an air supply to the mixing chamber, means for controlling the air through the supplemental nozzle, and means on the exterior of the supplemental nozzle adjacent the base thereof for obstructing or retarding the flow of air let in by the throttle valve, during idling.

1,631,702. INTERNAL-COMBUSTION ENGINE. EDWARD SOKAL, Brooklyn, N. Y., assignor to American Katalite Corporation, Brooklyn, N. Y., a Corporation of Delaware. Filed July 9, 1925, Serial No. 42,583, and in Great Britain May 11, 1925. 20 Claims. (Cl. 123—191.)



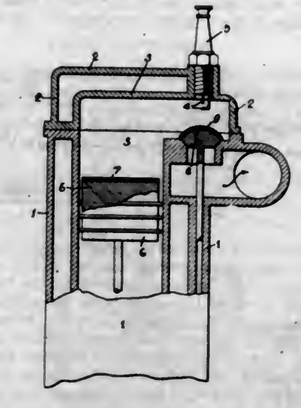
1. In an internal combustion engine, the combination with a combustion chamber, of a relatively permanent detonation counteractant fixedly disposed therein, said detonation counteractant comprising a material which acts endothermically to absorb heat during those periods of engine operation when the temperature within the chamber is the greatest, and which is capable of releasing heat during intermediate periods of engine operation.

1,631,703. INTERNAL-COMBUSTION ENGINE. EDWARD SOKAL, Brooklyn, N. Y., assignor to American Katalite Corporation, Brooklyn, N. Y., a Corporation of Delaware. Filed Oct. 18, 1926. Serial No. 142,247. 20 Claims. (Cl. 123—191.)



1. In an internal combustion engine, the combination with a combustion chamber, of a relatively permanent detonation counteractant fixedly disposed within said chamber, and consisting of a material which is chemically endothermically reactive under engine operating conditions.

1,631,704. INTERNAL-COMBUSTION ENGINE. EDWARD SOKAL, New York, N. Y., assignor to American Katalite Corporation, Brooklyn, N. Y., a Corporation of Delaware. Original application filed July 9, 1925. Serial No. 42,583, and in Canada July 6, 1925. Divided and this application filed Dec. 18, 1926. Serial No. 155,586. 5 Claims. (Cl. 123—191.)

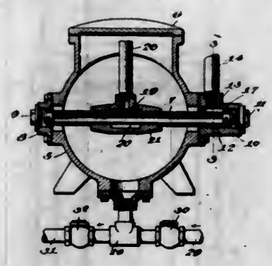


1. In an internal combustion engine, the combination of a combustion chamber, and a detonation counteractant comprising antimony and fixedly disposed within said chamber.

1,631,705. INTERNAL-COMBUSTION ENGINE. EDWARD SOKAL, New York, N. Y., assignor to American Katalite Corporation, Brooklyn, N. Y., a Corporation of Delaware. Original application filed July 9, 1925. Serial No. 42,583, and in Canada July 6, 1925. Divided and this application filed Dec. 18, 1926. Serial No. 155,587. 5 Claims. (Cl. 123—191.)

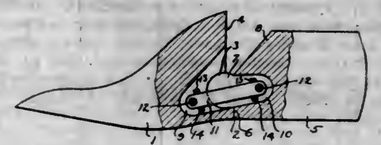
1. In an internal combustion engine, the combination of a combustion chamber, and a detonation counteractant comprising tellurium and fixedly disposed within said chamber.

1,631,706. INTERNAL-COMBUSTION ENGINE. EDWARD SOKAL, New York, N. Y., assignor to American Katalite Corporation, Brooklyn, N. Y., a Corporation of Delaware. Filed Jan. 11, 1927. Serial No. 160,327. 8 Claims. (Cl. 123—191.)



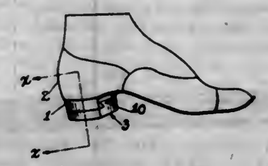
1. In an internal combustion engine, the combination with a combustion chamber, of a chemically endothermically reactive compound of a metal included in the alkali and alkaline earth groups fixedly disposed within said chamber.

1,631,707. VULCANIZING METHOD AND APPARATUS. JAMES D. TEW, Hudson, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed June 25, 1926. Serial No. 118,445. 9 Claims. (Cl. 18—53.)



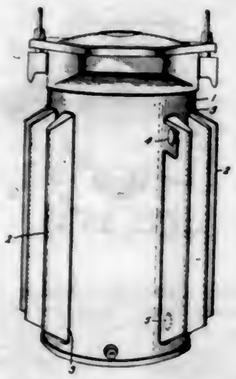
1. The method of treating articles with a liquid which comprises passing them through a gas lock into a liquid-containing chamber, there submerging them in a liquid contained in the chamber, lifting them from the liquid, and passing them, through a gas lock, out of the chamber.

1,631,708. BOILER FEED TRAP. STEVEN L. TILL, Chicago, Ill. Filed Oct. 15, 1926. Serial No. 141,795. 13 Claims. (Cl. 137—103.)



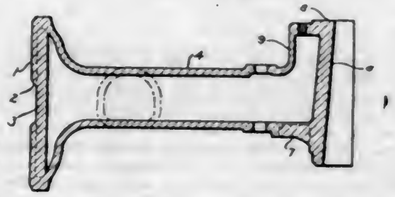
1. A feed trap comprising a housing, a tubular shaft rotatably arranged therein, steam feed and exhaust pipes communicating with said shaft, a water pipe entering the housing and means within the housing for rotating the shaft to selectively register with either the steam feed or exhaust pipe.

1,631,709. LAST. HARRY A. TOULMIN, Jr., Dayton, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Filed Sept. 13, 1926. Serial No. 135,049. 4 Claims. (Cl. 12—136.)



1. In a last, a toe part and a heel part adapted to rock upon one another, transverse pins located in said parts so arranged that in the extreme positions of said parts a line drawn between the centers of said pins will be to one side of the center of movement of said parts, yielding supports for said pins located therebetween, a rigid link connecting said pins whereby when the parts move from one position to the other said yielding supports will be actuated and said link will pass over the center of movement of said parts, and means on said yielding supports for positioning said pins.

1,631,710. DETACHABLE HEEL. ELIAS TRANIDES, New York, N. Y. Filed Aug. 25, 1926. Serial No. 131,481. 2 Claims. (Cl. 36—42.)

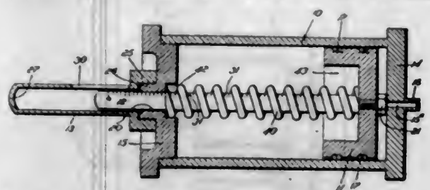


1. A two-piece heel, comprising an upper heel member having longitudinal grooves and a central rib, a lower heel member having longitudinal tongues to resiliently fit the groves aforementioned, a front face member fitting against the central rib and a longitudinal screw upwardly inclined through the front face member into the body of the central rib.

1,631,711. RADIATOR TANK. EDWARD D. TRBANOR, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Sept. 8, 1921. Serial No. 490,358. 3 Claims. (Cl. 257—191.)

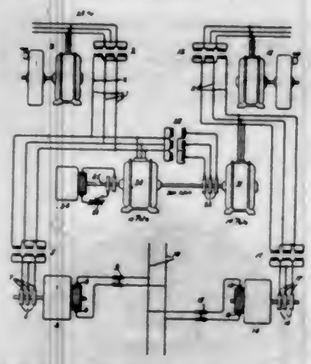
2. A container for oil immersed electrical apparatus, said container including a metal body portion with a plurality of openings in its wall, and a hollow radiating member open at one side to form an edge, the edge portion of the radiating member being welded to the outer surface of said wall around said openings in the wall.

1,631,712. PRODUCING OF CAST-METAL WHEELS. GEORGE WALTHER, Dayton, Ohio, assignor to The Dayton Steel Foundry Company, Dayton, Ohio, a Corporation of Ohio. Original application filed May 10, 1920, Serial No. 380,217. Divided and this application filed June 16, 1921. Serial No. 478,130. 4 Claims. (Cl. 22—193.)



4. The method of forming a core for use in casting wheels which consists in making the major portion of the core in one piece and thereafter applying to said core means for increasing the width of the rim and other means to vary the internal diameter of the hubs of the wheels to be cast.

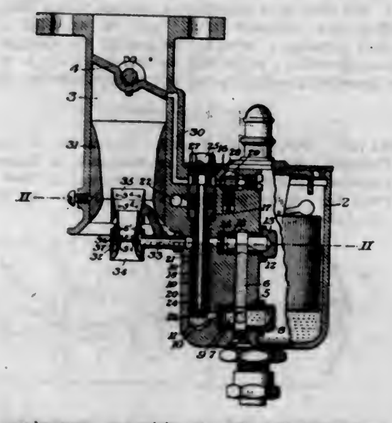
1,631,713. MERCURY-TUBE SWITCH. HENRY E. WARREN, Ashland, Mass., assignor to Warren Clock Company, Ashland, Mass., a Corporation of Maine. Filed Sept. 21, 1923. Serial No. 664,098. 6 Claims. (Cl. 200—152.)



1. An electric circuit controller comprising a tubular sealed chamber of insulating material, a pair of electrodes sealed into said chamber, so as to provide considerable arcing space between said electrodes, the interior surface of the chamber closely adjacent one electrode being smooth and the interior surface between the electrodes being roughened and a conducting fluid such as mercury contained within said chamber in sufficient quantity to electrically connect said electrodes when the chamber is in one position, the circuit controller being constructed so that the circuit therein is broken by the separation of the mercury over the roughened surface of said chamber when tilted toward the open position.

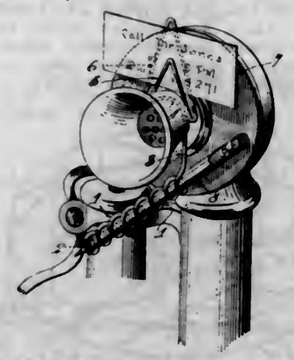
1,631,714. LOCOMOTIVE-FEED-PUMP GAUGE. WILLIAM W. WELLMAN, Las Vegas, Nev. Filed Sept. 8, 1926. Serial No. 134,319. 2 Claims. (Cl. 73—111.)

1. A locomotive feed water pump gauge including, a cylinder having a head closing one end and a cap closing the other end, there being an opening at the head end of the cylinder to admit pressure from the pump, a piston slidably carried in the cylinder, a spring normally holding the piston at the head end of the cylinder, and means at the cap end of the cylinder to indicate the position of the piston in the cylinder, said means including a stem projecting from the piston through the cap and a tubular housing carried by the cap to receive the stem, the stem being graduated and the housing having a sight opening so that the graduations can be seen.



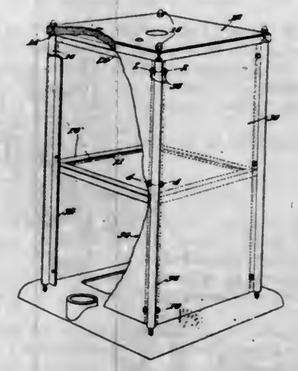
1,631,715. SYSTEM OF DISTRIBUTION. THEOPHILUS F. BARTON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 30, 1923. Serial No. 628,886. 4 Claims. (Cl. 172—281.)

1. An electric distribution system comprising a plurality of alternating current systems of different frequencies, rotary converters connected between said systems and a common direct current system, and means for maintaining a voltage and frequency tie between said alternating current systems, comprising an electrodynamic transformer of large capacity with respect to the capacities of the interconnected systems and of sufficiently low reactance to permit substantially instantaneous interchanges of reactive k. v. a. between said systems in amounts sufficient to maintain the voltage relation between said systems substantially fixed.



2. In an electric distribution system means for maintaining a frequency and voltage tie between the high tension alternating current systems of different frequencies comprising a synchronous dynamo electric machine connected to one of said system a low reactance, induction dynamo electric machine of the wound secondary type, having its primary windings connected to the other of said systems, the rotary elements of said machines being mechanically connected together in such a speed relation that the secondary frequency of said induction machine is equal to the frequency of the system to which the synchronous machine is connected and a transformer connected between said secondary winding and the system to which the synchronous machine is connected, said induction dynamo electric machine serving as a substantially constant voltage ratio transformer at all loads.

1,631,716. CARBURETOR. FRANÇOIS BAVEREY, Lyon, France, assignor to Societe du Carburateur Zenith, Lyon, France, a Corporation of France. Filed Dec. 27, 1920, Serial No. 433,477, and in France Oct. 24, 1919. 12 Claims. (Cl. 261—41.)



1. A carburetor, comprising a carbureting chamber, a constant level chamber, an atmospheric well, a plurality of fuel feeds for said well from said constant level chamber, a tube in said well, means restricting the suction exerted on one of said feeds by said carbureting chamber, and means in said carbureting chamber receiving fuel from said well, substantially as described.

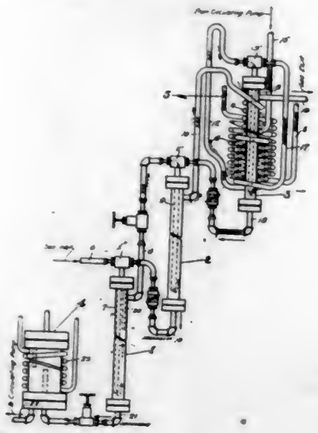
1,631,717. TELEPHONE NOTE RACK AND PENCIL HOLDER. THEODORE V. BRETER, New Philadelphia, Ohio. Filed Feb. 28, 1927. Serial No. 171,666. 2 Claims. (Cl. 40—10.5.)

1. An attachment for telephones comprising a wire formed into a coil to constitute a pencil receiver, a flat curved portion adapted to be secured between the transmitter case and the mouth piece of a telephone, and a clip for holding cards, pads and the like.

1,631,718. CABINET. CHARLES EDWARD CAMPBELL, Lynn, Mass., assignor to Campbell Electric Company, Lynn, Mass., a Corporation of Massachusetts. Filed June 14, 1920, Serial No. 388,777. Renewed May 1, 1926. 2 Claims. (Cl. 211—7.)

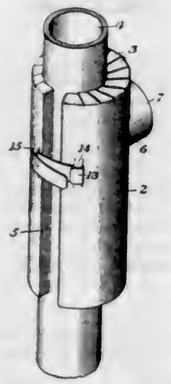
1. A cabinet comprising a base, corner posts secured to the base, sheet metal corner moldings enclosing the corner posts provided with side flanges, a top supported upon and secured to the corner posts, an angle iron support within the cabinet secured to the corner posts, and panels secured to the side flanges of the corner moldings, the support comprising an angle iron bar bent to form an open rectangular frame and having its free ends spot welded.

1,631,719. CONNECTING DEVICE. HOMER P. CHANDLER, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Mar. 20, 1924. Serial No. 700,517. 7 Claims. (Cl. 173—263.)



1. A fastening device to connect two cables with coinciding axes comprising a sleeve member of yieldable material having a longitudinally disposed channel therethrough and a V-shaped tongue and groove forming a longitudinal slot along one side and opening into said channel and adapted to be formed about the ends of the cables placed in said channel, the channel being of elliptical cross-section and spaced means on one edge of the adjacent edges of the sleeve member forming the slot adapted to engage with spaced means on the opposite edge of the slot when the sleeve is in the formed position to maintain the slot open between the said means, the transverse crosssection of the sleeve increasing in thickness from the edges of the slot toward the oppositely disposed point of the sleeve.

1,631,720. PROCESS OF RECOVERING AMMONIA FROM GASES CONTAINING SAME. ROYALL O. E. DAVIS, Chapel Hill, N. C., and LEWIS B. OLMSTEAD, Peru, Nebr. Filed June 13, 1921. Serial No. 477,256. 7 Claims. (Cl. 23—96.) (Granted under the act of Mar. 3, 1883. 22 Stat. L., 625.)



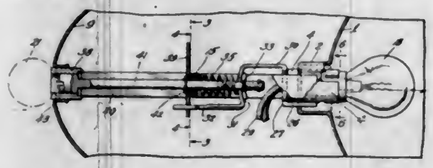
1. The method of removing ammonia from gases which consists in absorbing the ammonia from a gaseous mixture containing free ammonia in a fluid absorbent sub-

stance therefor having a low vapor pressure of ammonia at approximately zero degrees centigrade and a high vapor pressure of ammonia at temperatures between forty and fifty degrees centigrade, while maintaining said substance during said absorption sufficiently cool to secure effective absorption of said ammonia and its

separation from said gases under treatment, separating said absorbent containing said ammonia from contact with said gases and then raising the temperature of the absorbent so separated to a sufficient degree to drive off absorbed ammonia and separately recovering the absorbent and ammonia.

1,631,721. HOT-AIR STOVE. HENRI DE BOISCHEVALIER, Detroit, Mich., assignor to Societe du Carburateur Zenith, Lyon, France, a Corporation of France. Filed Oct. 20, 1922. Serial No. 595,879. 14 Claims. (Cl. 257—241.)

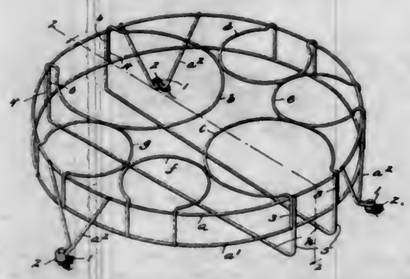
1. As an article of manufacture, a hot air stove for carburetors, comprising a casing adapted to be bent around heating members of different diameters, said casing having a flexible end wall adapted to seal one end thereof irrespective of the diameter of the heating members, substantially as described.



1,631,722. PROCESS OF SURFACE-FINISHING RUBBER GOODS AND PRODUCT OF SAME. HERBERT W. EMERY, Holliston, Mass., assignor to Archer Rubber Company, Milford, Mass., a Corporation of Massachusetts. Filed Nov. 3, 1926. Serial No. 146,065. 13 Claims. (Cl. 91—68.)

1. A process of superficially finishing rubber goods which comprises applying to the rubber surface a coating of lacquer comprising shellac and capable of being hardened by halogenization and halogenizing the lacquered surface.

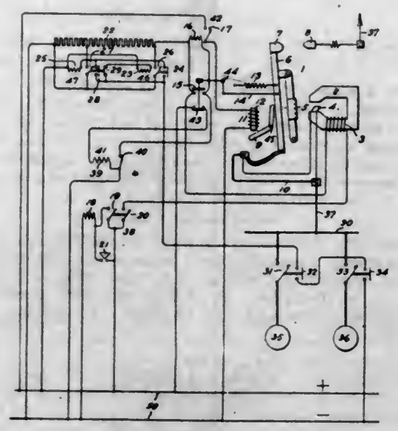
1,631,723. METHOD OF PREPARING WIENER SAUSAGES. ERWIN O. FREUND, Chicago, Ill., assignor to The Visking Corporation, Chicago, Ill., a Corporation of Virginia. Filed Aug. 19, 1926. Serial No. 130,363. 4 Claims. (Cl. 99—11.)



1. The process of preparing a sausage which comprises: stuffing the prepared meat into an artificial casing, thereby forming a sausage; subjecting the sausage to a curing operation; subjecting the cured sausage to a cooking operation; and stripping the casing from the sausage.

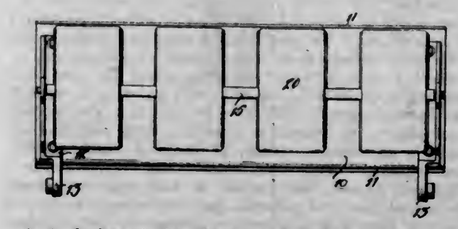
1,631,724. FOCUSING LAMP. CHARLES E. GODLEY, Ypsilanti, Mich., assignor to Edmunds & Jones Corporation, Detroit, Mich., a Corporation of New York. Filed Oct. 9, 1926. Serial No. 140,610. 15 Claims. (Cl. 240—44.)

1. In a lamp, a reflector having a substantially axial perforation, a lamp socket extending slidably through the perforation and adapted to rock in one plane about the wall of the perforation, a supporting member fast on the reflector, a screw effectively swiveled upon the supporting member and threadedly connected to the socket to adjust the socket axially, a cam member rotatably mounted on the screw, a tilt-effecting member fast on the socket and in operative engagement with the cam portion of the cam member, and means to rotate the cam member to tilt the socket.



1,631,725. RACK FOR TEA, COFFEE, AND SPICE CONTAINERS. AXEL I. S. HALVORSEN, Albany, Ind., assignor to McCormick Brothers Company, Albany, Ind., a Corporation of Indiana. Filed June 14, 1926. Serial No. 115,912. 1 Claim. (Cl. 211—14.)

A rack for condiment jars and other containers comprising a frame composed of a pair of concentric wire rings spaced apart and having feet for supporting the



frame horizontally, two relatively large arcuate wire loops projecting inwardly from opposite sides of the upper ring, a plurality of relatively small wire loops projecting inwardly from the upper ring at the sides of the large loops, the ends of said loops being bent downwardly and connected to both rings, and supporting wires extending across the lower side of the frame, under said relatively large loops and having their ends bent upwardly and secured to both of said rings.

1,631,726. PROTECTIVE DEVICE FOR DYNAMO-ELECTRIC MACHINES. HAMMOND CHARLES HASTINGS and CYRIL JOHN SARJEANT, Rugby, England, assignors to General Electric Company, a Corporation of New York. Filed Nov. 13, 1923, Serial No. 674,584, and in Great Britain Dec. 14, 1922. 5 Claims. (Cl. 175—294.)

1. The combination with an automatic circuit breaker arranged to interrupt a controlled circuit in response to a predetermined value of current, of a calibrating device for varying the value of current at which the circuit breaker automatically interrupts the controlled circuit, a plurality of dynamo electric machines arranged to be connected in the circuit through the said circuit breaker, and means automatically operated in response to the number of said machines included in the said circuit for varying the said calibrating device.

1,631,727. TOP CLEARER FOR ROVING FRAMES. WYLIE E. HENDERSON, Lanett, Ala. Filed Dec. 18, 1926. Serial No. 155,729. 7 Claims. (Cl. 19—139.)

1. A device of the character described comprising a cover, a longitudinally arranged rod slidably secured thereto, clips secured to said rod, and adapted to support a cot.

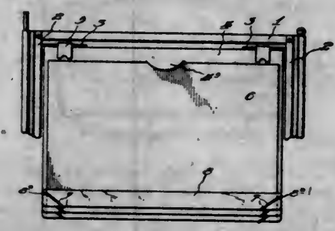
1,631,728. ART OF TREATING WOOD. WILLIAM HOSKINS, Chicago, Ill. Filed Apr. 21, 1924. Serial No. 708,009. 2 Claims. (Cl. 175—298.)

1. A radio panel consisting of wood in its natural state superficially impregnated with sulphur.

1,631,729. CERAMIC INSULATING MATERIAL. JOSEPH A. JEFFERY and EARLE T. MONTGOMERY, Detroit, Mich., assignors, by mesne assignments, to Champion Porcelain Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 24, 1919. Serial No. 278,879. 41 Claims. (Cl. 106—12.)

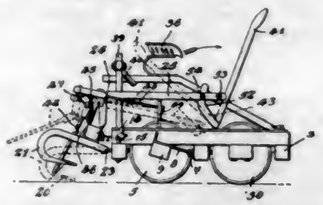
1. A ceramic material consisting of sillimanite crystals and a glassy matrix.

1,631,730. CERAMIC MATERIAL. JOSEPH A. JEFFERY and EARLE T. MONTGOMERY, Detroit, Mich., assignors, by mesne assignments, to Champion Porcelain Company, Detroit, Mich., a Corporation of Michigan. Filed May 24, 1919. Serial No. 299,574. 12 Claims. (Cl. 106—11.)



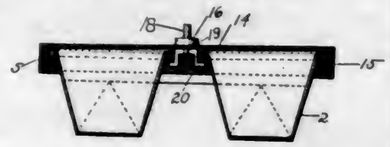
1. A batch for ceramic material comprising a material amount of a heat-formed constituent containing alumina, silica and a flux, the proportion of alumina to silica in said constituent being nearer their proportion in sillimanite than is their proportion in clay.

1,631,731. RULER. EARL R. JOHNSON, Chicago, Ill. Filed Sept. 27, 1926. Serial No. 137,852. 3 Claims. (Cl. 33—107.)



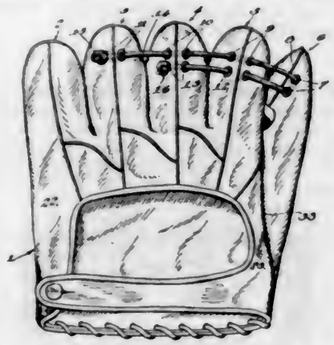
3. A ruler construction comprising a sheet metal body element having a ruling edge and linear scales on its opposite faces along said ruling edge; flanges bent from the stock of the body element and jointly comprising means for holding an insert in place thereon; certain of said flanges being struck out of the stock inwardly of the linear scales on the opposite faces of the body element, substantially as described.

1,631,732. VISIBLE-CARD SYSTEM. FRANK H. JOHNSTON, Chicago, Ill., assignor, by mesne assignments, to Acme Card System Company, Chicago, Ill., a Corporation of Illinois. Filed May 24, 1922, Serial No. 563,237. Renewed Jan. 14, 1926. 6 Claims. (Cl. 129—16.)



1. In a visible card system, the combination with a frame of a plurality of overlapping card holders mounted on said frame, said holders comprising diagonally positioned retaining members and protective strips engaged by the retaining members and covering the exposed edges of cards in the card holders.

1,631,733. WEEDER. MORGAN D. KAST, Pendleton, Oreg. Filed June 29, 1925. Serial No. 40,347. 6 Claims. (Cl. 97—144.1.)

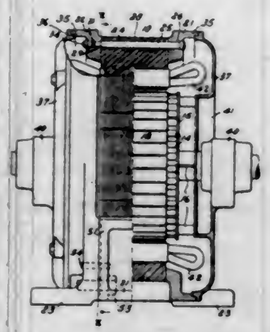


1. An implement of the character described comprising a gathering blade, means to move the blade to a dumping position, and pivotally mounted means moved upon its pivotal mounting to beat upon the blade thereby to loosen the gathered material.

1,631,734. COVERED BAKING PAN. ARTHUR KATZINGER, Chicago, Ill., assignor to Edward Katzinger Company, Chicago, Ill. Filed Sept. 9, 1926. Serial No. 134,487. 1 Claim. (Cl. 53—6.)

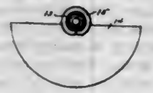
A multiple of pans attached together to form a unit, a reinforced lip extending outwardly around the upper edges of each of said pans, a detachable cover for said pans carrying a rotatable catch attached to its inner surface at a substantial distance from the edge of the cover with a handle for said rotatable catch extending through the outer surface, said catch being located so as to engage the adjacent lips of two adjacent pans.

1,631,735. BASEBALL GLOVE. PHILIP KENNEDY and BERT KENNEDY, Gloversville, N. Y. Filed July 3, 1925. Serial No. 41,363. 2 Claims. (Cl. 2—19.)



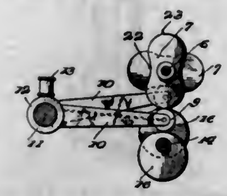
1. A glove having a body formed with a thumb and finger portions, said thumb having spaced openings in the back of a cover thereof adjacent to the inner side of the thumb and a plurality of said fingers having spaced openings in the back portions of the covers and at opposite sides of the longitudinal median lines thereof, and a flexible connecting member threaded through said openings in said fingers of the glove and in the thumb for adjustably connecting said fingers of the glove to one another and to said thumb.

1,631,736. BEARING FOR SPINNING SPINDLES. JOSEF KIRNER, Stuttgart, Germany. Filed June 26, 1922, Serial No. 571,057, and in Germany July 28, 1921. 7 Claims. (Cl. 308—228.)



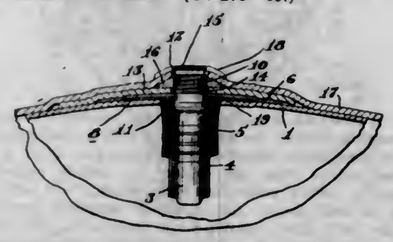
6. A support for spinning spindles comprising in combination, a bolster adapted to receive the spindle, and an anti-friction bearing mounted in said bolster and comprising a plurality of rollers surrounding the spindle and in contact therewith and annular guide means for the rollers coacting with the ends of the same and arranged in spaced relation to the spindle.

1,631,737. DYNAMO-ELECTRIC MACHINE. EARLE R. KNIGHT, Norwood, Ohio, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 17, 1922, Serial No. 553,912. Renewed July 29, 1925. 17 Claims. (Cl. 172—36.)



13. In a dynamo-electric machine, a stator element comprising in combination, separately formed and spaced end heads each having an annular radially extending portion and individual integral supporting feet adapted to carry the weight of the stator, a core consisting of assembled laminæ having spaced and apertured enlargements at the outer periphery thereof, said peripheral enlargements of the laminæ being transversely alined and providing therebetween substantially unobstructed peripheral surface portions extending across the core, and means associated with said end heads and passing through the enlargements on said core for clamping and holding said laminæ in assembled condition with said annular radially extending portions of the end heads bearing against and confining said laminæ, said clamping means cooperating with said laminæ to hold said end heads in spaced operative relation, said end heads extending radially beyond said assembled laminæ at points intermediate said enlargements and provided with through apertures affording ventilating passages substantially unobstructed by said laminæ.

1,631,738. VERNIER CONDENSER. FREDERICK KOCH, Newark, N. J., assignor to U. S. Tool Company, Inc., a Corporation of New Jersey. Filed Apr. 28, 1924. Serial No. 709,397. 1 Claim. (Cl. 175—41.5.)



In a variable condenser, the combination of a supporting frame, a rotor shaft mounted therein, said shaft having a polygonal cross-section for a portion of its length, a plurality of rotor plates having apertures therethrough to fit the polygonal section of said shaft, and spacing washers surrounding said shaft between said plates, said washers each being formed of a single convolution of flattened wire and having its off-set ends inwardly bent to conform to a face of said polygonal shaft.

1,631,739. SPEED-REDUCTION MECHANISM. ARTHUR JOSEPH KRAUSE, Cleveland, Ohio. Filed Aug. 8, 1924. Serial No. 730,957. 1 Claim. (Cl. 74—14.)

A speed reduction device comprising a counter shaft, a valve shaft spaced from the counter shaft and provided with a plurality of angularly arranged members fixed to said valve shaft, a plurality of cams angularly arranged and fixed on the counter shaft, rock arms having rollers at the free ends, said rollers being operatively disposed between the cams and the angularly arranged members, said members on the valve shaft comprising elongated members having their opposite ends curved on the arc of a semicircle with the sides of said elongated members being provided with depressions, said cams adapted to be actuated when the counter shaft is rotated for causing actuation of the angularly arranged members and through the cooperation of the rollers on the free ends of the arms.

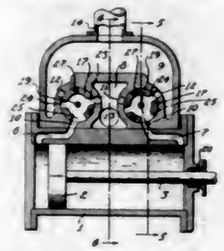
1,631,740. GAME-BALL BLADDER. GEORGE L. LAWRENCE, Jr., Melrose, Mass. Filed Dec. 15, 1926. Serial No. 154,992. 1 Claim. (Cl. 273—65.)

An inflated ball having a rubber bladder with a hole therethrough, a valve stem wrapped with a plurality of layers of suitable material throughout varying portions of its length, and inserted through said hole without distortion of the material surrounding said hole, a portion of said valve projecting outside of the bladder, a composite fabric and rubber washer to which said valve wrappings and valve are secured, said combined washer being adhered to the outside of the bladder surrounding said valve stem and hole, a cover for enclosing said bladder having a flap attached thereto and formed with a hole through which said protruding portion of the valve extends, the outer portion of said valve being threaded, and a threaded washer adapted to be threaded on said valve casing and clamp the said flap, and hence the cover, to the bladder.

1,631,741. HEEL FOR SHOES. LEONE LAZZARI and DOMINIC SAUDINO, New York, N. Y. Filed Feb. 18, 1925, Serial No. 9,915. Renewed Apr. 27, 1927. 1 Claim. (Cl. 36—59.)

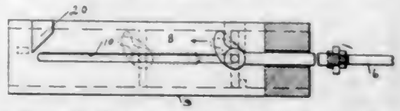
A cushion heel comprising an upper member of rubber, having a plane surface and a plurality of projections extending from one of its faces, two of said projections being toward the front and a curved projection being toward the rear of said member, and one or more of said projections being joined to said upper member by spaced legs, and a second member composed of leather and substantially rigid in form, said leather member having openings corresponding with the projections of the rubber member and being of less thickness than the depth of said projections.

1,631,742. LUBRICATOR. CHARLES LEA, Boston, Mass., assignor, by mesne assignments, to Frederick C. Blanchard, Dorchester, Mass. Filed Jan. 31, 1923. Serial No. 616,062. 10 Claims. (Cl. 184—65.)



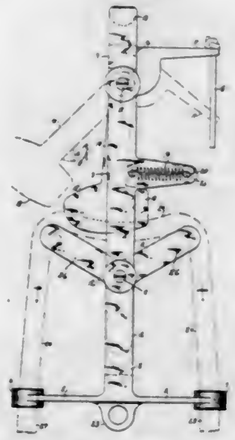
6. A lubricator having a reservoir presenting an inlet for the introduction of oil, two passages for the flow of oil from said reservoir to a common point of delivery, a permeable barrier controlling the flow of oil through one of said passages and disposed about the other, and an axially and laterally displaceable rigid member presenting a cover for said inlet and a valve for such other passage.

1,631,743. STEAM ENGINE. WILLIAM B. LIPSCOMB, Washington, D. C. Filed June 20, 1922. Serial No. 569,080. 3 Claims. (Cl. 121—186.)



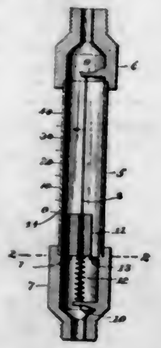
1. In a steam engine, the combination with a reciprocating driving piston and a cylinder surrounding the piston and having two ports communicating with its interior beyond the ends of the path of movement of the piston in either direction, of two valve seats of cylindrical form in cross section, each provided with an inlet port, an exhaust port, and a third port communicating with one of the ports of the driving cylinder, means for supplying steam to the inlet ports of both valve seats,

and a tubular oscillatory valve in each valve seat having two ports, one adapted to connect the interior chamber of the valve with the valve seat inlet port only and the other adapted to connect said interior valve chamber with the exhaust port of the valve seat only, said valves being alternately brought into operative position by oscillation of the valve in its seat, the valve having



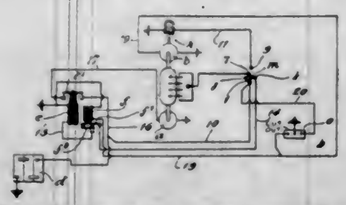
also a third port connecting the aforesaid interior valve chamber with the intermediate port of the valve seat when either the valve inlet or exhaust ports are operative, the said interior chamber of the valve constituting a common conduit for supplying live steam to the cylinder and for the passage of exhaust from the cylinder.

1,631,744. PROPELLER FOR SHIPS OR THE LIKE. JAMES K. LOWE, Baltimore, Md. Filed Oct. 14, 1926. Serial No. 141,645. 4 Claims. (Cl. 115—31.)



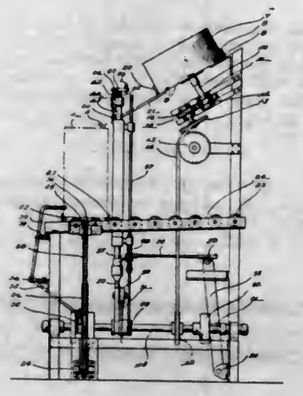
1. A propeller for ships or the like, comprising tunnel shaped members, push plates located in said members, means for alternately reciprocating said push plates, and means for changing the angular arrangement of said plates in said tunnel members.

1,631,745. ROPE GRIP. ANDREW LUCIBELLO, New Haven, Conn. Filed July 15, 1926. Serial No. 122,542. 1 Claim. (Cl. 188—64.)



A rope-clamp, comprising a cross-arm formed at opposite ends with eyes, through which the rope passes, a slotted post extending upward from said cross-arm and provided at its upper end with an eye and with a stop, a three-armed rope-guide rotatably mounted in said post, the ends of the arms formed with notches, a latch mounted in said post above said guide and provided at its lower end with a block extending into the path of the arms of the guide, said latch formed at its upper end with a stop and with a releasing-arm extending outward therefrom, and a spring tending to draw the latch into the path of movement of one of the arms of the said guide.

1,631,746. FLOW METER. GEORGE P. LUCKEY, Dayton, Ohio. Filed Jan. 26, 1923. Serial No. 615,093. 3 Claims. (Cl. 73—167.)



3. In a flowmeter for liquids, a tubular casing of uniform diameter, a body movable longitudinally within said casing by the friction of the liquid flowing through the casing, said body being of the same weight as an equal volume of said liquid, a guide for said body extending axially of the casing, and mechanical means for resisting such movement of the body with progressively increasing force.

1,631,747. STARTER FOR INTERNAL-COMBUSTION ENGINES. FREDRICK W. MABY, New York, N. Y., assignor to Royalty Holding Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 23, 1925. Serial No. 25,197. 4 Claims. (Cl. 290—37.)

1. A starting device for internal combustion engines embodying therein the combination with a motor adapted to be operatively connected with an engine shaft, a generator driven from the engine, an electric battery, a magnetic switch controlling the circuit from said battery to said motor, and a second magnetic switch in circuit with said generator and controlling the circuit from said battery to said first named magnetic switch, whereby when the engine is operating under its own power, the circuit to said motor will be opened, of a manually operative switch having a fixed contact, a binding post in electrical connection therewith, electrical connections between said contact, said binding post and said battery, a fixed contact adapted to be electrically connected with a magneto driven from the engine, a movable switch member electrically connected with the engine ignition system and adapted to be selectively engaged with either of said fixed contacts, and electrical connections between said binding post and said second magnetic switch whereby said manually operative switch may be actuated to close the circuit from said battery to the ignition system and simultaneously cause the closing of the circuit to said motor, or to close the circuit from the magneto to the ignition system while still permitting the closing of the circuit from said battery to said motor.

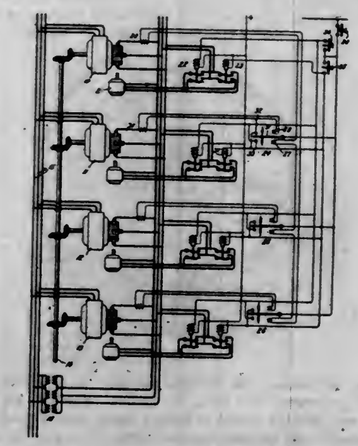
1,631,748. SEALING MACHINE FOR CONTAINERS OR THE LIKE. CHARLES E. MARTIN, Paulsboro, N. J., assignor to Vacuum Oil Company, New York, N. Y., a Corporation of New York. Filed Feb. 13, 1926. Serial No. 88,158. 12 Claims. (Cl. 113—18.)

1. A machine of the class described comprising a supporting means for the can to be sealed, a magnetized expanding head, mechanism for moving said expanding head to cause it to carry a sealing device from a registered position to a can on the supporting means, and mechanism for operating said expanding head to cause the sealing device to interlock with the container to which the sealing device is fed by said head.

1,631,749. OVERSHOE. FREDERICK H. MARTIN, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Apr. 14, 1923. Serial No. 632,011. 2 Claims. (Cl. 36—55.)

2. An overshoe having side lining members of heavily-napped cloth and a rear antifriction lining member of sateen cloth for slipping over the heel of the inner shoe, the said member presenting an uncoated, unimpregnated, sateen surface to the inner shoe.

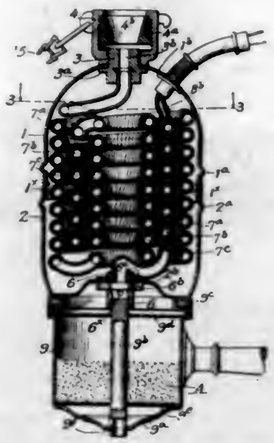
1,631,750. PAPER PRODUCT AND METHOD OF MAKING SAME. JAMES MCINTOSH, Norristown, Pa., assignor to Diamond State Fibre Company, Bridgeport, Pa., a Corporation of Delaware. Filed Mar. 2, 1926. Serial No. 91,815. 10 Claims. (Cl. 92—21.)



1. The process of making a paper product which comprises adding a cellulose ester to the paper and rag fibres prior to the Fourdrinier machine, processing the paper in the usual manner, parchmentizing the paper, and thereafter subjecting the sheet to heat and pressure to cause the cellulose ester to flow throughout the mass.

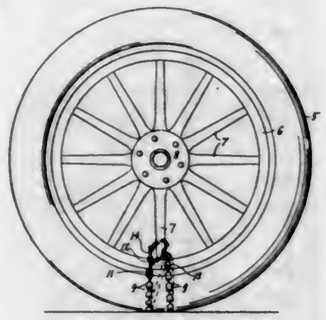
1,631,751. GRAVITY-DUMP BODY FOR TRUCKS OR WAGONS. FRANK J. MELTON, Clayton, N. Mex. Filed July 15, 1926. Serial No. 122,593. 1 Claim. (Cl. 298—23.)

In a gravity tilting body, a bolster positioned on a frame below the normal position of the body, a chain positioned on said body and engaging said bolster when the said body is in the tilted position, a bell crank connected to said chain, a spring to restrain said bell crank, a finger on said bell crank, an end gate on said body carrying on its lower edge a bar to engage said finger, fingers on said body to restrain said bar against said bell crank, an eye on the upper part of said end gate, a rod having a hook at one end to engage said eye and an eye at the other end of said rod, a strap on said body having an outwardly turned portion whereon said rod may rest, and a pin positioned on said body to receive said eye on said rod.



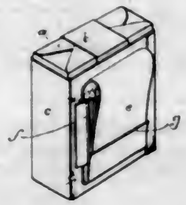
1,631,752. AUTOMATIC LOAD EQUALIZATION. WILBUR L. MERRILL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 22, 1927. Serial No. 162,881. 4 Claims. (Cl. 171—312.)

1. In a system for maintaining a predetermined distribution of load between a plurality of electric motors arranged to drive a common load, load adjusting means for each of a plurality of said motors, and an electro-responsive device associated with each of said load ad-



justing means, each of said devices being connected to respond to the difference between the load on the motor controlled thereby and the load on another of said motors to effect load corrective operation of said adjusting means.

1,631,753. ELECTRIC HEATER. BENJAMIN MIDULLA, Wilkinsburg, Pa. Continuation of application Serial No. 31,936, filed May 21, 1925. This application filed Aug. 17, 1926. Serial No. 129,783. 8 Claims. (Cl. 219—39.)



1. A heater comprising a plurality of coaxial coils connected in series and having an inlet and outlet; the coils being so connected that the liquid must pass through the outermost coil first, then through the innermost coil, and lastly through the middle coil; and an electrical heating element around the middle coil.

1,631,754. TIRE CHAIN. WILLIAM MURPHY, St. Louis Park, Minn. Filed Sept. 17, 1926. Serial No. 136,015. 1 Claim. (Cl. 152—14.)

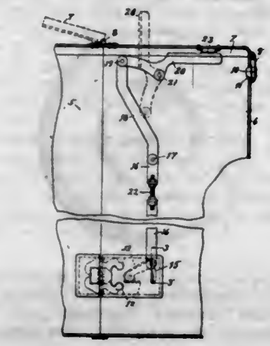
In an antiskid and traction device of the class described, a length of chain, a tension element attached to one end of said chain, a single chain link attached to the opposite end of said tension element, a pair of hooks engaging said latter link, said chain adapted to be coiled about a wheel rim and tire and one link of the chain engaged with one of said hooks to partly expand said tension element and create a taut condition of the coiled chain.

1,631,755. PACKAGE. HARRY F. NILES, Chicago, Ill. Filed Sept. 8, 1925. Serial No. 54,898. 1 Claim. (Cl. 206—48.)

A package for cigarettes, having a loop formed on a face thereof by extending a reduced portion of an adjacent side of the package across said face and securing the end of said reduced portion to said face near its adjacent edge, back of which loop the cover of a match strip may be passed to unite the cigarette package and the match strip.

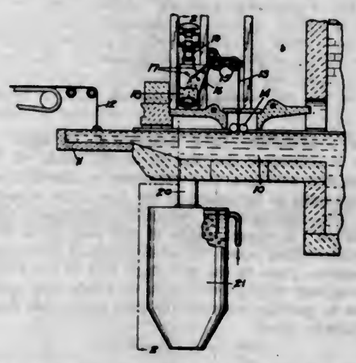
1,631,756. DETONATOR PACKAGE. FRANKLIN W. OLIN, Alton, Ill., assignor to Western Cartridge Company, East Alton, Ill., a Corporation of Delaware. Filed Feb. 5, 1925. Serial No. 7,162. 8 Claims. (Cl. 206—46.)

2. A prepared package comprising, a detonator cartridge having current conducting wire, a tube over the cartridge and on which the wire is coiled, and a casing for the wire.



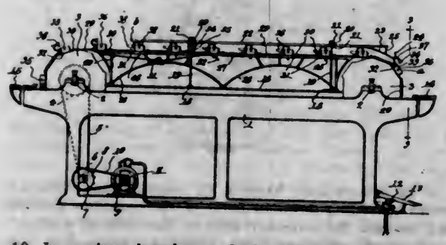
1,631,757. WASHING PAPER. CHARLES B. PECK, Suffern, N. Y. Filed Mar. 26, 1926. Serial No. 97,673. 3 Claims. (Cl. 87—23.)

2. A washing sheet comprising a thin vegetable parchment paper vehicle having the characteristic of flexibility when wet and sufficiently tough and tenacious to prevent tearing or surface disintegration when used for scrubbing, said vehicle being impregnated with soap.



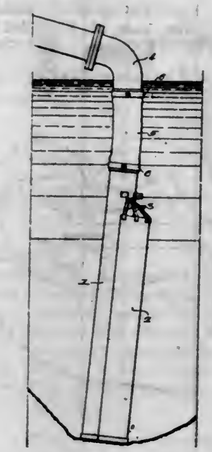
1,631,758. LATCHING DEVICE. MARTIN RASMUSSEN, Racine, Wis., assignor to Hartmann Trunk Company, Racine, Wis., a Corporation of Wisconsin. Filed Dec. 29, 1924. Serial No. 758,650. 1 Claim. (Cl. 292—25.)

An actuating device for wardrobe trunk fasteners comprising a lever adapted to be pivoted within the wardrobe section of the trunk, said lever being provided with a portion adapted to be engaged by the top section of the trunk, and a pair of pivotally connected link members, one of



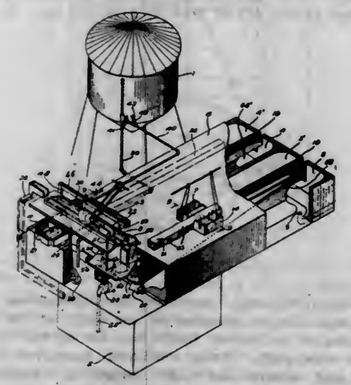
which is connected to said lever and the other of which is longitudinally adjustable, and adapted to be connected to the fastener.

1,631,759. METHOD AND MEANS FOR SKIMMING GLASS. WARREN A. RHOADES, Shreveport, La., and THOMAS C. MCKINLEY, Charleston, W. Va., assignors to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed July 22, 1925. Serial No. 45,335. 10 Claims. (Cl. 49—17.)



1. The process of producing sheet glass, consisting in providing a mass of molten glass, skimming the molten glass by drawing the surface therefrom in sheet form, and then drawing a sheet from the skimmed glass.

1,631,760. BUNCH FORMER. CHARLES A. RINKER, Galesburg, Ill. Filed Apr. 7, 1925. Serial No. 21,892. 10 Claims. (Cl. 131—42.)

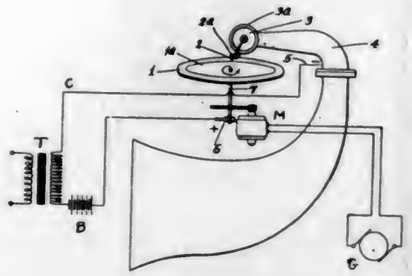


10. In a cigar buncher a feed table, a delivery table, bunch receiving forms for conveying bunches from the feed table to the delivery table, means operated by the movement of the forms for placing a plurality of bunches therein under compression and maintaining them under compression during a portion of the movement from one table to the other, and means for successively lifting the bunches automatically within the forms prior to reaching the delivery table.

1,631,761. SUCTION PIPE. ELTON RISLEY, Ventnor, N. J. Filed Apr. 10, 1925. Serial No. 22,159. 4 Claims. (Cl. 37—63.)

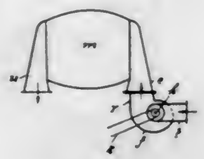
1. A suction pipe for hydraulic dredging operations comprising a main duct, an auxiliary duct parallel throughout its length with and partially surrounding said main duct being open at both ends and terminating adjacent the outer end of the main duct in a section of reduced area, and a grid protecting the upper end of the auxiliary duct.

1,631,762. METHOD AND APPARATUS FOR MIXING PULP. WALDO E. ROSEBUSH, Millwood, Wash., assignor to Inland Empire Paper Company, Millwood, Wash., a Corporation of Washington. Filed Aug. 5, 1924. Serial No. 730,208. 5 Claims. (Cl. 92—20.)



5. The method of preparing pulp for use in paper making machines, consisting in separately deckering sulphite pulp, then combining said deckered sulphite pulp with screened wood pulp, and finally deckering the mixture of the two pulps.

1,631,763. BEARING WITH ROLLING MEMBERS. LOUIS ROUANET, Ivry-Port, France, assignor to Compagnie d'Applications Mecaniques, Paris, France. Filed Nov. 10, 1922, Serial No. 600,017, and in France Dec. 12, 1921. 1 Claim. (Cl. 308—189.)

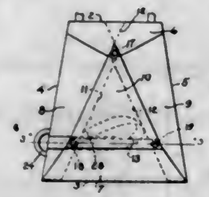


A bearing adapted to be used in an acid or oxidising medium, comprising concentric race members and rolling members disposed between said race members, the race members being made of aluminum bronze, and the rolling members being made of agate and the like material.

1,631,764. ELECTROSTATIC RELAY DEVICE. SAMUEL RUBEN, New York, N. Y. Filed Feb. 15, 1926. Serial No. 88,432. 11 Claims. (Cl. 179—111.)

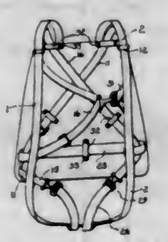
1. A relay device comprising an asymmetrically conductive couple adapted to receive and transmit signals by varying an electrostatic field between the elements of said couple in response to changes in the potential applied to the circuit connecting said elements.

1,631,765. COOLING ELECTRIC MACHINERY. REINHOLD RÜDENBERG, Berlin-Charlottenburg, Germany, assignor to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Aug. 23, 1921, Serial No. 494,546, and in Germany Oct. 7, 1918. 1 Claim. (Cl. 171—252.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



In dynamo-electric machines in combination, a self-ventilator directly mounted on the shaft of the machine and adapted to furnish ventilation for normal load only, and a separately driven ventilator connected in series with said self-ventilator for supplying ventilation at excess machine load, said self-ventilator being of such construction that the pressure drop therein is approximately the same for the passage of the quantity of air required at normal load, as for the passage of the quantity of air required at overload.

1,631,766. PARACHUTE. JAMES M. RUSSELL, San Diego, Calif., assignor to Herbert R. McClintock, San Diego, Calif. Filed Feb. 17, 1926. Serial No. 88,851. 16 Claims. (Cl. 244—21.)



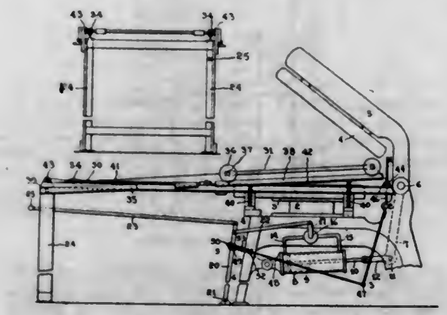
1. A parachute having an upper supporting surface and an outer continuation for said surface extending downwardly and inwardly therefrom, and means to directly interconnect the upper and lower portions of said continuation.

1,631,767. PARACHUTE PACK. JAMES M. RUSSELL, San Diego, Calif., assignor to Herbert R. McClintock, San Diego, Calif. Filed Apr. 12, 1926. Serial No. 101,420. 15 Claims. (Cl. 244—21.)

4. In a parachute pack adapted to be worn by an aviator, a container for the parachute made of flexible material and having a face piece and a plurality of side flaps connected to the edges of the face piece, a parachute within the container, a separate triangular piece of material on the opposite side of the pack from the face piece, and locking cones releasably holding the corners of said separate piece to the side flaps and to the face piece and extending through the pack to retain the parachute enclosed in position between the face piece, side flaps and the separate piece.

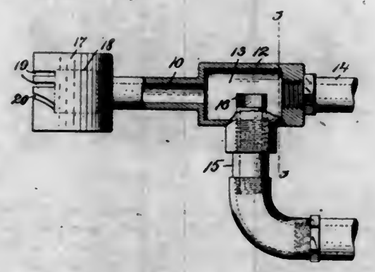
1,631,768. PARACHUTE HARNESS. JAMES M. RUSSELL, San Diego, Calif., assignor to Herbert R. McClintock, San Diego, Calif. Filed Apr. 22, 1926. Serial No. 103,858. 12 Claims. (Cl. 244—21.)

1. In a parachute harness, in combination, suspension straps extending down in front of the aviator's shoulders and beneath the aviator's seat in the form of a sling, a front strap extending down from one suspension strap at the front of one shoulder, crossing the chest to a point at the opposite side of the body and then returning at the front and engaging with said one suspension strap again and continuing on around back of the body for engagement with the other suspension strap, a back strap engaging the said other supension strap and extending down back over the other shoulder, crossing over at the back of the body and engaging said one suspension strap at the side of the body, a pair of leg strap attachments at the bottom of the suspension straps, and a snap hook detachably interconnecting the front strap at said point to the adjacent suspension strap so that said hook is at the side of the aviator and closely adjacent to said adjacent suspension strap.



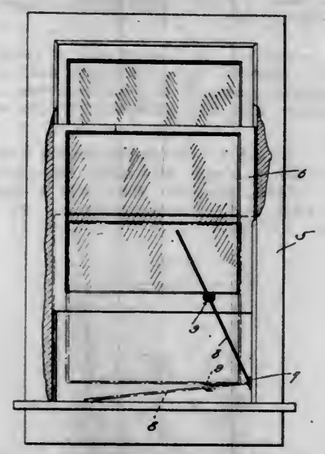
12. In combination, a parachute pack, a harness having several straps adapted to lie flat against one side of the pack, and quickly detachable connections between the said straps of the harness and the side of the pack to hold the said straps in place.

1,631,769. GAUGE ROD. NEIL E. SALSICH, Bethlehem, Pa. Filed Aug. 4, 1925. Serial No. 48,041. 10 Claims. (Cl. 238—53.)



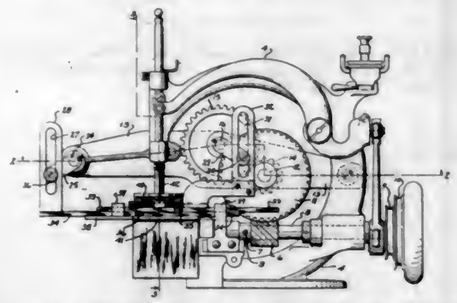
8. In a railway track construction, the combination with a pair of track rails, of a gauge rod comprising a pair of clip members in opposed relation and engaging over the outside flanges of the track rails, a rod member connecting said clip members, one of said clip members extending inwardly beyond the inner edge of the flange rail and also extending inwardly and upwardly into contiguity with the outside face of the web of said rail, an insulator member interposed between the last mentioned clip member and the rail, and means to positively prevent lateral movement of the insulator member with respect to the clip member.

1,631,770. PRESSING MACHINE FOR GARMENTS AND THE LIKE. EDWARD J. SCHREMP, Rochester, N. Y. Filed June 4, 1924. Serial No. 717,704. 4 Claims. (Cl. 68—9.)



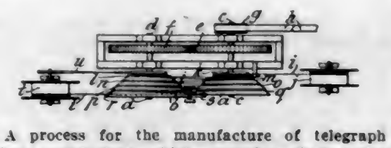
1. An ironing or pressing machine for garments and the like having in combination with the buck and the pressing head movable with relation thereto: a power means connected to the head for operating the same, a controlling means connected with the power means operative to control the movement of the power means, a work supporting tray slidable on guides for movement into and out of operative relation with the buck and pressing head, and actuating connections for the controlling means in the path of movement of the tray arranged to be actuated upon the movement of the tray into operating or pressing position to effect the lowering of the pressing head and said actuating connections being provided with means to permit the controlling means being actuated independently thereof.

1,631,771. OIL BURNER. ALBERT SHEATHER, Elizabeth, N. J. Filed Oct. 18, 1921. Serial No. 508,461. 1 Claim. (Cl. 158—78.)



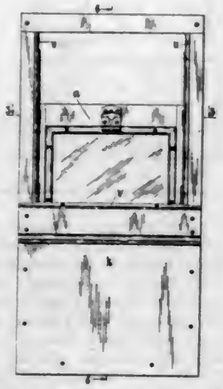
A burner comprising a one-piece casing enlarged at one end to form a mixing chamber with an end inlet and a side inlet and enlarged at the other end to form a head with a curved front and slits in the front, the upper slit being parallel with the axis of the casing and the lower slit being inclined to form an arcuate slit so that the stream emerging therefrom mixes with and arches the flame of the burner.

1,631,772. WINDOW-SASH HOLDER. ROBERT H. SHELTON, Durant, Okla. Filed Aug. 19, 1925. Serial No. 51,181. 1 Claim. (Cl. 292—276.)



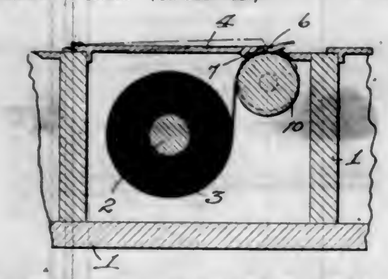
In combination with a sliding window sash, and the frame in which the sash operates, a bracket member secured to the window frame, a rod pivotally mounted in the bracket, a plate having an opening, secured to the lower rail of the sash, a shank having a head positioned in the opening of the plate and adapted to pivot with respect to the plate, said shank having an opening extending transversely therethrough, and having a threaded portion adjacent to the opening, said rod adapted to pass through the opening of the shank, and a winged nut on the threaded portion of the shank to engage the rod to clamp the rod to the shank.

1,631,773. MACHINE FOR MAKING VENTILATORS FOR WEARING APPAREL. WILLIAM I. SILVERSTEIN, Brooklyn, N. Y. Filed Nov. 15, 1924. Serial No. 750,187. 6 Claims. (Cl. 112—99.)



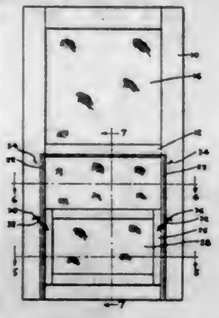
1. In a machine for making ventilators for wearing apparel, overlapping laterally sliding members for overlapping and spacing a plurality of strands, feeding and stitching mechanism for stitching together said strands cooperating with said members, and means for preventing the lateral displacement of said strands while the same are being stitched.

1,631,774. MANUFACTURE OF TELEGRAPH AND TELEPHONE CABLES. WILLOUGHBY STATHAM SMITH, Newton Poppleford, and ALFRED DEVER SHUTER, Harrow-on-the-Hill, England. Filed Jan. 2, 1925, Serial No. 293, and in Great Britain May 6, 1924. 2 Claims. (Cl. 173—81.)



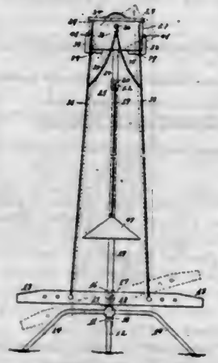
2. A process for the manufacture of telegraph and telephone conductors which comprises first laying the loading material around the conductor, then stretching the conductor, and finally annealing the loaded conductor.

1,631,775. SLIDING WINDOW OF MOTOR AND OTHER VEHICLES. JAMES MARSHALL STRACHAN, North Acton, London, England. Filed July 5, 1924, Serial No. 724,431, and in Great Britain Aug. 28, 1923. 6 Claims. (Cl. 20—52.)



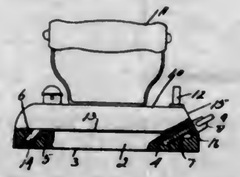
1. An improved sliding window for motor and other vehicles comprising a window sash and adjustable counterbalancing means constituted by one or more windlasses each consisting of a frame secured to the window sash; a pivot in said frame on which a drum is journalled; a wound spring surrounding said pivot and connected to it at one end and to the drum at the other; flexible members secured at one end to said drum or drums around which such flexible members are wound and secured at their other extremities to the window guide on each side of the window; means of turning the drum pivot in one direction to adjust the tension of its spring and a ratchet-wheel mounted on said pivot adapted to cooperate with a pawl to prevent its rotation in the reverse direction substantially as and for the purpose set forth.

1,631,776. PAPER-CUTTING CABINET. IRVIN R. SUNDAY, Reading Pa. Filed Aug. 2, 1926. Serial No. 126,663. 1 Claim. (Cl. 211—32.)



In a paper cutting cabinet, a body comprising a plurality of compartments, means for rotatively suspending rolls of paper therein, a hinged closure plate for each compartment, each plate having a cutting edge; an eccentric for each cutting plate, a lug on each cutting plate adapted to bear against said eccentric, and means for actuating the eccentric to raise the cover plate from the cabinet and to feed a relatively short length of paper therefrom.

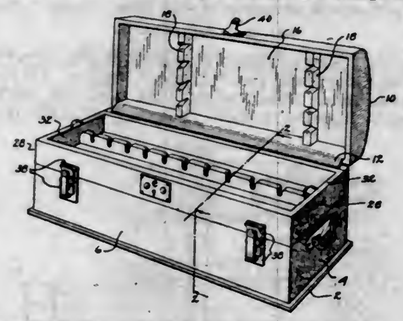
1,631,777. STORM WINDOW. EDWARD W. VINZ, Minneapolis, Minn. Filed Feb. 15, 1926. Serial No. 88,266. 2 Claims. (Cl. 20—55.)



1. A storm window comprising a main frame, an intermediate cross bar for said frame of the same thickness as the side members of said frame, a pane of glass in the space above said cross bar, a lower cross bar substantially midway between said intermediate cross bar and the lower member of said frame, said lower cross bar being of reduced thickness and being flush with the outer surface of said side members, a pane of glass in the space between said intermediate cross bar and said lower cross bar, the space between said lower cross bar and the lower member of said main frame being open, slideways on the inward margins of said side members extending between said intermediate cross bar and the lower portion of the main frame, an auxiliary frame mounted in said slideways, and a pane of glass in said auxiliary frame, said auxiliary frame being disposed in a vertical plane entirely outside said lower cross bar whereby said auxiliary frame may be slid from lower position in which the glass therein closes said open space into upper position with the upper auxiliary frame member in engagement with said intermediate cross bar.

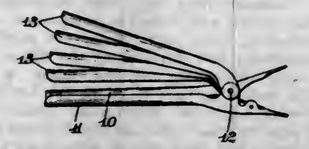
1,631,778. POULTRY FEEDER. EDOM WILLIAMS, Louisville, Ky. Filed Nov. 27, 1925. Serial No. 71,572. 10 Claims. (Cl. 119—70.)

1. A rockably-mounted reservoir, adapted to contain feed and deliver a portion thereof at each oscillation, a tilting lever below said reservoir, and connections from said lever to said reservoir whereby the tilting movements of said lever oscillate said reservoir and flexible connections between said connections and a common means on the reservoir for limiting the oscillations of the reservoir.



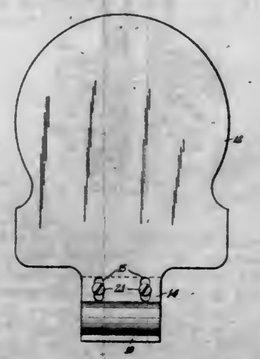
1,631,779. ELECTRIC IRON. JACOB M. WINTROB, Philadelphia, Pa. Filed Aug. 7, 1922. Serial No. 580,094. 3 Claims. (Cl. 68—26.)

1. An iron comprising a base, a top coacting therewith, means for detachably connecting the top to the base, said means including a butterfly or wing nut, said nut when in place having its wings projecting transversely of the iron and a handle fixed to the top, said handle cooperating with the wing nut when the iron is in a tilted position to act as a stand or support.



1,631,780. DISPLAY CHEST FOR SILVERWARE. ALPSCK L. ZEITUNG, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Sept. 3, 1926. Serial No. 133,344. 6 Claims. (Cl. 217—9.)

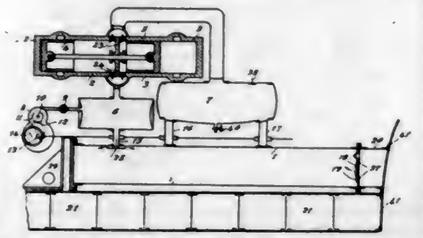
3. A display chest for pieces of silverware having, in combination, a body having end walls and front and rear walls, a support for silverware having one edge hinged to the upper edge of said front wall to permit it to be swung inwardly into substantially horizontal position and to permit it to be swung outwardly from said body, and a second support for silverware having one edge hinged to the outer edge of said first-mentioned support so as to permit it to be swung downwardly upon the upper edges of said end and front walls when the first-mentioned support is in closed position, and having upstanding front, rear and end walls, and a cover adapted to extend over the upper edges of said upstanding walls,



both of said supports having holders for silverware thereon which are arranged on the top sides thereof when said supports are in open position.

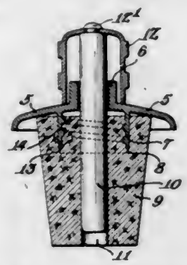
1,631,781. HAIR CURLER AND WAVER. GRAIG WAYNE ANDERSON, Columbus, Ohio. Filed Nov. 26, 1926. Serial No. 150,779. 4 Claims. (Cl. 132—36.)

1. Means for curling and waving hair comprising a curling rod, a longitudinally concaved blade cooperating therewith and a plurality of longitudinally concaved blades in hinged relation to said curling rod and in superposed nesting relation to one another whereby a tress curled on the rod can be waved by the plurality of blades.



1,631,782. ADIVERTISING SIGN. LORIS R. ANDERSON, Brooklyn, N. Y. Filed Feb. 2, 1927. Serial No. 165,279. 2 Claims. (Cl. 40—125.)

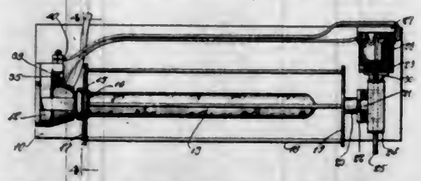
1. A detachable advertising sign, consisting of a suitably shaped plate member for receiving display matter and having a narrow extension with intermediate convex portion curved substantially to a semi-circle and the extreme outer end of the extension being turned outwardly to provide a locking lip; a clamping element adapted to cooperate with the convex portion for affording a substantially circular holding member and consisting of a narrow strip having an intermediate concave portion curved substantially to a semi-circle, the lower



end thereof being bent over to provide a hook to receive the said lip; and means to removably secure the upper portion of the clamping element and the upper portion of the said narrow extension to each other.

1,631,783. ARRANGEMENT FOR HYDRAULIC INTERNAL-REACTION PROPULSION. ORESTE ANGELINI, Rome, Italy. Filed Nov. 27, 1926, Serial No. 151,233, and in Italy Dec. 3, 1925. 1 Claim. (Cl. 115—15.)

Arrangement for hydraulic internal reaction propulsion comprising: several propelling tubes working successively, a non-rotatable internal combustion moto-compressor with a single driving and compressing piston, a balancing receptacle communicating with the compressor, during the sucking period, and with the compressed air outlet of the propelling tubes, a valve for the rapid flooding of each propelling tube provided at the end of the tube communicating with the external water, a deviator within each propelling tube to oblige the air threads to deviate horizontally, the distribution being controlled in such a way that the water contained in the propelling tubes flows out only partially not to uncover and expose to the compressed air the outlet ports.

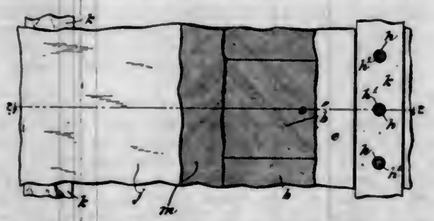


1,631,784. DISPENSING BOTTLE STOPPER. EDWIN H. BARKER, Moylan, Pa., assignor to A. H. Wirz, Inc., Chester, Pa., a Corporation of Pennsylvania. Filed July 9, 1921. Serial No. 483,429. 1 Claim. (Cl. 215—48.)

A cork having an interior pouring opening and a slit about the opening, in combination with a flanged top member having a depending shank adapted to enter the slit and having an interior thread-like projection extending laterally from the shank to increase the grip of the shank upon the cork and the resistance to expansion of the cork about its interior opening and a plug fitting the interior opening.

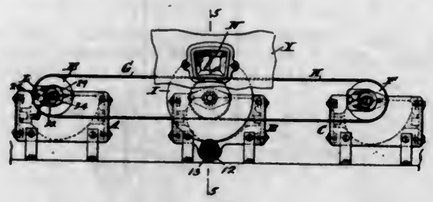
1,631,785. DISPLAY DEVICE. JOHN B. BARNETT, Philadelphia, Pa., assignor of one-half to William G. McCann and one-half to Arthur E. Spellissy, Philadelphia, Pa. Filed Mar. 30, 1925. Serial No. 19,406. 1 Claim. (Cl. 40—77.)

In a device of the kind described, a base, a standard fixed to said base, a second standard fixed to said base in spaced relation to the first standard, a frame consisting of a pair of plates and rods connecting the same, a lamp socket carried by the second standard and having one portion thereof arranged to constitute a journal, one plate of said frame having an opening fitting said journal and constituting a bearing for the frame, the first standard having an opening in its top and the second plate of the frame being provided with an extension constituting a journal for the frame and fitting the opening in the first standard, a ratchet wheel mounted on the last mentioned journal, a bracket of inverted J-shape having its longer leg fixed to the base, said bracket having its upper portion overhanging the ratchet and its terminal portion



depending in parallel relation to the longer leg, a rod aligned above the ratchet and slidably mounted in the longer leg and terminal portion of the last mentioned bracket, a pawl pivoted to said rod and having one end depending therefrom to engage the ratchet and the remaining end extending over the rod to limit movement of the pawl in one direction, a second bracket mounted on the base in alignment with said ratchet, a magnet carried by the last mentioned bracket, an armature pivoted below said magnet, and an arm carried by said armature and connected to said rod whereby to move the rod upon energization of the magnet and thereby actuate the ratchet.

1,631,786. SHOE-TREE. STEFANO BATTILANI, New York, N. Y. Filed Apr. 15, 1926. Serial No. 102,179. 3 Claims. (Cl. 12—128.1.)



1. A shoe tree comprising, a flexible arched toe piece having inturned flaps on each of its sides, said inturned flaps being curved in cross section and adapted to rest against the inner sole of the shoe and cause said toe piece to gently conform with the contour of the fore part of the shoe, and a rearwardly extending member to engage with the rear of the shoe, said member being flexible.

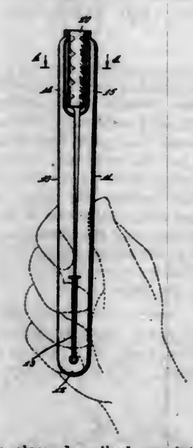
1,631,787. BUILDING-WALL CONSTRUCTION. GEORGE L. BENNETT, Cleveland Heights, Ohio. Filed Sept. 21, 1926. Serial No. 136,742. 9 Claims. (Cl. 72—32.)

1. A building wall construction embodying therein spaced, fixed studs, substantially non-inflammable, non-absorbent, pre-formed slabs mounted between and secured in relation to adjacent studs, metal reinforcement at one side of said slabs, means secured to said studs supporting said metal reinforcement and spacing it from said studs and said slabs, a plaster facing upon said slabs and about said reinforcement, a metal reinforcement at the other face of said slabs, means secured to said studs supporting said reinforcement and spacing it from said studs and said slabs, and a plaster surfacing upon said slabs and about said last named reinforcement.

1,631,788. CONDENSER-OPERATING MECHANISM FOR VARIABLE CONDENSERS. MORRIS H. BENNETT, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 28, 1926. Serial No. 112,250. 4 Claims. (Cl. 74—7.)

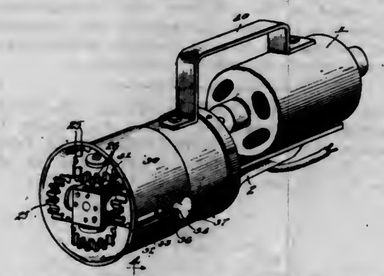
1. A driving device for circuit tuning elements, said driving device comprising a rotatable shaft for varying the tuning element, a wrist pin carried by the shaft, an eccentric, means for rotating said eccentric about an axis coincident with the longitudinal axis of the shaft, a rotatable member loosely mounted on the shaft, a double yoke device pivoted on said rotatable member and provided with two pairs of arms, one pair receiving the wrist pin between them and the other pair receiving the eccentric between them, and means carried by the eccentric for alternately engaging and driving either arm of the pair between which the eccentric is located to rotate the yoke, as an entirety, about the axis of the shaft.

1,631,789. MANUFACTURE OF PAPER PULP. JAMES BROOKES BEVERIDGE, Richmond, Va. Filed Apr. 13, 1925. Serial No. 22,884. 4 Claims. (Cl. 92—9.)



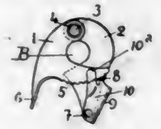
1. The method of treating woods and other fibrous substances for the production of pulp which comprises the cooking of the said woods and other fibrous substances in a mixture of sodium hydrate and sodium sulphide in aqueous solution, and of waste liquor obtained from the digestion of woods and other fibrous substances in solution of sodium acid sulphite.

1,631,790. FISHING REEL. JOHN BRISLIN, Brooklyn, N. Y. Original application filed Feb. 8, 1926, Serial No. 86,772. Divided and this application filed Dec. 11, 1926. Serial No. 154,064. 3 Claims. (Cl. 242—84.7.)



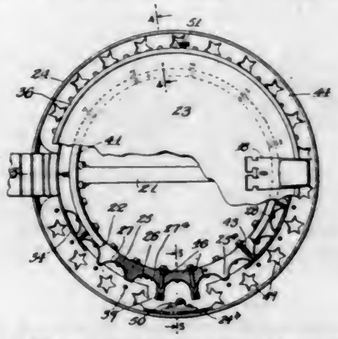
1. In a reel, a spool-shaft and means for rotating it, a collar loosely mounted on said spool-shaft, a stud, means on the exterior of the reel for partially rotating said stud, a spring coiled upon and secured at one end to said stud and having a finger arranged to press frictionally upon said collar, a ratchet wheel on said stud, and a spring-actuated detent adapted to engage said ratchet wheel.

1,631,791. GUM MASSAGING AND CLEANSING DEVICE. THOMAS A. BUCKLEY, Brooklyn, N. Y. Filed Aug. 17, 1925. Serial No. 50,770. 1 Calim. (Cl. 15—167.)



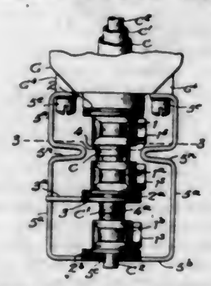
A device of the class described consisting of a length of resilient material formed to provide a pair of side arms having a connecting bight at one end integral therewith, an element within the bight and connected within the bight and side arms and connected thereto for normally effecting relative separation of the opposite free ends, the said opposite free ends having inwardly converging faces presenting relatively narrow inner edges, the said edges formed with a series of longitudinally spaced arcuate cut-away portions defining gripping teeth between which the article to be supported is adapted to be gripped by inward swinging movement of the side arms.

1,631,792. MASSAGING DEVICE. WILLIAM B. BURNLEY, Long Beach, Calif. Filed Jan. 17, 1925. Serial No. 3,162. 3 Claims. (Cl. 128—57.)



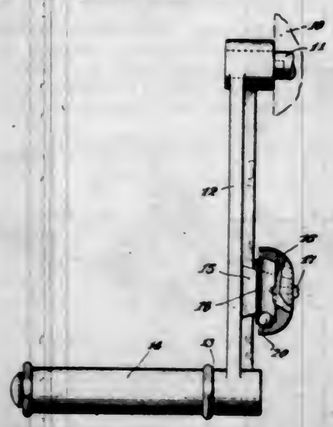
1. A massaging apparatus comprising a gear casing having its inner end closed and its outer end open, a bracket projecting from the closed end of the casing, an electric motor mounted on the bracket and having its armature shaft projecting into said casing, a pinion on the shaft within the casing, a shaft mounted in the gear casing, a ring gear carried by the inner end of the shaft and with which the said pinion meshes, a member secured to the outer end of said shaft and having a plurality of radial studs, rollers loosely mounted on the studs, a guide sleeve having a flared end and adjustably secured to the gear casing, and a handle secured to the peripheries of the motor and gear casing.

1,631,793. CLIP FOR HAIR-WAVING SACHETS. ISIDORO B. CALVETE, London, England. Filed Nov. 6, 1926, Serial No. 146,789, and in France Jan. 2, 1926. 3 Claims. (Cl. 132—36.1.)



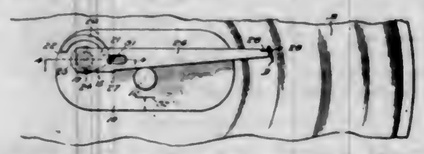
1. A clip for hermetically constringing and closing the open end of hair waving sachets comprising in combination a pair of flat arcuate jaws pivotally connected and so shaped as to innerly delineate a recess of varying area, the one jaw having one part folded upon itself into a finger piece and ratchet teeth on its outer curvature and the other jaw being fitted at its end opposite the pivot with a channelled rocker the outer part of which is formed as a finger rest whilst one of its wing portions is cut as a pawl for securely engaging the teeth on the companion jaw when inwardly swung and both wing portions have tongue-like extensions for guiding the mutual displacement of the jaws.

1,631,794. STRINGED INSTRUMENT. ROCCO A. CARLUCCI, West New York, N. J. Filed June 9, 1924. Serial No. 718,743. 15 Claims. (Cl. 84—272.)



1. A banjo of the class described, the parchment supporting rim of which comprises a continuous circular body provided in the periphery with circumferentially spaced recesses extending through the top and bottom faces of said rim and forming about the periphery of the rim, spaced sound transmission chambers.

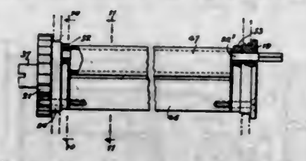
1,631,795. STEERING-POST CONTROL. FRANKLIN F. CHANDLER and RAYMOND E. YOUNG, La Fayette, Ind., assignors to Ross Gear & Tool Company, La Fayette, Ind., a Corporation of Indiana. Filed Dec. 16, 1926. Serial No. 155,190. 17 Claims. (Cl. 74—89.)



1. In combination with a steering post, a control tube; a lever attached to the lower end of the control tube; frictional means for holding the lever, and a resilient hanger attached to the post below the tube for holding said means in frictional contact.

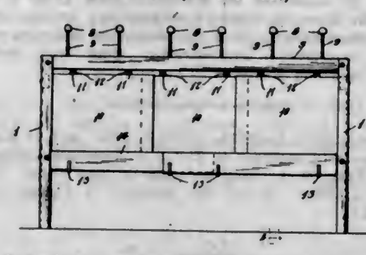
1,631,796. SPEED INDICATOR. THOMAS COLLINS, Jr., Bainbridge, N. Y., assignor to The American Separator Company, Bainbridge, N. Y., a Corporation of New York. Filed Dec. 9, 1925. Serial No. 74,282. 1 Claim. (Cl. 116—74.)

In a speed indicator, a crank arm, a bracket carried by the crank arm, a bell, an open ended slideway lying in an offset position within the bell with the open ends thereof adjacent oppositely disposed surface portions of the bell, a reciprocating member in the slideway, and a unitary means for simultaneously securing the bell to the crank arm bracket and connecting the slideway in its offset position within the bell.



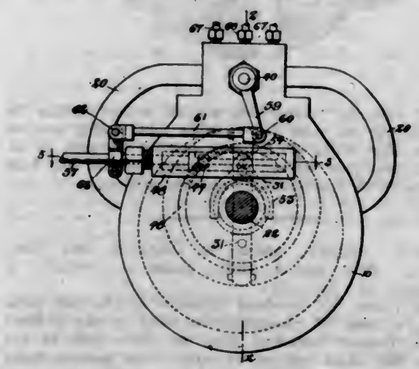
1,631,797. REPEATING ATTACHMENT FOR SOUND-REPRODUCING MACHINES. CHARLES J. COOKE, Washington, D. C., and JOHN A. RENNIE, New York, N. Y., assignors to Charles E. Sheppard, Long Island City, N. Y. Filed Sept. 25, 1923. Serial No. 664,740. 7 Claims. (Cl. 274—15.)

1. In a repeating attachment for sound reproducing machines, the combination with a supporting base, of an actuating arm pivoted eccentrically upon said base, means cooperating with said arm for causing its free end to engage a reproducing needle to lift and return the same to its starting point, and a hollow thimble having a split tubular lining of spring material and of downwardly converging form permanently driven into said thimble for holding the attachment in operative position.



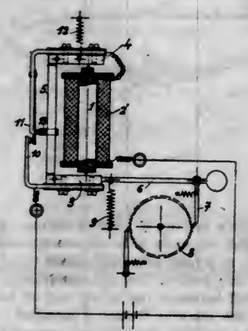
1,631,798. SANDING ROLLER. GEORGE HOWARD DAVOL, New York, N. Y. Filed July 6, 1925. Serial No. 41,820. 1 Claim. (Cl. 51—194.)

In a sanding roller a gripping structure for gripping a sheet of abrading or polishing material, said gripping structure including a pair of jaws, one jaw being stationary and the other movable, a looped spring carried by said jaws at each end, said springs acting to force the movable jaw from the stationary jaw, each of said springs having a slot, said movable jaw having an aperture adjacent each of said slots, a pin carried by the stationary jaw at each end and extending through the respective slots and through the respective apertures for



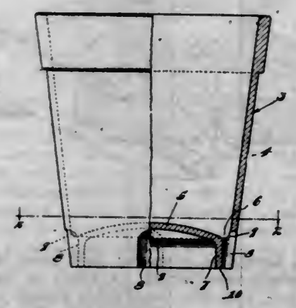
guiding the movable jaw and the springs as they function, and a manually actuated rotatable cam for causing the movable jaw to be closed against the action of said springs.

1,631,799. SANITARY POULTRY ROOST. EDGAR O. DORSEY, Montpelier, Ind. Filed Feb. 6, 1926. Serial No. 86,499. 3 Claims. (Cl. 119—22.)



1. A poultry roost, comprising a portable frame including upper and lower horizontal bars on its front and back sides, the upper bars supporting roost bars arranged transversely of the frame, one of said upper bars having loops secured to its under side, a droppings plate, hooks secured to one edge of said plate and removably engaging said loops, the opposite edge of said plate supported by the lower horizontal bar on the opposite side of the frame, brackets secured to the last mentioned lower horizontal bar and extending outwardly of the frame, and a trough supported on said brackets under the lower edge of the droppings plate.

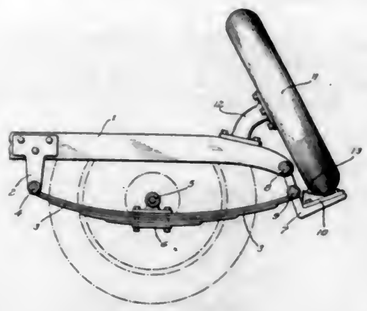
1,631,800. HYDRAULIC BRAKE. FRITZ DOTSCH, White Plains, N. Y. Filed July 14, 1926. Serial No. 122,405. 8 Claims. (Cl. 188—90.)



1. A hydraulic brake comprising a stator having a liquid chamber, a valve casing, a valve member in said valve casing, a passage in communication with the interior of the valve casing and said chamber, a by-pass in communication with said chamber and said passage at each side of the valve member, a rotor body operable in said chamber and arranged eccentrically with respect to the cylindrical wall thereof, radial retarding blades arranged for movement in a recess in said rotor body, means having a normal tendency to urge said blades radially outward to maintain their outer edges in contact with said cylindrical wall, said blades adapted to move against the liquid in said chamber to obtain the braking action, the movement of the liquid being under control of said valve member, and means for actuating said valve member.

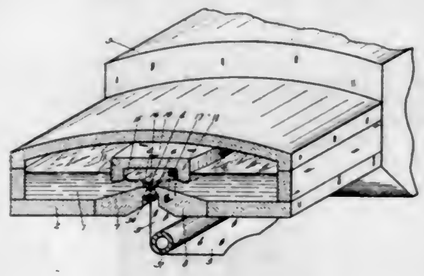
1,631,801. ELECTROMAGNETIC DEVICE PRODUCING A CONSTANT MOVING FORCE. ALBERT EPITAUX, Paris, France. Filed Aug. 22, 1925, Serial No. 51,740, and in France Sept. 2, 1924. 3 Claims. (Cl. 172—126.)

1. An electro-magnetic motor, comprising a soft iron core of reduced section at one end, a winding carried by said core, a fixed yoke completing the magnetic circuit, a first armature placed on the side of larger section of the core, a lever extending said armature on one side, a contact piece placed on the other side of the armature, a second armature opposite the smaller diameter of the core, a contact piece carried by said armature opposite the contact piece of the first armature, and means to draw the armatures back in their inactive position.



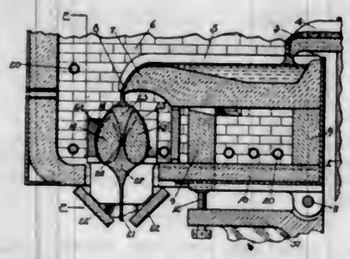
1,631,802. FLOWERPOT. FRANK EVERT, Chicago, Ill. Filed Feb. 9, 1926. Serial No. 86,993. 2 Claims. (Cl. 47—34.)

1. A flower pot comprising a side wall having a thickened supporting flange at the lower end thereof, a bottom for the pot at the upper end of the supporting flange and forming a drain trench with the side wall;



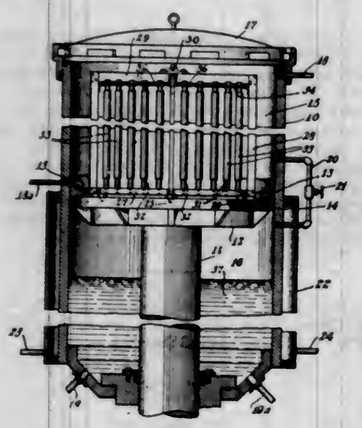
and channels in the form of grooves extending into the body of the supporting flange from the outer face thereof in communication at their upper ends with said trench, substantially as described.

1,631,803. VEHICLE. THOMAS J. FAY, Brooklyn, N. Y. Filed Dec. 5, 1925. Serial No. 73,397. 9 Claims. (Cl. 267—31.)



1. In a vehicle having a chassis frame and axle, a suspension element at each side of the chassis frame, each connected at a point intermediate of its ends to the axle, and at one end to the chassis frame, a shackle element connected between the other end of each suspension element and the chassis frame, a member secured to and connecting the shackle devices on opposite sides of the vehicle and having an abutment surface intermediate of its ends, and a resilient device carried by the chassis frame and engaging with said abutment surface, whereby relative movements of the frame and axle will be resisted by said resilient device.

1,631,804. METHOD AND APPARATUS FOR PRODUCING SHEET GLASS. ENOCH T. FERNGREN, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Aug. 21, 1922. Serial No. 583,346. 12 Claims. (Cl. 49—17.)



1. In the method of producing sheet glass by moving the glass downwardly through an orifice in the molten-glass container, that step wherein the surface portion of the molten glass directly overlying the orifice is isolated from the main body of glass and an increased surface tension is created in this isolated section, by providing spaced clinging surfaces to which the edges of the isolated body of glass may adhere.

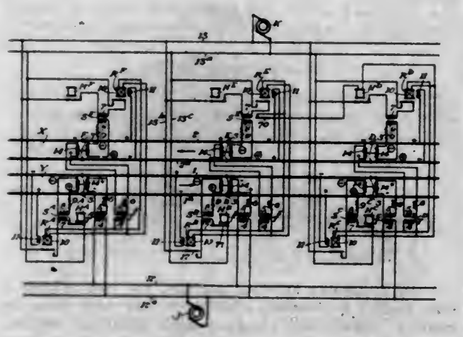
1,631,805. DRAWING SHEET GLASS. ENOCH T. FERNGREN, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed May 15, 1924. Serial No. 713,447. 11 Claims. (Cl. 49—17.)

1. In an apparatus for producing sheet glass, a pair of similar directing members between and around which molten glass flows to form the sheet, the members varying in cross-section symmetrically from their centers toward each end thereof.

1,631,806. VULCANIZING APPARATUS. ROY D. FRITZ, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 2, 1926. Serial No. 120,131. 5 Claims. (Cl. 18—6.)

1. A vulcanizer comprising a tank, a ram having its head within the tank for lowering and raising articles therein, and means on the side wall of the tank at an intermediate part thereof for sealing against the ram head to divide the tank into two compartments.

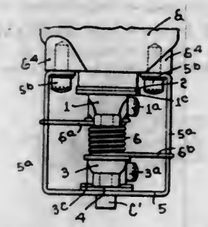
1,631,807. FRAME. MAUDE M. GILLETTE, New York, N. Y. Filed May 8, 1926. Serial No. 108,207. 4 Claims. (Cl. 40—152.)



1. A frame for enclosing pictures or the like, comprising a sheet of transparent material having a front portion thereof extending over the front face of the frame, the outer margin of said front portion being marked to simulate a wooden frame, said sheet extending integrally about certain of the sides of said front portion and further projecting rearwardly and inwardly thereof, said sheet terminating at one of the remaining sides of said front portion to provide an opening for the insertion

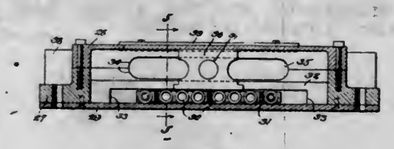
and removal of the picture, a sheet of stiffening material serving as the back of the frame, means for permanently securing said inwardly projecting portions to

said sheet of stiffening material, and means engaging said sheet of transparent material for supporting said frame.



1,631,808. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. ROBERT M. GILSON, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Aug. 19, 1924. Serial No. 732,927. 11 Claims. (Cl. 246—37.)

1. In combination, a section of railway track along which traffic moves in one direction, a source of alternating track circuit current of one frequency connected with the rails adjacent the entrance end of said section, means controlled by traffic conditions in advance of said section for supplying alternating train governing current of a different frequency to the rails adjacent the exit end of the section, and a track relay receiving energy from the rails adjacent the exit end of said section and responsive to said track circuit current but not to said train governing current.



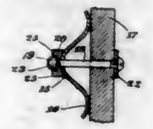
1,631,809. STEERING-POST CONTROL-LEVER ASSEMBLY. EUGENE J. GRUENEWALD and DAVID E. ROSS, La Fayette, Ind., assignors to Ross Gear & Tool Company, La Fayette, Ind., a Corporation of Indiana. Filed Nov. 15, 1926. Serial No. 148,554. 10 Claims. (Cl. 74—39.)

1. In combination with a steering post, a control tube extending through the post, means on the upper end of the control tube for turning the same; a lever attached to the lower end of the control tube; a hanger attached to the post below the tube; frictional means for holding the lever and a spring for holding said means in frictional

contact, said frictional means and spring being concentric with the tube, and said hanger holding the frictional means and spring in operative position.

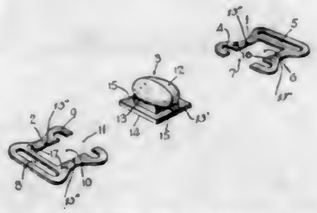
1,631,810. BEARING FOR GRAIN SEPARATORS. PERRY F. GRUVER, Amarillo, Tex. Filed Feb. 5, 1925. Serial No. 7,086. Renewed Apr. 28, 1927. 2 Claims. (Cl. 308—6.)

2. A bearing for reciprocating shafts of separators, including an elongated housing having an elongated opening in one wall thereof, a roller cage within the housing, rollers within the cage, a shoe adapted to operate over the rollers, a shaft extending through the opening and having connection with the shoe to move therewith, and means carried by the shaft for normally closing the elongated opening.



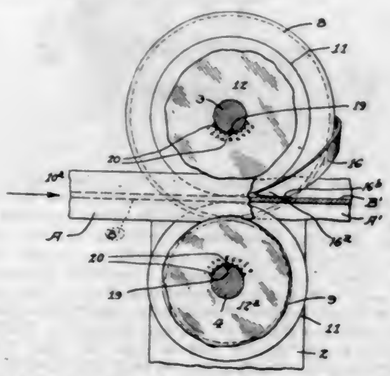
1,631,811. CONVERTIBLE CHAIR. EMIL GUENTHER, Philadelphia, Pa. Filed Dec. 19, 1923. Serial No. 681,464. 1 Claim. (Cl. 155—46.)

In a chair of the character stated, a back, means for enabling said back to be entirely removed from the chair in the formation of a bed, legs, side frame members and a seat extending therebetween, composed of slats alternately arranged and movable outwardly in opposite directions when a bed is to be formed, a combined drawer and foot rest slidably mounted between said side frame members and below the seat of said chair, comprising a bottom, front, rear and side walls and legs at each of the front corners of said drawer shorter than the legs of said chair, means for limiting the outward movement of said drawer and for permitting the latter to incline downwardly when open, the top edges of the side walls of said drawer having corresponding and aligned recesses and re-



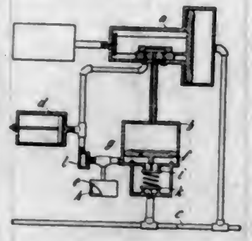
movable transverse foot rest members having their ends seated within said recesses, and adapted to be removed therefrom and to be contained in said drawer when the latter is closed.

1,631,812. END STRUCTURE FOR RAILWAY CARS. ROBERT D. HAWKINS, Wilmington, N. C. Filed Nov. 26, 1923. Serial No. 676,974. 2 Claims. (Cl. 85—50.)



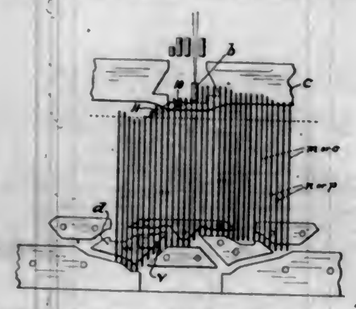
1. In a metallic panel having a corrugation formed therein with an outwardly projecting curved surface, a washer with an interior concave surface engaging said outwardly curved surface, said washer having a recessed exterior surface, and a bolt having a nut bearing upon said recessed surface.

1,631,813. HOSE-SUPPORTER STRUCTURE. CARL J. HAZELTON, Worcester, Mass., assignor to American Narrow Fabric Company, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 3, 1926. Serial No. 133,331. 8 Claims. (Cl. 24—245.)



1. A base plate structure for hose supporters comprising a pair of button-receiving plates, each plate being provided with an open-ended slot, and said plates being disposed so that said slots extend in opposite directions with the open end of the slot in one plate closed by the material of the other plate adjacent the closed end of the slot in the other plate.

1,631,814. CAME MACHINE. WILLIAM HENDERSON, New York, N. Y. Filed Nov. 10, 1924. Serial No. 748,878. 10 Claims. (Cl. 80—30.)

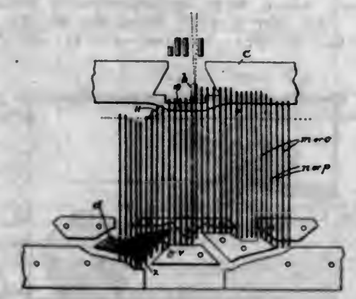


1. A mill for rolling glazing bars or cames, comprising multiple rolls having roll sections engaging the edges of the came leaves with irregular peripheries.

1,631,815. BRAKE ACCELERATOR FOR SINGLE-CHAMBER COMPRESSED-AIR BRAKES. WILHELM HILDEBRAND, Lichterfelde, Berlin, Germany. Filed Dec. 30, 1926, Serial No. 158,056, and in Germany Nov. 20, 1925. 2 Claims. (Cl. 303—39.)

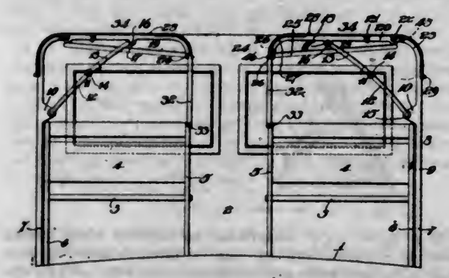
1. In a brake accelerator for single chamber compressed air brakes of the character referred to, the combination with a train pipe, a brake cylinder, connections between said pipe and cylinder, and an emergency valve controlling flow of air from said pipe to the brake cylinder through said connections, of an auxiliary chamber in communication with said connections between the train pipe and brake cylinder, for the purpose described.

1,631,816. CIRCULAR-KNITTING MACHINE. HAROLD E. HOUSEMAN, Wilmington, Del., assignor to Standard-Trump Brothers Machine Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 3, 1924. Serial No. 753,562. 18 Claims. (Cl. 66—40.)



1. In a circular knitting machine, the combination of yarn feeding mechanism, needles provided with butts and some of which are provided with shoulders substantially shorter than the butts, certain of said shoulders being shorter than other shoulders, a stitch cam adapted to engage needle butts to effect the depression of the needles, the stitch cam having an overhanging portion forming a supplemental cam adapted to engage the shoulders of shouldered needles to effect their depression at a point sufficiently in advance of the point of depression of other needles to cause shouldered needles to escape knitting engagement with the yarn, said stitch cam being movable into one position to cause its supplemental cam to engage the shoulders of all the shouldered needles and into another position to cause its supplemental cam to engage only the wider shoulders and into still another position to cause its supplemental cam to escape engagement with all the shoulders, and pattern mechanism controlling the position of the stitch cam.

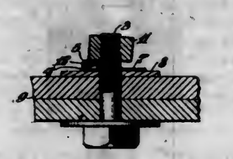
1,631,817. CIRCULAR-KNITTING MACHINE. HAROLD E. HOUSEMAN, Wilmington, Del., assignor to Standard-Trump Brothers Machine Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 27, 1926. Serial No. 104,883. 9 Claims. (Cl. 66—40.)



1. In a circular knitting machine, the combination of needles provided with butts and some of which are provided with shoulders substantially shorter than the butts,

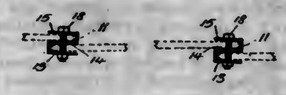
certain of said shoulders being shorter than other shoulders, a stitch cam adapted to engage needle butts to effect the depression of the needles, the stitch cam comprising a movable member and relatively fixed member, the movable member of the stitch cam having an element adapted to engage the shoulders of shouldered needles to effect their depression at a point in advance of the point of depression of other needles, the fixed member of the stitch cam being adapted to engage the needles depressed

by the movable member to complete their movement of depression, the movable member of the stitch cam being movable into one position to cause its shoulder-engaging element to engage the shoulders of all the shouldered needles and into another position to cause its shoulder-engaging element to engage only the wider shoulders and into still another position to cause its shoulder-engaging element to escape engagement with all the shoulders, and pattern mechanism controlling the position of the stitch cam.



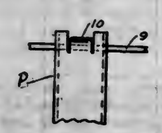
1,631,818. SEMI-INCLOSED COLLLAPSIBLE UPPER-DECK ROOF. ALBERT E. HUTT, Ardmore, Pa. Filed Apr. 15, 1925. Serial No. 23,209. 14 Claims. (Cl. 296—107.)

1. In a device of the character stated, an upper deck, a central aisle therefor, an upper deck collapsible roof structure thereon, transversely foldable jointed carlines therefor extending transversely of said upper deck to said aisle, and having their outer ends pivotally supported above said upper deck and foldable bows having their lower ends pivotally mounted above said upper deck and their upper ends pivotally connected to the inner sections of said carlines.



1,631,819. NUT LOCK OR FASTENER WASHER. JAMES W. IVORY, Philadelphia, Pa. Filed Oct. 11, 1922. Serial No. 593,676. 1 Claim. (Cl. 151—38.)

In combination two members arranged to be rigidly bolted together, a cylindrical bolt, the major portion of which is screw-threaded and which screw-threads extend entirely through said members, a washer fitted over the screw-threaded portion of said bolt, a nut-lock comprising a plate having a central circular hole for insertion over the extended screw-threaded portion of said bolt, said plate having one end bent downwardly thereunder to provide a hollow, rib-like and laterally extended, resilient

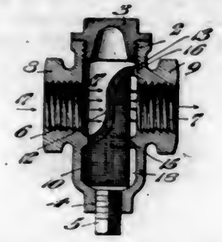


portion for resting upon the top of said washer, the opposite end of said plate being flat for free abutment upon said washer, and a nut for said bolt one lower edge of which nut abuts upon said rib-like, deflected, lateral, resilient portion of said plate, and the opposite lower edge of the nut being entirely free of both the plate and washer.

1,631,820. FENCE POST. CHARLES K. JACKSON, Columbus, Ohio. Original application filed Dec. 28, 1925, Serial No. 77,319. Divided and this application filed June 28, 1926. Serial No. 119,026. 1 Claim. (Cl. 256—69.)

A fence post formed from a single section of sheet metal, of S-shape and presenting spaced and connected webs and oppositely opening longitudinal side grooves, the said webs having alined openings adjacent to their upper ends, for the purpose described.

1,631,821. WIRE CONNECTION. CHARLES K. JACKSON, Columbus, Ohio. Filed Oct. 5, 1926. Serial No. 139,668. 1 Claim. (Cl. 256—48.)

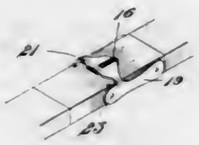


A fence post having a wire receiving notch extending down from its upper end and having an angularly disposed plate at one side of the notch, said plate having spaced apart slits forming a tongue therebetween adapted to be bent to overlie a wire extending through the notch.

1,631,822. SCREEN. FREDERICK L. JAHN, Philadelphia, Pa., assignor to Watson & McDaniel Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 19, 1925. Serial No. 69,957. 5 Claims. (Cl. 210—165.)

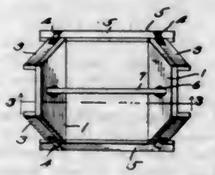
1. In a device of the character stated, an elongated tubular housing having a fluid passageway extending transversely through the upper portion thereof at substantially a right angle thereto and in substantially a straight path, a sediment chamber in the lower portion of said tubular housing below the level of said fluid passageway, an upper spacing and supporting rib projecting from the inner surface of said housing and formed integral therewith, extending from the upper portion of the outlet end of said passageway to the bottom of the inlet end of said passageway, a substantially horizontal

lower spacing and supporting rib directly below the lower level of the fluid passageway on the outlet side thereof, having its terminals spaced a suitable distance from the



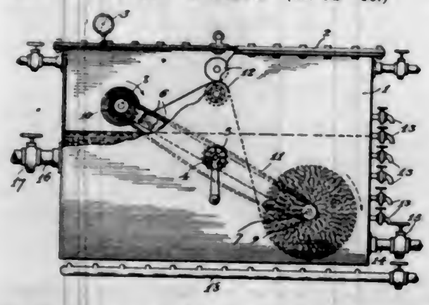
upper spacing and supporting rib; the bearing surfaces of said two ribs being cylindrical in shape and substantially coaxial with the tubular housing.

1,631,823. PURIFYING GASES. JOSEF JANNEK, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed June 8, 1925, Serial No. 35,781, and in Germany June 16, 1924. 2 Claims. (Cl. 23—3.)



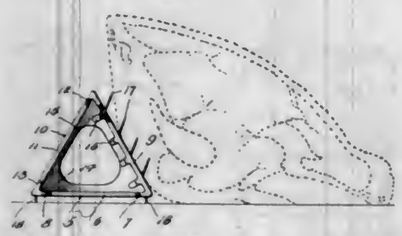
1. The process of removing iron carbonyl vapors from gases containing the same which consists in passing the said gases over active absorbing material and acting on the latter with a substance chemically reacting on iron carbonyl until the absorbing mass is substantially saturated with the reaction product of iron carbonyl and the chemically reacting body and then regenerating the mass.

1,631,824. SAFETY CATCH. PERCIVAL W. JONES, Warwick, R. I., assignor to Louis Stern Company, Providence, R. I., a Corporation of Rhode Island. Filed Aug. 20, 1926. Serial No. 130,447. 6 Claims. (Cl. 24—230.)



1. In an ornamental chain, including terminal links, a compressible part carried by one of said links, and a catch part carried by the other of said links and engageable with the compressible part when noncompressed, a finger-piece carried by said compressible part for operating the same, a yoke having arms hinged to the sides of one of the terminal links of the chain and swingable over the finger-piece to prevent manual manipulation of the finger-piece for detaching the terminal links of the chain.

1,631,825. CONCRETE FORM. THOMAS M. JONES, Garden City, Kans. Filed Feb. 21, 1927. Serial No. 169,943. 3 Claims. (Cl. 25—118.)

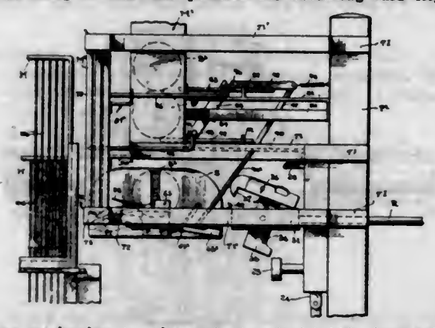


1. A form of the class described including side panels diverging upwardly and each having upwardly converging front and back edges, a brace interposed between and connecting the side panels, cleats upon the outer sides of said panels along the converging edges thereof, and bottom strips connecting the cleats of opposed panels, there being an open space between the bottoms of the side panels.

1,631,826. APPARATUS FOR SATURATING MATERIALS. LESTER KIRSCHBRAUN, Chicago, Ill., and CHESTER E. RAHR, Boston, Mass., assignors to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed May 9, 1921, Serial No. 467,831. Renewed Dec. 19, 1924. 3 Claims. (Cl. 91—46.)

1. In an apparatus of the character described, the combination with an air tight receptacle adapted to contain a heated liquid saturant, of a shaft passing therethrough, arms carried by said shaft and adapted to rock therewith in the receptacle, rotatable spools at each end of said arms, means for driving said spools by the rotation of said shaft, said spools being capable of an oscillatory movement in the receptacle, and means for imposing a pressure on the saturant in said receptacle.

1,631,827. MEAT JACK. JOSEPH LANTAGNE, Centerdale, R. I. Filed Dec. 2, 1926. Serial No. 152,221. 4 Claims. (Cl. 146—218.)



2. A meat "jack" comprising an inclined plate having meat penetrating prongs, and a prong-supporting base rigid with said plate and itself provided with prongs, the latter being adapted to anti-slippingly engage a butcher's block or other support.

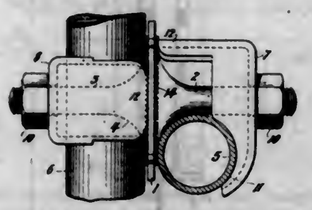
1,631,828. BOBBIN-FEEDING MECHANISM FOR LOOMS. JONATHAN LUCAS, New York, N. Y., assignor to Lucas-Lamborn Loom Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 27, 1922. Serial No. 609,274. 2 Claims. (Cl. 139—241.)

1. In a bobbin feeding mechanism for looms, a bobbin magazine arranged to contain a supply of new bobbins, tripping mechanism for holding said bobbins normally in the magazine, a shuttle having a path of travel which extends into receiving relation to said magazine, supporting devices on said shuttle controlled by the supply of yarn on the bobbin in said shuttle and automatically adjustable to a position as the yarn is used up, to permit the empty bobbin to drop in said shuttle, a yieldable

device for receiving and holding the empty bobbin in its dropped position, and means adjusted by one of said supporting devices into position for actuating said tripping mechanism to release the terminal bobbin from said magazine and to permit it to drop into the shuttle and to push the empty bobbin from said yieldable device.

1,631,829. CEREAL-BEVERAGE COMPOUND. LAUREL A. NEGLY and PERCY S. BLACK, Fort Worth, Tex. Filed Nov. 4, 1926. Serial No. 146,282. 11 Claims. (Cl. 99—11.)

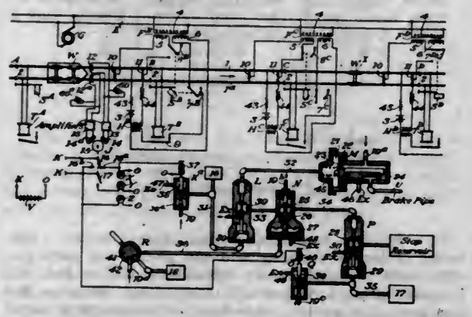
1. A cereal beverage compound comprising whole roasted cereal and roasted peanuts.



10. A cereal extract comprising a mixture of whole roasted wheat, whole roasted rye, whose roasted barley, roasted peanuts, wheat bran, brown sugar, honey, malt syrup, raisins, figs, and licorice boiled down with water to a syrupy liquid.

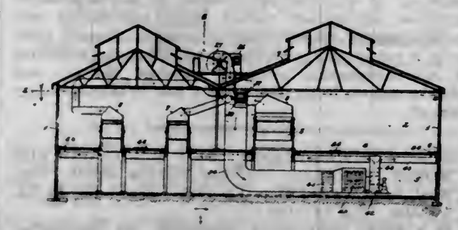
1,631,830. PREPARING CEREAL-BEVERAGE COMPOUNDS. LAUREL A. NEGLY and PERCY S. BLACK, Fort Worth, Tex. Filed Nov. 6, 1926. Serial No. 146,580. 4 Claims. (Cl. 99—11.)

1. A process of preparing a cereal beverage compound which comprises boiling a mixture of brown sugar, honey, raisins, figs, and water, mixing the resultant mass with wheat bran, and then roasting the same, and mixing the roast with whole roasted cereal and roasted peanuts.



4. A process of preparing a flavoring extract which comprises boiling a mixture of brown sugar, honey, malt syrup, ground raisins, ground figs, and water, adding licorice to the resultant mass, mixing the same with wheat bran and roasting, mixing the roast with whole roasted wheat, whole roasted rye, whole roasted barley, and roasted peanuts, and boiling the resultant mixture in water until a syrupy liquid is obtained.

1,631,831. COUPLING OR CLAMPING DEVICE FOR SCAFFOLDING AND OTHER FRAMEWORK STRUCTURES. DANIEL PALMER JONES, Stockwell, London, England, assignor of one-half to Scaffolding (Great Britain) Limited, Stockwell, London, England. Filed Sept. 16, 1926, Serial No. 135,714, and in Great Britain Oct. 20, 1925. 5 Claims. (Cl. 304—40.)

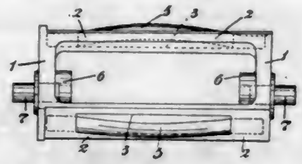


1. A device for clamping together tubular and other members of scaffolding or framework structures; comprising a disc having two coaxial stems one proceeding from each face thereof, the base of each stem conjoining the face of the disc in curved formation with a radius corresponding to the cross section of the scaffolding members which are to be clamped, gripping jaws one to be applied to each stem, said jaws extending laterally of said stems to overhang the scaffolding members contacting with the curved bases of said stems and located between said gripping jaws and said disc, said jaws being formed at their ends to partly embrace said scaffolding members to be clamped, and means coacting between said stems and said jaws to force said jaws to grip said scaffolding members between said jaws and said central disc.

1,631,832. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. MELVIN A. PENROD, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Jan. 9, 1925. Serial No. 1,484. 7 Claims. (Cl. 246—63.)

1. In combination, a railway track, means for supplying said track with alternating train controlling current which flows through the two rails in series, means for supplying the track with alternating current which flows through the two track rails in multiple, a train carried alternating current relay having two windings controlled by the currents in the two track rails respectively whereby the relay is energized in normal direction when current flows through the rails in series and in reverse direction when current flows through the rails in multiple, and train carried governing mechanism controlled by said relay.

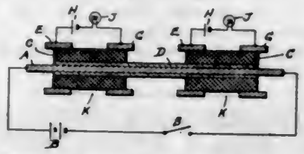
1,631,833. EXHAUST SYSTEM FOR PAPER-MACHINE DRIERS. WALDO E. ROSEBUSH, Millwood, Wash. Filed May 19, 1926. Serial No. 110,220. 7 Claims. (Cl. 34—48.)



1. A system of exhausting the hot moist air from paper machine driers including a hood adapted to fit partly over the driers, means for exhausting the hot moist air from the hood and directing the same to a distant point, means at said distant point for condensing the moisture in said air and reducing somewhat the temperature of the air, means for causing the cooled and comparatively dried air to be forced to a heater, means for heating the air at said heater, and means for directing the heated air

into the room in which the driers are located, said means directing the air so that it will pass upwardly along the side walls and along the under side of the roof for preventing condensation.

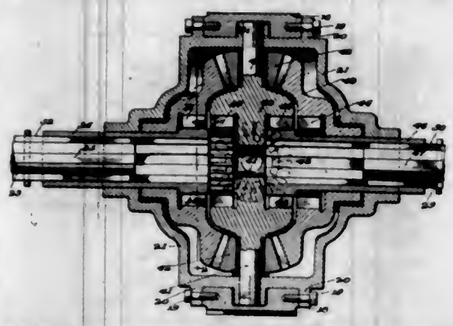
1,631,834. GELATINIZING WOOD. ARLIE WILLIAM SCHORGER, Madison, Wis., assignor, by mesne assignments, to Wood Conversion Company, Cloquet, Minn., a Corporation of Delaware. Filed May 19, 1921. Serial No. 470,933. 12 Claims. (Cl. 106—40.)



1. The method of reducing wood to a gelatinous mass, which consists in mechanically disintegrating wood fibers that have been subjected to a small amount of alkali, substantially as described.

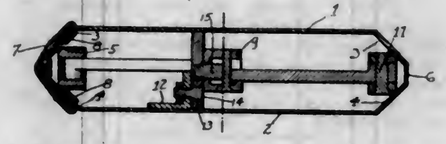
1,631,835. MANUFACTURE OF ARTIFICIAL SILK. FRIEDRICH WILHELM SCHUBERT, Apperley Bridge, near Bradford, England, assignor to Brysilka, Limited, Apperley Bridge, near Bradford, England. Filed June 21, 1926. Serial No. 117,537, and in Great Britain July 2, 1925. 3 Claims. (Cl. 242—110.)

1. A winding bobbin comprising two end pieces, a plurality of bars connecting said end pieces, and each provided with a longitudinally extending recess or slot, and a coiled spring arranged within each said recess or slot and projecting radially therefrom at intermediate points in its length, for the purpose described.



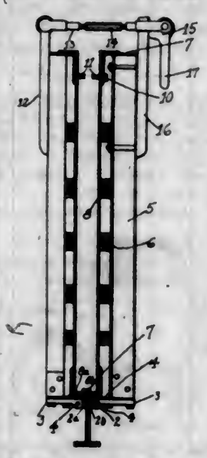
1,631,836. THERMOSENSITIVE RELAY. LESTER E. SPRAY, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 26, 1922. Serial No. 590,726. 1 Claim. (Cl. 177—352.)

A thermo-sensitive relay comprising a secondary unit made up of a cylindrical element of thermo-sensitive substance and spaced contact bands surrounding said thermo-sensitive element, and a primary element made up of a rod of electro-conducting material and a coating of electro-insulating material deposited thereon, said primary element being inserted in a hole in said secondary element.



1,631,837. POWER-TRANSMISSION MECHANISM FOR MOTOR VEHICLES. GEORGE MONROE STONE, Griswold, Iowa. Filed Mar. 17, 1925. Serial No. 16,221. 1 Claim. (Cl. 74—100.)

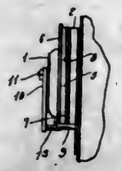
In a power transmission mechanism, the combination with a differential casing, means for rotating the casing, a pair of differential gears, a spider, pinions on the spider meshing with the gears, the spider and pinions operatively connecting the casing with the gears for causing rotation of said gears, shafts extending into the casing, sleeves slidable on the shafts and keyed to the shafts, said sleeves being provided with clutch elements, said spider having oppositely disposed clutch elements, the differential gears being provided with clutch elements opposite the clutch elements on the spider, means for causing the clutch elements of the sleeves to engage a clutch element on the differential gear or a clutch element on the spider, when a sleeve is moved along its respective



shaft for causing one of the shafts to be positively driven or for simultaneously driving both shafts independently of the differential.

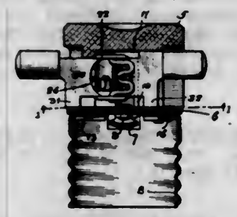
1,631,838. COLLAPSIBLE CORE. CHARLES H. TERRY, Cincinnati, Ohio. Filed Dec. 24, 1925. Serial No. 77,455. 4 Claims. (Cl. 25—131.)

1. A collapsible core device having side plates and edge blocks, a lengthwise movable member within said core, and means within the core and operable by the lengthwise movable member for positively thrusting outwardly from the center of the core, and drawing inwardly from expanded position both the edge blocks and the side plates, said means comprising arms connected to the lengthwise movable member and the edge blocks, and cams mounted on the side plates and engaged by the lengthwise movable member.



1,631,839. MOLD FOR FORMING HOLLOW PANELS. CHARLES H. TERRY, Cincinnati, Ohio. Filed Dec. 24, 1925. Serial No. 77,456. 10 Claims. (Cl. 25—121.)

1. A mold for forming plaster panels and the like comprising sections, hinged together in spaced relation along their edges, a spacing plate secured in connection with

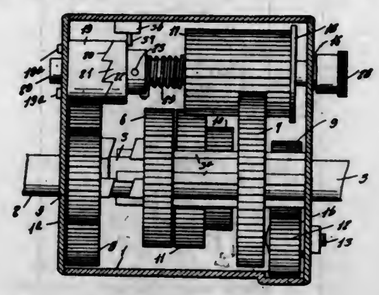


the hinging means, and adapted to define and close the gap between the sections, and means for securing said sections together along their other edges away from the hinged edges, comprising swing bolts and forks.

1,631,840. FURNACE-DOOR MOUNTING. DANA S. TEWKESBURY and ALBERT E. NEWTON, Kankakee, Ill. Filed June 5, 1924. Serial No. 718,049. 1 Claim. (Cl. 110—173.)

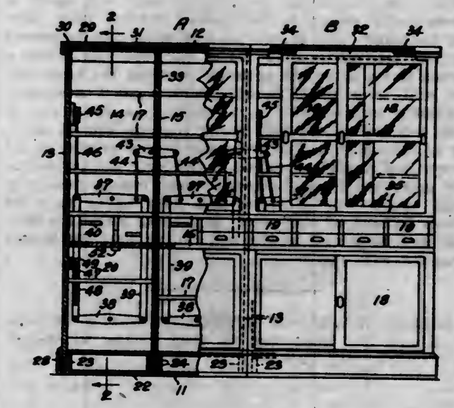
Means for slidably mounting a furnace door on its casing for upward movement to uncover the opening in the casing and downward movement to cover the opening, comprising vertical flanges on the casing, vertical channel bars on the door and embracing the flanges, the inner opposing sides of the flanges and channel bars being downwardly and inwardly inclined to carry the door bodily in the direction of the casing during its downward movement, and stops carried by the casing below the opening therein and upon which the door rests when in position to fully close the opening.

1,631,841. ELECTRIC SWITCH. GEORGE B. THOMAS, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Nov. 4, 1924. Serial No. 747,807. 5 Claims. (Cl. 173—355.)



2. In an electric switch mechanism, a reciprocating push plate having upper and lower bearings, and being apertured between said bearings, switch levers pivoted on said bearings and extending on opposite sides of the push plate, together with a pull spring passing with clearance through the aperture in the push plate and engaging both of said levers.

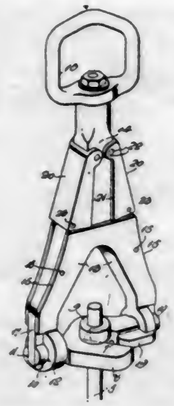
1,631,842. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HOWARD A. THOMPSON, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Feb. 6, 1924. Serial No. 690,929. 7 Claims. (Cl. 246—34.)



4. Railway traffic controlling apparatus comprising a stretch of railway track, a source of alternating current connected adjacent one end of said stretch, a second source of alternating current, means responsive to traffic conditions for at times supplying current from said second source to the other end of the stretch, and a track relay connected with said stretch adjacent said second source and responsive to current from one only of said sources.

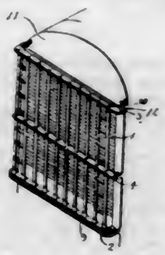
1,631,843. AUTOMATIC SHAFT LOCK FOR AUTOMOBILES. WALTER B. UFFERT, Lynbrook, N. Y. Filed May 13, 1926. Serial No. 108,836. 8 Claims. (Cl. 192—4.)

1. In combination with the transmission gearing of a vehicle, a stationary ratchet, a shaft, a ratchet carried by the shaft for cooperation with the stationary ratchet, and a gear carried by the shaft and constantly in mesh with one of the gears of the transmission.



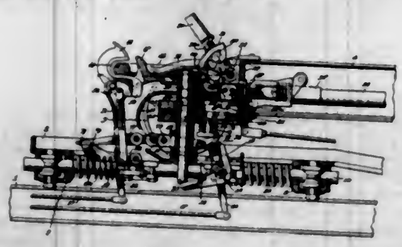
1,631,844. MERCHANDISE CABINET. ROBERT C. WALSH, St. Louis, Mo. Filed July 13, 1925, Serial No. 43,104, and in Canada Sept. 22, 1924. 5 Claims. (Cl. 211—7.)

1. In a knock-down cabinet, a base comprising a bottom board, members secured to the bottom board transversely thereof including a member at each end of the base spaced a short distance inwardly from the end thereof and a pair of members intermediate said end members, the members of said pair being spaced a short distance apart, top boards resting upon said transverse members and each connecting an end member with the adjacent intermediate member, back and front skirtings resting upon the bottom board and secured thereto and to the ends of the transverse members; upright members disposed outside the end transverse members and between the members of the transverse pairs; a top having transverse grooves at the ends and at a point intermediate the ends for the reception of the upright mem-



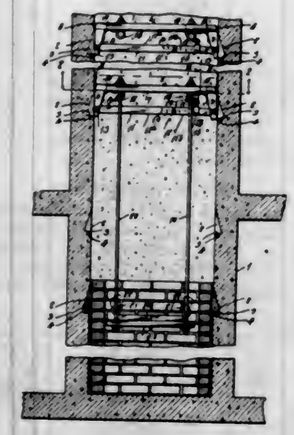
bers and longitudinal grooves at front and back; a back resting upon the base and extending into the longitudinal groove of the top, and fastening means releasably connecting the members together.

1,631,845. SUCKER-ROD ELEVATOR. EARL E. WESTMORELAND and SAMUEL G. TAYLOR, Oil City, La. Filed Aug. 16, 1926. Serial No. 129,540. 2 Claims. (Cl. 294—91.)



1. In a sucker rod elevator, a collar provided with oppositely projecting trunnions, said collar being formed with a rod-receiving throat, a vertical shank having spaced arms at its lower end formed with openings through which said trunnions pass, a guard on one of said arms for closing said throat until said shank is downwardly swung, a substantially vertical latch lever at the outer side of one of said arms and fulcrumed thereto between its ends, one of said trunnions having a notch in its outer end normally receiving the lower end of said lever to hold said shank against downward swinging with respect to the collar, the upper end of said lever being outwardly spaced from the arm on which it is fulcrumed, a lever releasing handle pivoted at its lower end to said upper end of the lever and pivoted at its upper end to said shank, whereby inward forcing of said handle will so swing said lever as to move its lower end out of said notch, and spring means for moving said lever and handle to normally hold the former engaged with the notch.

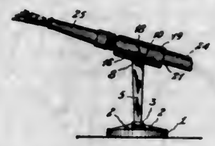
1,631,846. RADIATOR GUARD. HARVEY B. WILSON, Athens, Ill. Filed Nov. 11, 1925. Serial No. 68,317. 2 Claims. (Cl. 293—54.)



1. In a radiator guard of the character described a pair of spaced parallel horizontally disposed brackets provided each with a plurality of perforations accommodating corresponding ends of a like number of upright rods; swedged shoulders spaced from each end of said rods providing stop means therefor; a central bracing rib parallel with said brackets adapted to brace said rods in the middle and a plurality of spaced horizontal rungs secured between the two outer pairs of upright rods and between the inner pair of rods; whereby a cold weather shield being mounted on a roller may be detachably secured to the guard at different elevations of adjustment.

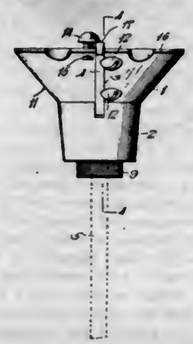
1,631,847. TRACTOR TRAILER COUPLER. SIDNEY B. WINN, Lapeer, Mich. Filed Aug. 5, 1925. Serial No. 48,201. 20 Claims. (Cl. 280—33.)

1. In a tractor trailer combination wherein a tractor is adapted to have its rear end backed under the forward end of a trailer and coupled thereto, and wherein the tractor includes a coupling pin:—means on the forward end of the trailer for engagement with the tractor pin to operatively couple the tractor and trailer, said means comprising a set of jaws adapted to be opened and closed relative to said tractor pin, said jaws being supported from said trailer to be opened and closed by disengagement and engagement of said tractor relative to said trailer, jaw holding means supported from said trailer adapted to hold said jaws closed about the tractor pin, and means operatable from said tractor adapted to release said jaw holding means and permit of said jaws being opened.



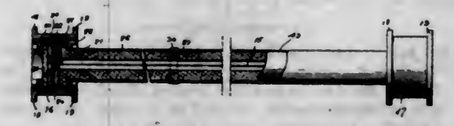
1,631,848. PORTABLE SCAFFOLD. HARVEY J. YAGER, Seattle, Wash. Filed Aug. 1, 1925. Serial No. 47,602. 1 Claim. (Cl. 304—15.)

A scaffold comprising supports, posts upon the upper ends of which the supports rest, said posts being downwardly and outwardly inclined, means pivoting the upper ends of the posts to the supports to permit the posts to be swung inwardly, eyebolts carried by the supports,



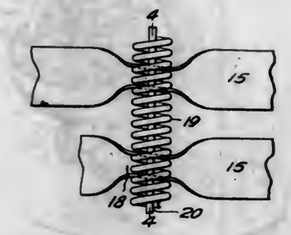
beams provided with eyebolts, boards carried by the beams, and hanger rods connected to the eyebolts of the beams and provided with hooks detachably engaging the eyebolts of the supports.

1,631,849. SPRINKLING-HOSE SUPPORT. HERALD P. ARNT, Lakewood, Ohio. Filed Mar. 25, 1922. Serial No. 546,734. 4 Claims. (Cl. 248—29.)



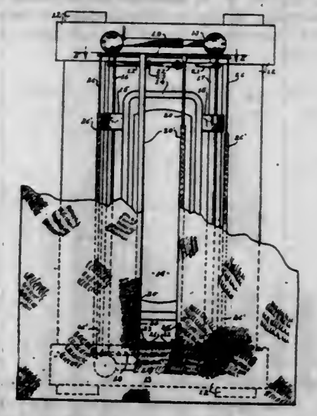
4. A device of the character described comprising the combination of a support, a bolt carried thereby and having a head fashioned with a curved surface, a pair of clamping elements each having a complementally curved surface, the latter being fashioned each with an elongated aperture, said bolt being loosely passed through said apertures, the arrangement being such as to permit reciprocal adjustment of said elements both along and crosswise of said bolt, a washer fashioned with a curved surface opposed to the corresponding bolt head surface and adapted to cooperate therewith to clamp said elements against said support and a nut for drawing said head and nut toward each other to bind the parts together.

1,631,850. VALVE-REFACING TOOL. LAWRENCE O. BEARD, Lancaster, Pa. Filed Oct. 9, 1926. Serial No. 140,613. 3 Claims. (Cl. 90—12.5.)



1. A valve refacing tool comprising a cutter head having an elongated slot therein, a cutter blade adapted for insertion in said slot, headed screws on opposite sides of said slot, the heads of said screws adapted to hold and guide said blade in said slot, and means for locking the cutter blade in said slot.

1,631,851. FUSE. CHARLES E. BENNETT, Decatur, Ga. Filed Sept. 23, 1926. Serial No. 137,309. 11 Claims. (Cl. 200—131.)

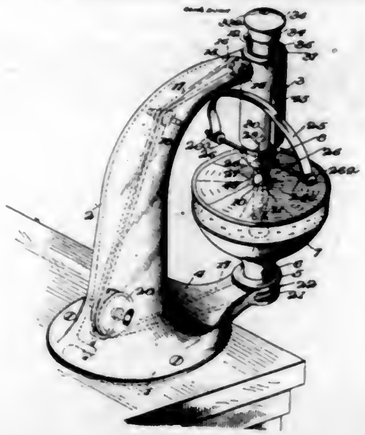


1. In a high voltage fuse, a fuse casing sealed at its opposite ends against rupture thereat on the blowing of the fuse having a bore of restricted cross-section to afford a fuse chamber of restricted dimensions, said casing being formed of non-inflammable yieldable, flexible insulating material susceptible to rupture at a point between said ends under high internal pressure.

1,631,852. BED-BOTTOM FABRIC. RICHARD BRADSHAW, Montreal, Quebec, Canada, assignor to Simmons Company, Kenosha, Wis. Filed July 2, 1925, Serial No. 41,176, and in Canada Sept. 13, 1924. 9 Claims. (Cl. 5—191.)

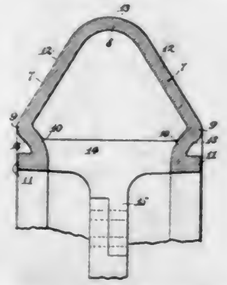
1. A bed bottom fabric comprising a series of solid flat ribbon-like strands disposed edge to edge and distorted at intervals in their length to present laterally facing bearing surfaces, and spacing means disposed between the strands and engaging the adjacent bearing surfaces thereof.

1,631,853. TOMB OR GRAVE CLOSING DEVICE. HUBERT J. BUSEY, Wichita, Kans. Filed Apr. 5, 1926. Serial No. 99,952. 2 Claims. (Cl. 27—30.)



1. In a tomb or grave closing device, in combination with a casket lowering device, pipes having rods slidably engaging therein for longitudinal variation, a curvature on the outer extremities of the rods and the pipes to slidably engage on the end frames of the casket lowering device, a fabric grass like covering attached to said rods and pipes, straps attached to the ends of said pipes and rods, said straps crossing and adapted to wind on the rollers carrying the casket drawing the said pipes and rods carrying with them the covering simultaneously to contact in the center of tomb.

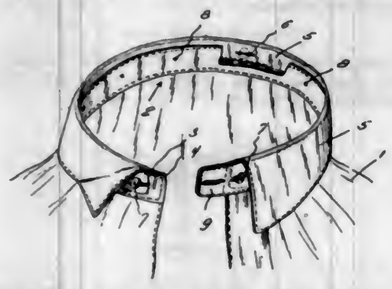
1,631,854. MACHINE FOR CORING AND DERINDING FRUIT. JOHN RAYMOND CARROLL, South Mountain, Pa., assignor of one-half to Albert C. Baurelle, South Mountain, Pa. Filed July 3, 1925, Serial No. 41,401. Renewed Nov. 23, 1926. 10 Claims. (Cl. 146—3.)



1. In a machine of the character described, a support for the fruit, a coring tool, a reciprocable shaft carrying

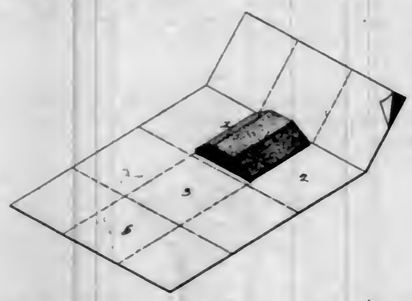
said tool, an operating member at one end of said shaft, yieldable means between the operating member and the shaft, means for limiting the movement of the shaft, and

ejecting means cooperable with the coring tool and actuated from the operating member when the same moves toward the shaft.



1,631,853. TIRE-BUILDING CORE. BARTHOLD DE MATTIA, Clifton, N. J., assignor to De Mattia Brothers, Inc., Garfield, N. J., a Corporation of New Jersey. Filed Oct. 23, 1923. Serial No. 670,336. 2 Claims. Cl. 154—9.)

2. A tire building core having a shaping surface substantially triangular in cross section, downwardly extending side walls at the base of said triangular cross section, and recesses in each side wall extending beneath the base of the triangular shaping surface of the core.



1,631,856. SHIRT. ROBERT G. DRAY, Savannah, Mo. Filed Aug. 18, 1925. Serial No. 51,053. 1 Claim. Cl. 2—116.)

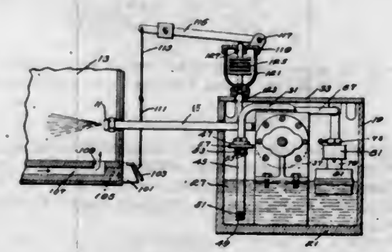
A shirt provided with a neck band composed of inner and outer sections, said sections being stitched together at their lower edges to the shirt, and extending from one of the forward edges of the shirt to a point beyond the other forward edge whereby to form a tab, the upper edges of the tab forming portion of the neck band being stitched together, the neck band being open at its upper edge to provide a pocket for the reception of a collar, buttons carried by the inner section of the neck band, the outer section being provided with button holes directly opposite said buttons, the tab portion of the neck band being provided with a through button hole adapted for cooperation with a button on the opposite side portion of the neck band when the neck band is closed, and a separable and reversible collar insertible

in said pocket and provided with button holes for cooperation with the first mentioned buttonholes and buttons.

1,631,857. RAILWAY SIGNAL TORPEDO. FRANK DUTCHER, Versailles, Pa., assignor to Standard Railway Fusee Corporation, Boston, Mass., a Corporation of New York. Filed Sept. 22, 1925. Serial No. 57,843. 1 Claim. (Cl. 246—487.)

The combination in a railway signal torpedo, of an explosive tablet; a rectangular wrapper which is folded over the tablet in such manner that there will be no seam on the upper surface of the torpedo, the seam being located under the torpedo; a reinforcing strip extending at right angles to the folded paper; and fastening means extending parallel with said reinforcing strip, the side extensions of the folded wrapper being folded under the fastening means, and the ends of the reinforcing strip being folded under the folds of the wrapper.

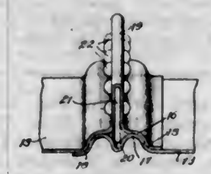
1,631,858. PROCESS OF PREPARING A FOOD PRODUCT AND PRODUCT RESULTING THEREFROM. SIMON GELFAND, Baltimore, Md. Filed Sept. 9, 1924. Serial No. 736,797. 4 Claims. (Cl. 99—11.)



1. An improved process for the manufacture of a food product consisting of dispersing roasted-peanut butter in an emulsion including edible oil, egg yolk, condiments and an aqueous liquid.

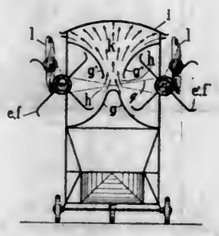
3. A new food product, including an emulsion of edible oil, yolk substance, and condiments dispersed in aqueous liquid, and intermixed roasted peanut butter.

1,631,859. LIQUID-FUEL-BURNING APPARATUS. GEORGE E. GOODRIDGE, Reading, Mass., assignor to Ballard Service Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 2, 1927. Serial No. 165,387. 10 Claims. (Cl. 158—36.3.)



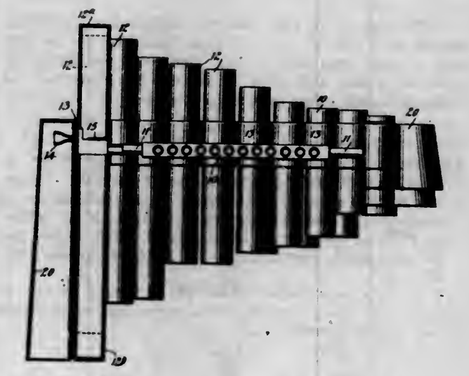
1. A liquid fuel burning apparatus comprising a burner nozzle, a main fuel reservoir, an intermediate, enclosed chamber of relatively small capacity in proximity to the

burner nozzle, said chamber having an air admission opening and an air-supplied space in the upper part thereof, a fuel supply pump for withdrawing fuel from the main fuel reservoir and having provision for delivering the same to the supply chamber, said supply pump having its discharge also connected to a return conduit leading back to the main reservoir to return the excess thereto, a float controlled delivery valve for the regulating the delivery by said pump to the supply chamber to maintain an approximately constant level therein below said air-supplied space, a main pump for delivering commingled air and liquid fuel through the burner nozzle, said supply pump being connected to operate only with and during the operation of the main pump, and said main and supply pumps being enclosed within the supply chamber but raised above the level of the liquid fuel maintained therein sufficiently to prevent the entrance of liquid fuel into



the working parts through the exposed joints thereof, a motor for driving said pumps located outside of said enclosed chamber, a suction conduit for said main pump provided with an inlet orifice immersed below the level of the liquid fuel within the supply chamber and a second air orifice above the liquid fuel level and open to the air-supplied space of said chamber, whereby a commingled mixture of air and liquid fuel is drawn from said chamber into said main pump and delivered to the burner while the leakage from said pumps drains into the liquid fuel in the bottom of the supply chamber and is delivered by the main pump to the burner, the gases arising from the fuel being also drawn into the pump and prevented from escaping outside the chamber and whereby the available supply of fuel by said supply pump for said chamber is cut off when the burner ceases operation.

1,631,860. CAR-ROOF CONSTRUCTION. KARL M. HAMILTON, Chicago, Ill., assignor, by mesne assignments, to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Delaware. Filed June 1, 1920. Serial No. 385,471. 13 Claims. (Cl. 108—504.)



1. In a metal car roof, in combination: contiguous roof sheets lapped at their transverse marginal portions and provided with reversely-extended companion ribs respectively formed in said lapped marginal portions, and a filler interposed between the companion ribs of the contiguous roof sheets, substantially as specified.

1,631,861. FLYING MACHINE. ADELHEID HANSCHKE, née SACHS, Berlin, Germany. Filed Sept. 11, 1926. Serial No. 134,917, and in Germany June 25, 1926. 3 Claims. (Cl. 244—16.)

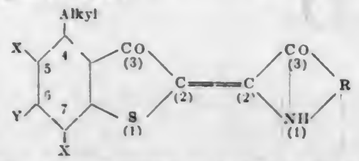
1. A flying machine comprising a wheeled frame, a roof covering said frame, two longitudinal, horizontal shafts arranged at opposite sides of said frame on the same level, vaned supporting wheels connected to said shafts, curved plates arranged so as to embrace the inside halves of said wheels and form an air space between them under said roof, means for rotating the wheels in opposite directions so that their outside halves will act on the air for upward propulsion, the plates being interrupted so that air will be forced by the upwardly moving vanes into the space under the roof, and propellers mounted in said frame so that they can be used for forward flight.

1,631,862. MUSICAL INSTRUMENT. WALTER HANSELL, Brooklyn, N. Y. Filed May 25, 1926. Serial No. 111,607. 12 Claims. (Cl. 84—330.)

6. A musical instrument including a mouthpiece, a series of sounding tubes closed at both ends, pipes constituting air passageways connecting the intermediate portions of all of said tube to the mouthpiece, the mouthpiece ends of said pipes being arranged in lateral juxtaposition, openings in the tubes arranged at the opposite sides from the pipe openings, one opening in each tube constituting an air inlet opening, the other opening in each tube constituting an air outlet opening, and non-vibratory transverse divider plates in the tubes for split-

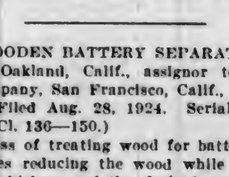
ting the air streams entering through the inlet openings, certain of the tubes sounding as air is drawn inwardly through the pipes, the other tubes sounding as air is blown outwardly through the pipes.

1,631,863. CHECK PROTECTOR. ROBERT I. HARRIS, Punta Gorda, Fla. Filed Aug. 11, 1926. Serial No. 128,683. 7 Claims. (Cl. 101—3.)



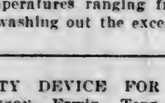
1. A pocket knife having blades and back springs to hold them in position; in combination, a pair of impression plates, means carried by the back springs rigidly holding one of the plates and guiding the other plate, and a movable lever having connection with said other plate for moving it in respect to the rigidly held plate.

1,631,864. FLY SWATTER. NORTON T. HENDRICKSON and CHARLES ROHOLT, Hoople, N. Dak. Filed May 11, 1926. Serial No. 108,356. 9 Claims. (Cl. 43—137.)



1. In a device of the character described, a rod terminating in a slotted head, a slide operating in the slot and a lever controlled by said slide, said rod being extensible, a link and lever connection for operating the slide, said link being extensible.

1,631,865. VIOLET VAT DYESTUFF OF THE 2-THIONAPHTHENE-2-INDOLINDIGO SERIES. RICHARD HERZ, Frankfort-on-the-Main, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 5, 1926, Serial No. 127,473, and in Germany Nov. 6, 1924. 4 Claims. (Cl. 260—49.)



1. As new compounds violet vat dyestuffs of the 2-thionaphthene-2-indolindigo series corresponding probably to the general formula:

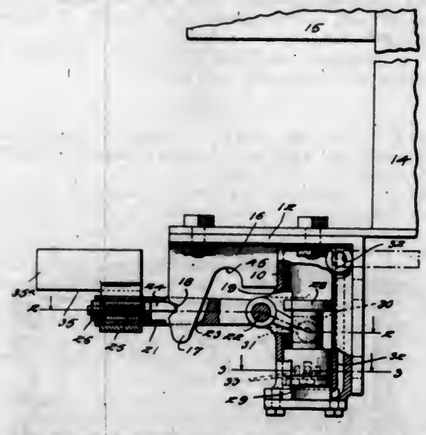
wherein X means a halogen or an alkyl-group, Y means hydrogen, which may be substituted by a halogen or an alkylgroup and R means an arylresidue, which may contain further substituents, which dyestuffs are, when dry, violet powders, soluble in concentrated sulfuric acid to a greenish to blue solution, forming with alkaline hydrosulfite a yellowish vat, from which cotton and wool is dyed in violet to bluish violet shades of an excellent fastness especially to washing, chlorine and light, which dyestuffs are substantially identical with the dyestuffs, obtainable by condensing oxythionaphthene derivatives, corresponding probably to the general formula:

wherein X means a halogen or an alkyl-group, Y means hydrogen which may be substituted by a halogen or an alkylgroup, with an o-isation body of the general formula:

wherein R means an arylresidue, which may contain further substituents, R_1 means a halogen or an arylidogroup.

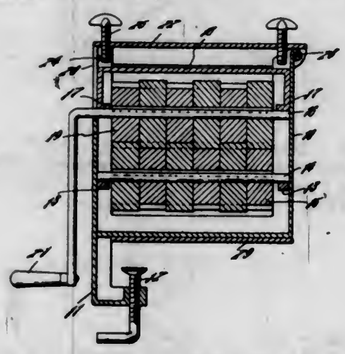
1,631,866. APPARATUS FOR PRODUCING AND PROJECTING CINEMATOGRAPHIC PICTURES. ANTON HEUBUNG, Munich, Germany. Filed Feb. 18, 1926, Serial No. 89,000, and in Germany June 23, 1924. 2 Claims. (Cl. 88—16.4.)

1. A cinematographic apparatus including a cinematographic film, an objective, an erecting prism the entering and emerging rays of which are coaxial, said prism being disposed with its longitudinal axis on the axis of the objective, and all of its deflecting surfaces at right angles to a plane which includes the optical axis, and which plane is at an angle of 45° to a plane defined by the optical axis and the longitudinal axis of the film.



1,631,867. WOODEN BATTERY SEPARATOR. ELIE S. HUMBOLDT, Oakland, Calif., assignor to The Pacific Lumber Company, San Francisco, Calif., a Corporation of Maine. Filed Aug. 28, 1924. Serial No. 734,815. 9 Claims. (Cl. 136—150.)

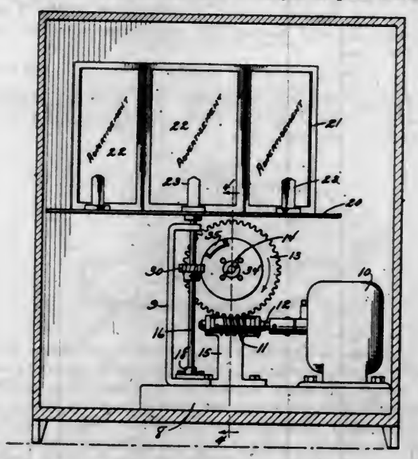
1. The process of treating wood for battery separators which comprises reducing the wood while green to substantially the thickness of the desired separators, soaking the green slabs in an aqueous solution of a sulfite or bisulfite at temperatures ranging from 15 C. to the boiling point, and washing out the excess of reagent.



1,631,868. SAFETY DEVICE FOR LOCOMOTIVES. HARLY S. JOHNSON, Erwin, Tenn. Filed July 23, 1926. Serial No. 124,519. 7 Claims. (Cl. 246—170.)

1. In a safety device for indicating derailments of locomotive trucks and in combination with the frames of the truck and locomotive, a cylinder having a port in the wall thereof secured to one of said frames, a connection between the cylinder at one end thereof and a train line pipe of the locomotive, a piston within the cylinder and normally urged to the opposite end of the cylinder by the train line pressure, a handle for shifting the piston.

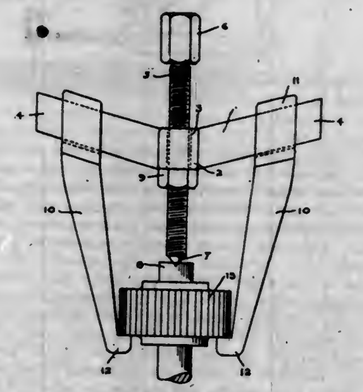
a latch yieldably resisting movement of the handle from a position in which the piston closes communication between the train line pipe and said port and an operative connection between the other of the frames and said handle shifting the handle to disengage the same from the latch upon abnormal separation of said frames.



1,631,869. MEAT TENDERER. WESLEY F. JURBY, Norcatur, Kans. Filed May 2, 1925. Serial No. 27,601. 1 Claim. (Cl. 17—26.)

A meat tenderer comprising an elongated channeled frame, bearing members carried thereby, a driven shaft journaled upon said bearings, a drive shaft carried by said frame and disposed in spaced superimposed relation to the aforementioned shaft, gear members arranged in staggered relation upon the shafts and adapted for intermeshing engagement, a substantially inverted U-shaped frame carried by the first mentioned frame and terminating to provide bearing portions for engagement with portions of the drive shaft, a top for the elongated frame, and adjusting means carried thereby for engagement with the inverted U-shaped frame to regulate the biting action of said gears.

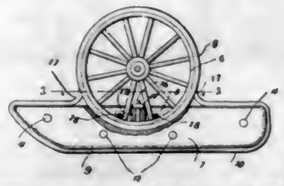
1,631,870. CHANGEABLE SIGN OR ADVERTISING DEVICE. SAMUEL KATZ, Greenville, S. C. Filed July 29, 1924. Serial No. 728,955. 2 Claims. (Cl. 40—33.)



1. A sign or display device comprising a casing having a display portion, a rotor disposed in the casing and having a plurality of sides arranged to be positioned successively in co-incidence with the said display portion of the casing, a substantially U-shaped upright frame in said casing, a shaft carrying the said rotor and arranged in bearings formed in the arms of the upright frame, a gear having teeth formed at an angle to the plane of rotation of the gear and secured to said shaft, a disk mounted for rotation, a lateral curvilinear cam portion cut from said disk and arranged to pass through the interdental spaces of the said gear and turn the rotor step by step and permit said rotor to dwell with its sides in co-incidence with the display portion of the casing, a worm gear having secured thereto the said disk and motor arranged in the casing and having a worm meshed with said worm gear.

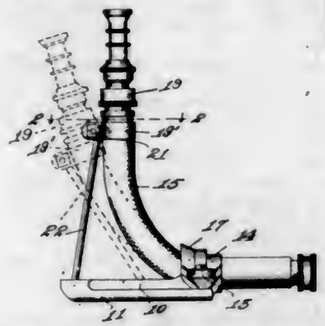
1,631,871. PROCESS OF MANUFACTURING MERCAPTO-BENZO-THIAZOLE. WILLIAM J. KELLY, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 7, 1922. Serial No. 580,313. 13 Claims. (Cl. 260—44.)

3. A method of producing mercaptobenzothiazole that comprises associating aniline with sulphur and carbon bisulfide at a temperature between 150° C. and 300° C. and under a pressure between 100 and 700 pounds per square inch.



1,631,872. GEAR PULLER. HENRY JOHN KNIGHT, Vancouver, British Columbia, Canada. Filed Nov. 21, 1925, Serial No. 70,570, and in Canada Apr. 25, 1925. 2 Claims. (Cl. 29—85.)

1. A gear puller comprising a yoke presenting a central body portion having a non-threaded bore extending therethrough and a pair of arms rigidly connected at their

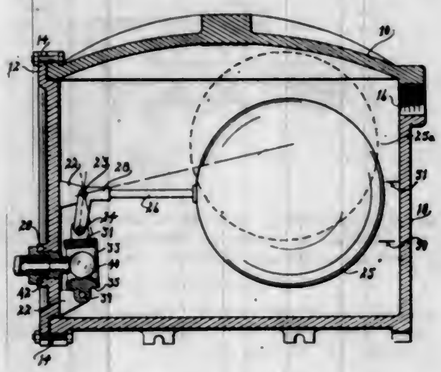


inner ends to said central body portion and inclining upwardly therefrom, a pair of gear grips formed at one end to engage a gear and provided at the opposite ends with inclined transverse openings slidably receiving the arms of the yoke therethrough, a threaded member passing loosely through the bore of said yoke and a nut threaded on said member and engageable with one side of the yoke.

1,631,873. WHEEL RUNNER. IRA KNIGHT, Midland, Mich. Filed June 22, 1926. Serial No. 117,811. 3 Claims. (Cl. 280—13.)

1. A runner adapted to be applied to a vehicle wheel, said runner comprising an elongated body portion, means to secure the body portion to a wheel with portions extending forwardly and rearwardly from the wheel, and a tread strip extending along the under face of said body and having its end portions extended upwardly about the ends of the body and along its upper face in contact therewith and having its ends bent upwardly to provide braces adapted to engage the front and rear portion of a tire-carrying rim of a wheel between the tire-engaging side flanges of the rim.

1,631,874. NOZZLE HOLDER. DANIEL LASHER and ALVIN S. PLANK, Port Huron, Mich. Filed Mar. 31, 1926. Serial No. 98,892. 1 Claim. (Cl. 248—29.)

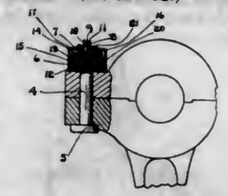


A hose holder comprising an elongated channeled plate having a plurality of spaced aligned depressed portions arranged in the channel portion thereof, supporting arms formed upon the under side and adjacent the forward end of the plate and extending outwardly and rearwardly thereof, said arms communicating with inwardly extending supporting arms secured to the opposite side edges of the plate adjacent the rear end portion thereof, a semi-circular attaching flange having outwardly extending apertured ears provided upon its opposite sides and secured to the upper side of the plate for securing an appreciable portion of the hose therebetween, the forward end of the attaching flange is upwardly inclined to permit upward swinging movement of the hose, and a clamping band secured to the forward end of the hose and having a pivotally mounted pin depending therefrom and terminating in a rounded end portion for selective engagement within any one of the plurality of depressed portions in the channeled plate for holding the forward end of the hose at a desired inclination.

1,631,875. MANUFACTURE OF STABILIZED METALDEHYDE. EMIL LÖSCHER, Basel, Switzerland, assignor to The Society Elektrizitätswerk Lonza, Gampel and Basel, Switzerland. Filed June 26, 1922. Serial No. 571,041, and in Germany Dec. 3, 1921. 3 Claims. (Cl. 260—140.)

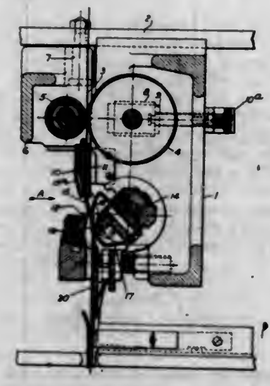
1. A process of stabilizing metaldehyde consisting in mixing it with ammonium carbonate.

1,631,876. STEAM TRAP. HERMAN C. MACAULAY, Rumford, Me. Filed Mar. 21, 1924. Serial No. 700,750. 4 Claims. (Cl. 137—103.)



1. In a steam trap valve structure, a ball valve and the means for completely shielding said ball from fluid currents when in open position which comprises a single opening valve box.

1,631,877. CALK ATTACHMENT FOR BOOTS. JOHN WILLIAM MCNEILL and JOHN MICHELSEN, Wistaria, British Columbia, Canada. Filed Dec. 5, 1925. Serial No. 73,470. 1 Claim. (Cl. 36—64.)

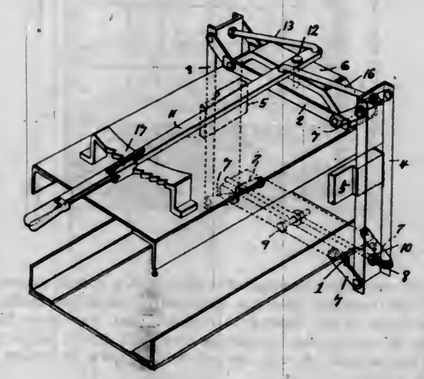


A calk attachment for boots comprising relatively adjustable calk carrying members presenting sole engaging portions curved longitudinally for a portion of their length to conform to the bottom contour of the boot sole, the remaining portion of the length of each member being bent twice at right angles to provide a vertical portion adapted to engage the breast of the heel and a horizontal portion adapted to flatly engage the bottom portion of the heel, said members being equipped with means for gripping the same to the sole of the boot when the members are adjusted to predetermined positions and being adapted to be secured in such adjusted positions by fastening devices passed into the heel of the boot through the horizontal heel engaging portions of the members.

1,631,878. AUTOMATIC TAKE-UP BOLT. OTTO MILLER, Cincinnati, Ohio. Filed Apr. 26, 1924. Serial No. 709,133. 3 Claims. (Cl. 85—32.)

1. An automatic take up bolt comprising a threaded member having a reduced shank, a nut having screw threads for cooperation with the threaded member, a nut tightening spring attached to the nut, and a pawl spring, said shank having a ratchet shaped end adapted to facilitate tensioning of the nut tightening spring and to retain the spring against release, said nut having ratchet teeth on one face for cooperation with the pawl spring, whereby loosening movement of the nut will be prevented in the event of breakage of the nut tightening spring.

1,631,879. MACHINE FOR AUTOMATICALLY CUTTING MOVING WEBS OF PAPER OR OTHER MATERIALS INTO SHEETS. WALTER EVERETT MOLINS, London, England. Filed Oct. 27, 1925, Serial No. 65,211, and in Great Britain Dec. 5, 1924. 3 Claims. (Cl. 164—68.)



1. A device for cutting strips from a travelling web of paper or like material which comprises a fixed blade, a movable blade adapted to co-operate therewith to effect a shearing action upon the web fed through the space between the separated blades, and a resilient deflector inclined to the plane of the fixed blade in such a manner that the lading edge thereof is located in close proximity to the edge of the fixed blade and in the path of the moving blade for the purpose hereinbefore set forth.

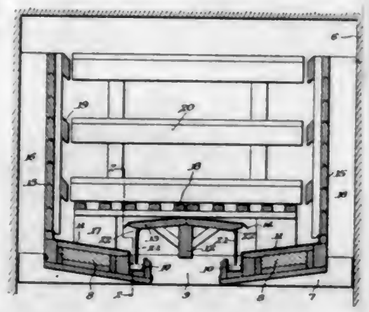
1,631,880. STUD-AND-SOCKET-TYPE FASTENING. THOMAS MORTON, Moseley, England. Filed July 8, 1926, Serial No. 121,188, and in Great Britain July 15, 1925. 3 Claims. (Cl. 24—110.)

1. In stud and socket type fastenings of the kind specified, the combination comprising a two piece expansible element, resilient means for connecting the two pieces of the said element, and an axially movable pin whereby the operative ends of the said pieces can be expanded, said pin being formed with a swelling, and a wire spring adapted to engage behind said swelling in either of the two positions of the pin.

1,631,881. STRAW PRESS. JOHN F. MURRAY, Otterbein, Ind., assignor of one-half to Walter Irvin, Otterbein, Ind. Filed Apr. 9, 1926. Serial No. 100,948. 1 Claim. (Cl. 100—23.)

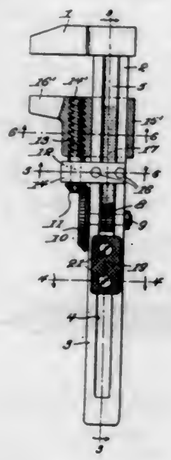
In a pressing chamber of a baling machine, channel beams at the sides, top and bottom of said chamber at one end thereof, links pivotally connecting the ends of said beams together, presser plates carried by the side beams, a bridge piece carried by the top beam, means adjustably connecting the lower ends of the side beams for moving the ends thereof toward and away from each other, an operating lever pivoted at one end to the bridge piece, connecting rods having their outer ends adjustably connected to the upper ends of the side beams and their inner ends connected to the lever at opposite sides of the pivot point whereby lateral movement of said lever will move the upper ends of said side beams toward and away from each other and means for holding said lever in adjusted positions.

1,631,882. FILE. MONTE E. NORDAN, West Frankfort, Ill. Filed Feb. 11, 1926. Serial No. 87,645. 4 Claims. (Cl. 29—78.)



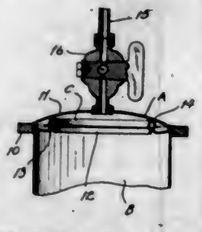
1. A flat file embodying a main body portion having exposed cutting surfaces provided at each face thereof for simultaneous abrading of two confronting surfaces, and plain surfaced flanges extending along each edge of the body portion and projecting beyond the plane of only one of the cutting surfaces.

1,631,883. REFRIGERATOR. JACOB B. OTTENHEIMER, Baltimore, Md., assignor to Ottenheimer Bros. Inc., Baltimore, Md., a Corporation of Maryland. Filed Nov. 3, 1924. Serial No. 747,596. 4 Claims. (Cl. 62—46.)



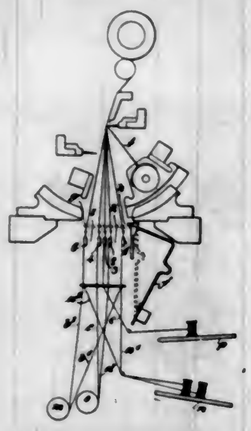
1. The combination of a chamber to be refrigerated; an ice support mounted in the upper portion thereof; an inclined draining bottom beneath a portion of said sup-

port, said bottom having a water collecting gutter adjacent its lower edge and there being an air port for directing air past the lower edge of said draining bottom; a water shedding baffle overlying said port and overhanging a portion of said bottom to shield said air port



from the direct passage of water; and a splash arresting screen mounted beneath said water shedding baffle in the path of air flowing to said air port, the lower margin of said screen projecting into said gutter below the upper margin of, and out of contact with the walls of, the gutter.

1,631,884. ADJUSTABLE WRENCH. VICTOR EMANUEL PAULSON, Esmond, S. Dak. Filed July 21, 1926. Serial No. 124,036. 2 Claims. (Cl. 81—133.)



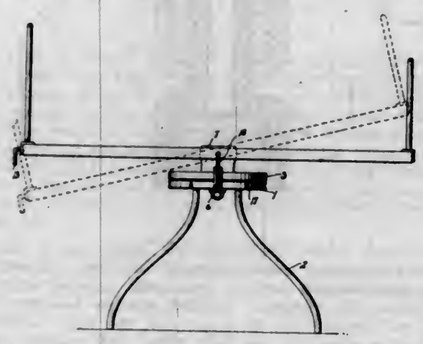
1. A wrench including a jaw having a shank extending at a right angle therefrom, a slidable jaw on the shank, a lug on the shank, a screw co-engaging with the slidable jaw and having a non-threaded portion which is journaled through the lug, a toothed element carried by the screw, a second toothed element engaging therewith and having a shaft journaled on the shank, a toothed wheel on said shaft, a rack-bar engaging the toothed wheel, and a handle fixedly secured on the rack-bar slidable on the handle portion of the shank.

1,631,885. VACUUM PACKING APPARATUS. FRANK W. L. PEERLES, St. Louis, Mo., assignor to James L. Hopkins, trustee, St. Louis, Mo. Filed June 30, 1926. Serial No. 119,783. 5 Claims. (Cl. 99—2.)

1. In a vacuum-packing apparatus a resilient suction-head unit and an exhauster-connection extending through said unit.

1,631,886. LACE FABRIC AND METHOD OF PRODUCING SAME. SAM PEPPER, Nottingham, England. Filed May 15, 1926, Serial No. 109,406, and in Great Britain May 12, 1925. 6 Claims. (Cl. 96—24.)

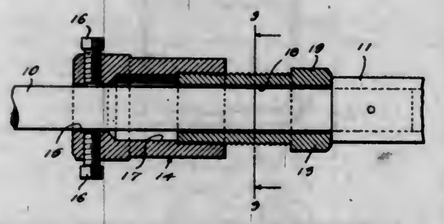
2. The method of producing double fronted fabrics on twist lace machines, which consists in dividing the basic threads employed into a front group and a back group, through which the bobbin threads are carried and with which they twist, and shifting the spool threads of one group of basic threads to cause relief to be produced on one face of the fabric, and shifting the spool threads of the other group of basic threads to produce a design on the other face of the fabric.



1,631,887. PHOSPHORUS CONTAINING NUCLEAR SUBSTANCE OF MILK CASEIN IN A CHEMICALLY-PURE FORM AND PROCESS OF MAKING THE SAME. SWIGEL POSTERNAK, Chene-Bougeries, near Geneva, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Jan. 11, 1924, Serial No. 685,717, and in Switzerland Jan. 25, 1923. 6 Claims. (Cl. 260—98.)

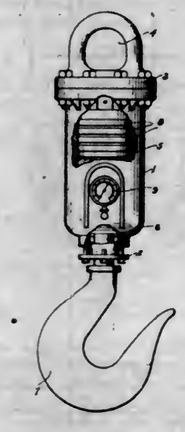
5. In the process for the manufacture of the phosphorus containing organic nuclear substance of milk casein in a chemically pure form, the step of decomposing a heavy metal salt of the organic phosphorus compound obtained by the tryptic digestion of milk casein with a solution of alkali metal carbonate.

6. As a new product the phosphorus containing organic nuclear substance of milk casein, which constitutes in



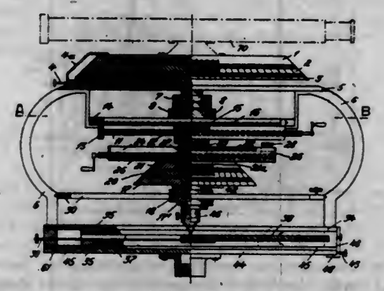
form of the free acid a white, amorphous powder containing 5.86 per cent of phosphorus, which is soluble in water, giving a clear solution, nearly insoluble in alcohol, and insoluble in other organic solvents, and which, when reacted upon with inorganic bases, forms salts partly soluble partly insoluble in water.

1,631,888. HOSPITAL BED. JOSEPH C. POW, Hays, N. C. Filed July 25, 1924. Serial No. 728,213. 1 Claim. (Cl. 5—60.)



A bed comprising a supporting plate, legs connected with the same, a second plate mounted on the first plate, anti-friction means between the two plates, a centrally arranged stud on the second plate passing through the center of the first plate, a nut threaded on the bottom of the stud, an upwardly extending projection on the second plate having flat sides with notches formed in one edge thereof, a bed frame pivotally connected with the projection so that it can be moved about a horizontal axis, said frame including a pair of parallel strips at the center thereof between which the projection passes, with the pivot pin passing through the strips and the projection, a spring pressed locking bar carried by the bed frame and having a part adapted to engage any one of the notches in the projection for holding the bed frame in adjusted position, a second spring pressed locking bar on the frame, the first plate having holes therein adapted to receive the inner end of said last mentioned locking bar and a bracket on the second plate having a hole therein through which a part of the locking bar extends for engaging one of the holes in the first plate.

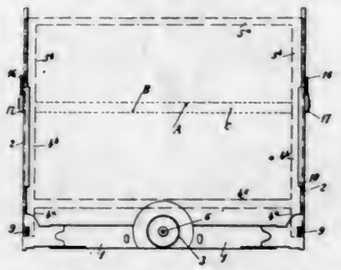
1,631,889. DRIVE-SHAFT PULLER. WILLIAM J. RAPPLEY, Billings, Mont. Filed Nov. 27, 1926. Serial No. 151,139. 1 Claim. (Cl. 29—85.)



In a device for removing couplings from shafts, a female member having at one end a bore adapted to receive and slidably fit the shaft, means projecting through the wall of the member at said end for holding the member against displacement longitudinally of the shaft, the opposite end of the member having an enlarged bore the wall of which is threaded, an exteriorly threaded male member engaged in said bore and having a bore slidably receiving the shaft, the projecting end of said male member being adapted for engagement with a wrench whereby it may be rotated and having its end face adapted for engagement with the coupling to be removed.

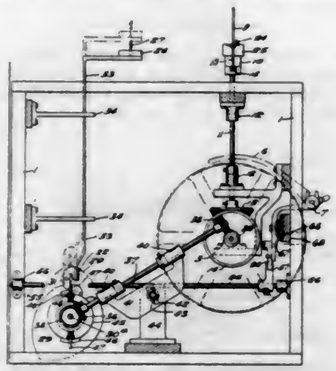
1,631,890. HYDRAULIC SWIVEL HOOK. FRANK REDICK, Parkerton, Wyo. Filed Feb. 25, 1924. Serial No. 695,137. 1 Claim. (Cl. 265—47.)

A swivel hook of the class described comprising a cylinder adapted to contain a liquid and having a central opening at its lower end, a cap detachably arranged upon the upper end of the cylinder, an eye integral with the cap, a piston movable in the cylinder, a stem connected with the piston and passing through the opening, and having a hook on its lower end, a removable gland connected with the bottom of the cylinder and surrounding the stem, an annular outstanding flange on the gland, bolts engaged with the flange and threaded into the end of the cylinder to retain said gland in position, a gauge connected with the bottom of the cylinder so that it will be acted upon by the liquid into the same, and a substantially U-shaped protective housing for the gauge and being formed integral with the cylinder in a manner to overlie and be disposed upon opposite sides of said gauge.



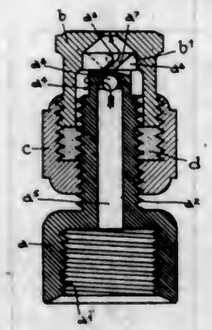
1,631,891. SURVEYING INSTRUMENT WITH DRAWING DEVICE. MART SANDER, Hapsal, Esthonia. Filed May 7, 1925, Serial No. 28,599½, and in Germany Mar. 31, 1923. 2 Claims. (Cl. 33—67.)

2. A surveying instrument comprising a base, a plotting table mounted for movement on the base in any direction in a horizontal plane, an upper protractor system including a fixed member, a telescope carrying member



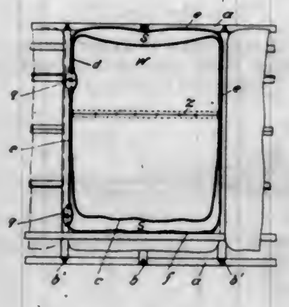
and an intermediate member, said last two members being revoluble, a lower protractor system including a lower member provided with a stylus to operate on the plotting table and revoluble upper and intermediate members, mounting means for said lower member of the lower protractor system enabling said protractor system to be moved in a horizontal plane in either of two directions at right angles to each other, means connecting said upper and lower protractor systems for independent operation and means coacting with a member of said connecting means to shift the lower protractor system laterally with respect to the upper protractor system and means to determine the position of said lower protractor system.

1,631,892. WINDOW OPENING AND CLOSING MECHANISM. JACQUES SAOUTCHIK, Neuilly-sur-Seine, France. Filed May 11, 1926, Serial No. 108,416, and in France May 18, 1925. 5 Claims. (Cl. 296—48.)



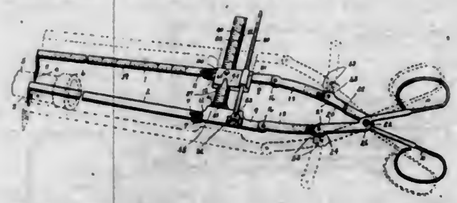
1. A mechanism for opening and closing windows on motor cars comprising a metal frame work seated in a well formed in the car body and including parallel grooved guides extending above the well, window pane carrying frames slidable in said grooves to a position within the well or a position above the same, means for operating the frames in the guides, a lid movably mounted upon the margin of the well and adapted to be automatically controlled by one of said window pane frames for closing the well when said frame has fully emerged therefrom.

1,631,893. SKEIN-WINDING MACHINE. JOHN F. SCHENCK, Sr., Lawndale, N. C. Filed May 8, 1926. Serial No. 107,715. 25 Claims. (Cl. 28—21.)



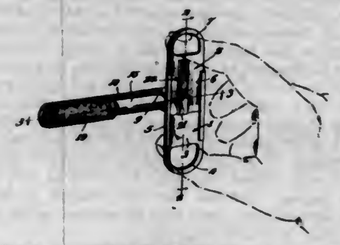
1. A skein-winding machine comprising a flyer, a thread guide, and means for moving the thread guide to cause the thread to wind substantially helically in a single layer on the flyer, said means being releasable to permit quick return of the thread guide to initial position upon completion of each thread-winding operation.

1,631,894. SPRAY NOZZLE. EDOUARD SCHLAEPFER, Lausanne, Switzerland. Filed Apr. 11, 1927, Serial No. 182,851, and in Switzerland Mar. 16, 1926. 1 Claim. (Cl. 299—117.)



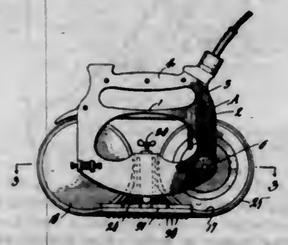
A spray nozzle comprising two complementary members arranged for axial adjustment one upon the other, the inner member having a cylindrical terminal portion provided with peripheral inclined passages widening in section toward their discharge end, the outer member having a cylindrical seat into which said terminal portion fits as said members approach their limit of relative movement in one direction, said inner member being of reduced diameter below said terminal portion forming with said outer member an annular recess, said inner member being provided with a longitudinal bore and a transverse bore communicating therewith and with said recess, said outer member being formed with a conical walled chamber in advance of the cylindrical terminal portion of said inner member communicating with the inclined passages therein, and being placed in communication with said annular recess when said cylindrical terminal portion is withdrawn from its seat in the outer member.

1,631,895. GAS CELL OF RIGID AIRSHIPS. KARL SILLER, Friedrichshafen, Germany, assignor to Luftschiffbau Zeppelin Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Filed June 15, 1926, Serial No. 116,108, and in Germany June 19, 1925. 5 Claims. (Cl. 244—3.)



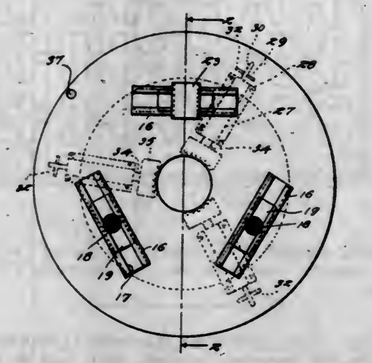
1. A combination gas cell for rigid airships comprising inner walls confining an inner space; and outer walls; said outer walls together with said inner walls confining an outer jacket space; said inner walls and said outer walls being connected to each other; said inner walls being so large that upon decrease of pressure in said jacket space they may cover substantially the upper half of said outer walls.

1,631,896. CALIPERS. HENRY A. ST. JOHN and JOHN F. GRIFFIN, Utica, N. Y. Filed Apr. 25, 1925. Serial No. 25,899. 8 Claims. (Cl. 33—147.)



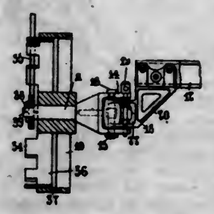
1. In a calipers, elongated members having ends bent at right angles thereto to engage the external surface of a journal, means whereby said members are maintained in parallel relation to each other, a link pivoted to each of said members and a lever adjustably secured to each link, said levers being pivoted to each other at an intermediate point, whereby to move said links and thereby cause movement of the elongated members towards and away from each other while maintaining their parallel relation.

1,631,897. ROTARY TOOTHBRUSH. BERRY V. STOLL, Louisville, Ky. Filed Aug. 6, 1926. Serial No. 127,653. 4 Claims. (Cl. 15—26.)



2. A brush comprising a handle having companion sections slidable longitudinally of each other and having overlapped inner end portions and their outer end portions adapted for engagement with the fingers of an operator, one section having its inner end portion formed with an opening and the other section having a slot communicating with the opening, a bearing carried by the first section, a shaft journaled in said bearing and extending across the opening and projecting from one side of the section, a pinion carried by said shaft and projecting through the opening and slot, a rack carried by the second section and having teeth extending across its slot and engaging said pinion to impart rotary motion to the pinion and shaft when the sections are slid longitudinally of each other, and a brush head carried by said shaft.

1,631,898. PORTABLE BELT SANDER. HAROLD A. SWAN, Coronado, Calif. Filed Dec. 31, 1924. Serial No. 759,150. 1 Claim. (Cl. 51—170.)

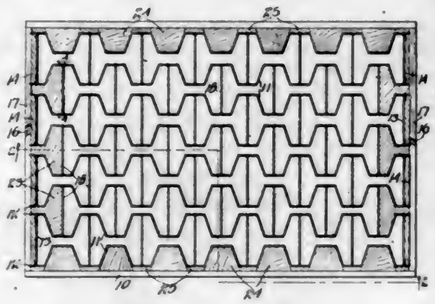


A device of the class described including a frame, a pair of rollers journaled in the frame, a belt sander trained over the rollers, means for rotating one of the rollers, and a series of flexible frictional studs positioned at the sides of and depending below the active run of the belt sander.

1,631,899. DRUM OR PULLEY ATTACHMENT. STEFAN A. TALJAN, East St. Louis, Ill. Filed July 13, 1926. Serial No. 122,249. 6 Claims. (Cl. 242—95.)

1. A drum for attachment to the hubs of spoked wheels having an opening for the passage of the hub, circumferentially spaced slides shiftable chordally of the drum at the inner face thereof, spoke engaging clamps carried by said slides and means at the outer face of the drum and shiftable radially thereof for clampingly engaging the hub of the wheel.

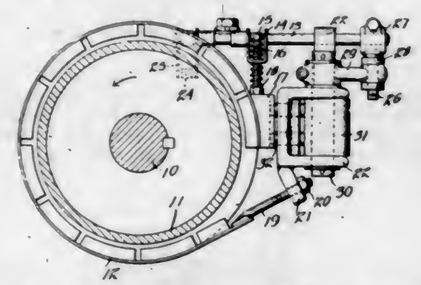
1,631,900. MEANS FOR PROPELLING WHEELED VEHICLES. JOSEPH TEMPERLEY, London, England. Filed June 28, 1924, Serial No. 723,034, and in Great Britain July 9, 1923. 1 Claim. (Cl. 280—3.)



Means for propelling wheeled vehicles comprising a wheel having a rim, a plate mounted within the rim and fixed thereto, projections on said plate extending beyond the edge of the rim, and defining axially extending recesses in said plate and a pivotally mounted lever adapted directly to engage in the recesses to rotate the wheel in either direction.

1,631,901. CONCRETE-BLOCK MOLD. WILLIAM A. THREADGILL, Miami, Fla. Filed Sept. 11, 1926. Serial No. 134,914. 10 Claims. (Cl. 25—121.)

2. A mold comprising a frame or box, core members disposed along the sides of the box and having inwardly projecting portions spaced along the same, reenforcing blocks disposed behind said inwardly projecting portions, a plurality of opposed partition members having portions projecting outwardly and inwardly in alternate relation, and separator plates disposed between said alternate outwardly extending portions and forming substantially H-shaped spaces, substantially as set forth.

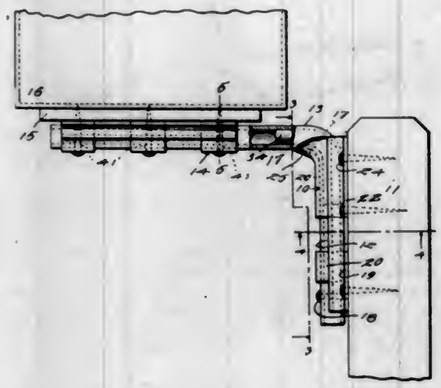


5. A mold comprising a frame, a plurality of partition members disposed tranversely therein, a plurality of

separator plates between said partition members, said partition members having their ends provided with slots, and a bar extending transversely within said slots, said

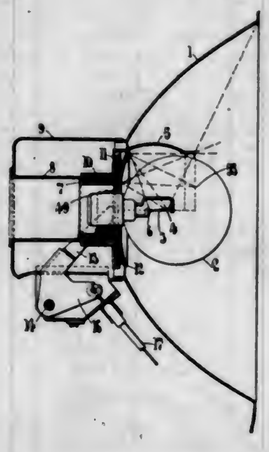
bar being adapted to be operated for jarring the partition members loose from the box, substantially as set forth.

1,631,902. AUTOMATIC BRAKE FOR VEHICLES. B. WICKLIFFE TWYMAN, Columbus, Ohio, and RALPH B. BURTON, Indianapolis, Ind. Filed Sept. 29, 1926. Serial No. 138,496. 17 Claims. (Cl. 192—4.)



4. The combination of a brake drum, a brake band associated with said brake drum, having one end secured in fixed position and the opposite end yieldably supported whereby when the brake drum is rotated in one direction the band will be lifted substantially out of engagement therewith and permit free rotation of the drum but upon a reverse rotation of the drum the band will grip the drum and prevent rotation thereof, substantially as set forth.

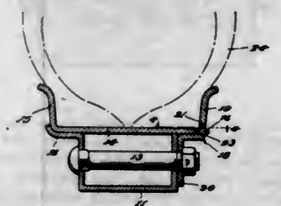
1,631,903. STABLE PEROXIDIZED COMPOSITION AND PROCESS OF MAKING SAME. JOHANNES A. L. VAN DER LANDE, Deventer, Netherlands, assignor, by mesne assignments, to Novadel Process Corporation, Buffalo, N. Y., a Corporation of New York. Filed May 3, 1926. Serial No. 106,486, and in The Netherlands Oct. 18, 1924. 9 Claims. (Cl. 23—250.)



1. A mode of overcoming the hygroscopic tendency of peroxidized compounds used for treating edible milling products and of increasing the stability thereof which comprises intimately incorporating the peroxidized compounds with a dry stable nondeliquescent solid material capable of absorbing considerable quantities of moisture without becoming wet and pasty and which in small quantities is non-poisonous to human beings, such incorporation being performed in the absence of flour in amount equal to many times as much as the amounts of said chemicals.

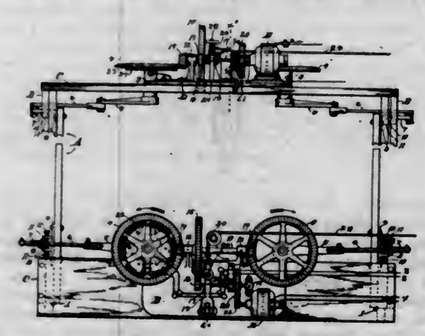
1,631,904. MAIL-BOX SUPPORT. JOHN WARMACK, Fort Smith, Ark. Filed July 7, 1926. Serial No. 120,981. 4 Claims. (Cl. 232—40.)

1. In a support for rural mail boxes and the like, a bracket adapted for attachment to a post and providing a vertically directed bearing, a horizontally disposed arm having a vertical extension engaged in said bearing and capable of vertical movement with relation thereto, the upper end of the bracket having a notch in which the arm may be engaged to maintain the arm in one position with relation to the bracket comprising a plate provided centrally with oppositely pressed semi-spherical portions providing a circular opening for the passage of the arm, the edges of the plate being offset and having their upper faces arranged in the same plane as the upper surface of certain of said pressed portions, the others of said pressed portions having openings for the passage of securing elements whereby the plate may be secured to the arm.



1,631,905. PROJECTION LAMP. HAROLD WORKMAN, Glasgow, Scotland. Filed May 15, 1926, Serial No. 109,446, and in Great Britain May 14, 1925. 1 Claim. (Cl. 240—45.)

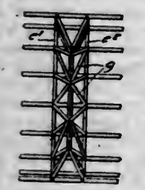
A headlamp for motor vehicles comprising a lamp body, a parabolic reflector mounted therein, a source of illumination extending from the focus of said reflector along its axis, a movable screen mainly formed as a zone from the central portion of a hemisphere and polished and plated



on its inner surface, and so disposed that, when the screen is in the operative position, the center of the sphere lies approximately on the axis of the reflector and between the center of the light source and that end of it which is farthest from the focus of said reflector and an actuating mechanism operatively connected to said screen to cause the latter to move between its two extreme positions—one in which it intercepts the rays from said source of illumination to or from substantially one half of said reflector and the other in which it allows the light free access to substantially all of said reflector.

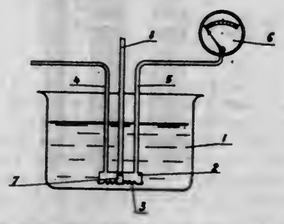
1,631,906. DEMOUNTABLE RIM. FRED D. ALLEN, Portsmouth, Va. Filed June 3, 1926. Serial No. 113,510. 2 Claims. (Cl. 301—35.)

2. A demountable rim including a rim body having lateral marginal lugs, a side ring slotted to receive said lugs, said lugs and side ring being provided, respectively, with grooves, and a removable locking ring common to the respective grooves, as and for the purpose set forth.



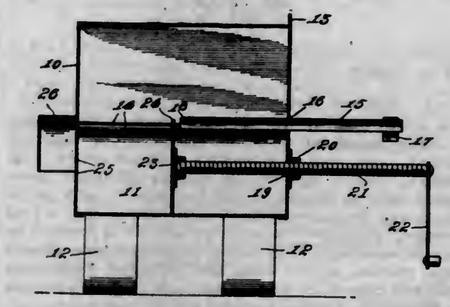
1,631,907. DOOR-OPERATING MECHANISM. FRED P. ANGELL, Huntington Park, Calif. Filed July 6, 1925. Serial No. 41,792. 7 Claims. (Cl. 268—63.)

1. In a door operating mechanism, the combination with a motor and a gear train operated by said motor to open and close a pair of doors, of means to disengage or separate motor communication between said motor and said doors through the separation of one gear from another including a lateral movable bearing in which one of said gears is journalled, means to restore said gears into engagement after having been disengaged and means to yieldingly retain said gears in engagement.



1,631,908. RIGID AIRSHIP. KARL ARNSTEIN, Friedrichshafen, Germany, assignor to Luftschiffbau Zeppelin Gesellschaft mit beschränkter Haftung, Friedrichshafen, Bodensee, Germany. Filed Oct. 2, 1924, Serial No. 741,240, and in Germany Oct. 13, 1923. 8 Claims. (Cl. 244—3.)

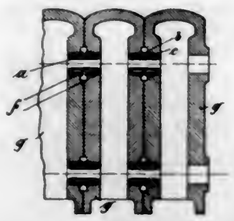
1. A rigid airship comprising a longitudinal member and a cross member, said cross member comprising a plurality of girders, part of said girders being so arranged in one common plane substantially at right angles to the longitudinal axis of said airship as to form a substantially polygonal truss with rigid circumferential mem-



bers, another part of said girders being situated out of the plane of said polygonal truss and being arranged in pairs substantially symmetrically thereto.

1,631,909. LIQUID-LEVEL INDICATOR. RAOUL EDOUARD BADIN, Paris, France. Filed Jan. 12, 1924, Serial No. 685,874, and in France Dec. 11, 1923. 2 Claims. (Cl. 73—54.)

1. In a liquid level indicator the combination of a pressure chamber immersed in the liquid at the full depth to be measured, means whereby said chamber is fed by a small inflow of compressed gas, an elastic diaphragm forming a wall of this chamber and subjected to the pressure of the liquid, a discharge valve secured to said diaphragm, a discharge tube connected at one end to the pressure chamber and communicating with the interior thereof at a point opposite said discharge valve and extending above the normal level of the liquid, a seat formed in the pressure chamber end of said discharge tube and cooperating with the discharge valve, a manometer gage and means whereby the said gage is adapted to indicate values proportional to the difference between the pressure in the pressure chamber and the pressure above the liquid.

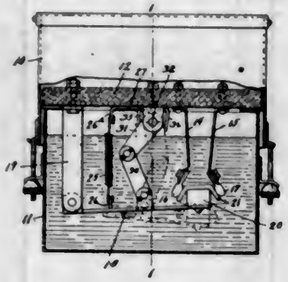


1,631,910. POTATO-MASHING MACHINE. ARTHUR E. BENQUIST, Lindstrom, Minn. Filed Sept. 4, 1925. Serial No. 54,558. 1 Claim. (Cl. 146—176.)

A potato mashing machine comprising a supporting base, a horizontally arranged cylindrical compression chamber mounted on the base and having one wall

imperforate and its other wall formed with a plurality of perforations, an inverted frusto pyramidal hopper located above and communicating with said chamber and coextensive in length therewith, pairs of spaced guide flanges located at the juncture of said chamber with the hopper, a cutoff plate arcuate in cross section and complementary to the compression chamber slidably mounted for longitudinal movement along said pairs of guide flanges, a follower mounted within said compression chamber and having a portion extending into the opening at the juncture of the hopper with the chamber to prevent rotation, and an operating screw threaded through a nut member at the imperforate end of the chamber and having a swivel connection with the follower.

1,631,911. CONNECTING NIPPLE FOR CAST-IRON HEATING-BOILER ELEMENTS. ALBERT BRAHM, Dusseldorf-Rath, Germany. Filed Apr. 7, 1926, Serial No. 100,341, and in Germany Mar. 25, 1925. 1 Claim. (Cl. 122—231.)



An elastic connecting nipple for cast iron heating elements of boilers comprising in combination a metallic sleeve having its ends outwardly bent, two metallic rings encompassing said sleeve, each ring being firmly connected at its outer end to the respective outwardly bent end of said sleeve, said rings having an internal diameter substantially greater than the external diameter of said sleeve and the combined length of said rings being less than the length of said sleeve, whereby to provide a space between said sleeve and said rings, and a gap between the opposed ends of said rings, said rings being exteriorly shaped to fit into connecting bosses of the boiler elements substantially as described and set forth.

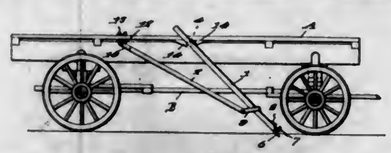
1,631,912. CUFF BUTTON. GEORGE W. BROWN, Marietta, Ohio. Filed Sept. 25, 1925. Serial No. 58,638. 1 Claim. (Cl. 24—109.)

A button of the character described comprising a base, a shank associated therewith and including relatively movable parts, each part having a V-shaped groove longitudinally thereof, said grooves unitedly defining a socket square in cross section and at the opposite sides of the shank, and having openings beneath said socket, a head including a squared extension adapted to be received by said socket whereby said head is capable of being rotated with relation to the base, said extension cooperating with said grooves for holding said head fixed with relation to the base in a given position, and an enlargement carried by the lower end of said extension and operating in said opening, and holding said head against casual separation from the shank.

1,631,913. ELECTRIC SWITCH. GEORGE A. BURNHAM, Saugus, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed July 3, 1922. Serial No. 572,527. 3 Claims. (Cl. 200—67.)

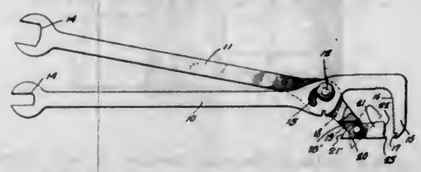
1. In an electric switch including an enclosing casing, movable and stationary switch members and operating mechanism received therein, said movable switch member comprising a pivoted arm, said operating mechanism including means to urge the switch members together, a rotatably supported operating shaft extended externally beyond the casing, links comprising a toggle connecting said operating shaft and pivoted arm arranged to govern the action of said urging means, and an operating member connected loosely with said shaft externally of said casing.

1,631,914. ELECTRICAL CONNECTER. MARCEL URBAIN CAILLAU, Billancourt, France. Filed Sept. 26, 1924. Serial No. 740,075, and in France Sept. 27, 1923. 2 Claims. (Cl. 173—269.)



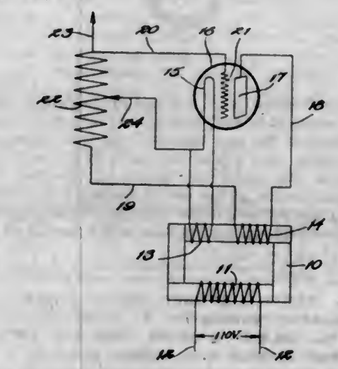
1. An electrical connecter comprising a pair of flat companion blades disposed in superimposed relation and pivotally connected at one shouldered end, the opposite end of each blade being of arcuate form to provide a gripping section, said blades being in contact at substantially midlength and divergent from the point of contact and then elbowed back to their pivotal point and divergent from the point of contact to the ends of the gripping sections, an insulating sheath having an opening to receive and hold the blades together inwardly of their gripping sections and of a length to extend beyond the point of pivotal connection of the blades, and a spiral spring yieldingly encircling both blades and held between the blade shoulders at one end and the inner end wall of the sheath at the other, said spring acting to normally maintain the relative positions of the blades and sheath so as to cause the gripping sections to be firmly held together by the edge of the opening in the sheath.

1,631,915. VEHICLE BODY REMOVING AND REPLACING DEVICE. SAM CARNES, North Powder, Oreg. Filed Oct. 2, 1926. Serial No. 139,156. 3 Claims. (Cl. 254—49.)



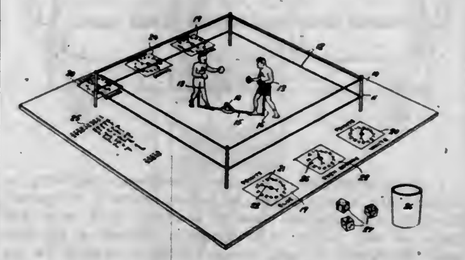
1. A device of the class described comprising a beam, an arm extended at rightangles therefrom adjacent the top thereof, a ground engaging part at the lower end of

the beam, a second beam slidably connected with the first beam, means for holding the second beam adjacent the lower end of the first beam and means for detachably



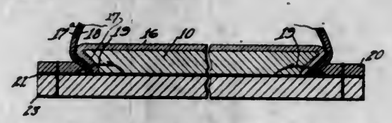
connecting the upper end of the second beam with a wagon body, the arm of the first beam also engaging a part of the wagon body.

1,631,916. TONGS. JAMES CHAMBERS, Pavo, Ga. Filed Nov. 27, 1925. Serial No. 71,765. 1 Claim. (Cl. 81—81.)



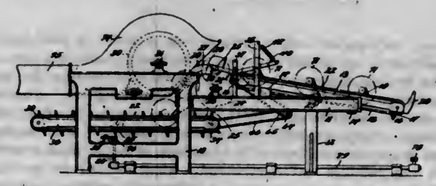
Tongs including a pair of crossed pivoted handles, one handle extending beyond the adjacent end of the other handle and formed with a right-angularly disposed jaw, there being a series of transverse teeth formed on one side of the jaw and a series of longitudinally disposed teeth arranged on the free end of the jaw, said adjacent end of the other handle being offset approximately forty-five degrees and bifurcated, said extension terminating within the confines of said fixed jaw, and a pivoted jaw including a reduced shank received by said bifurcation and pivoted therein and having a transverse series of teeth and a longitudinal series of teeth to cooperate with the corresponding series of teeth on the first mentioned jaw, said pivoted jaw when in a vertical position being wholly disposed beneath said fixed jaw, said offset portion of the handle having a beveled surface, and the adjacent end of said pivoted jaw having a similar surface adapted to engage the beveled surface of the handle to limit the pivotal movement of the jaw in one direction.

1,631,917. THERAPEUTIC OSCILLATOR. CHARLES C. COOK and GEORGE S. WALKER, Saginaw, Mich. Filed Jan. 28, 1925. Serial No. 5,299. 1 Claim. (Cl. 250—36.)



In an apparatus of the character described, a transformer having a primary coil adapted to be energized by an alternating current of a voltage commonly used in connection with house lighting systems, the transformer having two secondary coils, a three element vacuum tube including a filament having its terminals connected with one of said secondary coils, a plate having connection with one terminal of the other secondary coil, and an inductance located in series between the remaining terminal of the second named secondary coil and the grid element of the vacuum tube, one terminal of the filment being connected with an intermediate point in the inductance.

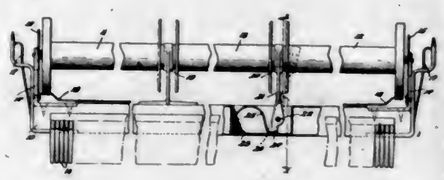
1,631,918. FIGURE TOY. MANUEL P. CORREA, Jr., Kalawao, Territory of Hawaii. Filed Jan. 13, 1926. Serial No. 81,063. 3 Claims. (Cl. 46—40.)



2. In a toy device, an arena including a base, a substantially U-shaped bracket secured to the center thereof, figures supported upon and arranged between the vertical parallel portions of the bracket and representing pugilists, each figure being formed from a flat piece of material, and a blank of material representing a pair of togs for each figure, and adapted to be attached to the latter.

1,631,919. SHOE AND METHOD OF MANUFACTURE. CHARLES O. CRISTALLINI, Worcester, Mass., assignor to Peck Shoe Company, Worcester, Mass., a Corporation of Massachusetts. Filed May 14, 1925. Serial No. 30,291. 2 Claims. (Cl. 36—17.)

1. As an article of manufacture, a shoe having an insole with a smooth flat lower surface provided with an inner channel, and having a lining on the top of the insole provided with a flange around the edge of the in-sole a welt, a layer of textile material secured to the bottom of the in-sole and of the welt throughout their areas to prevent squeaking, and an outer sole secured thereto, the welt and in-sole being sewed together in a way to tend to convex the in-sole on top.

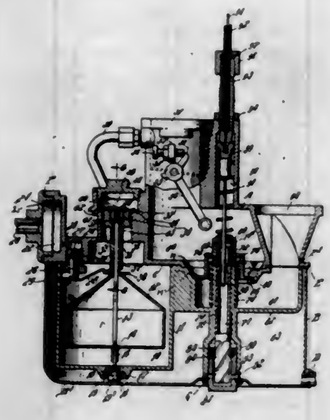


1,631,920. JACK-SPOOL-STRIPPING MACHINE. GEORGE CROSSLAND, Amsterdam, N. Y., assignor to Mohawk Carpet Mills, Inc., Amsterdam, N. Y., a Corporation of New York. Filed Feb. 20, 1925. Serial No. 10,670. 16 Claims. (Cl. 28—19.)

3. A machine of the class described, comprising in combination, a slotted guideway adapted to accommo-

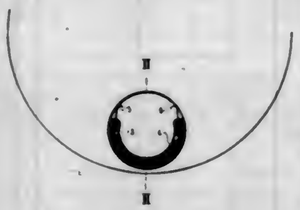
date the projecting shaft at each end of a jack spool or the like, means for delivering spools into said guideway, and means for delinting said spools while passing through said guideway.

1,631,921. SPOOL SUPPORT. GEORGE CROSSLAND, Amsterdam, N. Y., assignor to Mohawk Carpet Mills, Inc., Amsterdam, N. Y., a Corporation of New York. Filed Apr. 2, 1926. Serial No. 99,373. 4 Claims. (Cl. 139—10.)



1. A spool carrier of the kind described comprising in combination, a pair of coaxial spools rotatably supported at their non-adjacent ends in bearings rigid with the frame of the carrier, a transversely extending two-arm lever fulcrumed to said frame having a bearing in its outer end for the contiguous ends of said spools, the inner end of said lever terminating in a foot engaging a surface of the frame when the bearing in said outer end is coaxial with the other bearings, and a spring exerting pressure on said lever tending to hold said foot against said surface.

1,631,922. LADDER. TIMOTHY HERBERT CURTIS, Westminster, England. Filed Nov. 2, 1926, Serial No. 145,825, and in Great Britain June 9, 1926. 1 Claim. (Cl. 228—36.)



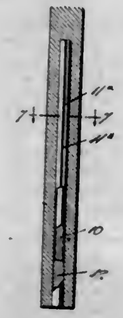
A collapsible ladder comprising a pair of side members each of channel section for the greater portion of its length from one end and of tubular section for the remainder of its length, with a transverse cut situated towards the free end of the channel section portion, the portion between the cut and the adjacent end having its sides pressed inwardly to enable it to be passed within the tubular end portion of a side member of another ladder, and rungs pivoted at their ends within both the side members and to be contained within said side members when the ladder is in its collapsed condition.

1,631,923. CARBURETOR. FRED DAY, Alcester, S. Dak. Filed Mar. 1, 1924. Serial No. 696,366. 2 Claims. (Cl. 158—36.1.)

1. In a device of the class described, a float chamber, a float therein, a reduced air pressure connection for the chamber, a fuel inlet and an air inlet for the chamber, a tubular air inlet valve, a stem for the float, said stem passing through the valve, a valve on the stem controlling the passage of air through the tubular valve to the chamber, and controlling the movement of the tubular valve in one direction, and a spring for opening the tubular valve and admitting additional air to the chamber after the tubular valve has been released by the valve on the stem.

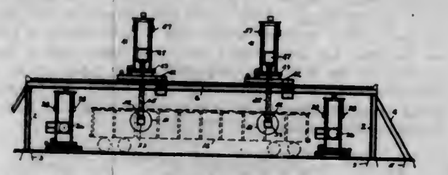
1,631,924. SOUND DAMPER. HEINRICH WILLEM KAREL DE BREY, The Hague, Netherlands. Filed June 18, 1924. Serial No. 720,859. 5 Claims. (Cl. 181—27.)

1. In combination with a sound transmitting element, of means arranged in said element and in contact with the inner surface of the wall thereof throughout substantially its full length, said means having a length approximating one-half the cylindrical length of the wall at the point of application of the means and extending inwardly from the inner surface of said wall to provide throughout its length a complete interruption to the passage of sound waves.



1,631,925. FRUIT SCRUBBER AND POLISHER. HARRY T. DEMAREST, Warwick, N. Y. Filed Dec. 1, 1924. Serial No. 753,332. 4 Claims. (Cl. 146—202.)

1. A fruit scrubber and polisher including a longitudinal substantially horizontal endless conveyor, embodying transverse freely rotatable fruit supporting rollers, stationary means mounted beneath the upper run of the conveyor on to which said rollers are adapted to ride for causing rotation of the rollers and sustaining the latter when supporting the fruit, means to actuate said conveyor, polishing means above the upper run of said conveyor to engage the tops of the fruit, and means associ-

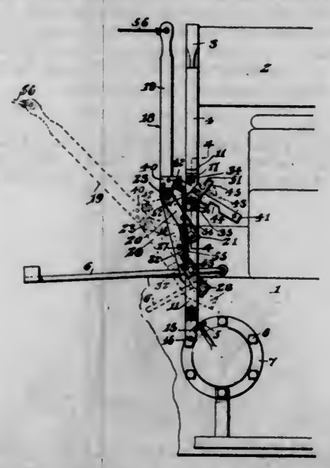


ated with said polishing means to cause lateral turning of the fruit while being moved longitudinally by the conveyor.

1,631,926. GOLF-CLUB SHAFT. ROBERT E. DICKINSON, Jr., Memphis, Tenn. Filed Jan. 24, 1927. Serial No. 163,102. 2 Claims. (Cl. 273—80.)

1. A golf club shaft comprising a single solid piece of wood turned to shape and formed with a central longitudinal bore, which opens through its lower end, a springy metal tube snugly held in said bore and terminating a short distance from the lower end thereof, a wood dowel snugly fitted into said tube, and a second wood dowel snugly fitted into the lower portion of the bore and abutting the lower ends of said tube and the first named dowel, said tube extending into the portion of the shaft for reception in the usual socket of the club head.

1,631,927. SAWING APPARATUS AND METHOD. WILLIAM S. DIETRICH, Greenville, Pa., assignor to The Greenville Steel Car Company, Greenville, Pa., a Corporation of Pennsylvania. Original application filed July 24, 1926, Serial No. 124,616. Divided and this application filed Oct. 30, 1926. Serial No. 145,351. 11 Claims. (Cl. 29—69.)



1. An apparatus of the character described having in combination a trackway above which a unit of railway rolling stock to be operated on may be retained in position principally by its own weight, a trackway extending parallel to said first-named trackway, a high speed friction saw unit movably mounted on said last-named trackway, and means for traversing said saw at right angles to said second trackway.

1,631,928. FABRIC DISK WHEEL. JOHN H. DOTY, Akron, Ohio. Filed Feb. 20, 1925. Serial No. 10,520. 3 Claims. (Cl. 301—63.)

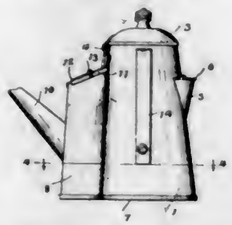
1. A vehicle wheel comprising a vulcanized body portion formed of two opposed outwardly convergent disk portions, each of said portions being composed of superposed plies of rubberized fabric vulcanized to form a composite body, the warp elements of the fabric composing said plies being grouped in fan-wise formation.

1,631,929. LEVER CONTROL FOR CLUTCH PEDALS. HARRY J. ENGLAND, Iowa Falls, Iowa. Filed Oct. 16, 1926. Serial No. 142,069. 7 Claims. (Cl. 74—39.)

1. A lever control for clutch levers or pedals comprising a support, an operating lever pivotally connected therewith, a hanger depending from and pivotally connected at its upper end to said lever, a holding member carried by the hanger and adapted to be arranged in the path of the clutch lever or pedal for shifting the latter downwardly to locked position when the lever is moved in one direction, a latching block carried by the support, a latching member pivotally connected to the lever and coacting with said block for maintaining the clutch pedal in latched position, and a resilient device slidably con-

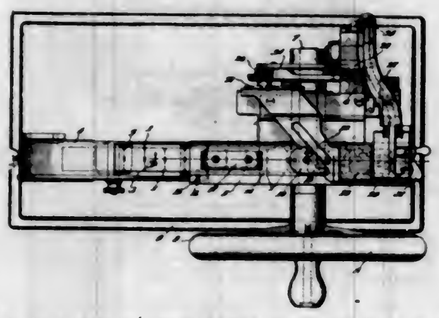
nected with the support and pivotally connected to said member for snapping it into engagement with said block and for releasing it from engagement with said block during the shifting of said lever.

1,631,930. METHOD OF IMPROVING ALUMINUM ALLOYS. VINCENZ FUSS, Lautawerk, Germany, assignor to Vereinigte Aluminumwerke A. G., Lautawerk, Germany. Filed May 31, 1924, Serial No. 717,170, and in Germany Aug. 16, 1923. 1 Claim. (Cl. 148—11.)



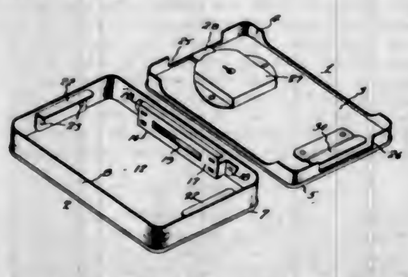
The process of treating aluminum alloys consisting in producing an ingot of aluminum alloys with substantially four percent of copper and two percent of silicon, subjecting the same to pressure to reduce it to the desired thickness, heating the same to the temperature of substantially 500 degrees C. for the period of about three hours, cooling the same, and then maintaining the same at a temperature of about 90 to 100 degrees C. for the period of about 48 hours.

1,631,931. DISPENSING CONTAINER FOR PLASTIC SUBSTANCES. WILLIAM H. G. GEAKE, Killara, near Sydney, New South Wales, Australia, assignor to Walter Rutherford, London, England, and John Bain, Ottawa, Canada. Filed Nov. 10, 1925, Serial No. 68,225, and in Great Britain Sept. 22, 1925. 5 Claims. (Cl. 221—60.)



1. A dispensing container including relatively rotatable rigid members, a torsionally collapsible sack arranged between said members and fixed direct to each at its top and bottom, said sack having an axial dimension less than its dimension in a plane transverse to its axis, and being adapted to discharge its contents through an aperture suitably formed in one of said members.

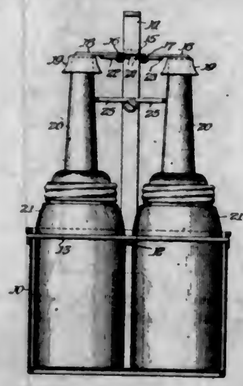
1,631,932. COMBINED COFFEE AND TEA POT. CHARLES GRIFFIN, Ypsilanti, Mich. Filed Aug. 17, 1926. Serial No. 129,851. 1 Claim. (Cl. 53—3.)



A combined coffee and tea pot comprising a coffee chamber provided at its top with an inwardly projecting guard lip and having a swinging cover adapted to extend over the entire top of the chamber above the said guard lip, a pouring spout for said chamber at an intermediate point of the height thereof and diametrically opposite the guard lip, a tea chamber set in the side of the coffee chamber diametrically opposite the pouring spout and closed to the coffee chamber, the top of the tea chamber comprising a fixed portion extending downwardly and outwardly through the side of the coffee chamber, and a swinging lid hinged to the free edge of said fixed portion to rest upon the outer wall of the tea chamber.

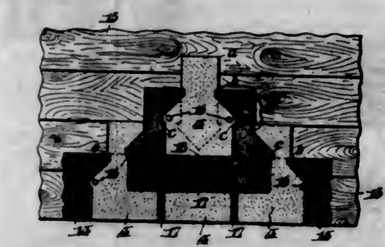
1,631,933. TAG PRICE-MARKING MACHINE. FREDERICK KOHNLE, Dayton, Ohio, assignor to The Monarch Marking System Company, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 11, 1926. Serial No. 147,819. 5 Claims. (Cl. 101—291.)

1. In a strip or ribbon feeding device, the strip to be fed having apertures in spaced relation and longitudinally aligned, a track for the strip comprising an enclosed channel for placing and guiding the strip and having a strip receiving platform at the end of the channel, a tension plate providing a closure for said channel and having bearing upon said platform for applying tension on the portion of the strip upon the platform, and a reciprocating feed finger moving longitudinally of the strip traversing said platform and adapted to engage into an aperture in the strip portion engaged by said tension plate.



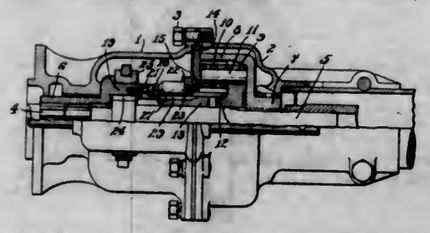
1,631,934. MONEY RECEPTACLE. MARCUS H. MOFFETT, Lakewood, Ohio, assignor to The Bankers Savings & Credit System Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 12, 1923. Serial No. 612,219. 4 Claims. (Cl. 232—4.)

1. A coin receptacle of the character described comprising a base having a peripheral flange, a cover having a similar flange arranged to telescope over the flange of the base, ledges extending inwardly from opposed parts of the flange of the cover, the flange of the base having notches through which said ledges extend, a part on the base for engagement over one ledge, and a lock carried by the base the bolt whereof is adapted to be projected over the other ledge, the interlocking parts being so constructed as to permit reversal of the casing members with respect to each other.



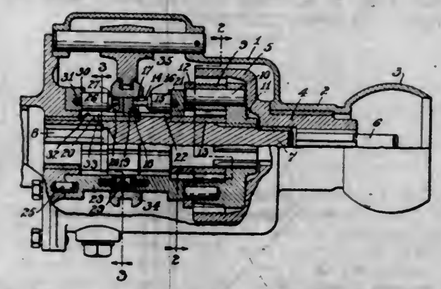
1,631,935. CONTAINER. WILLIAM NEIL, Chicago, Ill., assignor to William Neil & Company, Chicago, Ill. Filed Apr. 25, 1923. Serial No. 634,462. 9 Claims. (Cl. 224—48.)

1. In a device of the character described, the combination of a container in which a receptacle is adapted to be removably arranged, a support, said support providing a handle for the container, a closure hinged to the support, a stop cooperating with the closure to limit the downward movement of the closure and to maintain said closure in a substantially horizontal position from which



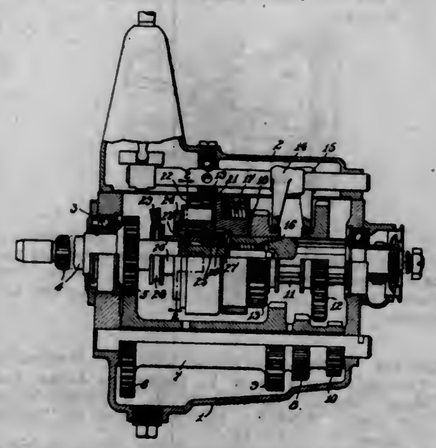
position said closure may be raised, said closure being provided to close the receptacle and to permit the removal of the receptacle from the container.

1,631,936. FLEXIBLE SHINGLE. GEORGE RITTER, Woodbridge, N. J., assignor to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Sept. 3, 1925. Serial No. 54,198. 3 Claims. (Cl. 108—7.)



2. As a new article of manufacture a flexible shingle configured to afford upper and lower rectangular portions in parallel and of minor and major area respectively with a mutually merging intermediate trapeziform section, said intermediate section having opposed lateral lugs and notches, the former functional to provide the usual spacings and the latter affording relatively-stepped vertical-aligning angle points.

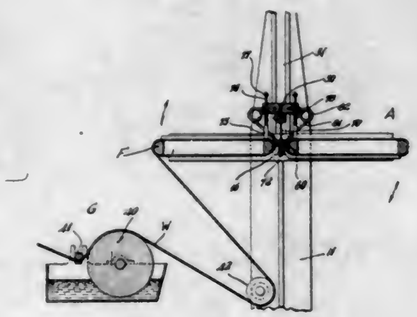
1,631,937. TRANSMISSION GEARING. JOHN M. SIMPSON, Muncie, Ind., assignor to Warner Gear Company, Muncie, Ind., a Corporation of Indiana. Filed Aug. 14, 1925. Serial No. 50,108. 10 Claims. (Cl. 74—34.)



1. The combination with a driving shaft and a driven shaft, of a planetary gear system including a ring gear driven from said driving shaft, a sun gear and intermediate gears, means for holding the sun gear against rotation, a clutch including two sets of radially movable rollers connected to the driven shaft and co-operating respectively with means on the driving shaft and with means connected to the intermediate gears and means for operating one of said sets of rollers to connect the parts to drive the driven shaft directly from the driving shaft or to drive the driven shaft from said driving shaft through said planetary gear.

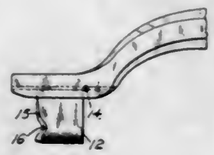
1,631,938. AUTOMOBILE TRANSMISSION. JOHN M. SIMPSON, Muncie, Ind., assignor to Warner Gear Company, Muncie, Ind., a Corporation of Indiana. Filed Aug. 14, 1925. Serial No. 50,169. 5 Claims. (Cl. 74—34.)

1. The combination with a driving ring gear, of a driven shaft, a pinion carrier connected to said driven shaft, pinions mounted on said carrier and meshing with said ring gear, a sun gear normally rotatable relatively to said driven shaft, a clutch including a plurality of radially movable rollers connected to said sun gear and cooperating with means on the driven shaft for locking said sun gear to said driven shaft and a second clutch including a plurality of radially movable rollers connected to a relatively stationary member and co-operating with means on the sun gear for locking said sun gear against rotation.



1,631,939. SPEED-VARYING TRANSMISSION. JOHN M. SIMPSON, Muncie, Ind., assignor to Warner Gear Company, Muncie, Ind., a Corporation of Indiana. Filed Oct. 28, 1925. Serial No. 65,317. 4 Claims. (Cl. 74—34.)

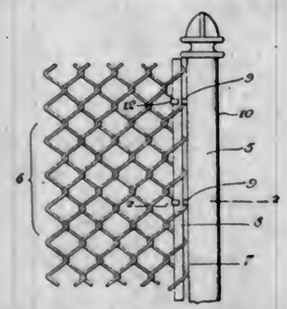
1. A speed varying transmission comprising a power receiving shaft, a power delivery shaft aligned therewith, and a planetary gear train for connecting said shafts



comprising an internal ring gear mounted on and rotatably connected with one of said shafts and having a set of clutch teeth, a stationary sun gear nesting said ring gear, a set of planetary pinions nesting said ring gear and meshing therewith and with said sun gear and mounted on a carrier having a set of clutch teeth and a clutch member splined on the other of said shafts and movable into engagement with the clutch teeth of the ring gear to directly connect said shafts and with the clutch teeth of the carrier to drive the delivery shaft through said planetary gear.

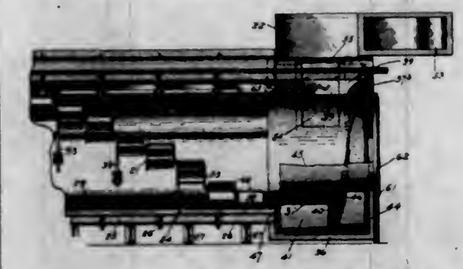
1,631,940. METHOD AND MECHANISM FOR COVERING CLOTH BOARDS, ETC. HARRY BRIDGMAN SMITH, New York, N. Y. Filed Nov. 19, 1925. Serial No. 70,031. 22 Claims. (Cl. 93—1.)

1. A method of applying sheet surfacing material to articles, comprising supporting a plurality of the articles at their ends, moving the articles together in a substantially orbital path, applying a continuous web of sheet covering material to the articles during such movement, and severing the web between adjacent articles.



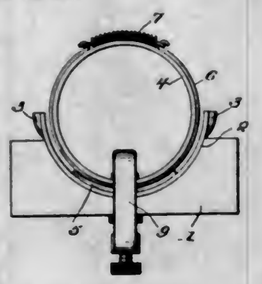
1,631,941. TIRE-REGROOVING TOOL. JOSEPH A. STRAITS, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 15, 1923. Serial No. 619,327. 6 Claims. (Cl. 30—20.)

1. A tool for cutting grooves in rubber compound comprising a cutting edge of substantially V-shape and having a plurality of notches therein, said notches being spaced from the apex of the edges forming the said V-shape.



1,631,942. FENCE-FASTENING DEVICE. HERBERT G. THOMSON, New York, N. Y., assignor to Anchor Post Fence Company, Garwood, N. J., a Corporation of New Jersey. Filed Dec. 18, 1926. Serial No. 155,707. 2 Claims. (Cl. 256—52.)

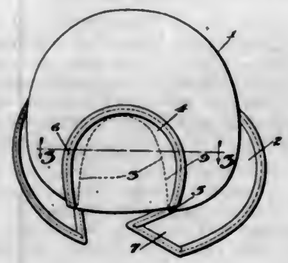
2. In fence fastening devices, the combination with chain-link fabric and a rectangular supporting post adjacent the marginal links of said fabric, of a restraining bar extending through the said links, and a series of angular locking members for said bar, one leg of each member being detachably secured to the side of the post ad-



jacent the fabric and the other leg having a forwardly-projecting hook which engages the edge of the bar remote from the post.

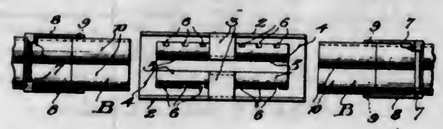
1,631,943. METHOD OF TREATING RUBBER ARTICLES. WILLIAM R. URQUHART, Los Angeles, Calif., CLIFFORD W. POST, Chicago, Ill., DWIGHT E. HUMPHREY, Cuyahoga Falls, Ohio, and CLARENCE C. VAN ARSDALE, Akron, Ohio, assignors to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed Oct. 18, 1920. Serial No. 417,755. Divided and this application filed Sept. 5, 1922. Serial No. 586,215. 5 Claims. (Cl. 18—53.)

1. The continuous method of treating rubber articles which consists in moving the articles progressively and successively through a circulated medium of heating fluid, different zones of which are maintained at material different temperatures.



1,631,944. APPARATUS FOR CASTING CURVED STEREOTYPE PLATES. SIMON WEBBNER, Linton, Ind. Filed June 23, 1926. Serial No. 118,125. 2 Claims. (Cl. 22—2.)

1. A device of the class described comprising a base having a semi-circular recess therein for receiving a mat, a cylinder adapted to fit in the recess and a pair of



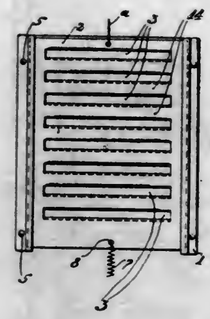
rings embracing the cylinder and adapted to rest on the mat for forming a metal receiving space above the mat said rings being bodily movable on the cylinder so that they can be adjusted to any position thereon.

1,631,945. LADY'S TRIMMED HAT. ERNEST M. ACH, Cincinnati, Ohio, assignor to The Samuel Ach Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 13, 1925. Serial No. 50,059. 2 Claims. (Cl. 2—197.)

1. A lady's hat comprising a crown portion having an opening at one side, the opening being of semi-oval form extending from the base line of the crown upwardly into the crown and a split-rim adapting the crown to be retracted for adjusting the head band dimension thereof, the rim extending beyond said crown opening for overlapping the rim ends in retracting the crown, and a flap covering said crown opening secured to the crown.

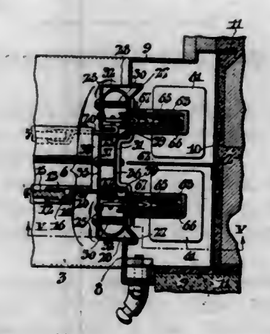
1,631,946. EXPANSIBLE LINK BRACELET. WILLIAM C. BOOTS, Attleboro, Mass., assignor to Guyot Brothers, Attleboro, Mass. Filed Apr. 7, 1926. Serial No. 100,370. 8 Claims. (Cl. 24—206.)

4. In combination with a bracelet having attaching means on its ends, a connecting member, means on the connecting member for engaging and holding said attaching means against lateral movement, one of said means being hollow to telescopically receive the other, means carried by one of said means to adjustably latch same to the other, and means carried by the said other means to engage the latching means.



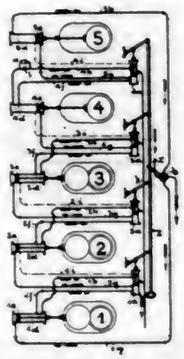
1,631,947. METHOD OF TREATING RUBBER. HERMAN A. BRUSON, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 28, 1926. Serial No. 138,338. 15 Claims. (Cl. 18—50.)

5. A method of preserving the quality of vulcanized rubber that comprises associating a material having the structural formula:



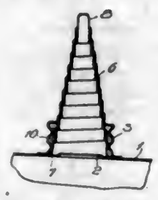
or derivative of this material with the rubber.

1,631,948. AUTOMOBILE RADIATOR SHIELD. HARRY LEIGH CURRAN, New York, N. Y. Filed Dec. 21, 1922. Serial No. 608,342. 1 Claim. (Cl. 189—61.)



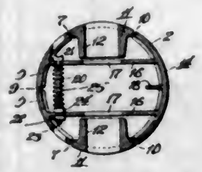
In a radiator shield, a frame comprising a flat plate carrying on opposed edges guiding means, said plate being formed with a series of parallel apertures, and a slide plate held in position upon the frame by said guiding means and formed with a series of apertures parallel with the apertures of the frame, means whereby the slide plate may be moved so that its apertures will lie in register with those of the frame or in position to close the apertures of the frame, a flange formed on the slide plate parallel and contiguous to each of its said apertures, and a flange on the frame contiguous to and parallel with each of the apertures therein, the said flanges co-acting to seal the said apertures against the admission of air when the slide plate is in closed position.

1,631,949. METALLIC WINDOW. JOAH BROGDEN, Melrose Park, Pa., assignor to David Lupton's Sons Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 17, 1921. Serial No. 501,396. Renewed Sept. 26, 1925. 21 Claims. (Cl. 189—72.)



1. The combination of metal window jambs; a sliding metal sash with laterally-flanged side rails and space for edgewise play outside them; and metal guides for said sash with portions extending between and engaging the lateral side rail flanges and adjustable transversely of the window, and thus controlling the edgewise position of the sash.

1,631,950. MEANS OF WORKING BLAST HEATERS USED IN CONNECTION WITH BLAST FURNACES. HERMANN RAPPOLD, Duren, Germany, assignor to Zimmermann & Jansen Gesellschaft mit beschränkter Haftung, Duren, Rheinland, Germany. Filed Apr. 6, 1925, Serial No. 732, and in Germany May 22, 1924. 4 Claims. (Cl. 137—144.)



1. An arrangement for automatically and positively operating the shut-off devices of blast heaters for blast furnaces by a pressure-medium always in their correct succession only required for a proper working of the heater: comprising, in combination with said shut-off devices, a series of two-plunger cylinders, each one located intermediate two adjacent shut-off devices, a main operating contrivance, a lever system in connection with said cylinders and with said main operating contrivance and adapted to simultaneously reverse the operative position of the same, a series of one-plunger cylinders, each one connected by its plunger-rod directly with one shut-off device, and a pipe system for the pressure-medium so connected with all said cylinders and with said main operating contrivance that only at the completion of the operation of one shut-off device the next following one is operated, and so on.

1,631,951. COLLAPSIBLE SPOUT. BYRON A. MCAMSH, Chicago, Ill. Filed Sept. 26, 1923. Serial No. 664,925. 5 Claims. (Cl. 221—27.)

1. A collapsible spout formed of a substantially flat strip spirally wound into a coil with the upper edge of each convolution adapted to frictionally engage the outer wall of the adjacent convolution, and the walls of said convolutions being maintained in spaced relation through such engagement.

1,631,952. PISTON. ELMER C. LONG, Quincy, Ill., assignor, by mesne assignments, to Security Trust Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 22, 1920. Serial No. 375,673. 12 Claims. (Cl. 74—108.)

1. A piston having a portion of its peripheral face entirely cut away, thereby forming a separated peripheral portion, supporting means secured to said separated portion extending to the opposite side of the piston for holding said portion in peripheral alinement with the peripheral face of the piston and means related to said separated portion for limiting the amount of separation of said portion from an adjacent peripheral portion.

Patents Nos. 1,631,953 to 1,632,776.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 359—No. 2. TUESDAY, JUNE 14, 1927. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; single numbers, 25 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

ADJUDICATED PATENTS.

(C. C. A. Ohio.) The Hughes patent, No. 913,551, for supplying air blasts to and removing ashes from gas producers, claims 1, 2, 3, and 6 *Held* not infringed. *Morgan Const. Co.* v. *Wellman-Seaver-Morgan Co.*, 18 F. (2d) 395.

(C. C. A. Del.) The Baekeland patent, No. 942,699, relating to making insoluble products of phenol and formaldehyde, claim 1 *Held* valid and infringed. *Bakelite Corporation* v. *Brunswick-Balke-Collender Co.*, 18 F. (2d) 384.

(C. C. A. Del.) The Baekeland patent, No. 942,809, for insoluble and infusible product of phenol and formaldehyde, *Held* not infringed. *Id.*

(C. C. A. Ohio.) The Hughes patent, No. 977,651, for supplying air blasts to and removing ashes from gas producers, claims 1 and 2 *Held* valid and infringed and claims 4 and 5 not infringed. *Morgan Const. Co.* v. *Wellman-Seaver-Morgan Co.*, 18 F. (2d) 395.

(C. C. A. Ohio.) The Lummis patent, No. 1,178,086, for fuel feeder for gas producers, claims 10–14 *Held* not infringed. *Id.*

(C. C. A. Ohio.) The Jefferies patent, No. 1,255,015, for supplying air blasts to and removing ashes from gas producers, *Held* valid and infringed. *Id.*

(C. C. A. Ohio.) The Lummis patent, No. 1,274,176, for fuel feeder for gas producers, claims 5 and 6 *Held* valid and infringed and claims 4, 10, and 21 not infringed. *Id.*

(C. C. A. Mich.) The Perkins reissue patent, No. 13,436, for wood glue, claims 28, 30, and 31 *Held* valid and infringed. *Perkins Glue Co.* v. *Holland Furniture Co.*, 18 F. (2d) 387.

(D. C. Md.) The Gross reissue patent, No. 15,782, for automobile parking light, claims 4, 5, and 6 *Held* valid and infringed. *Gross* v. *Norris*, 18 F. (2d) 418.

(D. C. Md.) The Gross design patent, No. 57,640, for design of automobile parking light, *Held* invalid. *Id.*

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

EX PARTE REINHARD.

Decided March 15, 1926.

PATENTABILITY OF CLAIMS—NOVELTY IN THE COMBINATION—SINGLE FUNCTION—SPECIAL COACTION BETWEEN ALL THE ELEMENTS.

Where there is novelty in the combination, where the combination performs a single function, and where there is special coaction between all the elements of the combination in performing that function, the doctrine of *Ex parte Mumford*, 100 O. G. 2178, and not *In re McNeil*, 106 O. G. 878, is controlling of the question of patentability of the claims.

[Note.—This application has resulted in Patent No. 1,582,848, April 27, 1926.]

APPEAL from Examiners in Chief.

Application for patent for windshield cleaners filed April 19, 1924, Serial No. 707,729.

Mr. Charles W. McDermott for applicant.

MOORE, *Assistant Commissioner:*

This is an appeal from the decision of the Examiners in Chief affirming the action of the Examiner finally rejecting all of the appellant's claims.

The invention is a windshield cleaner. The following are typical of the appealed claims:

2. A wind shield cleaner, having, in combination, a wiper means for reciprocating the wiper comprising a rotary screw shaft, and a tube within which the shaft has a running fit substantially throughout its length.

3. A wind shield cleaner, having, in combination, a wiper, and means for reciprocating the wiper comprising a rotary screw shaft and a device arranged to engage the root and sides only of the thread on the shaft.

8. A wind shield cleaner, having, in combination, a tube extending across the wind shield and provided with a longitudinal slot, a threaded shaft having a running fit in the tube, a wiper support mounted to slide along the slot, and a device carried by the wiper support engaged with the root and sides only of the thread on the shaft.

The references relied upon in support of the rejection of the claims are:

Brennan, No. 1,484,251, Feb. 19, 1924; Tuttle, No. 1,485,097, Feb. 26, 1924; Hammond, No. 1,516,600, Nov. 25, 1924.

The Examiners in Chief in affirming the decision of the Examiner state:

A wind shield cleaner having a reciprocating wiper to move across the wind shield and actuated by a rotary screw shaft by means of a traveling nonrotary nut which carries the wiper is shown to be old in the prior art.

The wind shield cleaner comprising a reciprocating wiper being old it is believed reasonable and the proper practice to hold that invention must reside in some of the other elements of the combination unless some new and unexpected result is secured by the combination and that it is immaterial whether the reciprocating element is a wiper for and on a wind shield or some other reciprocating element. In other words, there is not now a patentable combination between the specific character or type of reciprocating element and the specific actuating mechanism. The specific element (as a wiper) does not affect and is not affected by the specific actuating means.

The Examiner in his statement of the reasons for the rejection of the claims says:

The claims were all rejected as being directed to old combinations of a wiper and means for reciprocating the wiper over the wind shield glass, under the doctrine of *In re McNeil, In re Ratican*, etc. Applicant admits that he has improved only the manner of supporting the old rotary screw shaft and the form of the traveling nut. These are purely elements of the actuating device alone. The relation and cooperation between these elements and the wiper do not differ from that between the corresponding elements of the references, and the result obtained is the same; namely, the reciprocation of the wiper across the glass. It is held that the invention, if any, resides in the specific actuating means for the wiper (the nonrotatable nut, etc.) and not in the combination of this with the actuated element (the wiper).

It appears from the above that the Examiner and the Examiners in Chief are of the opinion that the doctrine announced in the McNeil decision (100 O. G. 2178), is controlling of the question of patentability of the appealed claims.

The appellant contends that—

* * * his whole combination between the motor and the wiper is new; that this combination has no utility outside of a wind shield cleaner, so far as he knows, or so far as the Examiner has pointed out, and that to deprive him of the right to claim it as a wind shield cleaner is to prevent him from claiming his real invention.

It is believed that the facts in this case do not fall under the McNeil decision, but under the Mumford decision (206 O. G. 878).

In the McNeil case there was no novelty in the combination of the trimmer and the stitch-forming mechanism. In the instant case there is novelty in the combination.

In the McNeil case the trimmer and the stitch-forming mechanisms performed two distinct operations upon the material. In the instant case the cleaning of the windshield is the sole function of the combination claimed.

In the McNeil case there was no special coaction between the particular stitch-forming mechanism and the trimmer. In the instant case there is special coaction between all of the elements of the combination in performing the windshield cleaning function.

The combination defined by claim 1 is new so far as shown by the references and is useful. The elements of the combination are not specifically claimed per se. The subject matter defined by this claim departs from the prior art in the "means for supporting the shaft substantially throughout its length." The specific means disclosed for performing this function is "a tube within which the shaft has a running fit substantially throughout its length", as specified in several of the appealed claims. This means assists in resisting the reaction resulting from the action of the wiper upon the shield whereby the wiper is firmly held in its operative position. The advantages that result from the use of the tube are set forth in the Reinhard specification and need not be repeated.

Claim 2 is more specific than claim 1 in including said tube as an element of the combination.

Claim 3 differs from the old combination in the limitation that the device which cooperates with the screw shaft is "arranged to engage the root and sides only of the thread on the shaft." As pointed out in Reinhard's specification, by this arrangement "the diameter of the assembled shaft and coil

is not increased over the diameter of the shaft alone." This also permits the shaft to be given a "running fit" within the supporting tube whereby the diameter of the shaft may be diminished, thereby lessening the current demand upon the storage battery of the car. This is one of the objects of the Reinhard invention, as set forth in his specification.

The remaining claims on appeal are more specific than those above considered and are regarded as patentable over the cited references. Some of these claims include in the combination the tube within which the shaft has a running fit and also the device for transmitting motion from the shaft to the wiper, said device engaging the root and sides only of the thread on the shaft.

In view of the above it must be held that the subject matter of each of the appealed claims is patentable over the cited patents.

The decision of the Examiners in Chief is reversed.

Court of Appeals of the District of Columbia.

DI SANTO *v.* GUARNERI.

No. 1,909. Decided February 7, 1927.

TRADE-MARKS—OPPOSITION—TOMATO PASTE—OLIVE OIL—SAME DESCRIPTIVE PROPERTIES.

Where opposer used his mark on tomato paste sold in cans, and applicant used his mark on olive oil sold in one-quart, two-quart, one-gallon, and six-gallon cans, *Held* that the goods are of the same descriptive properties.

APPEAL from the Patent Office. Reversed.

Mr. Arthur E. Dowell for Di Santo.

Mr. Hubert Howson for Guarneri.

Before MARTIN, Chief Justice, ROBB, Justice, and GRAHAM, Presiding Judge U. S. Court of Customs Appeals.

GRAHAM, *J.:*

On June 19, 1924, the appellee, Dominico Guarneri, filed in the Patent Office an application for registration of a trade-mark to be used in connection with the sale of olive oil, under the act of February 20, 1905, as amended. (33 Stat. 724.) The mark described consisted of a bust-size likeness of the Italian patriot Giuseppe Mazzini, surrounded by a border consisting of two concentric circles, with the word "Mazzini" in heavy black-faced type at the bottom of the likeness. On September 18, 1924, the appellant, Joseph Di Santo, filed notice of opposition to such registration. Testimony having been taken and submitted by both parties, on June 19, 1924, the Examiner of Interferences sustained the notice of opposition. On appeal from that action, the Assistant Commissioner of Patents, on August 27, 1925, reversed the decision of the said Examiner and granted registration to Guarneri. From that decision, Di Santo has appealed to this court.

The testimony shows that Di Santo, the opposer, resides at Duluth, Minnesota, and, for several years, has been there conducting the business of an importer, jobber, distributor and dealer in olive oil, tomato paste, malt sirup, cheese, raisins, garlic, macaroni, and other food products, all of which have been sold under the trade name of "Mazzini". On May 13, 1919, Di Santo caused to be registered in the Patent Office a trade-mark for effervescent granular salts, a magnesia preparation, which mark consisted of a bust-size likeness of Giuseppi Mazzini, with the word, in large black-faced type, "Mazzini". On October 21, 1924, he also caused the registration of a trade-mark to be made for tomato paste, which mark consisted of the word "Mazzini", in outlined letters. Application has also been made by him for registration of the same mark on malt sirup or malt extract, the date of filing of which application does not appear from the record.

It also appears from the record that the word "Mazzini", sometimes associated with a likeness and sometimes without, has been used continuously by Di Santo, as a trade name, upon effervescent salts, since 1916, upon tomato paste since February, 1923, and upon malt sirup or malt extract since 1920, in interstate commerce. The sales of tomato paste in particular, bearing this label, are shown to have been very large, and a considerable trade seems to have been conducted in effervescent salts and malt sirup of the same brand. In 1916, Di Santo determined to use the "Mazzini" brand on olive oil and at that time, and soon thereafter, advertised olive oil under that brand. Because of war conditions, however, no oil could be imported and none was sold in interstate commerce, under that brand, until July 1, 1924, since which time the trade name of "Mazzini" has been used extensively by him in connection with sales of such oil.

Guarneri, the appellee, resides at Brooklyn, where he conducts the business of a wholesale and retail grocer. Since August 6, 1923, he has been selling olive oil bearing the trade name "Mazzini" as described in his application for registration, in considerable quantities, sometimes aggregating 3,600 gallons in a year. There is some question about whether this has been sold in interstate commerce, but we think the record fairly shows that since September, 1923, these goods have been so sold.

The testimony further shows that the Di Santo tomato paste is sold in cans, the exact size of which is not stated. The Guarneri olive oil is sold in one-quart, two-quart, one-gallon and six-gallon cans. The testimony also shows that tomato paste and olive oil are ordinarily offered for sale together in grocery stores and other like retail establishments.

There is but one issue presented here. Di Santo, the opposer, claims that confusion is likely to arise in the trade which he claims to have established in goods of the same descriptive properties as those in which Guarneri desires to register his proposed trade-mark.

On the other hand, Guarneri contends that, even conceding the prior use and registration of the trade-mark "Mazzini" upon effervescent salts, malt sirup and tomato paste, these are not goods of the same descriptive properties as olive oil, and hence there can be no successful opposition here. As to the use of this trade-name by Di Santo on olive oil, it does not appear that he in fact so used it until after Guarneri had put his product upon the market. What opposer may have intended to do can not control. As was said in *George* v. *Smith*, 52 Fed. 830: "The law deals with acts and not intentions." See also *Borden Ice Cream Company* v. *Borden's Condensed Milk Company*, 201 Fed. 510.

It is manifest that the opposer had, long prior to the time when Guarneri first used the trade name "Mazzini", built up a very considerable trade in food products, which we may safely assume was the result in part, at least, of the use of his trade name and trade-mark. It must also be conceded that if any of the food products which he thus sold are of the same descriptive qualities as olive oil, that not only Di Santo, but the public as well, should be protected in the use of the trade name "Mazzini". Without attempting to express any opinion as to whether effervescent salts and malt sirup or malt extract are goods of the same descriptive properties as olive oil, we are clearly of the opinion that tomato paste, sold as shown by the record here, is of the same descriptive properties.

In *Williams* v. *Kern & Sons*, 254 O. G. 866, 47 App. D. C. 441, this court held that self-raising pancake flour and corn meal were of the same descriptive properties and remarked:

> The test here is not the likelihood of confusing the products, but the source from which they come.

In re Inderrieden Canning Co., 295 O. G. 887, 277 Fed. 613, 51 App. D. C. 214, involved the registration of the name "Peter Pan" as a trade-mark for canned peas and canned corn. It was rejected because of the prior registration of the same name as a trade-mark for canned pineapple. There Smyth, C. J., called attention to the fact that the prospective purchaser of canned peas would not likely be led by the confusion of marks to purchase pineapple when he desired peas, but might be led to purchase the peas on the strength of the standing and reputation of the pineapple bearing the same brand. In *Imperial Cotto Sales Co.* v. *Fairbanks Co.*, 284 O. G. 961, 50 App. D. C. 250, 270 Fed. 686, the Fairbanks Company, the opposer, had used and registered the trade-mark "Cottolene" to designate a cooking fat made from cottonseed oil and oleostearine. The applicant desired subsequently to register the same name as a trade-mark for an animal feed composed principally of cottonseed. The opposition was sustained.

In *California Packing Corporation* v. *Price Booker Mfg. Company*, 308 O. G. 451, 52 App. D. C. 259, 285 Fed. 993, the applicant sought to register the word "Mission" as a trade-mark for flavoring extracts for foods, mustard, tomato catchup, relishes, made of chopped and ground pickles packed in spices and vinegar, chowchow, salad dressing, and vinegar. Opposer used the same mark, substantially, on canned fruits, canned vegetables, foods and ingredients of food. The opposition was sustained. The words "Aunt Jemima's," accompanied by the picture of a negress, laughing, as applied to pancake sirup, have been held an infringement upon the same trade-mark as applied to self-rising flour. *Aunt Jemima Mills Co.* v. *Rigney & Co.*, 247 Fed. 407. This court, in *California Packing Co.* v. *Halferty*, 320 O. G. 700, 54 App. D. C. 88, 295 Fed. 229, held that canned fruit and canned salmon were of the same descriptive properties. In *Heller & Co.* v. *Southern Cotton Oil Co.*, 336 O. G. 510, 55 App. D. C. 288, 4 Fed. (2nd) 955, the word "Snowdrift" had been registered as a trade-mark for a lard compound and for certain other shortening compounds. When it was sought to register the same mark for use in a preparation described as "a substitute for the white of eggs in the making of meringue," etc., registration was refused. Attention is also called to *Wolf & Sons* v. *Lord & Taylor*, 202 O. G. 632, 41 App. D. C. 514, where men's, women's and children's stockings were held to be of the same descriptive properties as knitted and textile undershirts, drawers and union suits, and to *E-Z Waist Co.* v. *Reliance Mfg. Co*, 311 O. G. 709, 52 App. D. C. 291, 286 Fed. 461, where work shirts were held to be of the same descriptive properties as children's knitted waists.

It is a matter of common knowledge that the products tomato paste and olive oil, are both food products, one a condiment for the making of soups and relishes, the other principally used as an ingredient for sauces and salads. They are sold as canned goods, from the same establishments, and presumably to the same class of purchasers. The purchaser of olive oil would doubtless be led to purchase a brand with which he had become familiar as a purchaser of tomato paste. Thus confusion would result and not only the maker of the tomato paste, but the public as well, would be deprived of the protection which it was, obviously, the purpose of the trade-mark statute to give. And if it be found that there is doubt as to whether such confusion will exist, it is the duty of the court to resolve that doubt against the newcomer in the field. *Waltke & Co.* v. *Schafer & Co.*, 273 O. G. 630, 49 App. D. C. 254, 263 Fed. 650.

For the reasons given, the decision of the Assistant Commissioner of Patents is reversed, and the opposition of Joseph Di Santo sustained.

DISSENTING OPINION OF MR. JUSTICE ROBB.

The question in this case is whether tomato paste and olive oil are goods of the same descriptive properties, within the meaning of the Trade-Mark Act, which prohibits the registration of deceptively similar marks when "appropriated to merchandise of the same descriptive properties." In other words, this is a statutory proceeding and not an unfair competition case.

If we are to be governed by the terms of the statue, the decision below should be affirmed. See *American Tobacco Co.* v. *Gordon*, 342 O. G. 510, 10 F. (2nd) 646.

PATENT SUITS.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,608,674, E. L. Schumacher, Ophthalmic mounting, decided May 6, 1927, claims 1, 4, and 5.

Pat. 1,476,201, P. C. Haas, Burner igniter, decided May 6, 1927, claims 1, 2, and 3.

Pat. 1,395,991, M. F. Gascon, Adding machine, decided May 2, 1927, claim 1.

Pat. 1,348,573, H. A. Martin, Registering machine, decided May 2, 1927, claims 74 and 83.

Interference Notice.

U. S. PATENT OFFICE, *Washington, May 19, 1927.*

C. Schultz, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of C. R. & W. J. Sutherland, 45 Hudson Ave., Albany, N. Y., for registration of a trade-mark and trade-mark registered April 4, 1916, No. 109,423, to C. Schultz, 32 Jay St., New York, N. Y., and a notice of such declaration sent by registered mail to said C. Schultz at the said address having been returned by the post office undeliverable, notice is hereby given that unless said C. Schultz, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

TRADE-MARKS

OFFICIAL GAZETTE, JUNE 14, 1927.

[VOL. 359. No. 2.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 192,609. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) EMPIRE MILKING MACHINE COMPANY, Bloomfield, N. J. Filed Feb. 21, 1924.

EMPIRE

Particular description of goods.—Milking Machines and Parts Thereof and Milking-Machine Systems and Parts Therefor, Including Pulsators, Vacuum Pumps, Teat Cups, and Their Parts.

Claims use since March, 1914.

Ser. No. 221,455. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) RUBBERSET COMPANY, Newark, N. J., assignor to Rubber & Celluloid Products Company, a Corporation of New Jersey. Filed Oct. 8, 1925.

ALBRIGHT
RUBBERSET

The name "Albright" as shown is disclaimed apart from the other features of the mark shown in the drawing. Applicant is the owner of registrations 48,640 and 48,641 effected on the ground of exclusive use for 10 years next preceding Feb. 20, 1905.

Particular description of goods.—Paint, Shaving, Hair, Tooth, and Hand Brushes.

Claims use since June, 1922.

Ser. No. 221,456. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) RUBBERSET COMPANY, Newark, N. J., assignor to Rubber & Celluloid Products Company, a Corporation of New Jersey. Filed Oct. 8, 1925.

No claim is made to the representation of a brush apart from the mark shown in the drawing. Applicant is the owner of registrations 48,640 and 48,641 effected on the ground of exclusive use for 10 years next preceding Feb. 20, 1905.

Particular description of goods.—Paint, Shaving, Hair, Tooth, and Hand Brushes.

Claims use since April, 1919.

Ser. No. 226,600. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) PERFECTION GEAR COMPANY, Chicago, Ill. Filed Jan. 29, 1926.

No exclusive claim is made to the words "The Mark of Perfection," "Certified Parts," and "Chicago" apart from the mark as shown.

Particular description of goods.—Chains for Use on Motor Front Ends, Motor Drives, and Power Transmissions of All Descriptions.

Claims use since Nov. 1, 1925.

Ser. No. 226,894. (CLASS 39. CLOTHING.) FIRESTONE-APSLEY RUBBER COMPANY, Hudson, Mass. Filed Feb. 5, 1926.

THOROGRIP

Particular description of goods.—Boots and Shoes of Rubber and Fabric.

Claims use since July 27, 1925.

Ser. No. 227,769. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BELVEDERE TOILET PRODUCTS INC., St. Paul, Minn. Filed Feb. 25, 1926.

Miss America

Particular description of goods.—Cold Cream, Vanishing Cream, Hair Tonic, Bay Rum, and Cosmetics for the Skin.
Claims use since on or about Sept. 1, 1925.

Ser. No. 228,289. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) AKTIEBOLAGET PASTILL, Gefle, Sweden. Filed Mar. 8, 1926.

LAKEROL

Particular description of goods.—Confections and Sweets in the Form of Pastilles, Candies, Tablets, and Lozenges and Made of Saccharriferous Matter, with or without the Addition of Cocoa Edible Fats, and Relishing Substances, and Gum Arabic.
Claims use since Nov. 17, 1920.

Ser. No. 228,746. (CLASS 39. CLOTHING.) ENDEL & PELES STRAW HAT WORKS, INC., Beacon and New York, N. Y. Filed Mar. 17, 1926.

Strawcraft
FELT-FLEX

Applicant owns registration No. 172,117.
Particular description of goods.—Straw Hats for Men.
Claims use since Nov. 6, 1925.

Ser. No. 229,239. (CLASS 3. BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) THE LILLEY CO., Columbus, Ohio. Filed Mar. 26, 1926.

PAKFUL

Particular description of goods.—Hand Bags and Traveling Cases.
Claims use since Nov. 1, 1925.

Ser. No. 229,650. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) TRUVY, INC., New York, N. Y. Filed Apr. 3, 1926.

Tulipe d'Or

Particular description of goods.—Face Powders, Face Creams, Face Packs, Toilet Waters, Rouges, Perfumes, Hair Tonics, Hair Oils, Dentifrices, Tooth Powders, Nail Polishes, Deodorizing Preparations, Bath Salts, Smelling Salts, Lip Sticks, Eyebrow Pencils, Incenses, and Sachets.
Claims use since Jan. 1, 1925.

Ser. No. 229,833. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE UNITED GRAIN AND SUPPLY COMPANY, doing business as The Swayzee Milling Company, Swayzee, Ind. Filed Apr. 7, 1926.

Particular description of goods.—Wheat, Buckwheat, and Rye Flour.
Claims use since Nov. 30, 1925.

Ser. No. 230,389. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOE ENG, doing business as J. & J. Brothers, Chicago, Ill. Filed Apr. 19, 1926.

MAH JONGG

Particular description of goods.—Ginger Root Preserved in Sirup, Preserved Mixed Fruit, Chinese Sauce for Meats and Other Foods, Preserved Gum Gut, a Chinese Fruit.
Claims use since Feb. 15, 1926.

Ser. No. 230,416. (CLASS 39. CLOTHING.) ROBERTS WICKS COMPANY, Utica, N. Y. Filed Apr. 19, 1926.

In the drawing the flag at left is lined to indicate blue color.
Particular description of goods.—Men's and Youths' Overcoats, Coats, Suits, Raincoats, Waterproof Coats, and Storm Coats.
Claims use since Apr. 15, 1918.

Ser. No. 230,620. (CLASS 38. PRINTS and PUBLICATIONS.) ERNA FERGUSSON, doing business as Koshare Tours, Albuquerque, N. Mex. Filed Apr. 23, 1926.

Particular description of goods.—Road Maps, Tourist Guides, Books, and Pamphlets Containing Printed Matter Useful to Travelers and Tourists and Printed from Time to Time.
Claims use since Apr. 15, 1922.

Ser. No. 230,667. (CLASS 39. CLOTHING.) HARRY GEIST COMPANY, INC., New York, N. Y. Filed Apr. 24, 1926.

The lining on the drawing is for the purpose of shading only. No claim is made to the exclusive right to the use of the descriptive words "High Grade" apart from the mark shown in the drawing.
Particular description of goods.—Hoods of Wool, Straw, Hemp, Horsehair, Crinol, Artificial Silk, Cotton, Visca, Cellulose, and Paper for the Manufacture of Hats for Women.
Claims use since June, 1925.

Ser. No. 230,799. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MARTIN NIELSEN, Seattle, Wash. Filed Apr. 27, 1926.

KARMA

Particular description of goods.—Pickles.
Claims use since Feb. 1, 1926.

Ser. No. 231,310. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CREME JASMIN COMPANY, Minneapolis, Minn. Filed May 8, 1926.

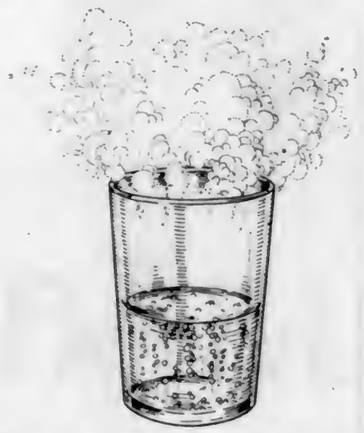
The term "Creme Jasmin" is disclaimed apart from the mark as shown.
Particular description of goods.—Skin Lotions.
Claims use since Sept. 1, 1924.

Ser. No. 231,743. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) S. W. MAGNUS & COMPANY, New York, N. Y. Filed May 17, 1926.

The portrait forming a feature of the mark is fanciful.
Particular description of goods.—Boys' Handkerchiefs.
Claims use since Jan. 15, 1926.

Ser. No. 231,858. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) GRIGGS, COOPER & COMPANY, St. Paul, Minn. Filed May 19, 1926.

HOME



Particular description of goods.—Shoe Laces.
Claims use since 1877.

Ser. No. 233,074. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) C. J. HALEY & CO., INC., New York, N. Y. Filed June 11, 1926. Under section 5b of the act of 1905, as amended in 1920.

Lindsay

Particular description of goods.—Sanitary Aprons, Sanitary Step-Ins, Sanitary Bloomers, Sanitary Petticoats, Sanitary Belts, and Sanitary Girdles.
Claims use since April, 1925.

Ser. No. 233,143. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MOYE J. NISCH, San Francisco, Calif. Filed June 12, 1926.

Particular description of goods.—Cold Remedies.
Claims use since Apr. 1, 1926.

Ser. No. 235,447. (CLASS 39. CLOTHING.) THE AMERICAN RETAIL STORES CO., Columbus, Ohio, and Indianapolis, Ind. Filed Aug. 2, 1926.

SUPERIOR

KENTSHIRE

Particular description of goods.—Men's Topcoats, Overcoats, and Three and Four Piece Suits.
Claims use since June 1, 1926.

Ser. No. 236,064. (CLASS 5. ADHESIVES.) GEO. D. SANDERS, Sr., Columbus, Miss. Filed Aug. 16, 1926.

SEAL-TITE TIRE FLUID SANDERS SANDERS

No claim is made to the words "Seal-Tite" and "Tire-Fluid" apart from the mark on the drawing.
Particular description of goods.—Bicycle Tire Puncture-Sealing Fluid.
Claims use since Jan. 1, 1921.

Ser. No. 237,056. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WOODBRIDGE FRUIT COMPANY, Woodbridge, Calif. Filed Sept. 9, 1926.

RedFeather

The drawing is lined for the color red.
Particular description of goods.—Fresh Deciduous Fruits and Grapes.
Claims use since June, 1911.

Ser. No. 237,524. (CLASS 12. CONSTRUCTION MATERIALS.) WILSON & GREENE LUMBER CO., Syracuse, N. Y. Filed Sept. 21, 1926.

CHECK SEAL

Particular description of goods.—Construction Materials—Namely, Lumber and Wood; Lumber Products, Viz, Flooring, Siding, Ceiling, Girders, Joists, Studding, Moldings, Brackets, Sash, Doors, Blinds, and Shingles.
Claims use since June 1, 1926.

Ser. No. 237,821. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ROCHE FRUIT & PRODUCE COMPANY, Yakima, Wash. Filed Sept. 27, 1926.

JEWEL

Particular description of goods.—Fresh Apples.
Claims use since August, 1919.

Ser. No. 237,880. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SUNLAND SALES COOPERATIVE ASSOCIATION, Fresno, Calif. Filed Sept. 28, 1926.

SUNLAND

Particular description of goods.—Dried Prunes, Figs, Raisins, Peaches, Pears, Apricots, Apples; Canned Peaches, Apricots, Plums, Grapes, Figs, Olives, Peas, Asparagus, Tomatoes, Spinach; Fresh Grapes, Peaches, Plums, Figs, Apricots, Apples; Mincemeat, Raisin Sirup for Food Purposes, Canned Fruit for Pies, Jam, Jelly, Rice, and Nuts in Their Natural State.
Claims use since July 27, 1925.

Ser. No. 237,917. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NORTH PACKING AND PROVISION COMPANY, Somerville, Mass. Filed Sept. 29, 1926.

TUXEDO

Particular description of goods.—Salt Pork and Bacon.
Claims use since July, 1902.

Ser. No. 238,608. (CLASS 12. CONSTRUCTION MATERIALS.) THE S. OBERMAYER CO., Chicago, Ill. Filed Oct. 14, 1926.

CARBO-BRIK

No claim is made to the exclusive use of the word "Brik" apart from the mark shown in the drawing.
Particular description of goods.—Furnace Cement in Laying Up Fire Brick and Kindred Uses.
Claims use since Feb. 18, 1926.

Ser. No. 238,654. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) L. J. HABERKORN, Chatsworth, Ill. Filed Oct. 15, 1926.

L. J. Haberkorn "Wartsoff"

The name appearing is a facsimile of applicant's signature. No claim is made to the word "Wartsoff" apart from the mark as shown.
Particular description of goods.—Medicinal Composition for Removing Warts.
Claims use since Sept. 27, 1926.

Ser. No. 238,667. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) POCAHONTAS FUEL COMPANY INCORPORATED, Pocahontas, Va., and New York, N. Y. Filed Oct. 15, 1926.

ORIGINAL POCAHONTAS

Exclusive use of the word "Pocahontas" being disclaimed apart from its association with the word "Original."
Particular description of goods.—Coal.
Claims use since Apr. 1, 1910.

Ser. No. 238,806. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PLANTERS NUT & CHOCOLATE CO., Wilkes-Barre, Pa.; Suffolk, Va.; and San Francisco, Calif. Filed Oct. 18, 1926.

NICKEL DESSERT

No claim is made to the word "Nickel" apart from the mark as shown.
Particular description of goods.—Candy.
Claims use since Aug. 2, 1926.

Ser. No. 239,475. (CLASS 39. CLOTHING.) G. HOWARD HODGE, New York, N. Y. Filed Oct. 30, 1926.

HANDKERCHIEF FELT

The word "Felt" is hereby disclaimed apart from the mark as shown.
Particular description of goods.—Ladies' Hats, Hat Frames, and Hat Linings.
Claims use since Oct. 21, 1926.

Ser. No. 239,725. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EMMA SMITH, Gary, Ind. Filed Nov. 5, 1926.

Particular description of goods.—Hair Grower.
Claims use since Oct. 12, 1925.

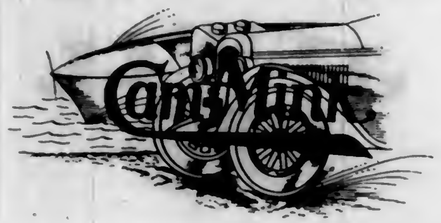
Ser. No. 239,936. (CLASS 32. FURNITURE AND UPHOLSTERY.) JACOB & JOSEF KOHN & MUNDUS, INC., New York, N. Y. Filed Nov. 11, 1926.

JACOB and JOSEF
KOHN
MUNDUS

No claim is made to the names "Jacob and Josef Kohn" apart from the mark as shown.
Particular description of goods.—Furniture, Principally Bent-Wood Furniture.
Claims use since 1924.

Ser. No. 240,167. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CALIFORNIA MEDICINAL WINE CO., Los Angeles, Calif. Filed Nov. 17, 1926.

California Padres



Particular description of goods.—Wine Elixir—Namely, Medicinal Wine for Use as a General Tonic.
Claims use since Sept. 1, 1926.

Ser. No. 240,221. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) THE SHOE FORM CO., INC., Auburn, N. Y. Filed Nov. 17, 1926.

FAIRYLITE

Particular description of goods.—A Plastic Cellulose Derivative.
Claims use since Oct. 18, 1926.

Ser. No. 240,400. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CAMPBELL AND MINKEL, New York, N. Y. Filed Nov. 22, 1926.

Particular description of goods.—Composition of Matter for Improving the Combustion of Fuel Oils, Especially Gasoline, in the Form of a Liquid Chemical Composition to be Mixed Therewith.
Claims use since Sept. 14, 1926.

Ser. No. 240,407. (CLASS 12. CONSTRUCTION MATERIALS.) DEUTSCHE XYLOLITH-PLATTEN-FABRIK OTTO SENING & CO., G. M. B. H., Freital-Potschappel, Germany. Filed Nov. 22, 1926.

XYLOLITH

Particular description of goods.—Flooring Materials in the Form of Blocks and Boards Made of a Specific Composition of Materials and Adapted to Lay a Floor Therewith.
Claims use since Nov. 11, 1924.

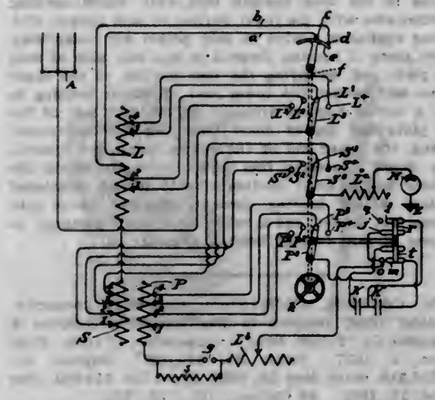
REISSUES

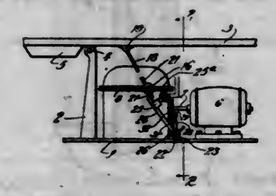


JUNE 14, 1927.

16,650. VALVED COUPLING FOR LUBRICATORS. HERBERT H. HOUGHTON, Los Angeles, Calif., assignor, by mesne assignments, to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 17, 1923. Serial No. 681,307. Original No. 1,342,678, dated June 8, 1920, Serial No. 351,984, filed Jan. 17, 1920. 7 Claims. (Cl. 221—47.4.)

1. In a lubricator for injecting grease or oil under relatively high pressure into machine bearings through nipples associated with said bearings, the combination of a compression grease gun, a lubricant delivery connection carried by said gun for receiving said nipples, said lubricant delivery connection comprising a sleeve adapted to receive said nipples, said sleeve and nipples having interengaging means for forming a quickly detachable connection therebetween upon relative rotation of the two to resist separation of the two by relative non-rotative movement under the pressure of the lubricant created by said gun, a gasket mounted in said sleeve, and co-acting with said nipples for making fluid tight the connection between said nipples and said sleeve, a valve seat on said sleeve, an inwardly opening pressure retaining valve on said seat, and means forming a valve stem projecting through said seat and cooperating with said nipples for opening said valve when said nipples and sleeve are moved relatively to each other.

16,651. ADJUSTMENT OF WAVE LENGTHS. GEORGE H. CLARK, Washington, D. C., assignor, by mesne assignments, to Radio Corporation of America, a Corporation of Delaware. Filed Apr. 20, 1920. Serial No. 375,381. Original No. 1,328,155, dated Nov. 25, 1919, Serial No. 2,799, filed Jan. 18, 1915. 13 Claims. (Cl. 250—40.)

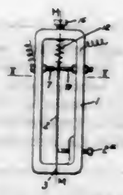


1. The combination with the primary and secondary of an oscillation transformer, of a variable inductance in circuit with one of them, a separate switch having connections with each of said primary, secondary and said inductance for varying them to simultaneously procure predetermined couplings between said primary and secondary and the requisite amount of inductance for each of a plurality of oscillation frequencies, and means common to all of said switches for actuating them in unison.

16,652. METHOD OF MAKING STRIP SHEETS. HARRY M. NAUGLE and ARTHUR J. TOWNSEND, Canton, Ohio, assignors to Forged Steel Wheel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 25, 1927. Serial No. 186,559. Original No. 1,536,028, dated Apr. 28, 1925, Serial No. 583,612, filed Aug. 22, 1922. 5 Claims. (Cl. 148—12.)

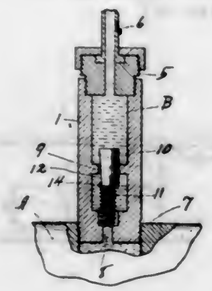
5. The method of making a strip sheet from a strip, skelp, bar or the like, which consists in rapidly reducing the material by a plurality of drafts between cold rolls and then annealing the sheet by a continuous method.

16,653. ATTACHMENT FOR CHIROPRACTIC TABLE. DOSSA D. EVINS, Davenport, Iowa, assignor to Frank W. Elliott, Davenport, Iowa. Filed Aug. 4, 1926. Serial No. 127,190. Original No. 1,504,111, dated Aug. 5, 1924, Serial No. 419,122, filed Oct. 23, 1920. 14 Claims. (Cl. 128—73.)



3. A chiropractic table comprising a base, supporting means upwardly projecting from said base, a table member pivoted on said supporting means for rotation about a horizontal axis, a motor associated with said base, a power shaft, power transmission means whereby movement of said shaft in a single direction may cause movement of said table member in reverse directions, and means for automatically terminating the movement of said shaft at the termination of the predetermined excursions of the table member, including a switch, and means, associated with such power transmission for opening the switch.

16,654. INSTANTANEOUS SWITCH. ARTHUR LEWERENZ, Berlin, Germany, assignor to The Firm Scherbius & Ritter, Wannsee, near Berlin, Germany. Filed Apr. 7, 1926. Serial No. 100,459. Original No. 1,516,195, dated Nov. 18, 1924, Serial No. 642,099, filed May 28, 1923. 12 Claims. (Cl. 200—138.)

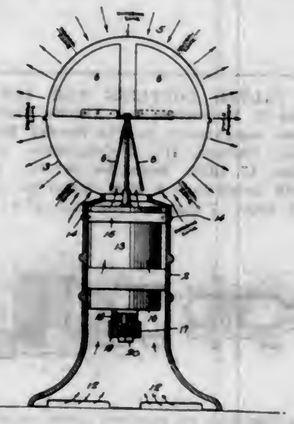


1. An instantaneous thermo-switch comprising a thermostatic strip arranged to flex in response to changes in temperature so as to occupy a given position at ordinary temperatures and to move away from said position upon

an increase in temperature, elastic means arranged to apply a force to said strip tending to hold said element in said position but to decreasingly resist the movement

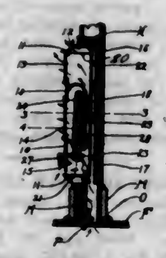
of said strip away from said position, said elastic means having a single stationary point of support, and switching means operated by said strip.

16,655. LUBRICATING SYSTEM. GEORGE L. MOORE, Chicago, Ill. Filed Apr. 2, 1927. Serial No. 180,601. Original No. 1,587,849, dated June 8, 1926, Serial No. 74,432, filed Dec. 10, 1925. 13 Claims. (Cl. 184—7.)



4. In a lubricating system for the chassis bearings of an automobile, a pump, a source of supply, a plurality of bearings, means connecting the pump with a source of supply, a conduit connecting the pump with the bearings and presenting a resistance to flow of oil and resistance means at each of said bearings to automatically compensate for differences in conduit resistance between each of said bearings and the pump.

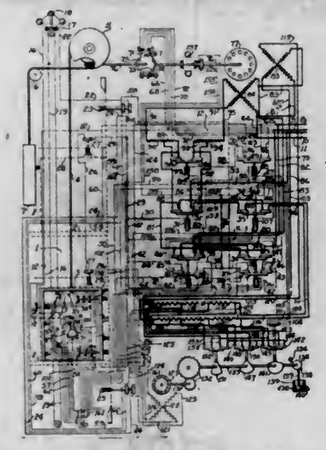
13. A flow control fitting for lubricating systems comprising a body member having an inlet and an outlet connected by a bore, a filler member in said bore having a tapered portion and defining with an integral portion thereof a highly restricted passageway, normally closed valve means within said bore, one of the elements of said valve being integral with said filler member.



16,656. VENTILATING FAN. SOCRATES ANTHONY XIPAS, Pittsburgh, Pa. Filed Apr. 23, 1927. Serial No. 186,132. Original No. 1,577,280, dated Mar. 16, 1926, Serial No. 67,797, filed Nov. 9, 1925. 15 Claims. (Cl. 230—252.)

1. In a device of the class described, a rotary impeller, and an enclosing casing therefor, said casing having a medial zone and two polar zones of openings therein, said impeller including means whereby the air is drawn into said casing through the openings in the polar

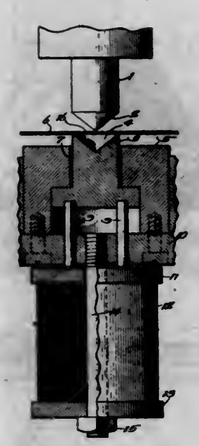
zones and forced toward the medial zone, said means serving to discharge the air through the openings in the medial zone.



16,657. WALL FURNACE. JOHN S. ANDREWS, Los Angeles, Calif. Filed June 21, 1926. Serial No. 117,577. Original No. 1,582,657, dated Apr. 27, 1926, Serial No. 40,181, filed June 29, 1925. 14 Claims. (Cl. 126—92.)

1. The combination with a building wall in the lower portion of which is formed a pocket and there being an opening in the floor beneath said wall, which opening communicates with the lower portion of said pocket, of a heating appliance located in said pocket and comprising a face plate, a housing secured to the rear side of said face plate and occupying the rear portion of the space within said pocket the lower end of which housing is open, a second housing arranged on the rear side of the face plate and spaced apart from the first mentioned housing, the lower end of the second mentioned housing being closed, a gaseous fuel burner arranged within the chamber in the lower portion of said second mentioned housing, radiant heating elements disposed above said gaseous fuel burner, and a reflecting housing arranged to the rear of said radiant heating elements.

16,658. CONTROL MECHANISM. ERNEST B. THURSTON, Toledo, Ohio, assignor to The Haughton Elevator & Machine Co., Toledo, Ohio, a Corporation of Ohio. Filed Mar. 3, 1927. Serial No. 172,525. Original No. 1,585,518, dated May 18, 1926, Serial No. 514,584, filed Nov. 12, 1921. 48 Claims. (Cl. 172—152.)

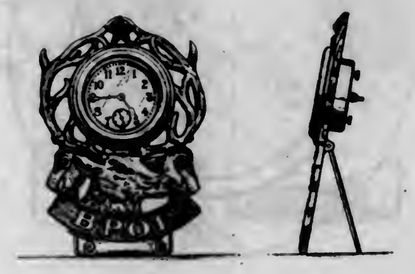


1. The combination with an elevator, a multi-speed alternating current motor for operating the elevator, said motor having a primary winding, a controller for the motor, a resistor for the motor in series with said primary winding, and means comprising a speed responsive switch for maintaining a short circuit across a portion

only of said resistor above a predetermined speed of the motor when said controller is shifted from motor actuating to motor stopping position.

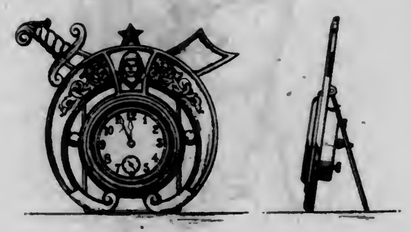
16,659. DIE MECHANISM. MORRIS SCHWARTZ, Chicago, Ill., assignor of one-half to Winnifred B. Parish, Chicago, Ill. Filed Jan. 31, 1927. Serial No. 164,997. Original No. 1,613,961, dated Jan. 11, 1927, Serial No. 679,796, filed Dec. 10, 1923. 1 Claim. (Cl. 113—46.)

Die mechanism for shaping sheet material, including a support for the sheet material; a male die member in the form of a punch upon the exterior of said support and having a tapering working end; a female die member having a tapering cavity receiving the tapering end of the punch and normally received in an opening in said support, and in which opening both die members are reciprocable, and between which support and the punch member a clearance, substantially equal to the thickness of the



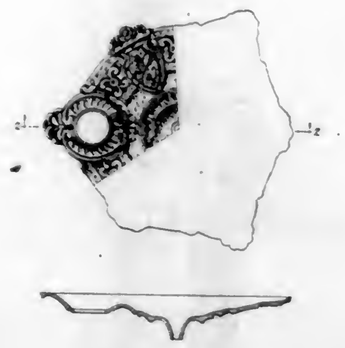
sheet material being operated upon, intervenes to receive the sheet material being worked upon; and means for maintaining clamping engagment of said die members with the sheet material after the initial punching operation, to enable the sheet material to be drawn by the die members into said clearance as said die members move together.

DESIGNS



JUNE 14, 1927.

72,811. CLOCK CASING. LOUIS V. ARONSON, Newark, N. J. Filed Feb. 5, 1927. Serial No. 20,630. Term of patent 3½ years.



The ornamental design for a clock casing, as shown.

72,812. CLOCK CASING. LOUIS V. ARONSON, Newark, N. J. Filed Feb. 5, 1927. Serial No. 20,631. Term of patent 3½ years.

The ornamental design for a clock casing, as shown.

72,813. CEILING PLATE FOR LIGHTING FIXTURES. JOHN A. BOEHRINGER, Springfield, N. Y., assignor to Star Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 17, 1927. Serial No. 21,163. Term of patent 3½ years.

The ornamental design for a ceiling plate for lighting fixtures, as shown.

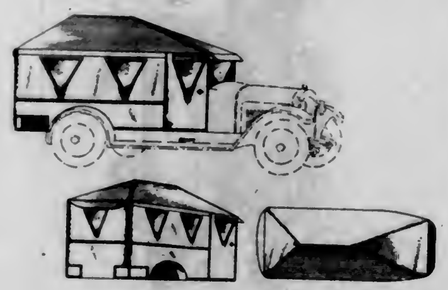
72,814. LOOP FOR LIGHTING FIXTURES. JOHN A. BOEHRINGER, Springfield, N. Y., assignor to Star Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 13, 1927. Serial No. 21,586. Term of patent 3½ years.

The ornamental design for a loop for lighting fixtures, as shown.

72,815. LOOP FOR LIGHTING FIXTURES. JOHN A. BOEHRINGER, Springfield, N. Y., assignor to Star Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 13, 1927. Serial No. 21,587. Term of patent 3½ years.

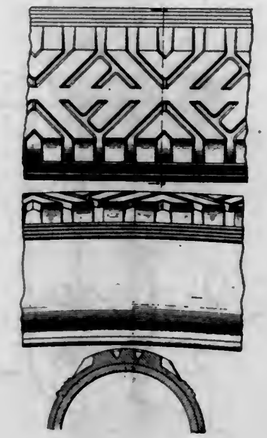
The ornamental design for a loop for lighting fixtures, as shown.

72,816. PLATE. EDGAR M. BOTTOME, Moundsville, W. Va., assignor to Fostoria Glass Co., Moundsville, W. Va., a Corporation of West Virginia. Filed Mar. 14, 1927. Serial No. 21,141. Term of patent 14 years.



The ornamental design for a plate, as shown.

72,817. GOBLET. EDGAR M. BOTTOME, Moundsville, W. Va., assignor to Fostoria Glass Co., Moundsville, W. Va., a Corporation of West Virginia. Filed Mar. 14, 1927. Serial No. 21,142. Term of patent 14 years.

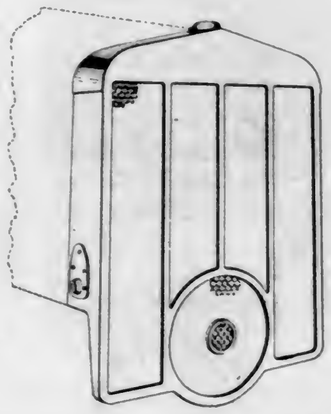


The ornamental design for a goblet, as shown.

72,818. AUTOMOBILE BODY. JAMES A. BRENT, Kalispell, Mont. Filed Oct. 23, 1926. Serial No. 19,453. Term of patent 14 years.

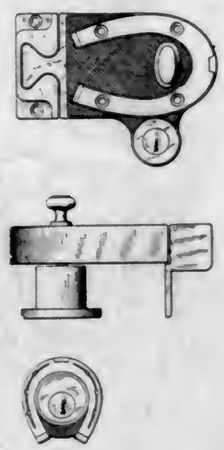
The ornamental design for an automobile body, as shown.

72,819. TIRE. TRUMAN S. CALDWELL, Racine, Wis., assignor to Racine Horseshoe Tire Company, Racine, Wis., a Corporation of Wisconsin. Filed Feb. 15, 1927. Serial No. 20,773. Term of patent 3½ years.



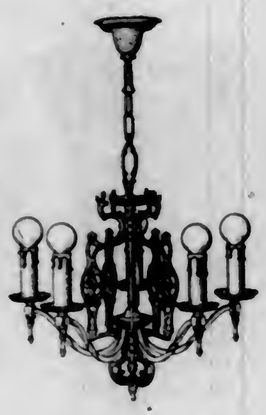
The ornamental design for a tire, substantially as shown.

72,820. COMBINED SMOKER'S STAND AND MAGAZINE RACK. FREDERICK B. CUSHMAN, North Bennington, Vt., assignor to H. T. Cushman Mfg. Co., North Bennington, Vt., a Corporation of Vermont. Filed Mar. 14, 1927. Serial No. 21,130. Term of patent 3½ years.



The ornamental design for a combined smoker's stand and magazine rack substantially as shown.

72,821. AUTOMOBILE RADIATOR OR THE LIKE. FRANK DE CAUSSE, New York, N. Y., assignor to H. H. Franklin Manufacturing Company, Syracuse, N. Y., a Corporation of New York. Filed Mar. 17, 1925. Serial No. 12,751. Term of patent 3½ years.

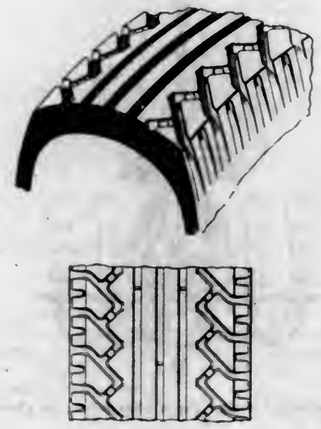


The ornamental design for an automobile radiator or the like substantially as shown.

72,822. DOOR LOCK. SAMUEL EDELSON, New York, N. Y. Filed Dec. 13, 1923. Serial No. 8,018. Term of patent 14 years.

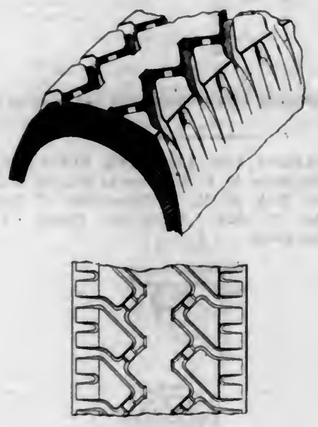
The ornamental design for a door lock, as shown.

72,823. CHANDELIER. HARRY FINCH, Inglewood, Calif., assignor to Allied Metal Industries, Inc., a Corporation of California. Filed Apr. 12, 1927. Serial No. 21,565. Term of patent 3½ years.



The ornamental design for a chandelier, as shown.

72,824. LIGHTING-FIXTURE BRACKET. HARRY FINCH, Inglewood, Calif., assignor to Allied Metal Industries, Inc., a Corporation of California. Filed Apr. 12. 1927. Serial No. 21,564. Term of patent 3½ years.



The ornamental design for a lighting fixture bracket, as shown.

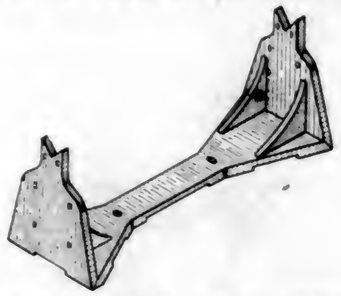
72,825. TIRE. WALLACE R. GILLAM, Tallmadge, Ohio, assignor to Lambert Tire & Rubber Co., Barberton, Ohio, a Corporation of Arizona. Filed Jan. 21, 1926. Serial No. 16,205. Term of patent 3½ years.

The ornamental design for a tire substantially as shown.

72,826. TIRE. WALLACE R. GILLAM, Tallmadge, Ohio, assignor to Lambert Tire & Rubber Co., Barberton, Ohio, a Corporation of Arizona. Filed Jan. 21, 1926. Serial No. 16,206. Term of patent 3½ years.

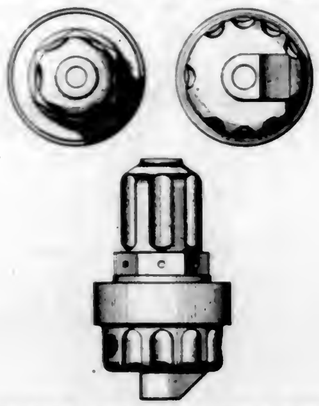
The ornamental design for a tire substantially as shown.

72,827. GOBLET. FRANK D. GREENAN, Moundsville, W. Va., assignor to Fostoria Glass Co., Moundsville, W. Va., a Corporation of West Virginia. Filed Mar. 14, 1927. Serial No. 21,133. Term of patent 14 years.



The ornamental design for a goblet, as shown.

72,828. TOY AUTOMOBILE. OSCAR HITT, Weehawken, N. J. Filed Feb. 10, 1927. Serial No. 20,677. Term of patent 7 years.

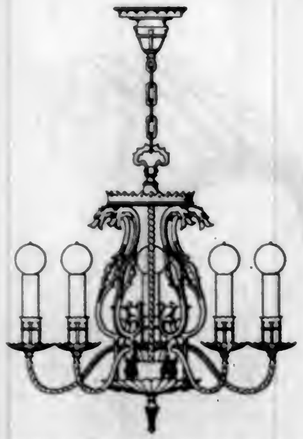


The ornamental design for a toy automobile substantially as shown.

72,829. MARINE-COMPASS BRACKET. PAUL C. KAUFFMAN, Seattle, Wash. Filed Mar. 18, 1924. Serial No. 8,982. Term of patent 7 years.

The ornamental design for a marine compass bracket as shown.

72,830. PRESSURE-REGULATOR CASING. ROBERT J. KEHL, Newark, N. J., assignor to Oxweld Acetylene Company, a Corporation of West Virginia. Filed Apr. 15, 1926. Serial No. 17,308. Term of patent 14 years.



The ornamental design for a pressure regulator casing substantially as shown.

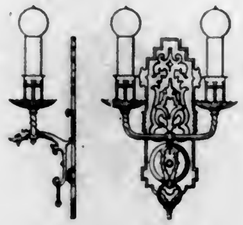
72,831. BOTTLE. CHANDLER KING, Chattanooga, Tenn. Filed Mar. 25, 1927. Serial No. 21,322. Term of patent 14 years.

The ornamental design for a bottle, substantially as shown.

72,832. CHANDELIER. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927, Serial No. 21,009. Term of patent 3½ years.

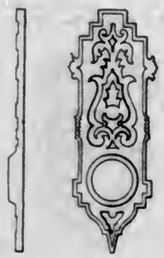
The ornamental design for a chandelier, as shown.

72,833. ARM FOR LIGHTING FIXTURES. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,010. Term of patent 3½ years.



The ornamental design for an arm for lighting fixtures, as shown.

72,834. CANOPY FOR LIGHTING FIXTURES. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,011. Term of patent 3½ years.



The ornamental design for a canopy for lighting fixtures, as shown.

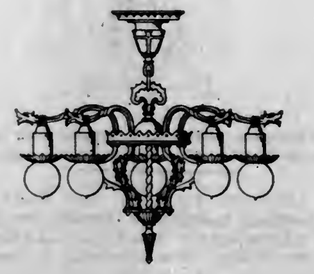
72,835. WALL BRACKET. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,012. Term of patent 3½ years.

The ornamental design for a wall bracket, as shown.

72,836. BRACKET BACK FOR LIGHTING FIXTURES. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,013. Term of patent 3½ years.

The ornamental design for a bracket back for lighting fixtures, as shown.

72,837. WALL BRACKET. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,014. Term of patent 3½ years.



The ornamental design for a wall bracket, as shown.

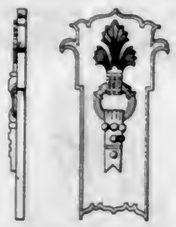
72,838. BRACKET BACK FOR LIGHTING FIXTURES. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,015. Term of patent 3½ years.

The ornamental design for a bracket back for lighting fixtures, as shown.

72,839. LIGHTING FIXTURE. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,016. Term of patent 3½ years.

The ornamental design for a lighting fixture, as shown.

72,840. WALL BRACKET. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,017. Term of patent 3½ years.

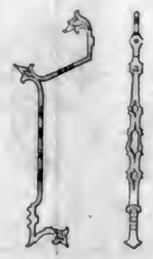


The ornamental design for a wall bracket, as shown.

72,841. BRACKET BACK FOR LIGHTING FIXTURES. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,018. Term of patent 3½ years.

The ornamental design for a bracket back for lighting fixtures, as shown.

72,842. BRACKET BACK FOR LIGHTING FIXTURES. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,020. Term of patent 3½ years.



The ornamental design for a bracket back for lighting fixtures, as shown.

72,843. LIGHTING FIXTURE. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,021. Term of patent 3½ years.

The ornamental design for a lighting fixture, as shown.

72,844. ARM FOR LIGHTING FIXTURES. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,022. Term of patent 3½ years.

The ornamental design for an arm for lighting fixtures, as shown.

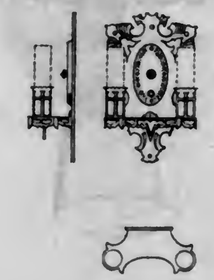
72,845. PLATE FOR LIGHTING FIXTURES. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,023. Term of patent 3½ years.

The ornamental design for a plate for lighting fixtures, as shown.

72,846. WALL BRACKET. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,024. Term of patent 3½ years.

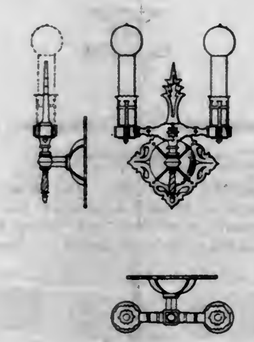
The ornamental design for a wall bracket, as shown.

72,847. BRACKET BACK FOR LIGHTING FIXTURES. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,025. Term of patent 3½ years.



The ornamental design for a bracket back for lighting fixtures, as shown.

72,848. WALL BRACKET. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,026. Term of patent 3½ years.

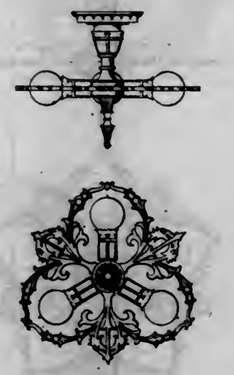


The ornamental design for a wall bracket, as shown.

72,849. BRACKET BACK FOR LIGHTING FIXTURES. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,027. Term of patent 3½ years.

The ornamental design for a bracket back for lighting fixtures, as shown.

72,850. WALL BRACKET. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,028. Term of patent 3½ years.

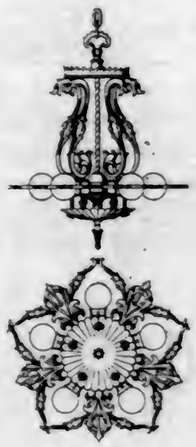


The ornamental design for a wall bracket, as shown.

72,851. WALL BRACKET. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,029. Term of patent 3½ years.

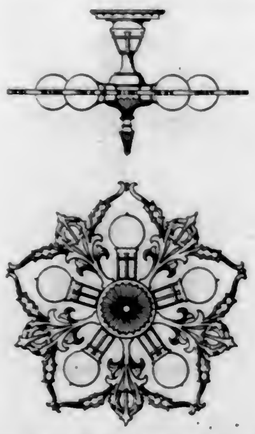
The ornamental design for a wall bracket, as shown.

72,852. CEILING LIGHT. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,030. Term of patent 3½ years.



The ornamental design for a ceiling light, as shown.

72,853. CEILING LIGHT. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,031. Term of patent 3½ years.



The ornamental design for a ceiling light, as shown.

72,854. LIGHTING FIXTURE. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,032. Term of patent 3½ years.

The ornamental design for a lighting fixture, as shown.

72,855. LIGHTING FIXTURE. MAX KLEIN, Brooklyn, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 21,033. Term of patent 3½ years.

The ornamental design for a lighting fixture, as shown.

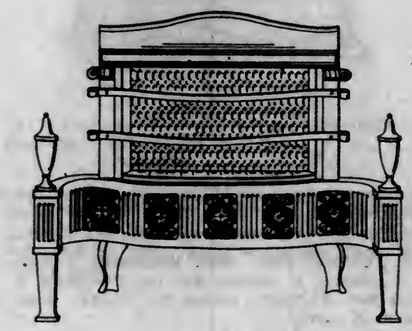
72,856. LAMP SHADE OR ANALOGOUS ARTICLE OF MANUFACTURE. ARTHUR R. KRAUSE, Woodhaven, and FREDERICK W. MATHIEU, New York, N. Y. Filed Dec. 15, 1924. Serial No. 11,705. Term of patent 7 years.

The ornamental design for a lamp shape or analogous article of manufacture, substantially as shown and described.

72,857. LAMP SHADE OR ANALOGOUS ARTICLE OF MANUFACTURE. ARTHUR R. KRAUSE, Woodhaven, and FREDERICK W. MATHIEU, New York, N. Y. Filed Dec. 15, 1924. Serial No. 11,706. Term of patent 7 years.

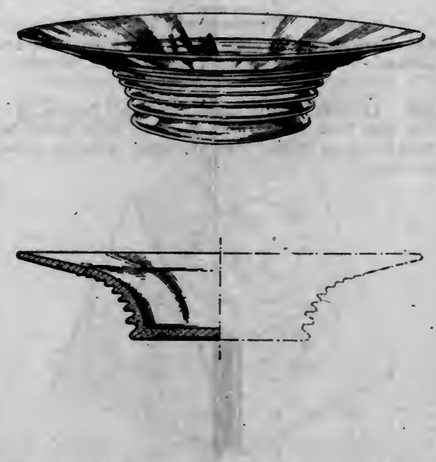
The ornamental design for a lamp shade or analogous article of manufacture, substantially as shown and described.

72,858. LAMP SHADE OR ANALOGOUS ARTICLE OF MANUFACTURE. ARTHUR R. KRAUSE, Woodhaven, and FREDERICK W. MATHIEU, New York, N. Y. Filed Dec. 15, 1924. Serial No. 11,707. Term of patent 7 years.



The ornamental design for a lamp shade or analogous article of manufacture, substantially as shown.

72,859. LAMP SHADE OR ANALOGOUS ARTICLE OF MANUFACTURE. ARTHUR R. KRAUSE, Woodhaven, and FREDERICK W. MATHIEU, New York, N. Y. Filed Dec. 15, 1924. Serial No. 11,708. Term of patent 7 years.

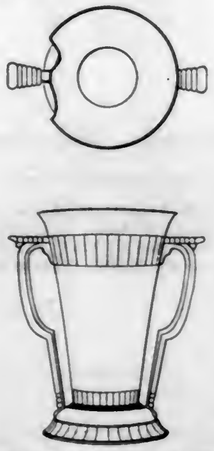


The ornamental design for a lamp shade or analogous article of manufacture, substantially as shown.

72,860. RADIANT HEATER. LINDLEY S. LAWSON, Pittsburgh, Pa. Filed Apr. 11, 1927. Serial No. 21,533. Term of patent 3½ years.

The ornamental design for a radiant heater, substantially as shown.

72,861. BOWL. WILLIAM H. MAGEE, Moundsville, W. Va., assignor to Fostoria Glass Company, Moundsville, W. Va., a Corporation of West Virginia. Filed Feb. 18, 1927. Serial No. 20,805. Term of patent 14 years.



The ornamental design for a bowl as shown.

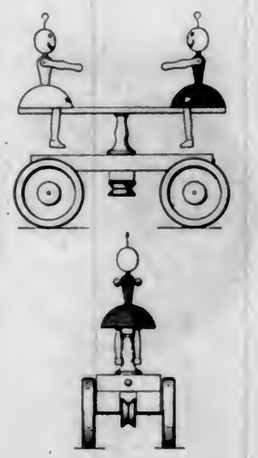
72,862. COMPORT. WILLIAM H. MAGEE, Moundsville, W. Va., assignor to Fostoria Glass Company, Moundsville, W. Va., a Corporation of West Virginia. Filed Feb. 18, 1927. Serial No. 20,806. Term of patent 14 years.

The ornamental design for a comport as shown.

72,863. LOVING CUP. ERIK MAGNUSSEN, Providence, R. I., assignor to Gorham Mfg. Co., Providence, R. I. Filed Mar. 21, 1927. Serial No. 21,244. Term of patent 14 years.

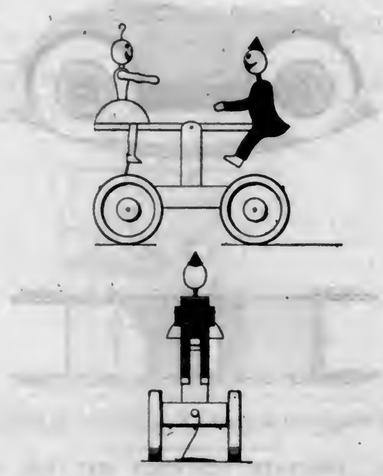
The ornamental design for a loving cup, as shown and described.

72,864. LIP-STICK HOLDER. CHARLES LIONEL MARCUS, New York, N. Y. Filed Sept. 11, 1924, Serial No. 10,736, and in France Mar. 17, 1924. Term of patent 14 years.



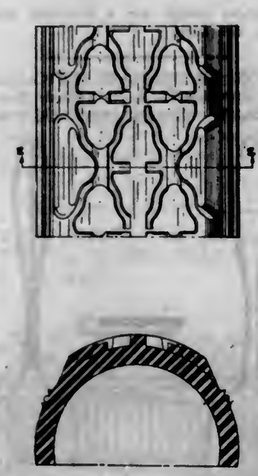
The ornamental design for a lip stick holder as shown and described.

72,865. STOCKING. IRENE PATTERSON, Trinidad, Colo. Filed Nov. 30, 1926. Serial No. 19,889. Term of patent 3½ years.



The ornamental design for a stocking, as shown.

72,866. WHEELED TOY. THOMAS E. POWERS, New York, N. Y. Filed Feb. 12, 1927. Serial No. 20,728. Term of patent 3½ years.



The ornamental design for a wheeled toy substantially as shown.

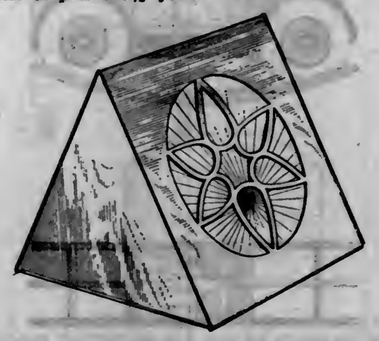
72,867. WHEELED TOY. THOMAS E. POWERS, New York, N. Y. Filed Feb. 12, 1927. Serial No. 20,729. Term of patent 3½ years.

The ornamental design for a wheeled toy, substantially as shown.

72,868. TIRE. BENJAMIN H. PRATT, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Nov. 20, 1925. Serial No. 15,486. Term of patent 14 years.

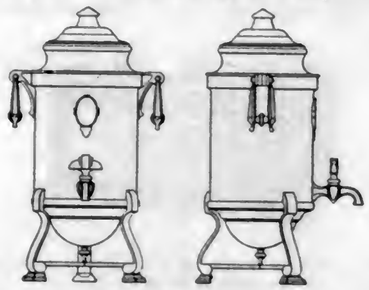
The ornamental design for a tire substantially as shown.

72,869. CABINET FOR RADIO RECEIVING APPARATUS. EDWIN S. PRIDHAM and PETER L. JENSEN, Oakland, Calif., assignors to The Magnavox Company, Oakland, Calif., a Corporation of Arizona. Filed Sept. 17, 1924. Serial No. 10,797. Term of patent 3½ years.



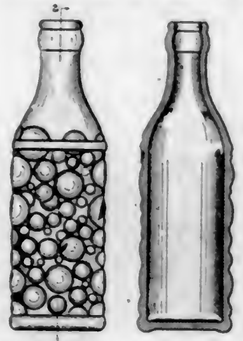
The ornamental design for a cabinet for radio receiving apparatus, substantially as shown.

72,870. BOX OR SIMILAR CONTAINER. JOSEPH N. ROYAL, Buffalo, N. Y., assignor to F. N. Burt Company, Limited, Toronto, Canada, a Corporation of Ontario. Filed Feb. 28, 1927. Serial No. 20,929. Term of patent 14 years.



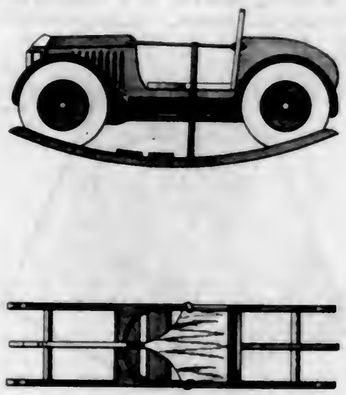
The ornamental design for a box or similar container as shown.

72,871. CONE SPEAKER. MAURICE C. RYPINSKI, Yonkers, LE ROY W. STAUNTON, Jackson Heights, and STEPHEN BOURNE, New York, N. Y., assignors to Brandes Laboratories, Inc., Newark, N. J., a Corporation of New Jersey. Filed Mar. 10, 1926. Serial No. 16,867. Term of patent 3½ years.



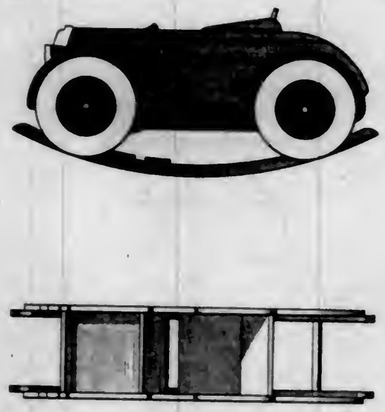
The ornamental design for a cone speaker as shown.

72,872. URN. HOWARD H. SCHOTT, Rochester, N. Y., assignor to Robeson-Rochester Corporation, Rochester, N. Y., a Corporation of New York. Filed Apr. 13, 1927. Serial No. 21,574. Term of patent 7 years.



The ornamental design for an urn as shown.

72,873. BOTTLE. GAYLE D. STEWART, Toledo, Ohio, assignor to The American Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 28, 1924. Serial No. 12,516. Term of patent 14 years.

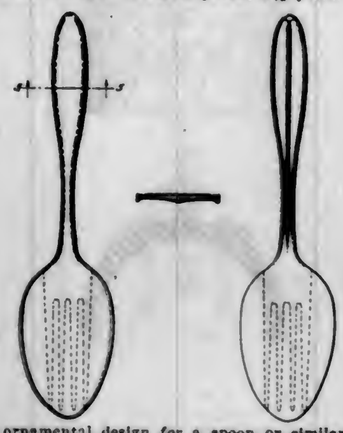


The ornamental design for a bottle, substantially as shown.

72,874. ROCKING TOY. ADOLPH SUNDBECK, Minneapolis, Minn., assignor to The Photo Plating Company, Minneapolis, Minn., a Corporation of South Dakota. Filed Mar. 5, 1927. Serial No. 20,988. Term of patent 3½ years.

The ornamental design for a rocking toy, as shown.

72,875. ROCKING TOY. ADOLPH SUNDBECK, Minneapolis, Minn., assignor to The Photo Plating Company, Minneapolis, Minn., a Corporation of South Dakota. Filed Mar. 5, 1927. Serial No. 20,989. Term of patent 3½ years.

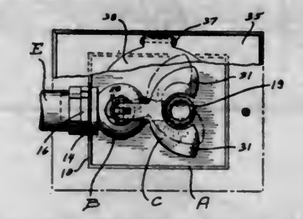


The ornamental design for a rocking toy, as shown.

72,876. DECORATE LUNCHEON MAT FOR HOT PLATES. MELVILLE TANNENHOLZ, Brooklyn, N. Y. Filed Apr. 12, 1927. Serial No. No. 21,561. Term of patent 3½ years.

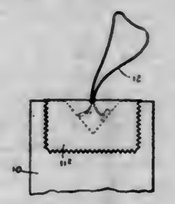
The ornamental design for a decorate luncheon mat for hot plates, as shown.

72,877. SPOON OR SIMILAR ARTICLE. FRANK S. TRUMBULL, Providence, R. I. Filed Mar. 23, 1927. Serial No. 21,279. Term of patent 3½ years.



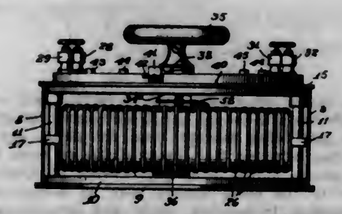
The ornamental design for a spoon or similar article, as shown.

PATENTS



GRANTED JUNE 14, 1927.

1,631,953. GAS-OUTLET FIXTURE. HORACE C. ANDERSON, Amarillo, Tex. Filed June 1, 1926. Serial No. 119,978. 9 Claims. (Cl. 137—13.)

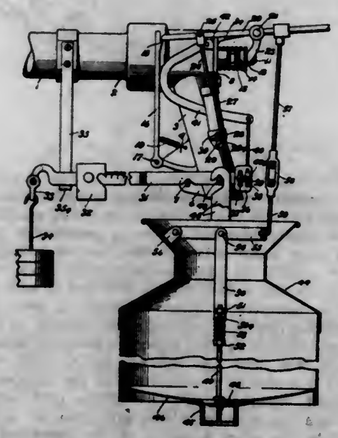


1. An outlet fixture comprising a housing having an open side, a valve embodying a nipple portion mounted in the housing, and operating means for the valve movable into the housing only when the valve is closed.

1,631,954. TICKET AND SECURING MEANS THEREFOR. MARCUS B. BEHRMAN, New York, N. Y., assignor to The Lox Seal Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 12, 1925. Serial No. 55,909. 4 Claims. (Cl. 40—21.)

1. In a device of the character deacribed, a marking ticket having a portion thereof removed along one edge to form a space therewithin and sheet material means engaging both sides of the ticket for completely enclosing said space for forming a pocket within the outlines of the marking ticket.

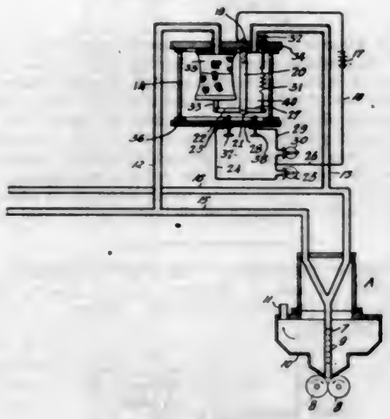
1,631,955. TRANSFORMER. CARL BERGMAN, Bergenfield, N. J. Filed Apr. 12, 1924. Serial No. 706,016. 6 Claims. (Cl. 171—119.)



1. A device of the character described comprising a casing provided with a pair of casing heads, a plurality of posts each extending through said casing and connected with both of said casing heads, a transformer core having a general annular form and provided with openings, members of insulating material disposed within said openings and extending therefrom, said members of insulating material being connected with said posts for the purpose of supporting said core by aid thereof, transformer windings mounted upon said core and insulated therefrom, and mechanism mounted upon one of said casing heads and connected with said transformer windings for enabling the operator to control said transformer windings.

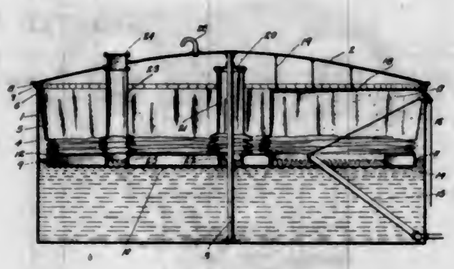
1,631,956. HEMMER. ALBERT HARRISON DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Sept. 20, 1924. Serial No. 738,746. 3 Claims. (Cl. 112—141.)

1. A hemmer comprising a hem-folding scroll formed as a diminishing spiral terminating in a hollow arbor having an inner free edge extending spirally toward the delivery end of the hemmer, said scroll including a work-supporting platform disposed mainly in advance of said arbor, said platform and the body of the hem-folding scroll having a front edge extending spirally rearwardly toward the delivery end of the hemmer and merging into the front edge of said arbor, which latter front edge continues spirally forwardly to the front end of said arbor.



1,631,957. AUTOMATIC LIQUID-WEIGHING MACHINE. JAMES J. FORTIER, Grand Rapids, Mich. Filed Apr. 23, 1924. Serial No. 708,368. 5 Claims. (Cl. 249—53.)

1. In a machine of the class described, a member having a passage therethrough and provided at one end with a downwardly extending nozzle, a valve in said member,

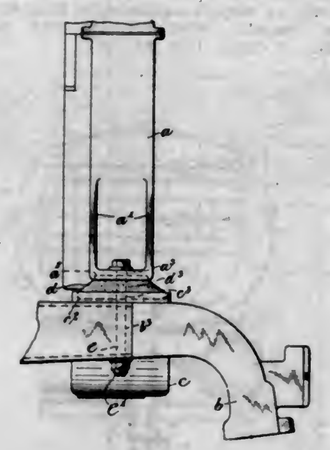


spring means acting on the valve to normally move it to closed position, a scale beam pivotally mounted between its ends on said nozzle, weights at one end of the beam, a receptacle suspended from the scale beam adjacent its other end, an outlet to said receptacle at the bottom thereof, a closure movably mounted to open or close said outlet, manually operable means for moving said valve to open position, means connecting the manually operated means and said outlet closure whereby the closure is moved to closed position when the valve is moved to open position and vice versa, latch means for holding the said manually operable means in position to keep said valve in open position, and means connected with the end of the scale beam opposite the end at which the weights are mounted for acting on said latch means to move it to free said manually operated means when the weight of liquid passed to the receptacle overbalances said weights carried on the scale beam, substantially as described.

1,631,958. PNEUMATIC RELAY. EDGAR W. GENT, Morristown, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 12, 1923. Serial No. 680,171. 2 Claims. (Cl. 200—81.)

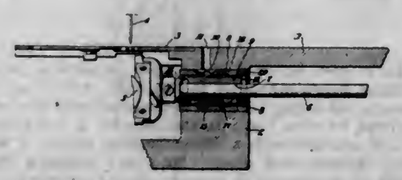
1. A pneumatic relay comprising a sealed chamber, a bellows within said chamber mounted in an upright position and constructed to assume a collapsible position when its inner pressure is less than that of said chamber, a support within the chamber for rigidly supporting the bellows at its top, a base for the free end of said bellows made of comparatively heavy material, a lever pivoted at or near its mid-point with one end secured to the bottom of said bellows so that when the pressure within said bellows is less than the pressure within said chamber said lever is moved in one direction by the collapse of the bellows and, when the pressure within said bellows is greater than the pressure within said chamber, said lever is moved in the other direction by the expansion of the bellows and the weight of the base of the bellows, and electrical contacts operated by the movement of said lever to control signals to indicate the position of greatest pressure.

1,631,959. OIL TANK. CLIFTON A. GLASS, Kansas City, Mo. Filed Mar. 28, 1924. Serial No. 702,600. 6 Claims. (Cl. 220—26.)



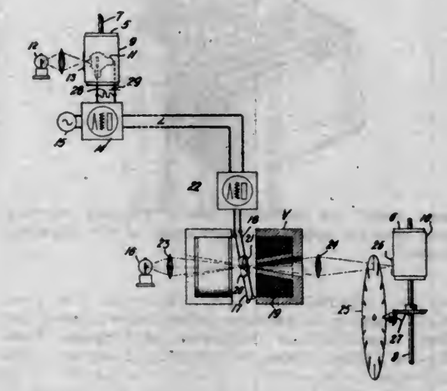
1. A liquid container, a substantially vertical curtain secured at its upper edge to the inside of the container and a metallic float sealed to the lower portion of the curtain around its outer edge, the float having an opening therein for the reception of a swing pipe and a supplemental curtain closing off communication between the opening and the upper portion of the container.

1,631,960. HOCKEY STICK. ZACHARIAH ADAM HALL, Hespeler, Ontario, Canada. Filed Nov. 26, 1924. Serial No. 752,445. 3 Claims. (Cl. 273—67.)



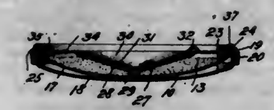
1. A hockey stick comprising a handle part one edge of which has a V-shaped notch interjacent its ends, said handle part being tapered from the notch and a corresponding point on the opposite edge to form an elongated tongue, and a blade part having an integral arm angular to the blade formed with an elongated recess corresponding in location, shape and dimensions to the tongue of the handle part, said tongue entered in the elongated recess and extending to the throat of the blade, and one of the forks of the arm formed by said recess entered in the notched edge of the handle part.

1,631,961. RADIATOR MOUNT. JOHN W. HEINEY, Allentown, Pa., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed July 18, 1923. Serial No, 652,257. 1 Claim. (Cl. 180—68.)



A wholly non-metallic connection and support interposed between a vehicle frame and a radiator, comprising a block of yielding non-metallic material at either side of the radiator having parallel upper and lower faces, the lower face of said block being greater in area than the upper face and the forward and rearward superficial areas of said block extending downwardly and outwardly, co-operating depressed seats for the block on the vehicle frame and radiator to receive snugly the bottom and top of the block, respectively, and a bolt passing through the seats and the block to maintain the block under compression and against displacement whereby pivotal movement of the radiator about the support will cause a distortion of that portion of the block between the two seats and added resistance will be applied to resist such pivotal movement.

1,631,962. SHAFT BEARING. MARTIN HEMLEB, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed July 16, 1923. Serial No. 651,802. 3 Claims. (Cl. 308—240.)

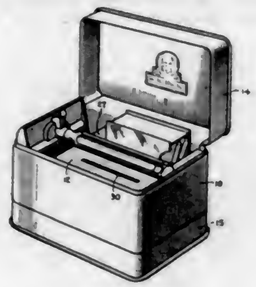


1. A bearing bushing comprising a sleeve formed in its outer surface with a depression constituting an oil-pocket, and separate capillary oil-supply and gravity return ducts connecting said pocket with the inner or bearing surface of the bushing.

1,631,963. TRANSMISSION OF PICTURES BY ELECTRICITY. HERBERT E. IVES, Montclair, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1923. Serial No. 683,632. 10 Claims. (Cl. 178—7.)

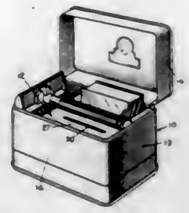
1. A light valve comprising means to produce a magnetic field of uniform strength, a member having a V-shaped edge located in said field, a second member also having a V-shaped edge suspended in said magnetic field and adapted to move relatively to said first mentioned member so as to form a square aperture of varying size.

1,631,964. VANITY CASE. NATHAN KASDAN, New York, and DANIEL POLLACK, Brooklyn, N. Y., assignors to Majestic Metal Specialties, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 30, 1926. Serial No. 98,416. 7 Claims. (Cl. 132—83.)



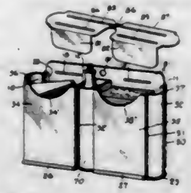
1. In a vanity case, a powder container, a cover therefor, and a powder sifter mounted on the cover, said powder sifter extending a substantial distance below the level of the powder in the powder container and including an arcuately movable closure plate.

1,631,965. CONTAINER. JOSEPH KAUFMAN, New York, N. Y., assignor to American Safety Razor Corporation, New York, N. Y., a Corporation of Virginia. Filed Oct. 3, 1924. Serial No. 741,377. 3 Claims. (Cl. 206—16.)



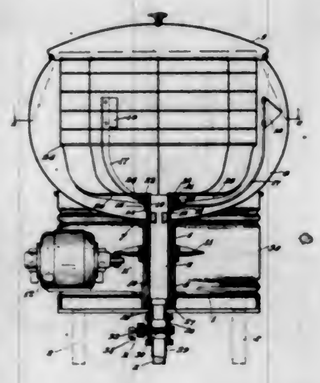
1. In a device of the character described, a container made up of a plurality of sections, each section being in the form of a metal stamping, having a continuous front, side and rear wall construction and a flange extending inwardly therefrom and continuous with the walls, the sections being assembled with the flanges in contact, whereby the container is formed with its interior divided

by the flanges into upper and lower compartments, and means associated with the flanges for complete, dividing partition between the compartments, a flexible covering



passed about the container and a finishing covering passed over the upper and lower edges of the assembled sections.

1,631,966. CONTAINER. JOSEPH KAUFMAN, New York, N. Y., assignor to American Safety Razor Corporation, New York, N. Y., a Corporation of Virginia. Filed Dec. 17, 1924. Serial No. 756,471. 2 Claims. (Cl. 206—16.)

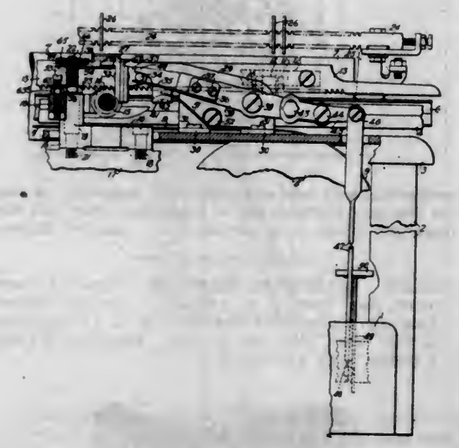


2. In a device of the character described, a container having a body portion open at its opposite ends, closures for said open ends, a partition associated with the body portion and intermediate the open ends thereof whereby superimposed compartments are formed, a saddle block in one of the compartments to receive parts of the shaving apparatus and a coin slot through the saddle block leading to the other compartment and means for locking the coin compartment, said closures including a stamping having continuous side walls and a flange, predetermined portions of which are cut away, and a closure base member having struck up portions adapted to engage the flange at the cut away portions thereof.

1,631,967. CONTAINER. JOSEPH KAUFMAN, Bronxville, N. Y., assignor to American Safety Razor Corporation, New York, N. Y., a Corporation of Virginia. Filed Jan. 29, 1925. Serial No. 5,491. 9 Claims. (Cl. 206—16.)

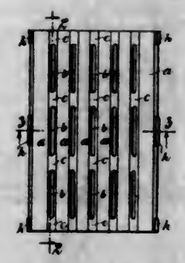
1. A safety razor container comprising a plurality of compartments, adjacent walls being formed to provide a depression therebetween, and another compartment adapted to be supported in said depression exteriorly of the first mentioned compartments with its walls contacting with the walls aforesaid, and means for interconnecting said walls.

1,631,968. DISHWASHING MACHINE. THOMAS J. KEHOE, Toledo, and MICHAEL J. KEHOE, London, Ohio, assignors, by mesne assignments, to Cascade Manufacturing Company. Filed Dec. 19, 1923. Serial No. 681,542. 7 Claims. (Cl. 141—9.)



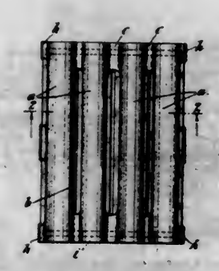
1. In a washing machine, a tank, means to rotate the tank about a vertical axis, an article holder within the tank, a deflector between the side of the tank and the holder, and a support for the deflector with relation to which support the tank and article holder are movable.

1,631,969. AUTOMATIC SLACK ADJUSTER. HENRY A. LEONHAUSER, Baltimore, Md., assignor to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 2, 1925. Serial No. 41,115. 4 Claims. (Cl. 188—198.)



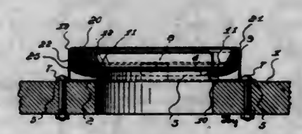
4. In a slack adjuster, brake lever connecting means comprising heads connected to the brake levers, an intermediate rod having threaded engagement with one head and having its other end rotatably received in the second head and provided with a circumferential groove, a bolt passing through said second head and engaging tangentially in said groove to prevent relative endwise movement of said rod and said second head, a sleeve rotatably mounted on said rod and said second head, clutching means comprising a spring and a member resiliently movable by said spring housed in said sleeve for transmitting rotary movement from said sleeve to said intermediate rod in one direction, said bolt being located outside said sleeve, and means operable by movement of the brake levers for oscillating said sleeve.

1,631,970. TYPEWRITING MACHINE. RICHARD J. LEWIS, Mohawk, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Dec. 29, 1925. Serial No. 78,146. 22 Claims. (Cl. 197—64.)



1. Braking mechanism for the carriage of a typewriting machine, comprising a braking arm adapted to cooperate with the carriage, and a cushioning device on which said arm is adapted to swing so that its opposite end portions are alternately raised and lowered.

1,631,971. LINER FOR TUBE MILLS, ETC. POUL T. LINDHARD, Brooklyn, N. Y., assignor to F. L. Smidth & Co., New York, N. Y., a Corporation of New Jersey. Filed July 11, 1925. Serial No. 42,868. 4 Claims. (Cl. 83—9.)

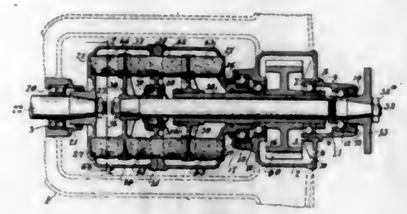


1. A liner block for tube mills, etc., consisting of a plurality of longitudinal bars of metal with rounded working surfaces, said blocks being provided with intervening spaces between the bars and bridge pieces connecting the bars at intervals along their length.

1,631,972. LINER FOR TUBE MILLS. POUL T. LINDHARD, Brooklyn, N. Y., assignor to F. L. Smidth & Co., New York, N. Y., a Corporation of New Jersey. Filed Oct. 1, 1926. Serial No. 138,848. 4 Claims. (Cl. 83—9.)

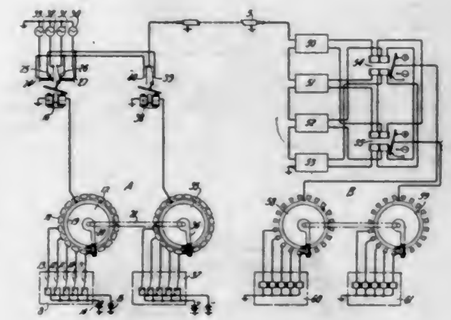
1. A liner for tube mills, etc., having longitudinal bars of metal spaced apart transversely to the direction of movement of the grinding bodies and having the lateral faces of adjacent bars formed in planes at an angle to each other so that the tangent of one-half of such angle shall not be substantially less than the coefficient of friction between the grinding bodies and the material of which the bars are formed, whereby the packing and lodging of the grinding bodies in the spaces between the bars is prevented and the corrugation of the working surface of the liner is maintained.

1,631,973. LUBRICATING AND PROTECTING MEANS FOR SPINNING MECHANISMS. GEORGE F. MACFARLANE, Wilkes-Barre, Pa. Filed Mar. 17, 1926. Serial No. 95,279. 7 Claims. (Cl. 118—59.)



1. A lubricator for a spinning machine that includes a thread guide that is supported to rotate with its ends beneath a supporting ring having a downwardly inclined top surface, comprising a hollow ring that has a flange to surround the edge of said supporting ring, and lubricant retaining packing arranged on said inclined top surface within said hollow ring.

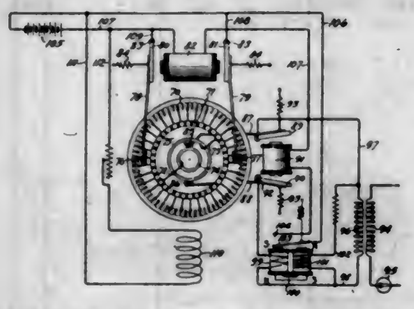
1,631,974. METHOD OF PRESERVING FRUITS. WHARTON B. MCLAUGHLIN, New York, N. Y.; Celia Brown McLaughlin administratrix of said Wharton B. McLaughlin, deceased. Filed Sept. 25, 1924. Serial No. 739,923. 1 Claim. (Cl. 99—14.)



The method of preserving fruits which consists in mixing the fruit with sugar, immediately milling the mixture so as to finely comminute the fruit and mix it thoroughly with the sugar before fermentation takes place, and maintaining the mixture at a temperature sufficiently low that fermentation is prevented until it is self-preserving.

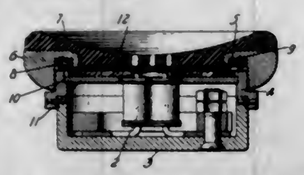
1,631,975. MULTIWHEEL DRIVE FOR VEHICLES. ALFRED F. MASURY and CHARLES FROESCH, New York, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 26, 1925. Serial No. 58,738. 13 Claims. (Cl. 180—75.)

1. In a vehicle having a plurality of pairs of driving wheels, driving means for the pairs, non-metallic yielding means for apportioning power between said pairs, and means to mount the yielding means to transmit power under torsion.



1,631,976. SIGNALING. ROBERT C. MATHES, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 26, 1924. Serial No. 734,150. 19 Claims. (Cl. 178—51.)

1. The method of transmitting intelligence which comprises generating alternating currents of a plurality of different single frequencies, selecting each of said currents respectively to represent portions of a plurality of messages and transmitting said currents only in succession.



1,631,977. ELECTRIC MOTOR. FRANK W. MERRILL, Fort Wayne, Ind., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Apr. 11, 1921, Serial No. 460,597. Divided and this application filed Apr. 1, 1924. Serial No. 703,348. 6 Claims. (Cl. 172—239.)

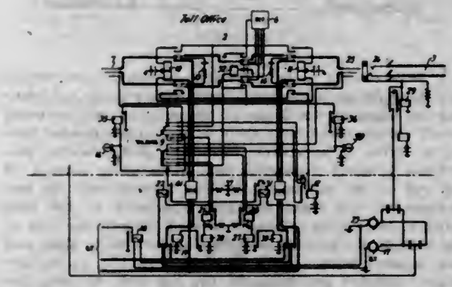
1. In a motor control system, a synchronous motor having a single field winding and a single armature winding, slip rings and a commutator connected to said armature winding, one set of brushes cooperating with said slip rings and normally in engagement therewith, a second set of brushes cooperating with said commutator and normally out of engagement therewith, separate sources of current connected to the brushes cooperating with the commutator and slip rings, means for moving said second set of brushes into engagement with said commutator to close one current source therethrough upon failure of the current source connected with the brushes

cooperating with said slip rings, and means for moving the first set of brushes out of engagement with said slip rings upon failure of the current source connected thereto.

1,631,978. TELEPHONE RECEIVER. ROBERT NORDENSWAN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 31, 1923. Serial No. 671,869. 4 Claims. (Cl. 179—115.)

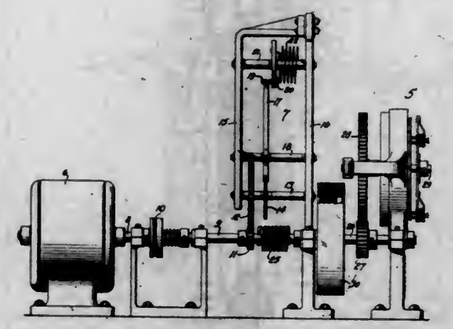
1. In a receiver, a diaphragm, a seat therefor, a clamping member engaging said seat, a ring disposed against said diaphragm and a yielding metal gasket between said ring and said clamping means, whereby the clamping pressure is distributed uniformly on said diaphragm.

1,631,979. DOOR BRACE. PASQUALE J. PICCIRILLI, New York, N. Y. Filed May 16, 1925. Serial No. 30,679. 2 Claims. (Cl. 292—338.)



2. A door brace comprising a bracing rod, means for pivotally attaching same to a door, and a wedge insertible to act against an end of said rod and jam the rod when same is in operative position, and means to position said wedge.

1,631,980. DOOR BRACE. PASQUALE J. PICCIRILLI, New York, N. Y. Filed Apr. 23, 1926. Serial No. 104,053. 1 Claim. (Cl. 292—338.)



A door brace comprising a bracing rod, means for revolubly attaching one end of same to the door comprising a socket member attached thereto, a flanged member held within said socket member, said flanged member forming with the end of said rod a fork and tongue arrangement, a pivot therefor, a space being provided between the end of said tongue and the end of the slot of said fork and a wedge member insertible in said space.

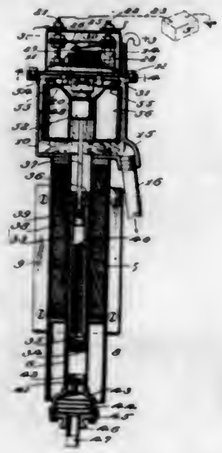
1,631,981. TELEPHONE SYSTEM. LESLIE F. PORTER, Passaic, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 31, 1925. Serial No. 47,217. 3 Claims. (Cl. 179—50.)

2. In a telephone system, lines, a cord circuit for interconnecting said lines, a source of alternating current associated with each line, means responsive to said alternating current associated with one end of the cord circuit for preparing it for a change in condition, and means associated with the other end of the cord circuit for completing the change in condition of said cord circuit.

1,631,982. CONTROL MECHANISM. LOUIS M. POTTS, Highwood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 9, 1922. Serial No. 593,292. 12 Claims. (Cl. 178—53.)

1. In a vibrating device, means for setting up a magnetic field, a vibrating member lying within said field, means for driving said vibrating member, and means for varying the intensity of said field to vary the rate of vibration of said member.

1,631,983. DEVICE FOR FILING CARDS AND THE LIKE. JOHN T. QUIGLEY, Los Angeles, Calif. Filed May 11, 1925. Serial No. 29,413. 9 Claims. (Cl. 129—16.)



1. A device for holding cards and the like including an elongated resilient guard strip adapted to lie loosely upon a support, and upon which the cards and the like may be placed, and a follower having a vertical portion and a horizontal forwardly extending portion insertable and removable from beneath the guard strip at any point without its removal.

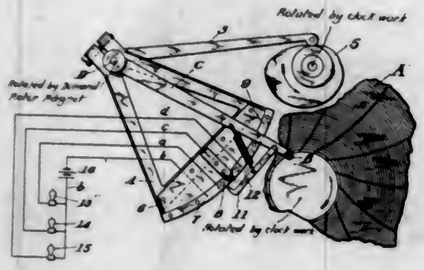
1,631,984. FUEL-FEEDING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. ALBERT G. REDMOND, Indianapolis, Ind., assignor to Jacob Richard Francis, Flint, Mich. Filed June 3, 1924. Serial No. 717,595. 19 Claims. (Cl. 103—26.)

1. A fuel feeding system for motor vehicles comprising a pump, said pump comprising a pump cylinder and a piston movable therein, an electric circuit including a source of current, a solenoid for actuating said piston, a

circuit maker and breaker in said electric circuit controlling the electrical energy to said solenoid, an electric

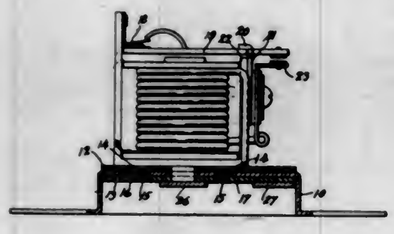
magnet operating said circuit maker and breaker in said electric circuit and a connection between the piston of said pump and the core of said electric magnet.

1,631,985. COLLAR AND CUFF. ODIN ROBERTS, Boston, Mass. Filed Aug. 22, 1924. Serial No. 733,543. 12 Claims. (Cl. 2—131.)



1. A folding collar comprising a blank of laminated textile fabric composed of adhesively integrated plies each including within its area the top and band portions and fold line of the collar, the inner ply of said blank being locally reduced along said fold line to predetermine the fold of the collar.

1,631,986. DIAGRAM HOLDER. HAROLD RUSCHER, New York, N. Y. Filed Jan. 15, 1926. Serial No. 81,469. 2 Claims. (Cl. 129—23.)

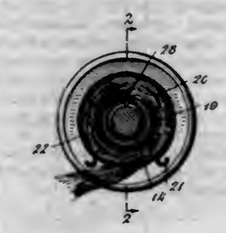


1. An article of manufacture comprising a somewhat elongated plate formed with approximately right angle projections at each end thereof extending substantially the width of the plate and having card receiving pockets attached to the outside surface, said plate formed with downwardly extending runner ribs along each longitudinal under edge and a post intermediate the ends of the plate and attached thereto and formed with a screw thread and a thumb nut working on said thread whereby diagrams may be securely and neatly, but removably held.

1,631,987. ATTACHMENT FOR ELECTRIC-CURRENT DEMAND METERS. WILLIAM H. SOMMER, Peoria, Ill., assignor, by mesne assignments, to The Union Trust Company, Cleveland, Ohio, a Corporation of Ohio, and John A. Chapman, Chicago, Ill., trustees. Filed Aug. 10, 1921. Serial No. 491,237. 12 Claims. (Cl. 177—311.)

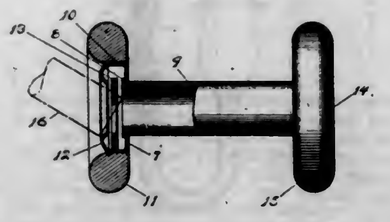
1. A maximum demand controller for an electric recording demand meter of the equal time period type comprising signaling means and means operable concurrently with the recording element of the meter but at a uniform rate to actuate said signaling means when said meter indicates that a predetermined demand rate is being exceeded during the latter portion of said predetermined time period.

1,631,988. CUT-OUT. PETER SORENSEN, Brooklyn, N. Y. Filed July 11, 1923. Serial No. 650,857. 2 Claims. (Cl. 200—87.)



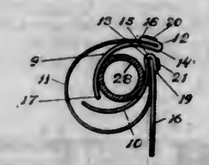
1. In a cut-out, a base member having a downwardly extending flange, a portion of said flange being cut away and the edges of the flange at the cutaway portion being struck outwardly to form shoulders, the base member having a series of apertures, insulating disks having projections integral therewith, said disks being located on top and on the bottom of the base member and the projections on the disks engaging apertures in the base member, connecting terminals located beneath the disk at the bottom of the base member, the terminals, disks and base member being rigidly connected together, an electromagnet member positioned on the top disk, an armature located above the electromagnet, a casing having a cut-out portion corresponding in dimensions to the cutaway portion of the flange, said casing being adapted to be guided into position by the abutment of the shoulders on the flange with shoulders on the casing.

1,631,989. HAIR CURLER. WARNER T. TABB, Mahwah, N. J. Filed Oct. 23, 1924. Serial No. 745,316. 7 Claims. (Cl. 132—33.)



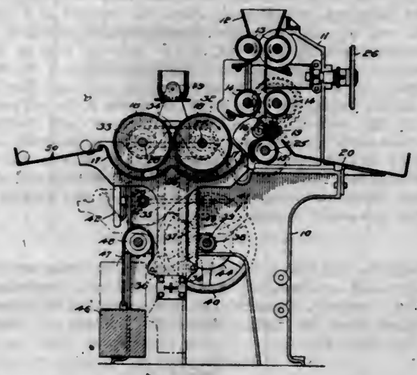
1. In a hair curler, a body including a hollow spindle, a clamping device independent of the spindle to retain

ends of hair in engagement with said spindle, a second clamping device independent of said spindle engageable



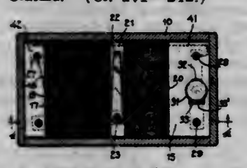
with hair wound upon said spindle to retain the wound hair in curled condition, and a heatable cartridge insertable into said spindle after the hair is wound thereon.

1,631,990. HAIR CURLER. WARNER T. TABB, Mahwah, N. J. Filed Oct. 30, 1925. Serial No. 65,838. 9 Claims. (Cl. 132—33.)



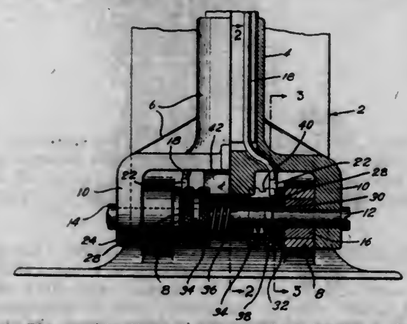
1. Gravity means to retain a heating element in a hollow spindle of a hair curler, said means comprising a ring normally eccentric with respect to said spindle and rotatable about the axis of said spindle.

1,631,991. CLAMP. WARNER T. TABB, Mahwah, N. J. Filed Nov. 11, 1925. Serial No. 68,410. 11 Claims. (Cl. 132—31.)



1. In a clamp for a hair curler; a resilient member of semiclosed-surface formation having open ends and a mouth extending longitudinally thereof, and perforations in said member adjacent said mouth, said perforations providing increased flexibility of said member adjacent said mouth.

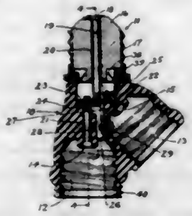
1,631,992. DOUGH MOLDER. FRANK H. VAN HOUTEN, Beacon, N. Y., assignor to Dutchess Tool Company, Beacon, N. Y., a Corporation of New York. Filed Sept. 10, 1926. Serial No. 134,638. 7 Claims. (Cl. 107—9.)



1. In a dough molding machine, the combination of a pressure plate, drums cooperating with said plate for molding the dough, means for adjusting said plate toward and from said drums at one rate of speed, and a second adjusting means for moving the plate toward and from the drums at an increased rate of speed.

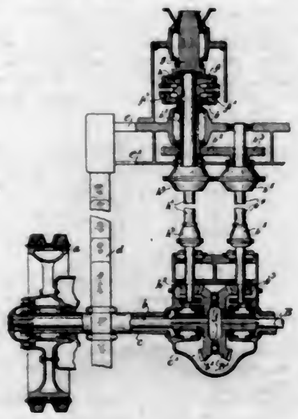
1,631,993. RADIO RECEIVING APPARATUS. GEORGE W. WACKER, North Bergen, N. J., assignor to Pal Radio Company, North Bergen, N. J., a Corporation of New Jersey. Filed Aug. 17, 1923. Serial No. 657,906. 8 Claims. (Cl. 171—242.)

1. In a device of the character described, a tuning apparatus including spaced coils, a rotatable member positioned in the space between the coils, means extending from one end of said member for tuning the coil, and a conductor spring pressed into contact with the other end.



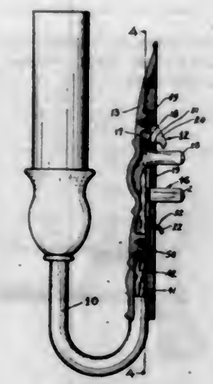
1,631,994. ELECTRICAL CONNECTION. ALONZO A. WARNER, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed Feb. 1, 1923. Serial No. 616,261. 4 Claims. (Cl. 173—324.)

1. The combination of two members having a hinged connection between them comprising two adjacent perforated lugs located on said members, respectively, and



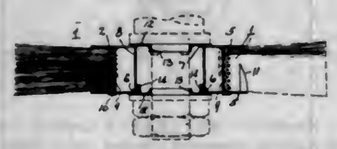
a pivot pin extending through an aperture in each lug, terminal contacts arranged side by side and located on the same side of both of said lugs and surrounding said pivot pin, connections between said terminal contacts and said members to cause them to turn with said members, respectively, about the axis of said pivot pin, one of said connections comprising a block of insulating material arranged at the opposite side of said contacts from both of said lugs and mounted to slide axially on said pivot pin and revolve with the far lug, a spring acting on the block to cause it to cooperate with the nearest lug to yieldingly press said contacts toward each other, said block being located between said spring and the nearest of said terminal contacts and insulating said spring from said terminal contacts, and electrical conductors secured to said contacts and carried by their associated members, respectively.

1,631,995. PLURAL PLUG. CHESTER E. WARNER, Berwyn, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 29, 1922. Serial No. 571,659. 1 Claim. (Cl. 173—335.)



A base for a two-way plug comprising an insulating housing and positioning member having a pair of threaded shell receptacle contacts molded therein, the ends of said threaded shell receptacle contacts being substantially frusto-conical shaped, the side of the frusto-conical shaped portion of one of said threaded shell receptacle contacts being in substantially parallel relation with the axis of the other threaded shell receptacle contact.

1,631,996. FINAL DRIVE FOR VEHICLES. GOTTFRIED WIRRER, Plainfield, N. J., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 11, 1925. Serial No. 14,629. 2 Claims. (Cl. 74—99.)

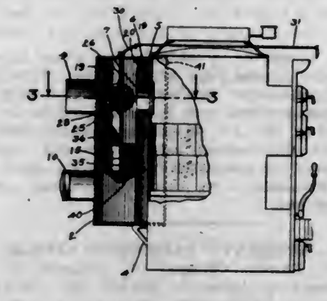


1. In a motor vehicle having a chassis frame, the combination with a pair of live axle sections and a propeller shaft, of differential gearing carried with the chassis frame and having two driving elements, means to drive the driving elements of the differential from the propeller shaft, a longitudinally extending shaft, a sleeve concentric with the shaft, a second longitudinally extending shaft, operative connections between the first named longitudinally extending shaft and one element of the differential, operative connections between the sleeve and the other element of the differential, operative connections between said sleeve and the second named longitudinally extending shaft, bevel gearing connecting said first named longitudinally extending shaft and one of the live axle sections and opposed bevel gearing connecting said second named longitudinally extending shaft and the other of the live axle sections, and a single thrust bearing to oppose the thrusts on the gearing on the live axle sections.

1,631,997. ELECTRIC-FIXTURE SUPPORT AND CONNECTER. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 5, 1923. Serial No. 622,760. 4 Claims. (Cl. 175—338.)

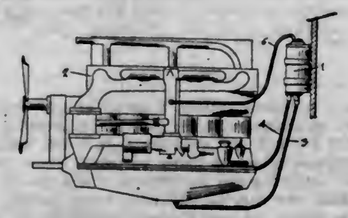
1. A plug-in device and fixture supporting bracket for cooperating with a receptacle having blade receiving openings and a supporting plate having hook receiving openings, said plug-in device having blades for entering said blade-receiving openings, and said fixture supporting bracket having hooks for entering said hook-receiving opening, said plug-in device being slidably mounted on said bracket, said plug-in device comprising an insulating base on which said contact blades are mounted, said insulating base comprising two sheets of insulating material on opposite sides of said bracket and secured together.

1,631,998. ROTARY BRUSH. EDWIN S. CARMAN, East Cleveland, and EDWARD E. CURTIS, Lakewood, Ohio, assignors to The Osborn Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 25, 1922. Serial No. 556,539. 6 Claims. (Cl. 15—181.)



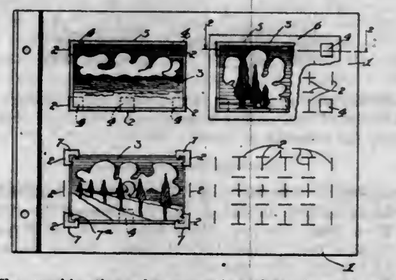
1. A holder for rotary brush sections comprising complementary annular plates adapted to receive and laterally hold such sections, a spacing member interposed between said plates, and means adapted to retain said plates in drawn together position, said means also serving as a seat for the sections.

1,631,999. PROCESS OF STORING DRYING OILS. EDWIN M. S. CHANDLER, Taunton, Mass. Filed Apr. 29, 1925. Serial No. 26,666. 5 Claims. (Cl. 23—250.)



1. That improvement in the method of storing drying oil which consists in maintaining it in a substantially constant state of agitation.

1,632,000. CRESCENT RADIATOR. JOHN H. CROSS, Minneapolis, Minn., assignor to The Waterman-Waterbury Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Dec. 30, 1926. Serial No. 157,993. 7 Claims. (Cl. 126—99.)

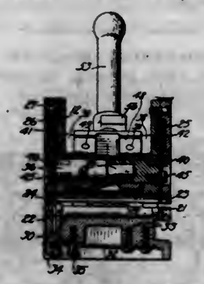


1. A crescent radiator including smoke inlet and outlet flues, a partition depending between the flues and having its lower end adjacent the bottom of the casing, and a baffle arranged laterally one at each side of the partition, below the level of the flues and slanting in opposite directions and engaging the walls of the radiator, and having their lower ends arranged with reference to the radiator walls to form circulation openings adjacent the bottom of the radiator, and at opposite ends of the casing in direction of the greatest horizontal dimension.

1,632,001. OIL PURIFIER. IVAN L. EASTMAN, Toledo, Ohio, assignor of one-half to Le Roy E. Eastman, Toledo, Ohio. Filed June 18, 1926. Serial No. 116,911. 12 Claims. (Cl. 123—196.)

1. In an oil purifier for internal combustion engines, a container connected to the crank shaft casing of the engine and for containing crank case oil, means for producing a vacuous condition in the container, the container having an air inlet located below the level of the oil in the container for directing air through a portion of the oil in the container and means for controlling the flow of air through the oil according to the level of the oil in the container.

1,632,002. ALBUM. ALBERT W. ENGEL, Chicago, Ill. Filed Aug. 10, 1925. Serial No. 49,272. 12 Claims. (Cl. 129—20.)

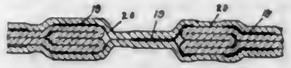


1. The combination of a mounting sheet formed with a slit, a sheet to be mounted, and a fastener of sheet material, gummed on one surface and folded, engaged in the slit with its line of fold substantially co-incident therewith and with its gummed surface at one side of the fold secured to the sheet to be mounted.

1,632,003. FINGER GRIP FOR VIOLIN BOWS. JOSEPH GAYNOR, Jersey City, N. J. Filed Sept. 8, 1926. Serial No. 134,153. 5 Claims. (Cl. 84—282.)

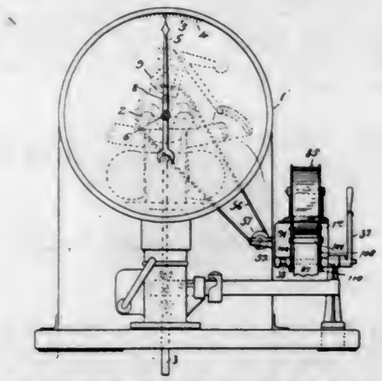
1. A finger grip for violin bows comprising a tube for loosely surrounding the stick of the bow, said tube being externally threaded at both ends, and provided with split cones on the ends thereof, nuts having screw threaded engagement with the tube to contact each cone, said tube having opposed perforations therein, designed to hold a finger rest in selected positions on the tube.

1,632,004. CUTTING DEVICE. LEON N. HAMPTON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 30, 1922. Serial No. 609,977. 7 Claims. (Cl. 81—9.5.)



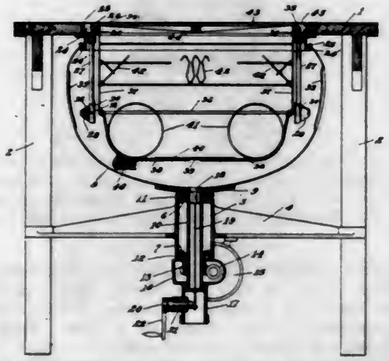
3. A cutting device comprising a split shaft, a knife blade mounted eccentrically on each end of said shaft, a lever for actuating said shaft, and adjustable means on said lever for varying the operating range of said blades.

1,632,005. METHOD OF AFFIXING REENFORCING TAPE. LOUIS H. HARTMAN, Toledo, Ohio, assignor to The Valve Bag Company of America, Toledo, Ohio, a Corporation of Ohio. Filed July 8, 1926. Serial No. 121,128. 3 Claims. (Cl. 112—262.)



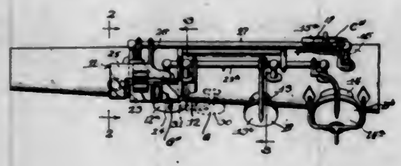
3. The method of affixing reenforcing tape to fabric, which comprises adhering portions of the tape to fabric

with an adhesive which, in its unset state, has comparatively little adhesion to a needle, while leaving uncoated portions of the tape and fabric between the adhered



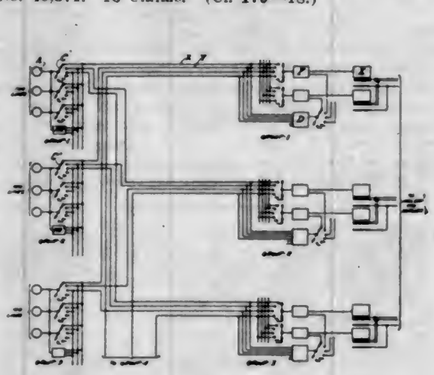
portions, and sewing a continuous seam through alternate coated and uncoated portions of the tape and fabric while the adhesive is unset.

1,632,006. RECORDING WEIGHING MECHANISM. JOHN HOLM, Brooklyn, N. Y., assignor to American Kron Scale Company, New York, N. Y., a Corporation of New York. Filed July 11, 1921. Serial No. 483,714. 17 Claims. (Cl. 234—1.)



1. In a recording weighing mechanism of the class set forth, the combination of weighing mechanism having an indicator and an arm operative therewith, of a member normally free from said arm adapted to cooperate therewith, a wheel to operate said member, a plurality of power driving means to actuate said wheel in opposite directions, one of said power means controlling the other power means, means normally restraining said power driving means adapted to be released at will, printing devices, and means controlled by said wheel to actuate said printing devices.

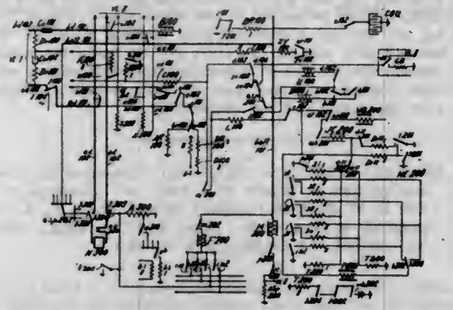
1,632,007. DISHWASHING MACHINE. MICHAEL J. KEHOE, London, Ohio, assignor, by mesne assignments, to Cascade Manufacturing Company. Filed Nov. 8, 1922. Serial No. 599,720. 14 Claims. (Cl. 141—9.)



1. In a washing machine, a tank mounted rotatably about a substantially vertical axis, an article holder in the tank, and a deflector between the side of the tank and the holder, the tank having a greater horizontal diameter at the level of the deflector than it has near the bottom.

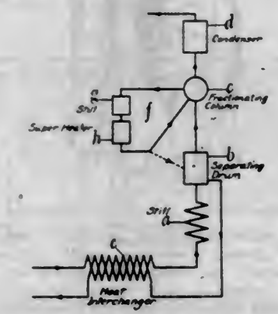
1,632,008. KEY DEVICE FOR SAXOPHONES. FREDERICK L. LEMM, La Porte, Ind., assignor to Conturier Company, La Porte, Ind., a Corporation of Indiana. Filed Sept 24, 1926. Serial No. 137,454. 3 Claims. (Cl. 84—385.)

1. In a saxophone, a multiple key group adapted to be controlled by the little finger of the left hand, and connected with tone hole covers, two of said covers being normally closed, and being adapted to be opened by depressing one key of said group, and other tone hole covers intermediate said last named tone holes having means for automatically closing the upper one of said two tone hole covers when their common controlling key is depressed.



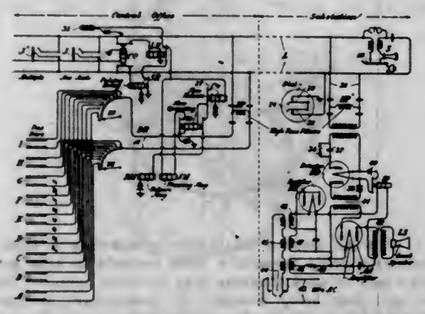
1,632,009. AUTOMATIC TELEPHONE SYSTEM. CLARENCE E. LOMAX, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Aug. 5, 1925. Serial No. 48,371. 15 Claims. (Cl. 179—18.)

1. In a telephone system, a group of line switches, a plurality of groups of finder switches, a group of trunks accessible to said line switches each trunk terminating in a different group of finder switches, means for automatically operating any line switch to seize an idle trunk, and means for starting an idle finder switch of the group in which the seized trunk terminates to find the seized trunk.



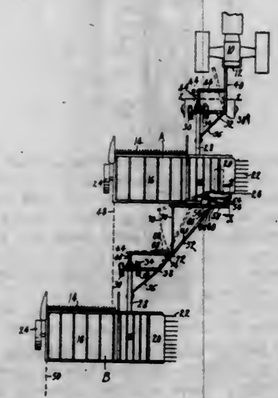
1,632,010. AUTOMATIC TELEPHONE SYSTEM. FRITZ LUBBERGER, Berlin-Schmargendorf, Germany, assignor to Siemens & Halske Aktiengesellschaft, Wernerwerk, Berlin, Germany. Filed July 2, 1923, Serial No. 41,034, and in Germany July 12, 1924. 12 Claims. (Cl. 179—27.)

1. In a telephone system, a main and a sub-exchange, a trunk line between said exchanges, said sub-exchange containing switching equipment comprising only relays, said switching equipment automatically operating to seize said trunk in response to the initiation of a call from



said sub-exchange, and directively operable by impulses received over said trunk on calls from said main exchange to select a called line in said sub-exchange.

1,632,011. PRODUCTION OF PETROL. FRANK TINKER, Sutton Coldfield, England. Filed Sept. 25, 1922, Serial No. 590,480, and in Great Britain Jan. 7, 1922. 3 Claims. (Cl. 196—49.)



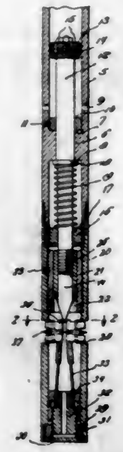
1. A method of treating oil which comprises distilling the oil to top the same, fractionating the vapors formed to form a condensate while out of contact with raw oil and treating the condensate thus formed to crack the same and thus to form a cracked vapor, introducing said cracked vapor directly into the first mentioned vapors.

1,632,012. PROGRAM-SELECTING CIRCUITS. JOHN F. TOOMEY, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 10, 1923. Serial No. 679,735. 6 Claims. (Cl. 179—2.)

1. In a program transmitting system, a subscriber's telephone line terminating in a subscriber's telephone apparatus at the subscriber's station, means at the central office whereby a connection may be established between said subscriber's line and another subscriber's line, a plurality of trunks at the central office upon which programs may be impressed, a directive switch at the central office for establishing a connection between said line and any desired trunk to the exclusion of other trunks, controlling means at the subscriber's station for controlling the operation of said directive switch to select a program, and means for restoring said switch to normal at the beginning of the operation of selecting a new program.

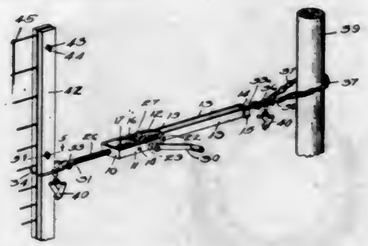
1,632,013. BINDER HITCH. GUY A. TRAUGER, Livermore, Iowa. Filed Sept. 1, 1926. Serial No. 132,992. 8 Claims. (Cl. 280—33.5.)

1. In combination with a pulling means and a device to be pulled having steerable wheels and a stub tongue for steering them, a hitch comprising a draw bar pivoted to said device at a point spaced from the pivotal point of the steerable wheels, connecting means for connecting the draw bar to the stub tongue for imparting steering movement to the steerable wheels when the draw bar is given pivotal movement, the free end of said draw bar being connected to said pulling means and a flexible pulling connection from the pulling means to the point of connection of the connecting means to the stub tongue.



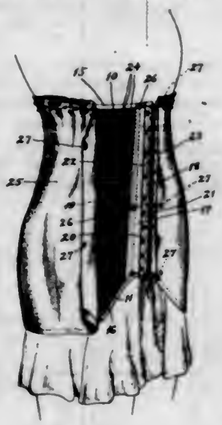
1,632,014. TRUSS FOR BRIDGES AND THE LIKE. CLAUDE A. P. TURNER, Minneapolis, Minn., assignor to William M. Turner. Filed Apr. 26, 1924. Serial No. 709,203. 4 Claims. (Cl. 14—3.)

1. A truss having a compression member of polygonal cross section, the flat sides of the polygon being formed of longitudinally extending plates, angles that join such



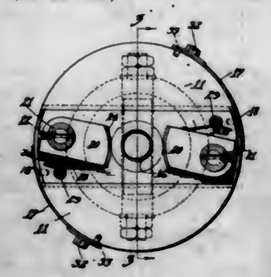
plates at their edges and internal braces secured to the compression member at intervals, the exterior of such member being free from outwardly projecting flanges.

1,632,015. WELL-CASING CUTTER. ERCOLE VENTRESCA, Houston, Tex. Filed May 22, 1926. Serial No. 111,007. 5 Claims. (Cl. 81—195.)



2. A device of the class described including, in combination, a shell having a restricted interior portion forming an upper and a lower shoulder, openings above the upper shoulder, a rod slidable in the shell through the restricted portion, a piston at the upper end of the rod, a collar about the rod and fixed to seat on the upper shoulder, said piston having passages extending therethrough, so that when the piston abuts the collar both the openings and the passages are closed, a stop collar on the rod below the lower shoulder, means for normally holding said stop collar in engagement with the lower shoulder, a casing threadedly on the lower end of the shell, cutting means in the casing, and an operating member for the cutting means on the rod.

1,632,016. WIRE STRETCHER. LAUREL C. WOODYARD, Lacona, Iowa. Filed Oct. 2, 1922. Serial No. 591,791. 1 Claim. (Cl. 254—67.)

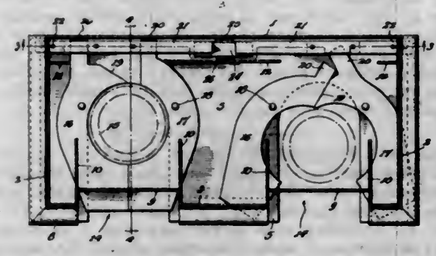


In a wire stretcher, a frame having end members and longitudinal side members, said side members being spaced to accommodate gearing and bent inwardly at an angle between their ends whereby a portion of the sides are spaced closer together, a cross element secured to the inwardly bent portions of the side members and a second cross element spaced from the first one, a threaded rod loosely journalled in said cross elements and one end of the frame, a bevelled gear having a threaded connection with the rod and arranged abutting the second cross element, a shaft journalled in one longitudinal member, having on one end a bevelled gear meshing with the first bevelled gear and on the other end an operating means, whereby the rod can be moved longitudinally with a minimum tendency to bind and fastening means connected with the frame and rod respectively.

1,632,017. REDUCING GARMENT. BERTRAM G. WORK and LOUISA N. SLADE, New York, N. Y., assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Sept. 16, 1924. Serial No. 737,988. 3 Claims. (Cl. 2—29.)

1. A body girdle comprising an elastic, non-absorbent rubber lining having numerous small openings therethrough to permit the escape of perspiration, a fabric cover loosely overlying said lining for absorbing the perspiration, and separable fasteners connecting the edge portions of said lining and cover and permitting complete detachment of the cover, thus allowing the lining and cover each to be completely cleansed independently of the other.

1,632,018. WORK-DRIVING DEVICE. RICHARD A. ASHTON, Seneca Falls, N. Y., assignor to Seneca Falls Machine Co., Seneca Falls, N. Y., a Corporation of Massachusetts. Filed June 8, 1925. Serial No. 35,544. 5 Claims. (Cl. 82—40.)

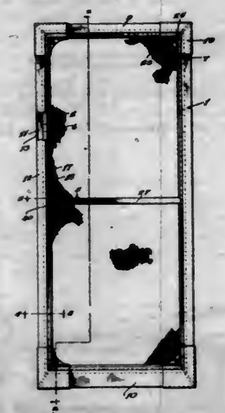


1. A work driving attachment comprising a head, a transverse guide thereon, a slide movable in said guide, and a pair of work engaging dogs pivotally mounted thereon, said dogs being mounted for independent movement upon their separate pivots and for simultaneous movement on said head in one direction to equalize the driving pressure of the dogs on the work.

1,632,019. RECEPTACLE AND BLANK THEREFOR. CESARE BARBIERI, New York, N. Y., assignor to The Vortex Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 20, 1920, Serial No. 418,274. Renewed Dec. 3, 1925. 6 Claims. (Cl. 229—1.5.)

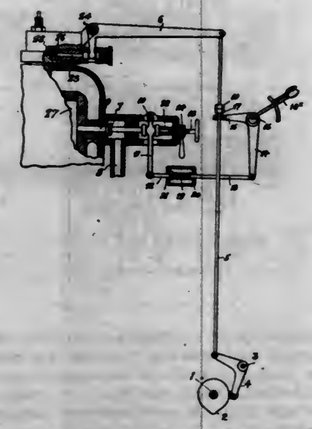
1. A blank for a tapered receptacle provided with edges of different configuration formed as a part of a solid blank and adapted to be sealed to each other to form a sealing portion, said sealing portion being adapted to be folded and curled around the apex of the receptacle and sealed to the major portion of said blank.

1,632,020. COMBINED LETTER BOX AND MILK-BOTTLE HOLDER. DECIO BOLZONETTI, Pittsburgh, Pa. Filed Mar. 31, 1926. Serial No. 98,933. 5 Claims. (Cl. 232—41.)



1. An article holder comprising a member having an article receiving opening, jaws disposed upon opposite sides of the article receiving opening and pivoted intermediate their ends and having rear projections, a lock spring, disposed to overlie the projections of the jaws when closed, fast at one end and movable at the opposite end and having stops to come between and engage the projections of the jaws and secure the latter when closed and a pivoted release comprising a portion underlapping the free end of the lock spring, and a lever which when operated lifts the lock spring to withdraw the stops from between the rear projections of the jaws.

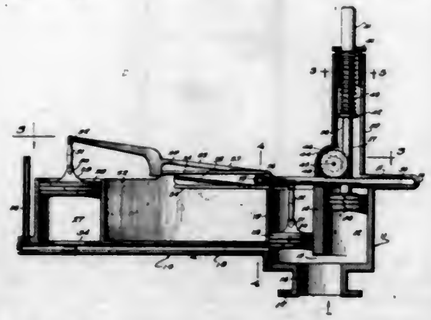
1,632,021. BEDPAN. ALINE O'SULLIVAN BREAUX, New Iberia, La. Filed Oct. 8, 1926. Serial No. 140,294. 5 Claims. (Cl. 4—112.)



1. A bed pan comprising a pan body, a seat hinged thereto and covering only a portion of the pan, and a shield also hinged to said pan and spaced from the seat.

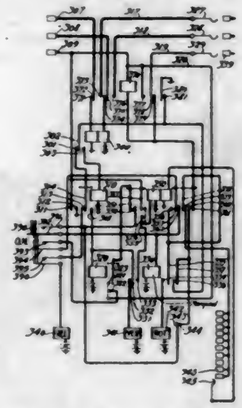
1,632,022. WINDOW SCREEN. JOHN THOMAS COOK, Howell, Mich., assignor of one-half to Frank J. Finch, Jackson, Mich. Filed May 6, 1926. Serial No. 107,220. 2 Claims. (Cl. 156—14.)

1. In a window screen, a main frame comprising hollow frame members each including spaced side walls and a connecting wall, the side walls having inwardly turned portions provided with marginal flanges substantially in contact at the inner sides of the respective frame members, corner members having right angularly disposed hollow branches slidably and adjustably receiving the ends of respective ones of the frame members and including spaced side walls and webs in the corners between the walls for intimate engagement with the ends of the frame members, clamping bolts secured through the said webs adjustable to clamp the corner members to the respective frame members to maintain the frame members in positions of adjustment with respect to the corner members, a rigid auxiliary frame having its frame members arranged within the corresponding members of the main frame, and a screen sheet stretched within the auxiliary frame and having its portions adjacent its margins extending between the flanges of the side walls of the members of the main frame.



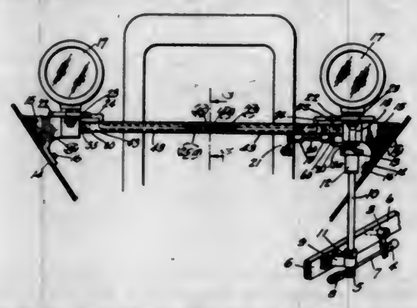
1,632,023. COMPRESSED-AIR STARTING DEVICE OF INTERNAL-COMBUSTION ENGINES. AXEL UNO STUAE DANIELSSON, Ulfsunda, Sweden, assignor to Aktiebolaget Atlas Diesel, Stockholm, Sweden, a Corporation of Sweden. Filed Feb. 5, 1923, Serial No. 617,043, and in Sweden Feb. 2, 1922. 2 Claims. (Cl. 60—16.)

1. In an internal combustion engine adapted to be started by means of compressed gas the combination of



a starting valve, a pump feeding fuel into the combustion chamber of the working cylinder of the engine, driving means for the said pump including a reciprocating member, an abutment provided on the said member, a movable member coupled to the starting valve, and means for bringing the said movable member into the path of said abutment and out of the same.

1,632,024. FLUID-PRESSURE REGULATOR. ROBERT L. DENNISON, New York, N. Y. Filed Aug. 4, 1925, Serial No. 48,155. Renewed Nov. 15, 1926. 6 Claims. (Cl. 50—10.)

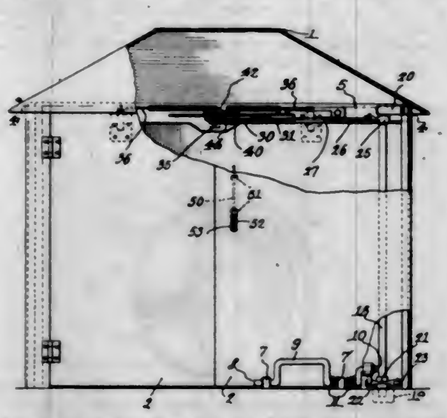


4. A pressure regulating device comprising a valve chamber communicating with a source of variable fluid pressure, a conduit connected at one end to said valve chamber, a valve in said chamber adapted to control passage of fluid therefrom to said conduit, a member spaced a substantial distance from said valve chamber and directly responsive to pressure in said conduit, a lever connected between said member and said valve, a fulcrum pin passing through said lever, and means responsive to pressure from said source for shifting said fulcrum pin longitudinally with respect to said lever.

1,632,025. AUTOMATIC TELEPHONE SYSTEM. GEORGE E. DUSTIN, Woodcliff, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 24, 1923. Serial No. 670,557. 9 Claims. (Cl. 179—18.)

1. In combination, a telephone line, an automatic switch, means for extending the line to said switch, means for sending a series of impulses to operate said switch to further extend said line, and means in said switch for absorbing the next series of impulses transmitted thereto.

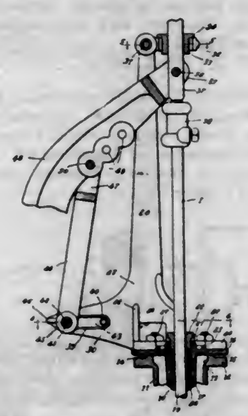
1,632,026. DIRIGIBLE HEADLIGHT FOR MOTOR VEHICLES. HARRY GOODMAN, Britton, Okla. Filed July 17, 1926. Serial No. 123,180. 4 Claims. (Cl. 240—62.)



1. In a device of the character described, a headlight supporting shaft, a headlight and extension rod all in connection with a light-plate; a second light-plate, headlight and shaft; said extension rod connecting said light-plates and movable therewith; clutch means to connect said shafts for revoluble movements in unison, and to disconnect the same; means for simultaneously moving said head-lights; bracket means and angle iron adapted to anchor said device to the fenders of a motor vehicle; two compression coil springs surrounding said extension rod in the center and co-acting with clamps, washers and holding means to automatically force said headlights to a front facing position when disconnected from the moving means for said headlights; means connecting said shafts and clutching means with the steering mechanism and frame of a motor vehicle.

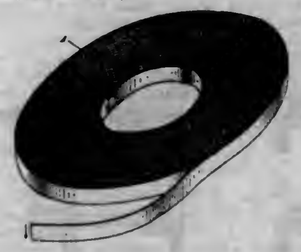
1,632,027. EMULSIFIED SOLID GREASE. MORITZ JOSEPH HEITMANN, Freital-Potschappel, near Dresden, Germany. Filed Apr. 8, 1925, Serial No. 21,698, and in Germany Apr. 10, 1924. 2 Claims. (Cl. 87—9.)

1. An emulsified solid grease containing a relatively high percentage of water comprising mineral lubricating oil, water and polymerized oil, said polymerized oil and lubricating oil being soluble in each other and said polymerized oil being in sufficient quantity to insure emulsification of said water in the lubricating oil.



1,632,028. DOOR OPERATOR. IRA FRANKLIN KEISLING, Kokomo, Ind. Filed Aug. 16, 1926. Serial No. 129,559. 2 Claims. (Cl. 268—35.)

1. In a device of the class described, a movably mounted door, a plunger supported for sliding movement, a connection between the door and the plunger, a lever

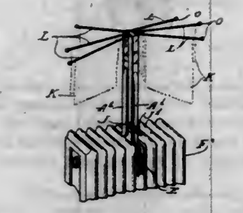


and a fulcrum therefor, a radius arm mounted for swinging movement, a yieldable connection between the lever and the radius arm, means for connecting the radius arm with the plunger, car-operated means for moving the lever, a latch engaging the plunger, a shaft supported for rocking movement and having an eccentric portion, the shaft comprising a part which cooperates with the latch to disengage the latch from the plunger, an actuating member pivoted to the lever and slidable on the eccentric portion of the shaft, the actuating member having a projection which cooperates with the eccentric portion of the shaft to rock the shaft and to disengage the latch from the plunger.

1,632,029. PUMP. SWAN LARSON, Rockford, Ill., assignor to Geo. D. Roper Corporation, Rockford, Ill., a Corporation of Illinois. Filed Apr. 20, 1925. Serial No. 24,345. 18 Claims. (Cl. 103—217.)

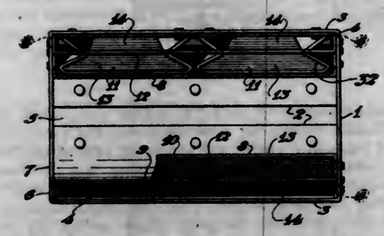
1. In a pump of the class described, a base, a bracket mounted on the base, said bracket having opposed grooves, a fulcrum having a sleeve portion, a tubular bearing for the sleeve portion having its ends seated in the grooves and slidably adjustable in the same, a bolt extending through the tubular bearing and adapted to hold the same in adjusted position in the grooves, a pump rod, a handle pivotally connected to the pump rod, and a pivotal connection between the fulcrum and the handle.

1,632,030. METHOD AND MEANS FOR THE IDENTIFICATION OF ELECTRICAL CABLES. WILLIAM H. MARTIN, Chappaqua, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 26, 1922. Serial No. 590,744. 6 Claims. (Cl. 283—62.)



2. As an article of manufacture, a circular pad of paper comprising a strip wound tightly in the form of a flat helix having one edge thereof colored differently from the color of the paper constituting said pad.

1,632,031. CLOSURE FOR VESSELS. ALFONS MAUSER, Cologne-Marienburg, Germany. Filed Nov. 6, 924, Serial No. 748,032, and in Germany Mar. 20, 1924. 9 Claims. (Cl. 220—61.)



8. In a barrel, drum, or like container, having a mouth, a cover for said mouth, a cover support fixed to the container adjacent said mouth, a cover-retaining member engaging said support and said cover, and an annular securing member engaging said cover-retaining member to prevent vertical movement thereof.

1,632,032. DRYING RACK. MICHAEL W. MCARDLE, Chicago, Ill. Filed Apr. 18, 1927. Serial No. 184,621. 8 Claims. (Cl. 34—26.)

1. A rack comprising a frame having parallel uprights connected by a cross bar and formed with offset lower end portions spaced apart more widely than the remainder of the uprights, means for drawing said lower ends toward each other in clamping engagement with a supporting structure, and rack rods hingedly carried by the cross bar adapted to depend therefrom in parallel relation to the uprights or to be extended horizontally from said cross bar at will.

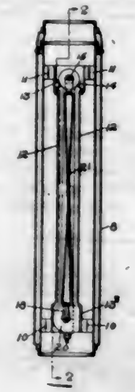
1,632,033. FEEDER SHIPPING BOX FOR CHICKS, ETC. KINNEY I. MILLER, Lancaster, Mo. Filed Jan. 17, 1927. Serial No. 161,553. 13 Claims. (Cl. 119—19.)

1. In combination with a shipping box for small live stock, a trough arranged within the box at one side thereof: and a gutter arranged below the trough.

1,632,034. ELECTRICAL HEATING DEVICE. ROY M. MOFFITT, Maumee, Ohio. Filed Dec. 10, 1925. Serial No. 74,455. 6 Claims. (Cl. 219—34.)

1. In an electrical heating device, a housing, a pair of spaced opposed heat radiating plates in the housing having their ends offset outwardly of the major portions

of the plates, a heating unit composed of a frame having end and side rods, a series of abutting insulating blocks mounted on the end rods and having perforations, large insulating blocks engaging the ends of the respective series and abutting the side rods, a wire alternately threaded through the perforations of the respective series



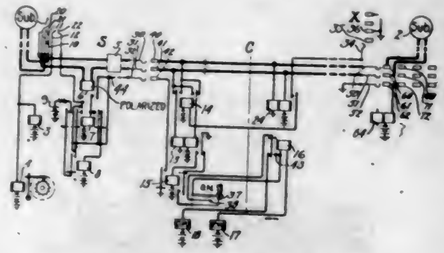


Fig. 2

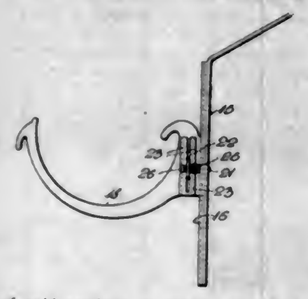
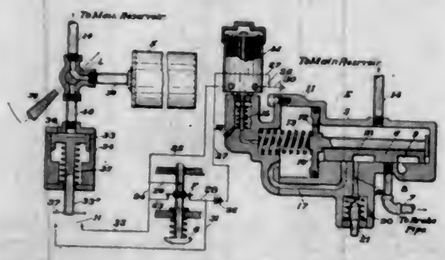
of blocks and having its ends threaded through the large blocks of one series to provide terminals, and catches on the offset parts at the upper ends of the plates engageable with the large blocks at the top of the frame to support the latter in position and against downward movement.



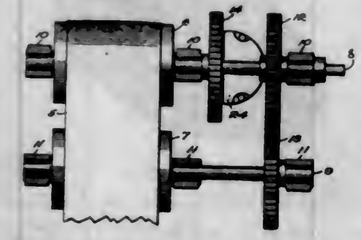
1,632,035. AUTOMATIC TELEPHONE SYSTEM. CHARLES A. MORTON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 1, 1924. Serial No. 753,027. 5 Claims. (Cl. 179—9.)

1. In a telephone system, a calling line, called lines, an automatic switch for interconnecting the same, means in said automatic switch for supplying talking battery to said calling line, a relay for reversing the direction of the flow of current in the calling line, a local circuit for said relay, means dependent upon the classification of the called line for either extending or preventing the extension of said local circuit, and means responsive to the called line in answering for closing said local circuit to operate said relay.



1,632,036. EAVES-TROUGH SUPPORT. CHARLES P. MULLEN, Conshohocken, Pa. Filed Apr. 10, 1926. Serial No. 101,166. 3 Claims. (Cl. 108—29.)

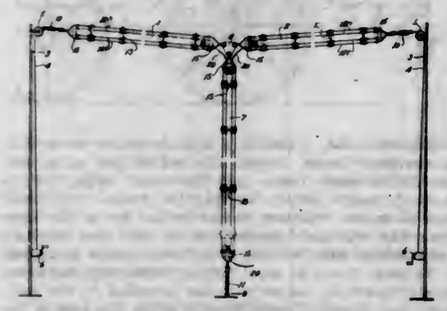
1. An eaves trough support comprising a stationary section to be secured to the roof, a trough-engaging section having a slidable connection with said stationary section, the two sections having differently spaced openings, any two of which may be alined, a spring projected pin for passage through the alined openings, a slide carrying said pin, and means slidably connecting said slide



with one of said sections to permit vertical adjustment of the pin into alinement with the openings through which it is to be passed.

1,632,037. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. FRANK H. NICHOLSON, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 9, 1920, Serial No. 364,511. Renewed July 27, 1926. 34 Claims. (Cl. 246—183.)

10. Railway traffic controlling apparatus comprising a vehicle, a reservoir on the vehicle normally connected with a source of fluid pressure, a cylinder, a piston therein biased to one position, manually operable means on the vehicle for disconnecting said reservoir from said source and connecting said reservoir from said source and connecting the reservoir with said cylinder and with a small exhaust orifice whereby said piston is moved to another position for a given interval of time, and automatic traffic governing mechanism on said vehicle controlled by said piston.



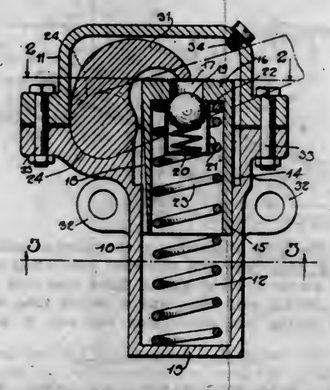
1,632,038. MECHANICAL MOVEMENT. ALMON E. NORRIS, Brookline, Mass. Filed July 31, 1923. Serial No. 654,891. 3 Claims. (Cl. 74—99.)

1. In a power transmitting mechanism, the combination of a driving shaft, two driven shafts, and mechanism to cause said driving shaft to drive said driven shafts,

said mechanism including two gears meshing with each other, one secured to one driven shaft and the other loosely mounted on the second driven shaft, a gear secured to the second driven shaft, pinions loosely mounted on said driving shaft and meshing, respectively, with the gears on the second driven shaft, gears of different diameters loosely mounted on said driving shaft and carrying said pinions, respectively, a carrier secured to said driving shaft, and a gear loosely mounted on said carrier to rotate about an axis other than the axis of said driving shaft, the last-mentioned gear meshing with said gears of different diameters.

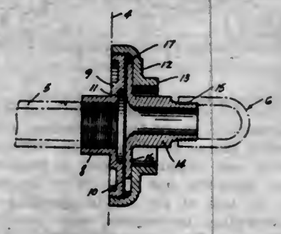
1,632,039. ANTENNA STRUCTURE. ARTHUR A. OSWALD and EDWARD L. NELSON, East Orange, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 4, 1924. Serial No. 684,284. 13 Claims. (Cl. 250—33.)

1. An antenna comprising a plurality of cage sections, a down lead, means for electrically connecting said sections to said down lead, and means connected to said sections to prevent the antenna from rolling.



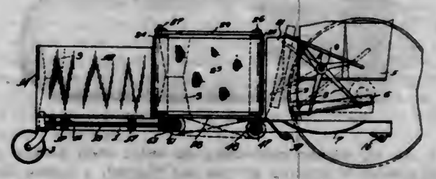
1,632,040. SOUND AMPLIFIER. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry B. Newhall. Filed Feb. 29, 1924. Serial No. 695,974. 17 Claims. (Cl. 181—27.)

1. In combination, an outer frame provided with a wide intramarginal orifice having a forwardly diverging concave wall, a forwardly opening bowl-like reflector resiliently mounted at its mid part in said orifice and spaced from but almost touching said concaved wall and provided with a central opening; and a means resiliently mounting a telephonic element transmitting sound into said opening.



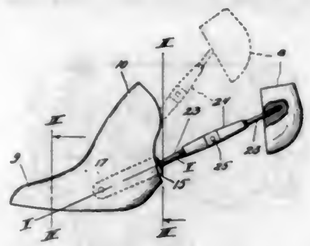
1,632,041. HYDRAULIC SNUBBER. ARMAND L. POUDRIER, Los Angeles, Calif. Filed July 26, 1926. Serial No. 125,036. 3 Claims. (Cl. 267—8.)

1. In a hydraulic snubber, a casing adapted for connection to a vehicle part and having a cylindrical bore in its lower part provided with an enlarged upper end, a piston fitting the lower part of said bore and having a passage extending therethrough, a downwardly opening check valve carried by the piston and controlling said opening, a spring urging the piston in one direction in the casing, a shaft extending transversely of the casing, a rock arm on said shaft engaging the top of the piston, a lever on said shaft adapted for connection to a second part of the vehicle movable toward and from the first



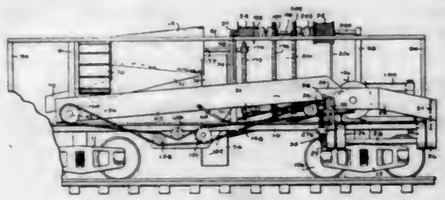
part, said piston having a slot extending longitudinally of the outside of the piston and increasing in depth towards the bottom of the piston, the upper part of said slot being of uniform depth, and a pin extending through the casing into the slot and adjustable to enter the slot to varying extent.

1,632,042. ADJUSTABLE UNION. EMIL PRICE and WILLIAM A. PFISTER, Los Angeles, Calif. Filed Oct. 5, 1925. Serial No. 60,458. 10 Claims. (Cl. 277—18.)



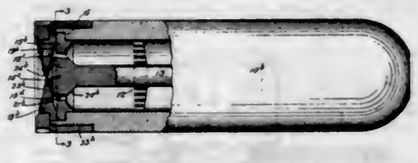
8. In a device of the class described, the combination of a mixing member, horizontal supply pipes, connecting members and means including unions slidable transversely of said connecting members for connecting the mixing member with said supply pipes.

1,632,043. SHOCKER. JAMES A. RICHARDSON, Halkirk, Alberta, Canada. Filed Mar. 12, 1926. Serial No. 94,222. 6 Claims. (Cl. 56—413.)



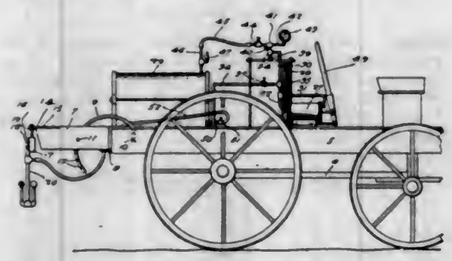
1. The combination with a carrier-shaft and rotary carrier and a mutilated gear on said shaft, of driving mechanism including a pinion for co-action with the mutilated gear, and means whereby the weight of a sheaf will turn the mutilated gear for operative connection with said pinion.

1,632,044. BOOT OR SHOE FORM. ARTHUR SCHOSHUSEN, West Somerville, Mass. Filed Mar. 31, 1921. Serial No. 457,178. 5 Claims. (Cl. 12—128.2.)



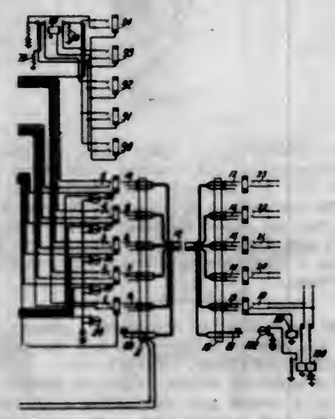
1. A shoe form comprising a toe portion, and a heel portion, a telescoping rod and tube connecting said toe and heel portions, a coil spring fitted over said rod and abutting against said tube, and a second tube enclosing said coil spring and overlapping one end of said first tube.

1,632,045. BALLAST-CLEANING MACHINE. WILLIAM J. SHANNON, East Cleveland, Ohio. Filed Dec. 7, 1925. Serial No. 73,695. 14 Claims. (Cl. 37—107.)



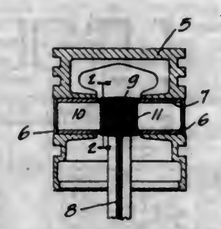
1. A machine for excavating ballast, comprising a railroad car having an excavator mechanism suspended at one side thereof, means for swinging the excavator mechanism upwardly and inwardly about a longitudinal axis over the car platform and a conveyor mechanism also mounted at the side of the car in operative association with the excavating mechanism, said conveyor mechanism normally extending upwardly of the car and means for lowering said conveyor mechanism to a substantially horizontal position from which it may be swung about a longitudinal axis.

1,632,046. OIL BURNER. EDWARD A. SKYIEPAL, New York, N. Y. Filed Dec. 22, 1923. Serial No. 682,150. 2 Claims. (Cl. 299—120.)



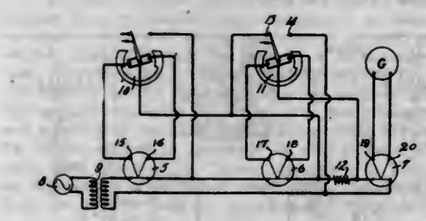
1. An oil burner comprising an outer shell having a fuel admission opening at one end thereof, a nozzle tip member having opposed conical recesses in its outer and inner faces and a fuel orifice at the common apex of said conical recesses, an end member in contiguous relation to said nozzle tip member and forming with the inner face thereof a fuel chamber, said end member having holes connecting said fuel chamber with the interior of the shell, an annular shoulder on said end member in surface engagement with the inner conical face of said nozzle-tip member and forming a central recess, said shoulder having passages substantially tangent to said central recess and connecting the latter with said fuel chamber and means cooperating with said passages and said fuel orifice for atomizing the fuel as it leaves said burner.

1,632,047. SPRAYING MACHINE. DANIEL W. SMITH, Malone, Tex. Filed Apr. 28, 1926. Serial No. 105,238. 1 Claim. (Cl. 299—40.)



In combination, a vehicle, a main frame on the vehicle, an auxiliary frame, hinges attached to the under surface of the main frame and the under surface of the auxiliary frame section so that the hinged edges will abut when the auxiliary frame section is in the same plane with the main section and so that said auxiliary frame section may be held at different angles in respect to the main frame so as to incline rearwardly and downwardly therefrom, an arcuate bar attached to the main frame and disposed concentrically about the axis of the hinges, a pin piercing an opening in the auxiliary frame section and adapted to pierce one of a plurality of openings provided in the bar, brackets projecting rearwardly from the auxiliary frame section, eye-bolts hingedly engaged with said brackets, a beam supported on the eye-bolts, and spraying means on the beam.

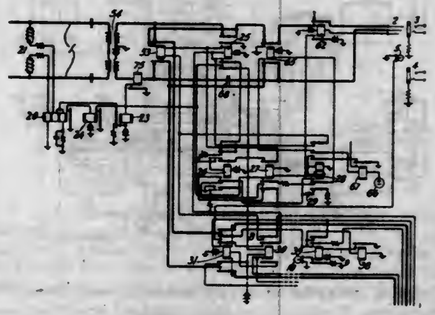
1,632,048. TESTING SYSTEM. JOHN W. VAN DE WATER, Hastings-on-the-Hudson, and BERT R. BLAIR, Jackson Heights, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 16, 1926. Serial No. 81,663. 5 Claims. (Cl. 179—175.)



4. In a system for testing telephone circuits, means for temporarily and simultaneously connecting a testing device to a plurality of telephone circuits, means for automatically and successively performing certain tests upon said circuits, means manually performing certain other tests upon said circuits, means for indicating when either of said types of tests is in progress, and means for indicating when said second mentioned type of tests is completed.

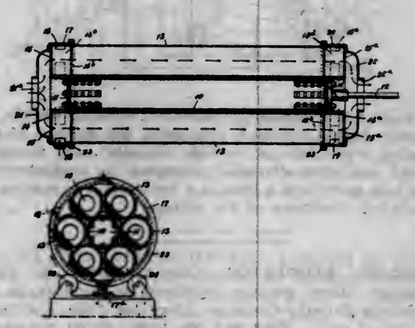
1,632,049. CONNECTION FOR PISTONS AND CONNECTING RODS. ARVIN C. WEBSTER, Detroit, Mich. Filed May 12, 1924. Serial No. 712,902. 4 Claims. (Cl. 74—108.)

1. In combination, a piston having alingned openings therein, a connecting rod having an aperture therein aligned with said openings, a pin extended into said openings and thru said aperture that portion of the pin engaged in said aperture being originally larger than the aperture and being forced into said aperture under pressure, and said portion being provided with a plurality of knurls having relatively flat tops.



1,632,050. PROTECTIVE DEVICE. GERARD P. WENNEMER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 21, 1923. Serial No. 676,131. 5 Claims. (Cl. 175—294.)

2. In combination, a thermocouple, a heater element therefor, a measuring instrument associated with said thermocouple, a second thermocouple, a heater element therefor serially connected with the heater element of the first mentioned thermocouple, a resistance of a magnitude equal to the resistance of the heater element of said first thermocouple, and means responsive to the passage of a predetermined current through said second thermocouple for short circuiting said first heater element and substituting therefor said resistance.

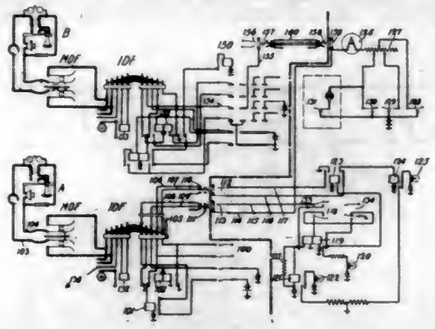


1,632,051. TELEPHONE SYSTEM. WILEY WHITNEY, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed July 28, 1926. Serial No. 125,367. 5 Claims. (Cl. 179—27.)

1. In a telephone system, a trunk, a signal associated with said trunk, an operator's telephone set and an impulse sender, means responsive to the seizure of said trunk for actuating said signal and for automatically associating said telephone set and sender with said trunk, and means effective incident to the association of said

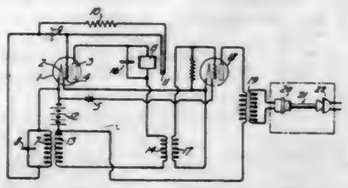
telephone set and sender with said trunk for actuating said signal in a different manner and for transmitting a signal comprising a plurality of impulses of tone current to said trunk and to said telephone set.

1,632,052. METHOD OF CARBONIZING FUEL BRIQUETTES. ELLSWORTH B. A. ZWOYER, Perth Amboy, N. J., assignor to The General Fuel Briquette Corp., New York, N. Y., a Corporation of New York. Filed Feb. 9, 1923. Serial No. 617,963. 3 Claims. (Cl. 44—10.)



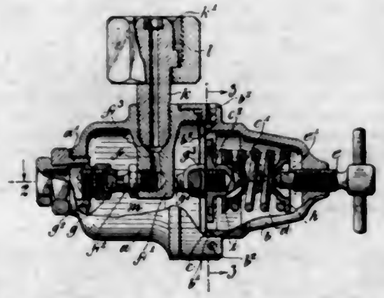
1. The method of treating fuel briquettes containing a normally soluble binder which consists in passing the briquettes through a zone heated to a predetermined degree sufficient to transform said normally soluble binder into a product insoluble in moisture and smokeless in combustion, and slowly moving said briquettes relatively to each other during the travel through said zone, in a manner to subject all parts of all of said briquettes to an approximately equivalent heat treatment and controlling said relative movement to avoid the development of impact forces sufficient to weaken the briquettes during said treatment.

1,632,053. TESTING DEVICE. ARNOLD S. BERTELS, Tenafly, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 9, 1923. Serial No. 650,299. 11 Claims. (Cl. 179—8.)



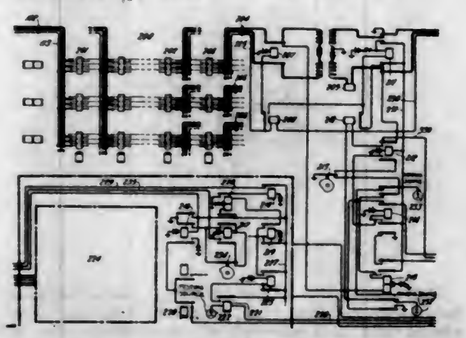
1. In a telephone system, a subscriber's line, a call charging device therefor, a test box, means for connect-

ing said test box to said line, a source of current, and means in said test box for applying current of different



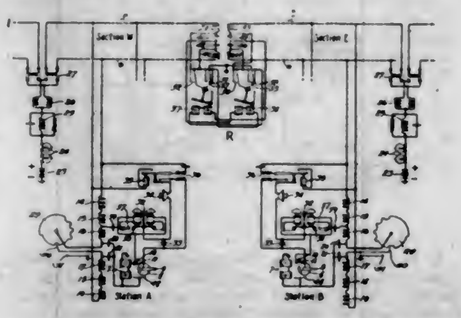
prescribed strengths from said source to said device for determining if said device is in standard operating condition.

1,632,054. OSCILLATION GENERATOR. JOHN T. L. BROWN, New Brighton, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 3, 1923. Serial No. 678,117. 12 Claims. (Cl. 250—36.)



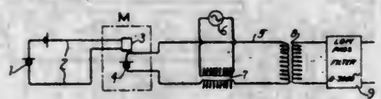
1. In a self-oscillating system including an electric discharge device having a leak path, the method of producing oscillations of variable frequency and amplitude which comprises alternately changing the conductivity of the leak path from a high to a low value, for varying the electrical conditions of the system.

1,632,055. REGULATOR. LORN CAMPBELL, Jr., Minneapolis, Minn., assignor, by mesne assignments, to The Harris Calorific Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 16, 1925. Serial No. 69,302. 2 Claims. (Cl. 50—23.)



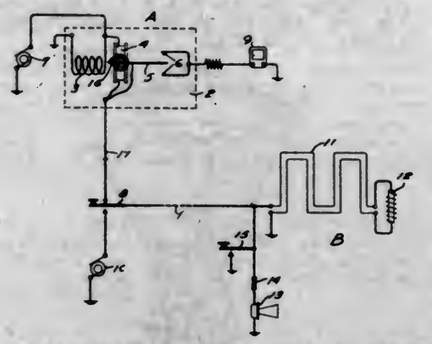
1. In a pressure reducing valve, in combination with a casing and a bonnet, said bonnet having a plurality of vent holes formed therein, a movable diaphragm mounted therewithin between the casing and the bonnet, and a plurality of shearing points formed integrally on the inner wall of the bonnet and disposed in line with the vent holes and at right angles to the diaphragm and adjacent to and around its perimeter.

1,632,056. TELEPHONE-EXCHANGE SYSTEM. WARREN W. CARPENTER, Queens, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 2, 1924. Serial No. 703,679. 8 Claims. (Cl. 179—18.)



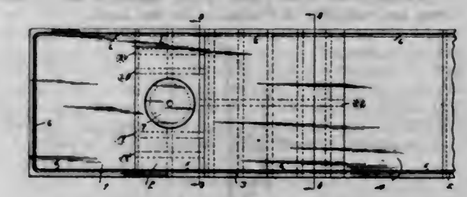
1. In a telephone system, a subscriber's line, a selective switch having operable contacts, a sender for controlling the selective operation of said switch, means for operating the contacts of said switch to extend the talking connection to said line, means for testing the condition of the connection extended to the subscriber's line, and means responsive to said test for releasing the sender.

1,632,057. SIGNALING SYSTEM. LESLIE E. COON, Chatham, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 22, 1924. Serial No. 701,064. 3 Claims. (Cl. 177—340.)



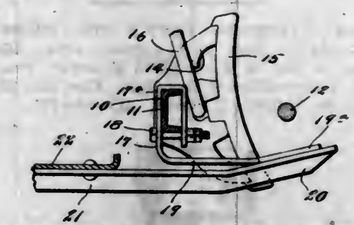
1. In a signaling system, a line circuit comprising a plurality of line sections, a bridge including inductive and capacity devices connected across each of said line sections, a selector connected between ground and the midpoint of each bridge, a source of current individual to each line section, bridges including inductive and capacity devices connected across the terminals of adjacent line sections, a polarized relay connected between ground and the midpoint of each of said last mentioned bridges means including the source of current for discharging and charging the condensers bridged across each line section to operate the selectors and polarized relays thereon, and means controlled by said polarized relays for dicharging and charging the condensers in the bridges associated with the selectors on the adjacent line section.

1,632,058. SECRET SIGNALING. ROY E. CORAM, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 21, 1923. Serial No. 676,031. 8 Claims. (Cl. 178—44.)



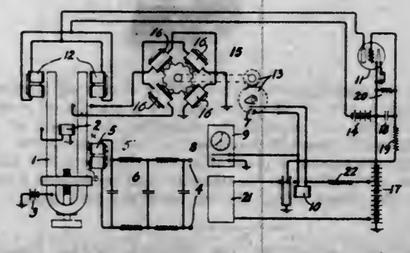
1. In combination, a circuit including a source of sustained carrier waves of a frequency at least as high as the upper essential speech frequencies, a mechanically variable resistance controlled in said circuit to modulate said carrier waves, said resistance being varied to produce modulated carrier waves having a lower side band within the audio frequency range, and a filter for transmitting only said lower side band.

1,632,059. ALARM SYSTEM. AUSTEN M. CURTIS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 16, 1922. Serial No. 582,110. 2 Claims. (Cl. 177—314.)



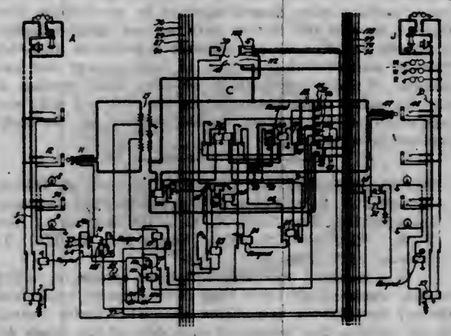
1. An alarm system comprising a line circuit interconnecting a central station and a substation, an alarm device and a source of alternating current at said central station energizing said line circuit, a galvanometer at said central station, said galvanometer having its field coil excited locally by said source of current and its moving coil connected in series with said line circuit, and a spring for normally holding the movable coil against the torque exerted by the magnetic field in each of said coils, said movable coil being responsive to a change in the relation of the phase angle of the currents in the field and movable coils for operating said alarm device.

1,632,060. NONWARPING STOVE TOP. GEORGE DOUGLAS, San Francisco, Calif. Filed Oct. 26, 1925. Serial No. 65,034. 3 Claims. (Cl. 126—211.)



1. A cast iron cover for ranges, comprising smooth top sections having overlapping edges whereby a cover of any desired length may be built up, transverse and longitudinal hollow ribs cast on the bottom portion of said top, said hollow ribs being filled with asbestos.

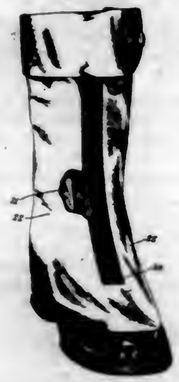
1,632,061. BRAKE-BEAM GUIDE. HERBERT W. EKHOLM, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 21, 1924. Serial No. 687,664. 9 Claims. (Cl. 188—213.)



1. A brake beam guide compriaing a resilient element adapted to have cooperating engagement with the rear part of a trussed brake beam, and a member adapted to be secured to a part of a truck and extending under said brake beam to form a support for said resilient element.

1,632,062. REGULATOR. JOHN G. FERGUSON, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 9, 1923. Serial No. 656,549. 8 Claims. (Cl. 172—293.)

1. A regulator for a current translating device capable of producing motion comprising a clock, and means comprising a space discharge device controlled by the conjoint action of the translating device and the time clock for regulating the rate of translation of said translating device.



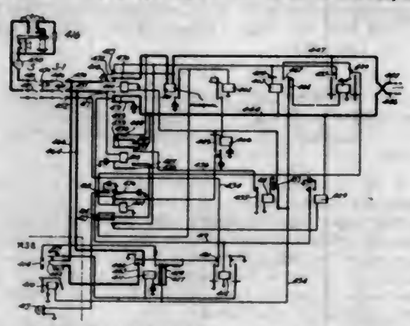
1,632,063. TELEPHONE SYSTEM. CLARENCE B. FOWLER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 30, 1923. Serial No. 677,827. 12 Claims. (Cl. 179—58.)

1. In a telephone system, a telephone line, a link circuit, a signal for the link circuit, a source of current, means for first connecting current from said source to

said signal to actuate said signal when the subscriber of said line hangs up after completing a call, and means for intermittently shunting said signal to flash said signal when the subscriber of said line recalls.

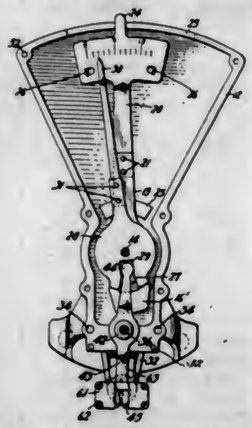
1,632,064. FASTENING DEVICE FOR SHOES AND THE LIKE. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed May 13, 1924. Serial No. 713,087. 2 Claims. (Cl. 24—205.)

1. A fastening device comprising a pair of anchorage strips, a row of clasps secured on a margin of each of the strips and a slide for engaging the clasps of one strip with those of the other, at least one of the said strips comprising a piece of locally-yielding fabric folded upon itself about an inextensible cord to provide a bead, and the clasps being secured upon the said bead.



1,632,065. RUPTURE OR HERNIA TRUSS. ERNEST GIFFHORN, Newark, N. J. Filed Nov. 20, 1925. Serial No. 70,252. 3 Claims. (Cl. 128—103.)

1. In a truss a bowed main body-portion, a fastening-portion, the adjoining ends of said body-portion and fastening-portion being hinged together in overlapping relation to provide the former with an end member underlying the latter, and an adjustable set-screw threaded through said fastening portion to bear against said end member of said body-portion whereby both spacing of said fastening portion away from the wearer's body and regulation of the tension exerted thereby on the body-portion is attained.

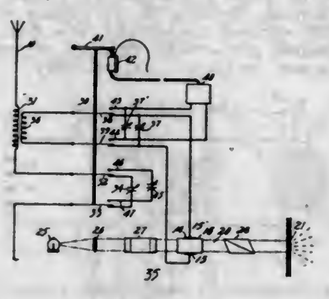


1,632,066. TELEPHONE SYSTEM. ALFRED E. HAGUE, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 4, 1924. Serial No. 696,776. 13 Claims. (Cl. 179—27.)

1. In a machine switching telephone system, a calling line, a trunk circuit, switching mechanism at either end thereof operable in association therewith under control of the calling line, means at each end of the trunk for indicating when it is busy, means including a relay bridged across the trunk at the end adjacent to the calling line for holding the trunk busy thereat after the calling line disconnects while permitting the switching mechanism at the distant end of the trunk to release, and

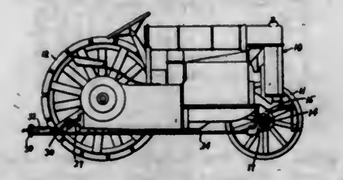
means controlled by said bridging relay for thereafter releasing the remaining switching mechanism and removing the busy condition from the trunk.

1,632,067. CLEARANCE GAUGE. LEON N. HAMPTON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 15, 1922. Serial No. 607,110. 7 Claims. (Cl. 33—172.)



1. A gauge of the character described comprising a scale, an indicating member associated therewith, means for adjusting said member with respect to said scale, and means actuated by the device to be tested for limiting the adjustment of said member.

1,632,068. PHONIC DIAPHRAGM. HENRY C. HARRISON, Port Washington, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 19, 1923. Serial No. 646,307. 5 Claims. (Cl. 181—32.)



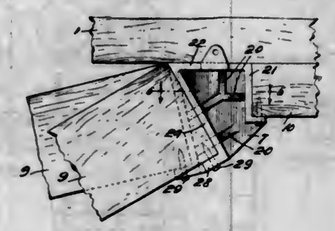
1. A composite phonic diaphragm comprising a plurality of corrugated diaphragms, the corrugations of one of said diaphragms crossing the corrugations of another of said diaphragms.

1,632,069. WAVE TRANSMISSION SYSTEM. RALPH V. L. HARTLEY, South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 14, 1924. Serial No. 731,914. 2 Claims. (Cl. 250—20.)

1. A communication system comprising means for receiving carrier waves from a remote station, a source of light, two crossed Nicol prisms in the path thereof, whereby the plane polarized light passing the first prism is prevented from passing the second, means between said prisms responsive to said received waves to rotate the plane of polarization of a beam of light, and means responsive to light traversing both of said prisms to produce an indication that the remote station is calling.

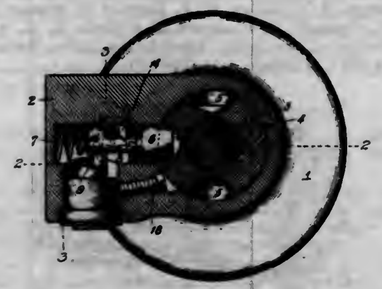
1,632,070. DRAWBAR ATTACHMENT FOR TRACTORS. ROB C. HAWKINS, Long Beach, Calif., assignor to "H H" Manufacturers, Inc., Long Beach, Calif., a Corporation of California. Filed Feb. 24, 1926. Serial No. 90,233. 12 Claims. (Cl. 280—33.44.)

1. In a tractor including a frame having a front axle thereon, said frame including a portion disposed about said axle, a rear bracket on said frame, a drawbar, means to secure said drawbar to said frame, said means engaging said portion of the frame which is disposed about the axle, the draft on said drawbar being transmitted to said means both in pulling and pushing, a platform arranged below and in the rear of said bracket and means on said drawbar engaging said platform to prevent downward movement of said drawbar, said drawbar having a pull member thereon.



1,632,071. CURTAIN-ROD BRACKET. JAMES N. HENRY, Providence, R. I. Filed Sept. 29, 1926. Serial No. 138,407. 5 Claims. (Cl. 156—22.)

4. In a bracket for curtain rods, a housing end portion, parallel segments integral with the end portion alternately disposed resilient distended segments also integral with the end portion, rounded external shoulders

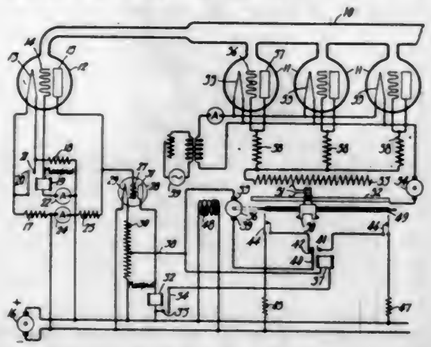


near the free ends of the resilient segments, and laterally extending attaching lugs integral with the ends of the first mentioned segments.

1,632,072. BRACING-BLOCK. ERNEST A. HERRICK and THOMAS LEONARD MACBEAN, New York, N. Y. Original application filed Mar. 21, 1925, Serial No. 17,208. Divided and this application filed Sept. 14, 1925. Serial No. 56,153. 2 Claims. (Cl. 20—94.)

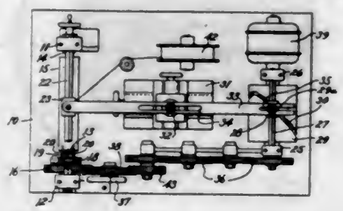
1. A bracing block composed of a connecting web, a timber receiving web at one side of the connecting web and two brace receiving webs at another side of the connecting web, the two receiving webs extending at different dihedral angles from the timber receiving web.

1,632,073. LOCK. GEORGE S. HILL and AUGUSTUS C. SAXTON, Chicago, Ill., assignors, by direct and mesne assignments, to H-B Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 18, 1921. Serial No. 445,945. 4 Claims. (Cl. 70—46.)



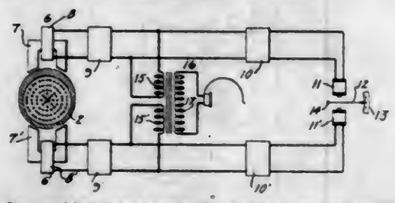
1. In a structure of the character described, a casing, a spring pressed bolt slidable therein, said bolt having a notch in one face thereof adapted to be engaged by a

latch member, one face of said notch being inclined inwardly and backwardly to serve as bolt latch holding means, and a spring pressed bolt latch adapted to be seated in said notch by spring pressure and having an inclined face adapted to co-operate with the inclined face of the notch in the bolt to assist in preventing accidental release of the bolt from withdrawn position.



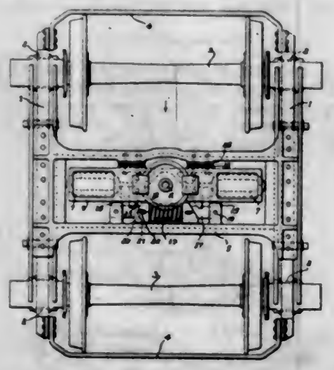
4. In a lock, a casing having an aperture for the reception of a locking bolt and an opening for the reception of a member to be locked by said bolt, said casing being provided with a chamber extending inwardly from an outer face thereof to the bolt receiving aperture and adapted to receive a lock cylinder therein, an aperture extending from said opening through the casing into the lock cylinder receiving chamber, a lock cylinder mounted in said chamber, and a holding member extending through said second named aperture into the cylinder receiving chamber and into engagement with the cylinder to hold the same in place within the casing.

1,632,074. CONTROL APPARATUS. WILLIAM G. HOUSKEEPER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 30, 1922. Serial No. 548,076. 13 Claims. (Cl. 250—27.)



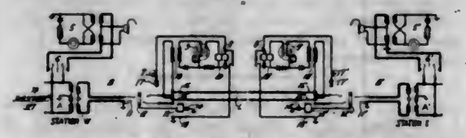
1. In a device of the character described, an electric discharge device to be evacuated, said device comprising a vessel containing a plurality of electrodes, means to cause one of said electrodes to emit electrons, a source of potential connected between said electron emitting electrode and another of said electrodes for establishing a space current therebetween, and means controlled by the pressure of the gas within the device for automatically varying the potential of said source.

1,632,075. WINDING MACHINE. WILLIAM G. HOUSKEEPER, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 4, 1924. Serial No. 684,303. 4 Claims. (Cl. 140—71.)



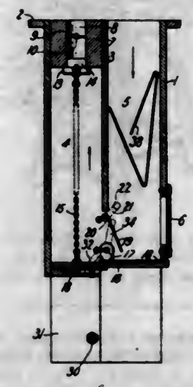
1. In combination, a rotatable mandrel, a rotatable cam having its axis parallel to the axis of said mandrel, a lever supported between said mandrel and said cam, a rod parallel to the axis of said mandrel, a wire guiding member slidably mounted thereon, connections between the opposite ends of said lever and said guide member and cam respectively, and means for rotating said mandrel and said cam.

1,632,076. METHOD OF DETERMINING INEQUALITIES IN WALL THICKNESS OF TUBES. FRANCIS A. HUBBARD, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 22, 1925. Serial No. 24,948. 10 Claims. (Cl. 175—183.)



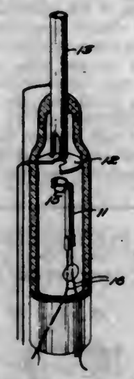
1. In combination, a metallic tube, a circuit including a source of alternating current and said tube, exploring coils located in the magnetic field produced thereby, and means connected to said coils for detecting the asymmetry of the thickness of the wall of said tube.

1,632,077. GUIDING TRUCK. CHARLES JABLOW, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 15, 1923. Serial No. 668,489. 13 Claims. (Cl. 105—189.)



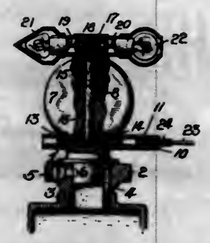
1. A guide truck for railway vehicles comprising a wheeled truck frame, a transom connecting the side frames thereof, a bolster mounted on said transom, and steering means associated with said transom and bolster comprising a plurality of roller links capable of longitudinal and limited lateral movement on said transom.

1,632,078. SIGNALING SYSTEM. JACOB S. JAMMER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 20, 1924. Serial No. 721,347. 14 Claims. (Cl. 179—15.)



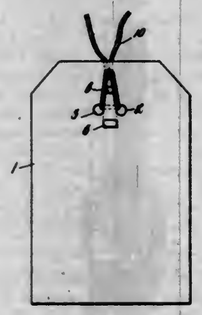
1. In a signaling system, a transmission line, a rectifier connected to said line, a relay in the output of said rectifier, a signal controlled by said relay, a telephone set, and switching means for disconnecting said rectifier from said line and for simultaneously connecting said telephone set to said line.

1,632,079. PNEUMATIC VALVE. GEORGE M. O. JENKINS, London, England, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 23, 1924, Serial No. 745,382, and in Great Britain Apr. 23, 1924. 4 Claims. (Cl. 302—2.)



1. In combination, a receiving valve comprising a compartment, a door therefor, a hinged member therein, means for normally maintaining a vacuum therein, said vacuum causing a ticket to be drawn against said hinged member to move the same and a valve operated thereby for shutting off the vacuum, and means simultaneously operated by said hinged member to open said door to release the ticket.

1,632,080. ELECTRIC DISCHARGE DEVICE. JOHN BERTRAND JOHNSON, Elmhurst, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 27, 1921. Serial No. 524,874. 2 Claims. (Cl. 250—27.5.)

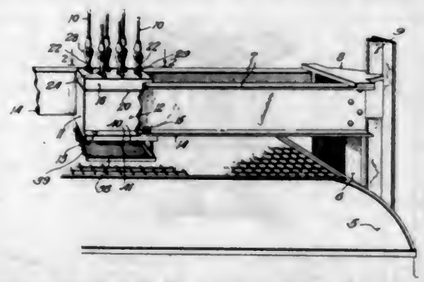


1. In an electron discharge device an enclosing vessel containing a gaseous atmosphere, a substantially cylindrical tubular anode, a cathode comprising a metallic ribbon having a substantially ring-shaped portion, said ring-shaped portion being spaced from and substantially in alignment with said anode, the interior diameter of said ring-shaped portion being at least as great as the interior diameter of said anode, means for supplying heating current to said cathode and means for establishing a difference of potential between said anode and cathode.

1,632,081. SIGNALING DEVICE FOR AUTOMOBILES. SHELDON LEE JONES, Brooklyn, N. Y. Filed July 31, 1923. Serial No. 654,838. 2 Claims. (Cl. 177—327.)

1. In a turning signal for automobiles, an indicator, means for rotatably mounting the same on the radiator cap, an electric bulb on said indicator, an operating member adapted to be mounted adjacent the driver's seat, an electric wire connecting said indicator and member and a flexible casing and insulation for said wire, whereby said wire is adapted to transmit both push and pull, an electric switch having one of its contacts on said wire, a source of electrical current, and an electrical connection between said source and said switch, and between said wire and said bulb, whereby said wire also serves to transmit current between said switch and bulb.

1,632,082. SHIPPING TAG. WILLIAM G. JOPSON, Wellesley, Mass., assignor, by mesne assignments, to C. A. Reed Company, Williamsport, Pa., a Corporation of Delaware. Filed June 22, 1923. Serial No. 647,036. 8 Claims. (Cl. 40—27.)



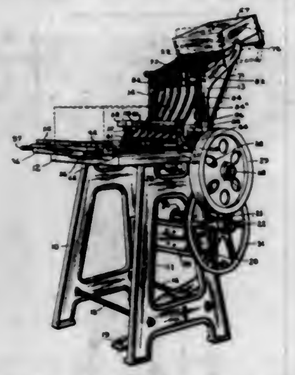
1. A shipping tag having a body portion provided with a pair of spaced perforations therethrough, and a reinforcement passing between said perforations on one face of the tag and over which a loop of string having its ends passed through said perforations may bear, said reinforcement having a transverse shoulder against which the loop may bear.

1,632,083. CABLE EQUALIZER. EDWIN F. KIECKHEFER, Milwaukee, Wis. Filed June 9, 1924. Serial No. 718,879. 4 Claims. (Cl. 187—1.)

3. A cable equalizer of the character described, comprising a block member, a plurality of cylinders formed in the block member, channels grooved in the upper face of the block member and affording communication between the cylinders, a head plate secured to the block member and closing the upper ends of the cylinders, pistons mounted in the cylinders, rods secured to the pistons and passed outwardly of the cylinders through the means closing the upper ends thereof, means surrounding the piston rods at their point of passage through the head member to provide a slidable fluid tight joint, means for securing lifting cables to the upper ends of said rods, a

fluid medium filling the upper ends of the cylinders whereby unequal stress on one piston displaces a portion of the fluid medium therein and said displaced fluid medium

being distributed to the other cylinders through the grooved channels, and means extended from the head plate for facilitating the insertion of the fluid medium.

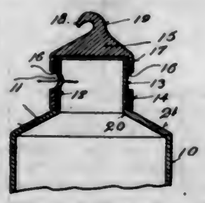


1,632,084. MERCURIAL BAROMETER. PAUL E. KLOPSTEG and HERMAN PAUL SACHSE, Chicago, Ill., assignors to Central Scientific Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 1, 1922. Serial No. 604,219. 5 Claims. (Cl. 73—4.)

1. In a mercurial barometer the combination of a column open at one end, a collar fixed to the column adjacent to the open end and having an air pocket therein, and a cistern threadedly engaged with the collar and communicating with the column and the air pocket.

1,632,085. BOX-NAILING MACHINE. ROBERT F. KURZ, New Haven, Conn., assignor of two-thirds to Fred A. Damon and one-third to Frank Starita, New Haven, Conn. Filed Apr. 18, 1923. Serial No. 632,912. 18 Claims. (Cl. 1—10.)

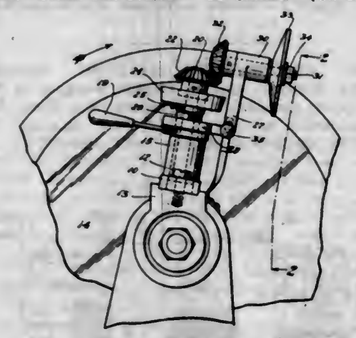
9. In a nailing machine, a frame, a work carrier slidingly mounted thereon, a nail guide tiltably secured to said carrier, means to deliver a nail to said nail guide, nail driving means relatively stationary in respect to said carrier, means to clamp the work against a portion of said carrier, said clamping means being adapted to move said carrier toward said driving means when the work is clamped thereby, whereby the nail is forced from said nail guide into the work by said nail driving means, means associated with said nail guide for tilting the same during the nail driving operation, whereby the nail body is held in a horizontal position, and means associated with said carrier and operable in timed relation to the



movement thereof whereby another nail is delivered to said nail guide after the return of said carrier and work clamping means to their inoperative position.

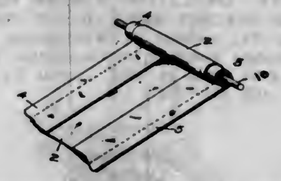
1,632,086. CLOSURE. NIXON LEE, Brooklyn, N. Y. Filed June 18, 1920. Serial No. 389,859. 7 Claims. (Cl. 215—43.)

1. A closure for container openings comprising, in combination, a circular closure member formed integrally of resilient sheet metal having an upwardly projecting centrally-disposed dome and with its rim crimped annularly about the outer edges of a circular compressible liner in contact with the rim of the container opening inside the crimped rim of the closure member bearing only on the liner along its peripheral margin in vertical alinement with said container opening rim, and on outer cap secured rotatably to the container and bearing centrally, anti-frictionally and yieldingly only on the dome of said closure member simultaneously to press inwardly and also radially expand both closure member and liner as a unit in all directions with substantially uniform pressure on the rim of the container opening.



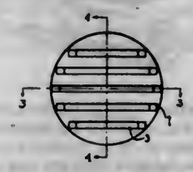
1,632,087. TOOTH-PASTE HOLDER. HENRY LILLFORD, New York, N. Y. Filed Oct. 17, 1925. Serial No. 62,948. 1 Claim. (Cl. 221—60.)

A tube for holding paste and the like, said tube including a neck having an aperture in the side wall thereof, a crown fitted over the outer end of said neck beyond



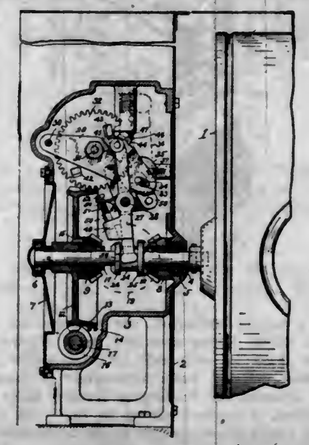
said aperture and secured thereto for forming an abutment, a closing ring axially movable on said neck for closing said aperture, and abutting against said abutment, and a hook integral with said crown.

1,632,088. SHARPENING DEVICE FOR SLICING-MACHINE KNIVES. PATRICK J. LUCEY, South Bend, Ind., assignor to Lucey Slicing Machine Company, Chicago, Ill., a Corporation of Illinois. Filed July 5, 1922. Serial No. 572,921. 15 Claims. (Cl. 51—248.)



1. A device for sharpening the bevel edge of a circular rotary knife of a slicing machine, comprising in combination, a rotary knife sharpening member, means driven by the engagement with the side of a knife, operative connections between said knife driven means and said sharpener, and handle means for readily swinging said sharpening member into and out of engagement with said knife.

1,632,089. GRID LEAK FOR RADIO APPARATUS. RALPH E. MARBURY, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 24, 1921. Serial No. 439,360. 8 Claims. (Cl. 201—74.)

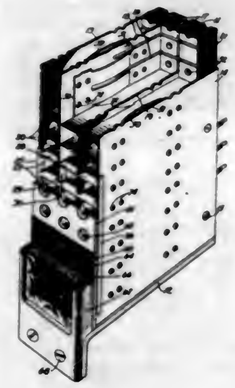


3. A resistance unit comprising a rolled sheet of fibrous insulating material and a strip of foil at each edge of said sheet, the outer edges of said foils extending beyond the edges of said sheet and the inner edges thereof being separated, said sheet of insulating material carrying a finely divided conducting material and a binding material.

1,632,090. METHOD OF MAKING STRAINER PLUGS. JOSEPH HENRY MCEVOY, Jr., Houston, Tex. Filed Feb. 6, 1926. Serial No. 86,446. 6 Claims. (Cl. 29—163.5.)

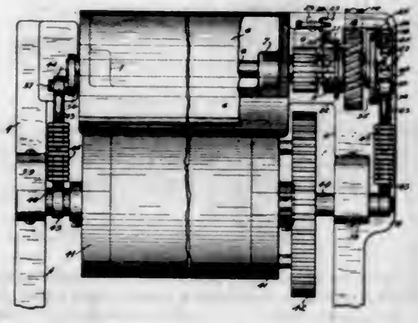
1. A process of forming strainer plugs comprising forming a plane metal disk of the desired thickness, milling a series of parallel slots from each side of said disk, the slots on one side being registered with those on the other side, and punching out the material at each end of each of the slots to leave end walls of the character described.

1,632,091. WASHER DRIVE MECHANISM. HARRY W. MITCHELL, Cleveland, Ohio, assignor to G. F. Mitchell & Son, a Partnership composed of George F. Mitchell, George R. Mitchell, and Harry W. Mitchell, Cleveland, Ohio. Filed Apr. 2, 1923. Serial No. 629,278. 11 Claims. (Cl. 74—50.)



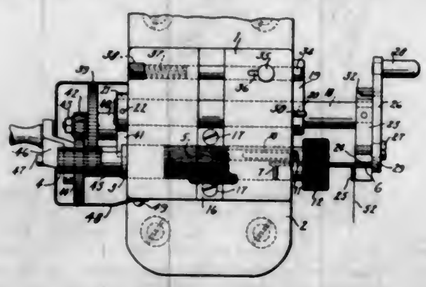
1. A washer drive mechanism comprising a drive shaft, a driven shaft, a pair of rotatable members loose upon the driven shaft, means for continuously driving said members in opposite directions from the drive shaft, a shiftable clutch element adapted to be shifted to alternately clutch said members to the driven shaft, clutch shifting mechanism operated by the drive shaft for alternately shifting the clutch element in opposite directions, and means for simultaneously disconnecting said clutch shifting mechanism from the drive shaft and moving said clutch element to neutral position out of engagement with both the rotatable members on the driven shaft.

1,632,092. VELOCIPEDE. WILLIAM W. MORRILL and WILLIAM V. MORRILL, Spokane, Wash. Filed May 22, 1926. Serial No. 110,991. 2 Claims. (Cl. 208—42.)



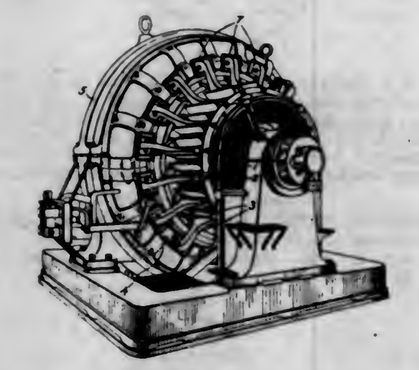
1. In a velocipede the combination with a main frame, steering wheel and rear driving wheel, and a crank shaft for the driving wheel, of a pedal mechanism and means for transmitting power therefrom to the crank shaft, a rock shaft having a rock yoke and rocking seat supported on the frame, and a pitman connecting from the crank shaft to the rock yoke.

1,632,093. CALL INDICATOR. EMIL C. MUELLER, Jr., Elizabeth, and STANLEY T. CURRAN, Mountain Lakes, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 5, 1925. Serial No. 73,349. 2 Claims. (Cl. 177—326.)



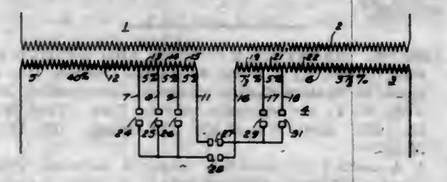
2. In a signal indicator, the combination of a plurality of signal lamps arranged in a cellular structure with one lamp in each cell, said structure comprising longitudinal division walls alternately of metal and insulating material and transverse division walls of insulating material, a contact spring in each cell attached to the metal longitudinal division walls, transverse end plates of metal connected to the longitudinal metal division walls, each lamp being adapted to have one of its terminals make electrical contact with the contact spring in the cell where the lamp is inserted so that said terminals of all of the lamps will be electrically connected together through the springs and longitudinal division walls to the metal end plates.

1,632,094. IRONING MACHINE. ARTHUR S. NEWSHAM and PAUL A. VIBRSEN, Chicago, Ill., and GUSTAV MISCH, Pittsburgh, Pa., assignors, by direct and mesne assignments, of one-third to H. O. Swoboda, Inc., Pittsburgh, Pa., a Corporation of Pennsylvania, and two-thirds to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 10, 1919, Serial No. 276,097. Renewed Sept. 26, 1922. Serial No. 590,599½. 8 Claims. (Cl. 68—9.)



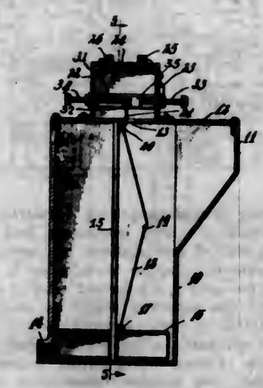
1. In an ironing machine, a frame, a shoe carried by said frame, a normally stationary rotary shaft associated with said frame and shoe, a rotary roller shaft journaled in said frame and adapted for movement laterally in its bearings, a roller arranged upon said shaft for cooperation with said shoe, means normally loose upon said first named shaft for transmitting rotary movement to said roller shaft in a predetermined position of the same in its bearings, foot controlled means whereby said first named means may be made fast to its shaft to cause a predetermined movement of the same, means whereby rotary movement of one of said shafts will cause a movement of the other shaft laterally in its bearings and subsequently arrest the rotary movement of said first named shaft.

1,632,095. GRID-WINDING MACHINE. EDWIN E. NEWTON, Montreal, Quebec, Canada, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 26, 1925. Serial No. 52,564. 11 Claims. (Cl. 153—67.)



1. A grid winding machine comprising a casing, a threaded shaft in said casing, a rotatable mandrel carried by said shaft, wire receiving means carried by said mandrel, clamping means surrounding said receiving means and mandrel, and means to rotate and reciprocate said shaft.

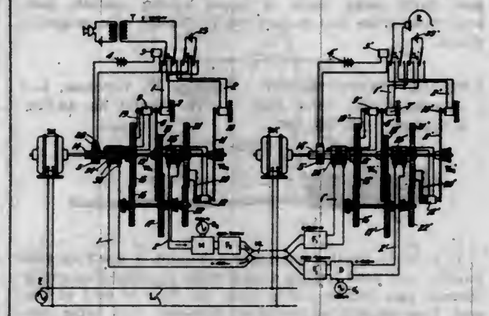
1,632,096. INSULATING WASHER FOR BRUSH-HOLDER BRACKET ARMS. REX H. NEWTON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 26, 1925. Serial No. 58,818. 2 Claims. (Cl. 171—324.)



2. The combination with a rotating current-collecting device, of a plurality of stationary brushes disposed thereabout, brush-holder brackets for said brushes, an annular supporting member for said brackets, and insulating means including baffle flanges extending outwardly away from said supporting member for providing an insulating surface, which is protected from the windage of the rotating device, in the leakage path from each bracket.

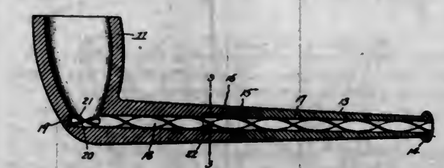
1,632,097. TRANSFORMER WINDING. JOHN F. PETERS, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 7, 1926. Serial No. 114,228. 4 Claims. (Cl. 171—119.)

1. An electrical winding comprising a plurality of divisions, one of which comprises a standard section having a definite number of turns, the other division comprising a section the number of turns of which is the product of the number of turns in the standard section and a number evenly divisible by one-half, and means for controlling connections of the several divisions and sections to vary the voltage of the winding in steps corresponding to changes of one-half the number of the turns in the first named section.



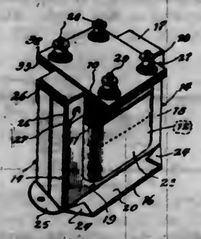
1,632,098. FLOAT-OPERATED CIRCUIT CLOSER. MARIANO ROSALES, San Antonio, Tex. Filed June 22, 1925. Serial No. 38,617. 2 Claims. (Cl. 290—84.)

1. In a device of the class described, having a pivoted rod movable by a float, the combination of a casing, rails depending from said casing, blocks slidable between said rails, adjusting screws engaging said casing, and abutting said blocks, springs depending from said blocks and projecting into the line of movement of said rod, contacts on said springs, other contacts engageable with said contacts, and depending from said blocks, some of the latter contacts being located in the front of said springs, and other of the latter contacts being located in the rear of said springs, whereby a forward movement of said rod closes a pair of said coactive contacts, and a continued forward movement opens another pair of said coactive contacts.



1,632,099. SECRET SIGNALING. JOHN C. SCHELLENG, Millburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 12, 1925. Serial No. 49,785. 10 Claims. (Cl. 179—1.)

1. The method of securing secrecy in the transmission of message waves comprising a band of frequency components, which method consists in dividing said message waves arbitrarily into sets of fragments on a time basis, reducing the frequency of each component of the successive fragments by a factor equal to the number of



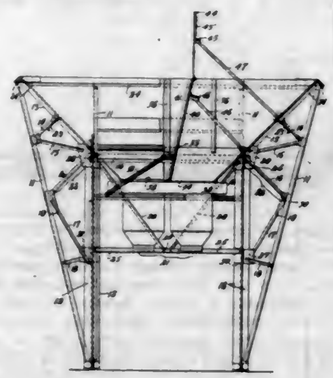
fragments in a set, superposing the various fragments of a set, the components of which are changed in frequency, and transmitting together the superposed fragments.

1,632,100. SMOKING PIPE. EVERETT W. SWARTWOUT, White Plains, N. Y. Filed Oct. 30, 1923. Serial No. 671,633. 1 Claim. (Cl. 131—12.)

The combination of a pipe comprising a bowl portion, a bowl stem portion, a bored mouth piece stem portion and means for disconnectibly connecting said mouth piece stem portion with said bowl stem portion, said connecting means comprising a tubular member secured to and projecting from said mouth piece stem portion, said tubular member being provided with a set of bayonet slots, a spirally arranged member disposed in the bore of said bowl stem portion and the bore of said mouth piece stem portion, said spiral member engaging the walls of said bores at spirally continuous locations, a set of lugs carried by and projecting from said spiral member and removably received within said set of bayonet slots.

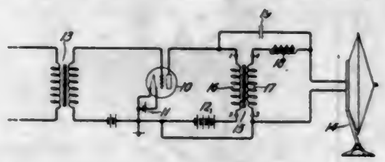
1,632,101. AMPLIFYING TRANSFORMER. CHESTER H. THORDARSON, Chicago, Ill. Filed Oct. 18, 1922. Serial No. 595,231. 5 Claims. (Cl. 175—361.)

1. A transformer and magnetic shield casing comprising, in combination, a shell type core and primary and secondary windings thereon, said casing comprising side members, each consisting of a plate to bear at its ends against the transformer core and curved between its ends to embrace the transformer windings, and including also a pair of side members each consisting of angle post parts



to embrace the corners of the core and to fit over said plate ends, and means to interlock the members of said casing together on the core and winding, said plates and post parts being made of metal having smooth, non-projecting areas and having the properties of a magnetic shield.

1,632,102. TOOTHBRUSH. WILLIAM H. VATCHER, Los Angeles, Calif. Filed July 1, 1925. Serial No. 40,774. 2 Claims. (Cl. 15—167.)

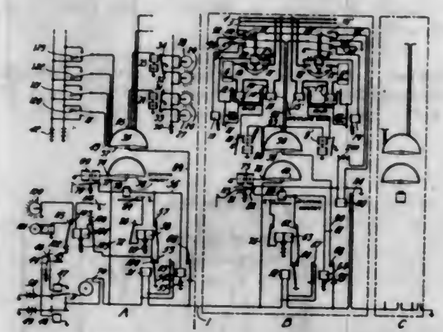


1. A tooth brush comprising a handle, a head on said handle, said head having a longitudinally extending cavity therein, and bristles rising from the floor of said cavity, said floor sloping upwardly at the ends and being substantially arcuate in cross section.

1,632,103. BIN. WILLIAM M. VENABLE, Pittsburgh, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed Sept. 5, 1925. Serial No. 54,596. 15 Claims. (Cl. 189—3.)

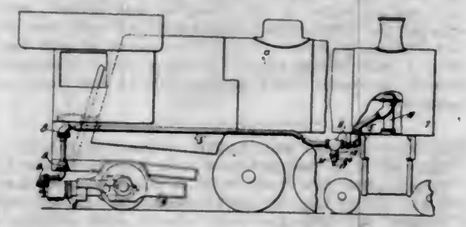
1. The combination with a bin of a fabricated supporting leg for the bin having upwardly and outwardly divergent branches laterally sustaining adjacent bin sides.

1,632,104. TRANSMISSION CIRCUITS. DONALD F. WHITING, Port Washington, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed July 31, 1926. Serial No. 126,155. 5 Claims. (Cl. 178—44.)



1. In combination two circuits having different impedance-frequency characteristics and means for coupling said circuits to substantially uniformly transmit a wide range of frequencies, said means comprising a transformer having windings connected to said circuits and of such an impedance ratio as to efficiently couple the circuits for frequencies in the lower portion of said range, an inductance element connected in series between one terminal of one of said windings and the circuit connected to said winding, a capacity element connected in shunt to said transformer and inductance element between a terminal of the other of said windings and the terminal of said inductance element adjacent said circuit, and connections between the other terminals of said windings.

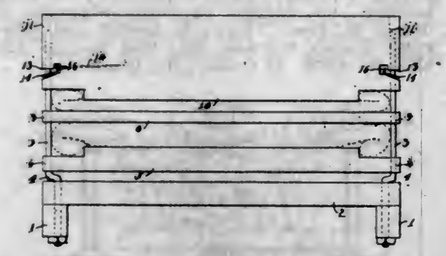
1,632,105. MAGNETIC MATERIAL AND METHOD OF PRODUCING IT. LYALL ZICKRICK, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 25, 1925. Serial No. 18,324. 12 Claims. (Cl. 175—21.)



1. A method of producing magnetic material, which consists in alloying antimony with a magnetic material, and reducing the resulting product to finely divided form.

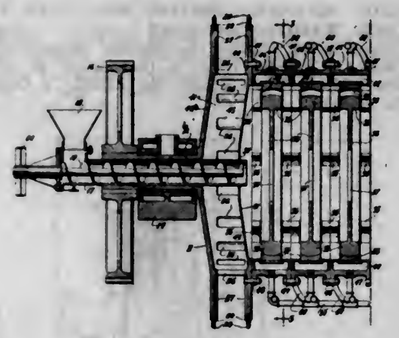
1,632,106. SIGNALING SYSTEM. FERDINAND ZOGBAUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 24, 1923. Serial No. 676,843. 6 Claims. (Cl. 177—353.)

1. A signaling system comprising a central station and a remote station, a circuit connecting said stations, a distributor at each of said stations, an operating magnet for each of said distributors included in a circuit normally open at two points, a polarized relay at each station, means whereby the polarized relays are controlled from the central station to close the associated operating magnet circuit at one point, a line relay in said first circuit at each station to close the operating magnet circuit at the other point, and impulse transmitting means associated with said circuit at said central station for operating said line relays.



1,632,107. EXHAUST AND SEPARATOR SYSTEM FOR LOCOMOTIVES. GEORGE H. ZOUCK, Orange, N. J., assignor to Franklin Railway Supply Company, a Corporation of Delaware. Filed Apr. 23, 1925. Serial No. 25,199. 3 Claims. (Cl. 105—37.)

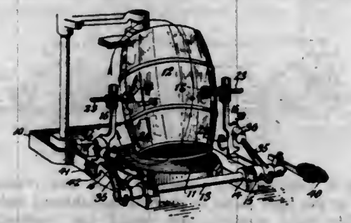
1. The combination with a locomotive smoke-box and the main engine exhaust means discharging thereinto, of an auxiliary exhaust line, a separator in the exhaust line



with a discharge for the separated liquid, and means for preventing draft of air through the separator into the smoke-box by the locomotive.

1,632,108. CLAMPING DEVICE. LYMAN P. ARMSTRONG, San Jose, Calif. Filed Mar. 4, 1926. Serial No. 92,253. 3 Claims. (Cl. 5—320.)

2. A structure of the character described comprising a frame, a pair of spaced parallel rods mounted thereon, parallelly arranged jaw members slidably mounted on said rods, the jaw member remote from said frame having a slot formed in each end thereof, a metal plate loosely mounted in each slot and provided with an orifice through which the adjacent rod passes, and means for tilting the plate in the slot.



1,632,109. GRINDING AND DRYING APPARATUS. JOHN E. BELL, Brooklyn, N. Y., assignor to Combustion Engineering Corporation, a Corporation of New York. Filed Jan. 12, 1922. Serial No. 528,669. 23 Claims. (Cl. 83—9.)

1. A continuous grinding and drying mill comprising a rotary casing with grinding means therein and peripheral portage at one end, and stationary casing means arranged annularly about said portage and substantially sealing with the rotary casing above and below at either side of said portage, for discharge of ground material from the rotary casing below and passage of a medium for drying such material above.

1,632,110. BARREL-REVERSING MECHANISM. EDWIN F. BEUCLER, Buffalo, N. Y., assignor to E. & B. Holmes Machinery Co., Buffalo, N. Y., a Corporation of New York. Filed July 12, 1924. Serial No. 725,748. 12 Claims. (Cl. 147—6.)

1. A barrel reversing mechanism comprising two rotatable jaws adapted to engage with opposite sides of a barrel, gripper arms which carry said jaws and which turn about longitudinal horizontal axes, lifting arms

which turn about a transverse horizontal axis and to which the gripper arms are pivoted and means for operating said arms and jaws simultaneously.

1,632,111. SAFETY GAS-STOVE LOCK. GIULIO BEVILACQUA, Clifton, N. J. Filed Sept. 3, 1926. Serial No. 133,356. 4 Claims. (Cl. 126—42.)

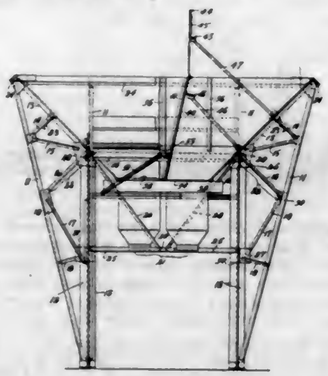
1. An attachment for gas stoves comprising a channel shaped guard disposed over the cocks of the stove when they are in a closed position, said guard being composed of two mutually slidable sections, upturned beadings on the lower edges of one of said sections to receive and guide the edges of the other section, hook engaging means at one end of said guard, said means being rigidly held in the beadings, a spring at the opposite end of said guard, and means to engage the free end of the spring to a fixed part of the stove.

1,632,112. CONNECTER MEMBER. CARL BRAMMING, Chicago, Ill., assignor to Accessories Manufacturing Company, a Corporation of Illinois. Filed Aug. 12, 1925. Serial No. 49,793. 9 Claims. (Cl. 173—269.)

3. A terminal plug comprising a conductor provided with a resilient portion having a transverse opening through one end thereof for the reception of the end of a wire conductor and a spring-pressed contact member in the opposite end thereof.

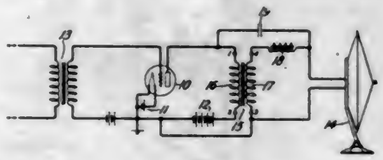
1,632,113. PHENOLIC CONDENSATION PRODUCT. ARTHUR L. BROWN, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 7, 1922. Serial No. 550,516. 7 Claims. (Cl. 260—4.)

5. A method of making condensation products which comprises dissolving a drier in cresol, mixing formaldehyde therewith and heating to cause said ingredients to react, said drier having the condensing properties of "tox tungate."



to embrace the corners of the core and to fit over said plate ends, and means to interlock the members of said casing together on the core and winding, said plates and post parts being made of metal having smooth, non-projecting areas and having the properties of a magnetic shield.

1,632,102. TOOTHBRUSH. WILLIAM H. VATCHER, Los Angeles, Calif. Filed July 1, 1925. Serial No. 40,774. 2 Claims. (Cl. 15—167.)

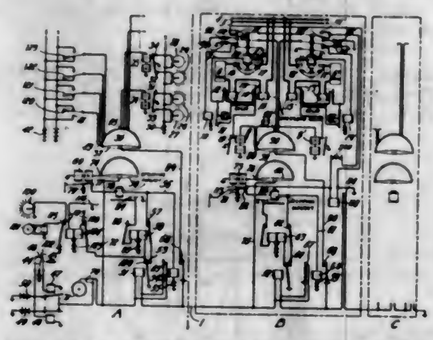


1. A tooth brush comprising a handle, a head on said handle, said head having a longitudinally extending cavity therein, and bristles rising from the floor of said cavity, said floor sloping upwardly at the ends and being substantially arcuate in cross section.

1,632,103. BIN. WILLIAM M. VENABLE, Pittsburgh, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed Sept. 5, 1925. Serial No. 54,596. 15 Claims. (Cl. 189—3.)

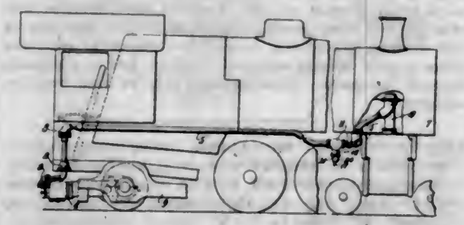
1. The combination with a bin of a fabricated supporting leg for the bin having upwardly and outwardly divergent branches laterally sustaining adjacent bin sides.

1,632,104. TRANSMISSION CIRCUITS. DONALD F. WHITING, Port Washington, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed July 31, 1926. Serial No. 126,155. 5 Claims. (Cl. 178—44.)



1. In combination two circuits having different impedance-frequency characteristics and means for coupling said circuits to substantially uniformly transmit a wide range of frequencies, said means comprising a transformer having windings connected to said circuits and of such an impedance ratio as to efficiently couple the circuits for frequencies in the lower portion of said range, an inductance element connected in series between one terminal of one of said windings and the circuit connected to said winding, a capacity element connected in shunt to said transformer and inductance element between a terminal of the other of said windings and the terminal of said inductance element adjacent said circuit, and connections between the other terminals of said windings.

1,632,105. MAGNETIC MATERIAL AND METHOD OF PRODUCING IT. LYALL ZICKRICK, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 25, 1925. Serial No. 18,324. 12 Claims. (Cl. 175—21.)

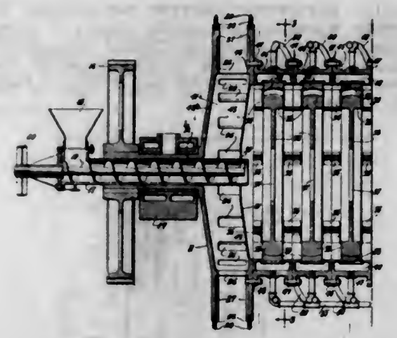


1. A method of producing magnetic material, which consists in alloying antimony with a magnetic material, and reducing the resulting product to finely divided form.

1,632,106. SIGNALING SYSTEM. FERDINAND ZOGBAUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 24, 1923. Serial No. 676,843. 6 Claims. (Cl. 177—353.)

1. A signaling system comprising a central station and a remote station, a circuit connecting said stations, a distributor at each of said stations, an operating magnet for each of said distributors included in a circuit normally open at two points, a polarized relay at each station, means whereby the polarized relays are controlled from the central station to close the associated operating magnet circuit at one point, a line relay in said first circuit at each station to close the operating magnet circuit at the other point, and impulse transmitting means associated with said circuit at said central station for operating said line relays.

1,632,107. EXHAUST AND SEPARATOR SYSTEM FOR LOCOMOTIVES. GEORGE H. ZOUCK, Orange, N. J., assignor to Franklin Railway Supply Company, a Corporation of Delaware. Filed Apr. 23, 1925. Serial No. 25,199. 3 Claims. (Cl. 105—37.)



1. The combination with a locomotive smoke-box and the main engine exhaust means discharging thereinto, of an auxiliary exhaust line, a separator in the exhaust line with a discharge for the separated liquid, and means for preventing draft of air through the separator into the smoke-box by the locomotive.

1,632,108. CLAMPING DEVICE. LYMAN P. ARMSTRONG, San Jose, Calif. Filed Mar. 4, 1926. Serial No. 92,253. 3 Claims. (Cl. 5—320.)

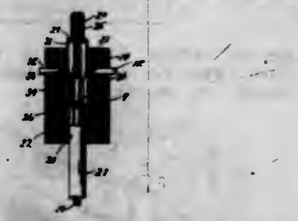
2. A structure of the character described comprising a frame, a pair of spaced parallel rods mounted thereon, parallelly arranged jaw members slidably mounted on said rods, the jaw member remote from said frame having a slot formed in each end thereof, a metal plate loosely mounted in each slot and provided with an orifice through which the adjacent rod passes, and means for tilting the plate in the slot.

1,632,109. GRINDING AND DRYING APPARATUS. JOHN E. BELL, Brooklyn, N. Y., assignor to Combustion Engineering Corporation, a Corporation of New York. Filed Jan. 12, 1922. Serial No. 528,669. 23 Claims. (Cl. 83—9.)

1. A continuous grinding and drying mill comprising a rotary casing with grinding means therein and peripheral portage at one end, and stationary casing means arranged annularly about said portage and substantially sealing with the rotary casing above and below at either side of said portage, for discharge of ground material from the rotary casing below and passage of a medium for drying such material above.

1,632,110. BARREL-REVERSING MECHANISM. EDWIN F. BEUGLER, Buffalo, N. Y., assignor to E. & B. Holmes Machinery Co., Buffalo, N. Y., a Corporation of New York. Filed July 12, 1924. Serial No. 725,748. 12 Claims. (Cl. 147—6.)

1. A barrel reversing mechanism comprising two rotatable jaws adapted to engage with opposite sides of a barrel, gripper arms which carry said jaws and which turn about longitudinal horizontal axes, lifting arms

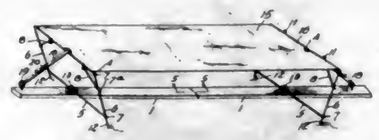


which turn about a transverse horizontal axis and to which the gripper arms are pivoted and means for operating said arms and jaws simultaneously.

1,632,111. SAFETY GAS-STOVE LOCK. GIULIO BEVILACQUA, Clifton, N. J. Filed Sept. 3, 1926. Serial No. 133,356. 4 Claims. (Cl. 126—42.)

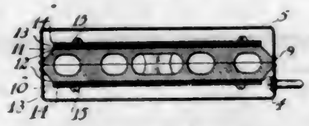
1. An attachment for gas stoves comprising a channel shaped guard disposed over the cocks of the stove when they are in a closed position, said guard being composed of two mutually slidable sections, upturned beadings on the lower edges of one of said sections to receive and guide the edges of the other section, hook engaging means at one end of said guard, said means being rigidly held in the beadings, a spring at the opposite end of said guard, and means to engage the free end of the spring to a fixed part of the stove.

1,632,112. CONNECTER MEMBER. CARL BRAMMING, Chicago, Ill., assignor to Accessories Manufacturing Company, a Corporation of Illinois. Filed Aug. 12, 1925. Serial No. 49,793. 9 Claims. (Cl. 173—269.)



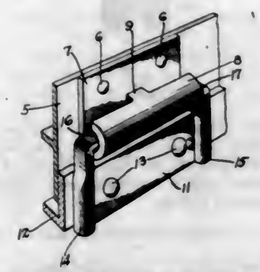
3. A terminal plug comprising a conductor provided with a resilient portion having a transverse opening through one end thereof for the reception of the end of a wire conductor and a spring-pressed contact member in the opposite end thereof.

1,632,113. PHENOLIC CONDENSATION PRODUCT. ARTHUR L. BROWN, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 7, 1922. Serial No. 550,516. 7 Claims. (Cl. 260—4.)



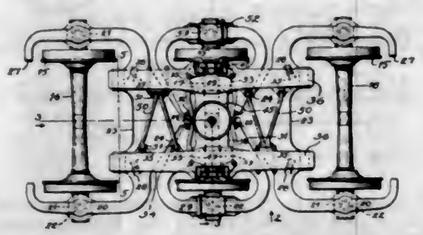
5. A method of making condensation products which comprises dissolving a drier in cresol, mixing formaldehyde therewith and heating to cause said ingredients to react, said drier having the condensing properties of "tox tungate."

1,632,114. FOLDING COT. WILLIAM E. BROWN, Los Angeles, Calif. Filed Sept. 10, 1925. Serial No. 55,433. 8 Claims. (Cl. 5—112.)



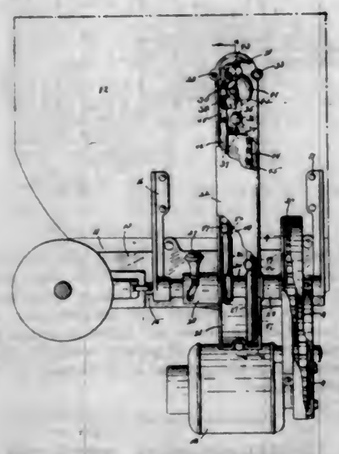
4. In a folding cot, a folding base, end frames connected to the base so as to prevent detachment therefrom, a flexible body support, and means for tensioning the body support between the end frames, and means for collapsing the end frames on the folded base longitudinally thereof with the body support wrapped around the collapsed end frames and folded base.

1,632,115. GREASELESS-DOUGHNUT MACHINE. JOHN A. BURRICHTER, St. Paul, Minn. Filed Feb. 2, 1925. Serial No. 6,215. 2 Claims. (Cl. 53—10.)



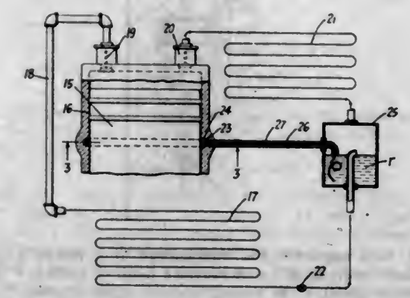
1. A machine for baking doughnuts to render the same greaseless, comprising a pair of hinged cast metal molds, said molds having similarly shaped batter-receiving depressions formed therein to receive the material to be baked, the depressions facing each other in pairs when the molds are closed and each pair being entirely separated from other pairs and shaped to produce a doughnut, said depressions further having centrally located contacting studs forming a heating unit extending throughout the center of the material to be baked, an electrical heating element secured to the outer face of a mold, and a casing for each of said molds secured to the outer edges thereof and spaced from the outer surfaces of the molds and from the outer edges of the heating elements to provide heating spaces throughout the entire area of the molds.

1,632,116. HINGE. OTTO W. L. BUSS, Minneapolis, Minn. Filed Dec. 22, 1923. Serial No. 682,190. 2 Claims. (Cl. 16—171.)



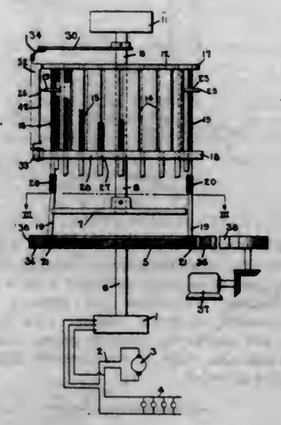
1. A hinge comprising a member having a planiform body portion marginally turned toward itself along one end to provide a bearing, the inner edge of the bearing portion being uniformly spaced from the body of said member to form a longitudinal slot parallel with the body portion of said member, an abutment integrally formed on the edge of said marginal portion of a length equal to the width of said slot and abutting against said body portion, and a complemental hinge member comprising a planiform body portion having oppositely facing pintle members secured to said body portion being of substantially rectangular cross section and of a width equal to the width of said slot, said pintle members terminating short of one another a distance equal to the width of said abutment and adapted to straddle said abutment upon insertion thereof into said slots.

1,632,117. RAILWAY-CAR TRUCK. CARL L. CHARLES, Baltimore, Md., assignor, by mesne assignments, to Herbert M. Brune, Charles E. Scarlett, and Janon Fisher, trustees, Baltimore, Md. Filed Jan. 31, 1925. Serial No. 6,070. 11 Claims. (Cl. 105—166.)



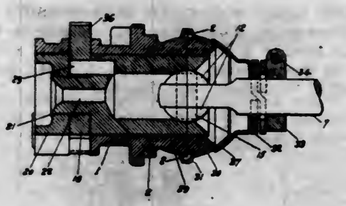
1. The combination with a car body having a king pin and a plurality of wear plates disposed transversely under said body and on each side of said pin, of a car truck comprising wheels, axles for said wheels, journal boxes for said axles, a center plate for engagement with said pin, and a plurality of side bearings disposed transversely on each side of said center plate between said boxes and said wear plates, said bearings on each side of said center plate being adapted to contact successively with said wear plates when the car body rocks, thereby damping the oscillation of said body.

1,632,118. ECCENTRIC DRIVING MECHANISM FOR POWER WASHING MACHINES. HARRY J. CRINER, Clarinda, Iowa, assignor to Clarinda Manufacturing Company, Clarinda, Iowa, a Corporation of Iowa. Filed Sept. 10, 1925. Serial No. 55,497. 2 Claims. (Cl. 74—14.)



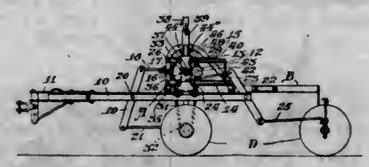
1. A driving mechanism, comprising a support, a driving member journaled on said support and formed with oppositely arranged eccentrics, a housing enclosing said eccentrics and extending at right angles to said driving member, a bearing member mounted in said housing, a slide bearing arranged for rotary oscillation in said bearing member and formed with a peripheral flange resting thereon, a follower shaft arranged for sliding movement in and oscillation with said slide bearing, sprocket teeth arranged peripherally on said slide bearing immediately above said flange, a chain engaging said teeth near its center, and driving connections between the ends of said chain and the respective eccentrics, for the purposes stated.

1,632,119. CYLINDER LUBRICATION. RANSOM W. DAVENPORT, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 25, 1925. Serial No. 58,559. 7 Claims. (Cl. 62—115.)



3. In a mechanically operated refrigerating system of the compressor-condenser-vaporizer type, a compressor having a cylinder and a piston reciprocable therein, said cylinder having a groove in the inner wall thereof, a condenser, and means for feeding liquid from said condenser into said groove to lubricate the compressor.

1,632,120. DEMAND METER. DAVID C. DAVIS, Chester, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 2, 1922. Serial No. 604,570. 6 Claims. (Cl. 234—5.5.)

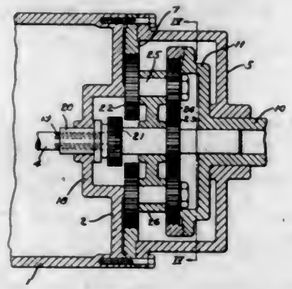


1. A measuring instrument comprising a plurality of recording elements for co-operation with a chart, a meter element, means for successively connecting the recording elements to the meter element for actuation thereby over equal overlapping periods of time and for disconnecting the recording elements from the meter element and resetting the same to an initial position at the ends of said periods, and means for causing each recording element to effect a record on the chart.

1,632,121. UNIVERSAL JOINT. ADIEL Y. DODGE, South Bend, Ind., assignor, by mesne assignments, to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 7, 1924. Serial No. 697,472. 10 Claims. (Cl. 64—103.)

1. In combination, a rotatable shaft having a cam secured at one end and a transverse bore at the other end with a transverse opening through the latter end into the bore, said opening having a minimum width less than the diameter of the bore, and a second shaft having an end formed to enter the slot and bore in the first shaft with means for securing the second shaft end in oscillatable position in said bore consisting of; members formed to fit and substantially fill the bore on both sides of the second shaft end, said members being operatively fastened to said shaft end, a support enclosing all of the first mentioned shaft and cam, except the nose of the cam, said support acting to prevent said second shaft end from moving laterally out of said bore, and yielding means held in position by means on the second shaft for enclosing the joint end of said support.

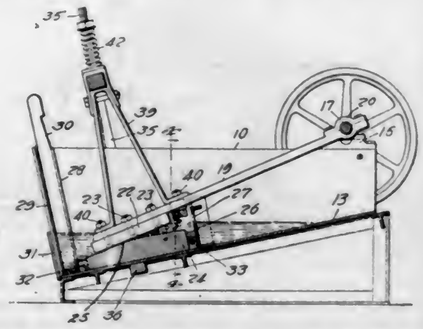
1,632,122. TRACTOR HARROW. WILLIAM C. DWYER and JOSEPH I. MITCHELL, Auburn, N. Y., assignors to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 4, 1922. Serial No. 579,577. 8 Claims. (Cl. 55—83.)



1. The combination with a disk harrow comprising a frame and disk gangs pivoted thereto, of power actuated angling mechanism for the gangs comprising a pinion journaled on the frame, means for driving said pinion in a constant direction, a gang shifting member longitudinally slidable on the frame and carrying oppositely facing rack bars, connections between one end of the gangs and said member, and means for bringing the pinion into mesh with either rack bar to give said gang shifting member positive movement in opposite directions.

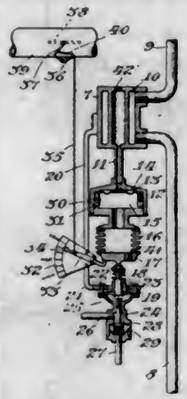
3. The combination with a disk harrow comprising a frame and disk gangs pivoted thereto, of traction actuated angling mechanism for the gangs comprising a member slidable back and forth on the frame and provided with opposed rack bars, a movable pinion journaled on the frame and driven by travel of the harrow, connec-

tions between said slidable member and one end of the gangs, and means for moving said pinion into mesh with either rack bar.



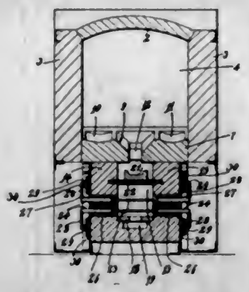
8. A gang angling device for disk harrows comprising a frame having a pair of opposite, inwardly facing, rack bars slidably mounted thereon, a drive pinion journaled on said frame between said rack bars, a second pinion in mesh therewith and journaled on a support movable about the axis of said drive pinion, and means for swinging said support to bring said second pinion into engagement with either rack bar.

1,632,123. REDUCTION-GEAR TRANSMISSION. HARRY DE WITT ELSE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 2, 1924. Serial No. 703,675. 7 Claims. (Cl. 74—34.)



1. A speed-changing device, comprising a casing member, a sleeve gear journalled therein, a shaft extending into said sleeve gear and having a running fit therewith mounted for rotation in said casing, a pair of gear wheels mounted in spaced relation on said shaft, an internal gear securely mounted in said casing, a spider journalled on said shaft, planetary gear-wheels journalled on said spider and adapted to engage the sleeve gear and said internal gear, and means for engaging each of said pair of gear wheels with said planetary gear-wheels.

1,632,124. ORE CRUSHER. THEODORE FREIBERG, Prescott, Ariz. Filed July 12, 1926. Serial No. 121,863. 3 Claims. (Cl. 83—53.)

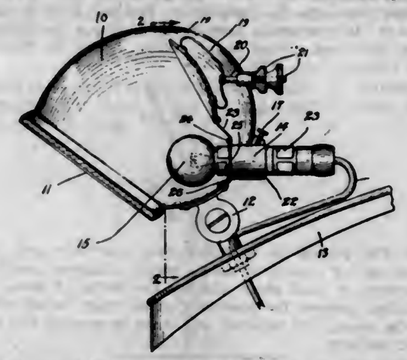


1. An ore crusher comprising a trough having an inclined bottom, a die block mounted at the lower end of the inclined bottom, the upper surface of the die being beveled, a shoe, mounted to reciprocate upon the upper surfaces of said die block, means for feeding ore to be crushed upon the die block, a screen located across the lowermost end of said trough and means for causing the reciprocation of said shoe with respect to the die block.

1,632,125. BOILER REGULATOR. CHARLES A. FRENCH and LAURANCE E. GOIT, Chicago, Ill., assignors to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed June 8, 1922. Serial No. 566,885. 6 Claims. (Cl. 236—32.)

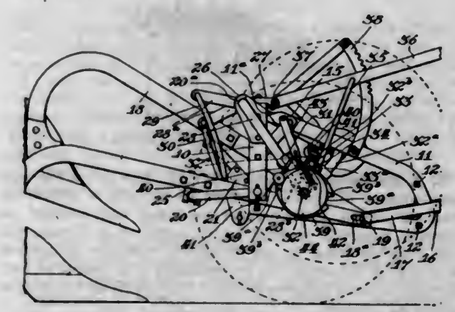
1. In a regulator, the combination of a jacket, a bulb therein containing an expansible fluid, a casing, a diaphragm dividing the casing into an upper chamber communicating with the bulb and a lower chamber, an expansion element filled with fluid in communication with the lower chamber, and control means adapted to be actuated in one direction by the expansion element when the fluid in the bulb expands and in the opposite direction when the fluid contracts.

1,632,126. ELECTRIC FURNACE. LAWSON H. GIDDINGS, Pasadena, Calif. Filed Mar. 15, 1926. Serial No. 94,759. 7 Claims. (Cl. 219—35.)



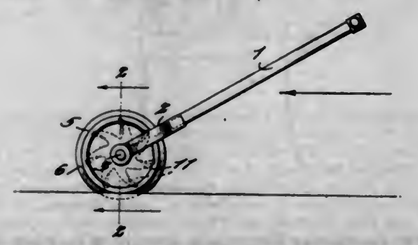
2. In a furnace of the class described, a furnace chamber, a floor for said chamber, a heating chamber below said floor, said floor being provided with a narrow longitudinal opening connecting the furnace chamber and heating chamber, electrical resistor rods in said heating chamber, and means for passing gases longitudinally inwardly along the ends of the resistor rods in entering said heating chamber.

1,632,127. MOTOR-VEHICLE LAMP. WILLIAM L. GOODSTEIN, Waynesburg, Pa. Filed Oct. 8, 1924. Serial No. 742,322. 2 Claims. (Cl. 240—44.)



1. In a motor vehicle lamp, a casing, a collar secured in the casing, a lamp socket passing through said collar, means for variably positioning the lamp socket in the casing, a reflector pivotally mounted on said collar, a spring

device mounted on the reflector, and threaded means engageable with the spring device and with the casing, for

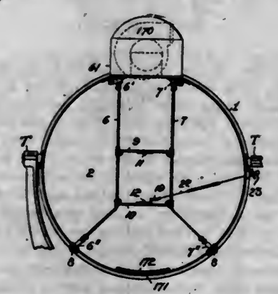


moving the reflector back and forth and for securing it in desired angular relationship with a lamp bulb in the lamp socket.

1,632,128. DEPTH ADJUSTER FOR PLOWS. WILLIAM S. GRAHAM, Canton, Ill., assignor, by mesne assignments, to Fred Gerlach and Arnold B. Keller, trustees, Chicago, Ill. Original application filed Apr. 17, 1922, Serial No. 553,521. Divided and this application filed Dec. 12, 1925. Serial No. 74,973. 7 Claims. (Cl. 97—73.)

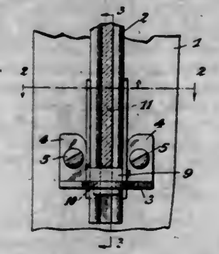
1. The combination with a power lift device comprising a frame, a cranked axle journaled thereon, a wheel on the cranked axle, traction actuated clutch mechanism connected to the wheel and including an intermittently rotatable member and a link eccentrically pivoted thereto, said link having its upper end pivoted on the frame; of means for adjustably varying the eccentric relation between said rotary member and link.

1,632,129. LAWN-EDGE TRIMMER. JACK GREEN, Norfolk, Va. Filed Aug. 30, 1926. Serial No. 132,633. 5 Claims. (Cl. 97—227.)



1. A lawn edge trimmer including a handle, a shaft carried by the handle, spaced cutting disks loosely mounted on the shaft, one of said disks being provided with a roller extension to impart movement to the disk in the operation of the trimmer, and a cutter mounted loosely on the shaft between the disks and driven from the operated disk.

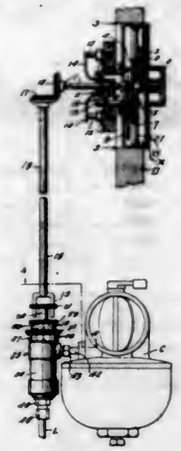
1,632,130. CONDENSER. ARTHUR HADDOCK, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 7, 1925. Serial No. 73,635. 6 Claims. (Cl. 175—41.5.)



1. A condenser comprising a cylindrical rod, a hollow conducting cylinder slidable over said rod, an insulating threaded member attached to said rod and engaging said hollow cylinder, and additional means, for insulating one end of said hollow cylinder from said cylindrical rod, adapted to move said hollow cylinder with respect to said rod.

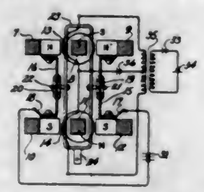
1,632,131. SEARCHLIGHT. THEODORE HALL, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 23, 1919. Serial No. 319,382. 13 Claims. (Cl. 176—51.)

1. In a searchlight, a drum, means connected across the interior of said drum for bracing the same, a pair of electrode holders carried by said bracing means, means for moving said holders relatively, and means extending without the drum for shifting said holders together to vary the dispersion of the beam.



1,632,132. WINDOW STOP. CONRAD T. HANSEN, Detroit, Mich., assignor to The American Motor Body Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Nov. 21, 1923. Serial No. 675,985. 2 Claims. (Cl. 16—86.)

1. In combination, a window stop member having a U-shaped portion constituting at the base of the U a seat for a bumper element, the ends of said U-shaped portion

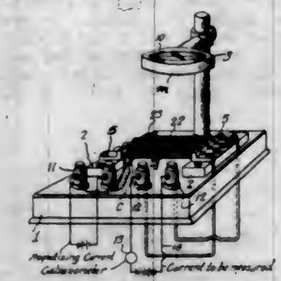


being bent at an angle to the plane of the U and constituting attachment flanges, and a bumper element on the said seat.

1,632,133. DEVICE FOR CONTROLLING BOTH THE IGNITION CIRCUIT AND THE SUPPLY OF GAS TO THE CARBURETOR. CHARLES D. HARDING, Beloit, Wis. Filed May 5, 1925. Serial No. 28,277. 2 Claims. (Cl. 70—127.)

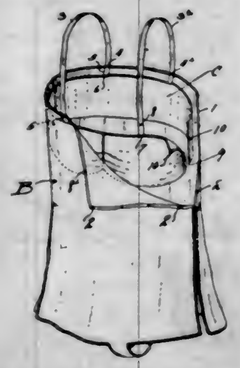
1. In a device of the class described, an operating device, a valve stem with which said device is operatively connected, said valve stem having a central channel and a lateral aperture opening out of said channel, a sleeve rotatively mounted over the valve stem, said sleeve having an aperture positioned in the same plane as the lateral aperture of the rotatable valve stem, said sleeve having a knurled flange for manually rotating same and the flange having an index marking, a ring positioned under the knurled flange and having graduation markings, the said ring also having a knurled flange integral therewith, a sleeve operatively connected with and rotated by the rotation of said ring, the aforesaid sleeve having an aperture in the same plane as the aperture in the first mentioned sleeve and in the valve stem, a stationary sleeve having a lateral passage lying in the same plane as the apertures in the aforesaid sleeve and valve stem, said passage being in communication with a pipe leading to the carburetor from the fuel tank, and a ring bearing graduation markings, said ring being affixed on the upper end of the stationary valve stem and under the knurled flange of the rotatable ring, and a pipe leading to the carburetor.

1,632,134. ELECTROMAGNETIC DEVICE. HENRY C. HARRISON, Port Washington, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 30, 1923. Serial No. 677,829. 8 Claims. (Cl. 175—336.)



1. An electromagnetic system for producing distortionless vibrations comprising an electromagnet providing a variable magnetic field, a coil movable in and transverse said field and a source of steady current for said coil.

1,632,135. ELECTRODE STRUCTURE FOR ELECTRON-DISCHARGE DEVICES. WILLIAM FERRIS HENDEY, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 1, 1920. Serial No. 370,618. 4 Claims. (Cl. 250—27.5.)

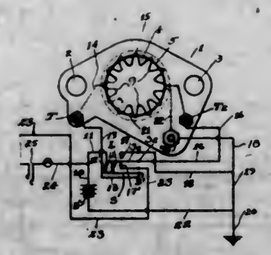


3. The process of manufacturing a unitary grid electrode out of a sheet of metal, which comprises punching apertures in said sheet, placing the strips of metal remaining between the apertures at an angle to the plane of the sheet, and bending said sheet to provide two parallel surfaces.

1,632,136. METHOD OF MEASURING MAXIMUM CURRENT. IWAO IKEDA, Sendai, Japan. Filed Dec. 30, 1924, Serial No. 758,954, and in Japan Jan. 8, 1924. 3 Claims. (Cl. 171—95.)

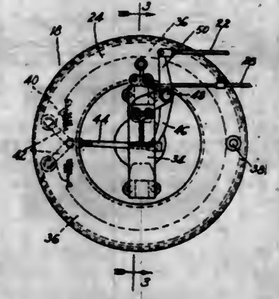
3. A magnetometric instrument for the indication and measurement of electric current comprising a system of magnets and a magnetometer arranged and adapted to indicate magnetic changes in the cores of said magnets, said magnets being in circuit axially with the conductors of a source of current to be indicated and measured and the coils of said magnets being in the circuit of a separate source of current.

1,632,137. BODY GARMENT. MINNESOTA B. JACKSON, Guthrie, Okla. Filed July 2, 1925. Serial No. 41,127. 1 Claim. (Cl. 2—73.)



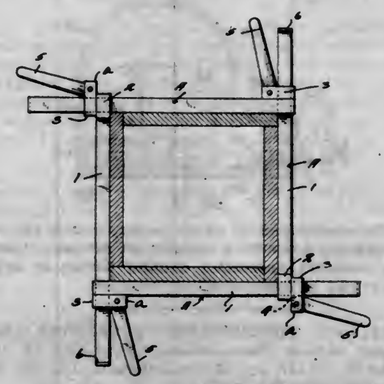
In combination with a body garment, a confining band within the garment, shoulder straps having their ends connected with the upper marginal edge of the confining band, all of the end portions of said straps but one being connected to the upper marginal edge of the body garment, and means forming separable connection between the remaining strap and the upper marginal edge of the body garment, as and for the purpose specified.

1,632,138. PICTURE FRAME. JAMES T. JOHNSON, Birmingham, Ala. Filed Apr. 2, 1926. Serial No. 99,285. 1 Claim. (Cl. 40—152.)



In a mount for pictures, a frame, a glass for arrangement in front of the frame and having a plane rear face upon which the picture is to be disposed, a rearwardly extending flange formed upon the edge of the glass and extending into the frame for maintaining the glass and picture forwardly of the frame, said frame being provided with a groove in the rear surface thereof about its opening, and a plane backing seated in the groove to maintain the glass within the frame, said backing being flush with the rear surface of the frame.

1,632,139. HEATING SYSTEM FOR INTAKE MANIFOLDS AND CIRCUIT FOR SAME. HANS S. MATTISON, La Crosse, Wis., assignor, by direct and mesne assignments, to New Era Products Company, Minneapolis, Minn., a Massachusetts Trust Association. Filed Oct. 29, 1924. Serial No. 746,631. 1 Claim. (Cl. 219—20.)

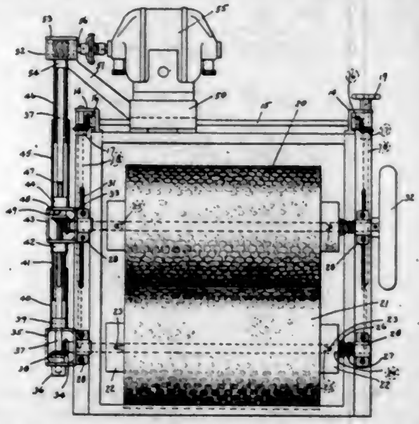


The combination with a sectional heating coil positioned in the line between the carburetor and intake manifold of an internal combustion engine, an electric circuit including said coil and a tap connected to the divisional point of said coil, and a double-throw double-pole switch in said circuit adapted when in one contact position to cause energy to flow through the two sections of said coil in parallel, and when in the other contact position to cause current to flow through said sections in series.

1,632,140. BRAKE CONTROL. MONTGOMERY W. McCONKEY, Chicago, Ill., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Original application filed Mar. 24, 1923, Serial No. 627,439. Divided and this application filed June 13, 1925. Serial No. 36,846. 21 Claims. (Cl. 188—194.)

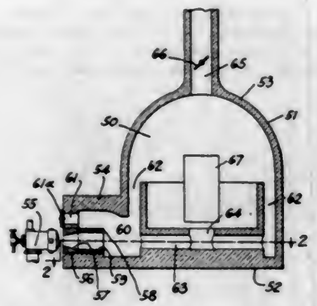
5. A vehicle having, in combination, a swivelled wheel having an expansible and contractable brake having adjacent free ends, and brake-operating connections including operating means engaging both free ends and a member controlling the operating means having a part engaging said means which is movable substantially perpendicular to the swivelling axis from an idle position spaced from the swivelling axis to an active position substantially in that axis.

1,632,141. FORM-HOLDING YOKE. JOSEPH E. McFARLAND, Burlington, N. C., assignor of one-third to Claude G. Somers, Burlington, N. C. Filed July 7, 1926. Serial No. 120,989. 2 Claims. (Cl. 25—131.)



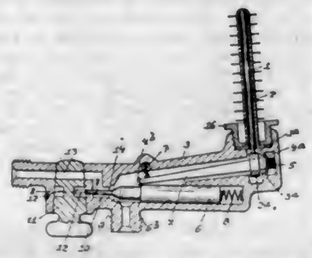
1. A form yoke comprising a plurality of duplicate units, each of said units consisting of an elongated member having one end portion returned to provide an overlying arm, a second member slidably mounted upon the first named member, means carried by the second member and coacting with the first member to lock the second member against movement along the first member, the opposite end portion of the first member being provided with a laterally disposed lip to prevent removal of the second member from the first member.

1,632,142. VEGETABLE CLEANER. HENRY WM. MEYER, Indianapolis, Ind. Filed May 25, 1925. Serial No. 32,698. 3 Claims. (Cl. 146—201.)



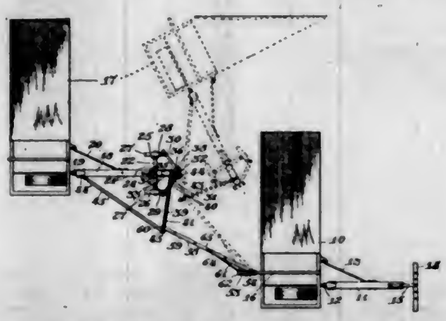
1. A vegetable cleaner of the character described including a framework having a lateral aperture therein,

a pair of oppositely rotating scrubbing rolls with their axes parallel to each other and the lateral aperture, an



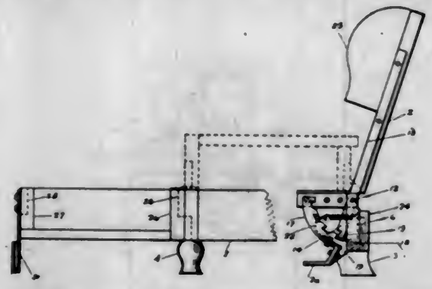
upper guard within the framework and adjacent the aperture and the upper roll, and means for adjustably and pivotally supporting said upper guard.

1,632,143. OIL-FIRED KILN. ALBERT W. MORSE, Long Island City, N. Y. Filed Dec. 22, 1925. Serial No. 76,987. 6 Claims. (Cl. 25—140.)



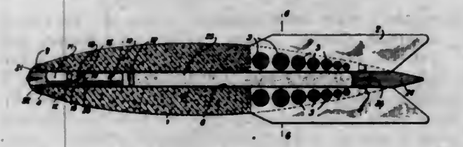
1. The combination of an oil burner, with a kiln having a primary combustion chamber, an extension thereto, and a secondary combustion chamber having an adjustable air port in communication therewith.

1,632,144. THERMOSTATIC APPARATUS. JOSEF NĚMEC, Mstisov, Czechoslovakia. Filed Aug. 17, 1925, Serial No. 50,746, and in Czechoslovakia, Apr. 21, 1925. 2 Claims. (Cl. 137—161.)



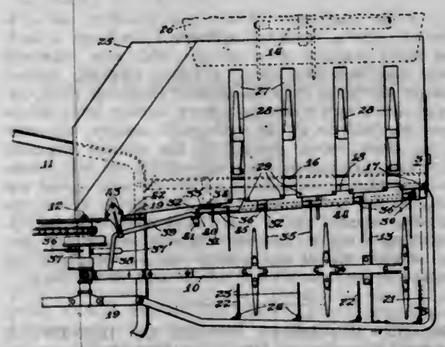
1. In a device of the type described, a casing having a horizontally disposed bore therein, a plunger slidable in said bore and having a reduced portion forming an annular shoulder, said reduced portion being provided with a tapered portion having a stem projecting therefrom, a spring within the bore tending to move the plunger in one direction, a lever within the casing having one of its ends rockingly retained therein and its free end formed with a head, a spring for normally retaining said head engaged with the aforesaid shoulder on the plunger when it has been caused to recede within the bore which contains it and in opposition to the force of the first-mentioned spring, a rod having, at one end, an eye which encompasses the rockingly mounted lever, and a tube of easily expanding metal encompassing said rod and secured at one end, to the free end of the aforesaid rod and, at its other end, to the casing.

1,632,145. HITCH. CHARLES PEARSON, Chicago, Ill., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed June 18, 1923. Serial No. 646,038. 11 Claims. (Cl. 280—33.11.)



1. In combination, a plurality of implements arranged in trailing relation; a draft connection between the implements including a tongue and steering truck, a draft member connected to the steering truck and draft connection, and means connecting the tongue and draft member for aligning the steering truck with the line of draft of the implements.

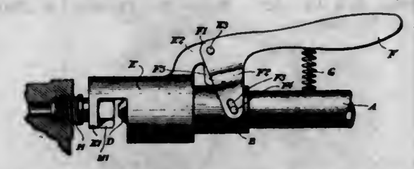
1,632,146. FOLDING CHAIR. JOSEPH S. PECKER, Philadelphia, Pa., assignor of one-third to Morris Katzander, one-third to Eugene Bloss, and one-third to Charles Jellinek, Philadelphia, Pa. Filed Oct. 11, 1923. Serial No. 667,983. 1 Claim. (Cl. 155—49.)



A folding chair of the class described comprising a main section, an arm section arranged upon the main section and hinged at its front to the same and adapted to swing outwardly, fastening devices projecting from the outer end of the arm section and arranged in pairs, legs provided near their upper ends with slots to receive one of the fastening devices of each pair and having notches in their upper ends for engaging the other fastening device of the said pairs whereby the legs are maintained in position for use, an intermediate projection carried by the arm section and located between the said pairs of fastening devices and arranged to support the legs when the same are folded, said legs being provided at their lower ends with flanges and one of the legs being provided between its ends with an angular bend offsetting the lower portion of the leg and receiving the flange of the other leg when the legs are folded to permit the said legs to fit flat against each other upon the intermediate projection.

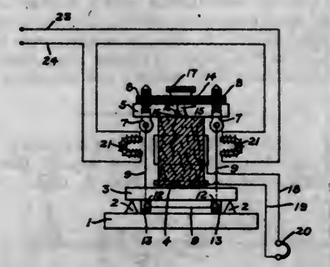
1,632,147. DUMMY BOMB. EARL J. W. RAGSDALE, Norristown, Pa., assignor to Secretary of War Dwight F. Davis. Continuation of application Serial No. 330,480, filed Oct. 13, 1919. This application filed Mar. 6, 1926. Serial No. 92,976. 22 Claims. (Cl. 102—2.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A practice bomb, comprising an axially bored body portion, a readily expelled tailpiece closing one end of the bore of the body portion, and having peripheral grooves, and vanes seated in said grooves.



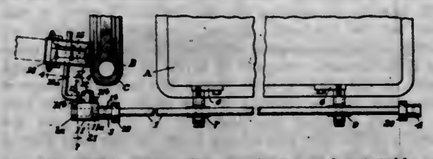
1,632,148. GRAIN SHOCKER. CLEMMA R. RANEY, Chicago, Ill., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Oct. 5, 1922. Serial No. 592,475. 17 Claims. (Cl. 56—417.)

1. In a grain shocker having a frame, the combination of a sheaf delivery member pivotally carried thereon, means for swinging the sheaf delivery member, and means carried by the frame for both supporting sheaves in the path of movement and holding sheaves out of the path of movement of said sheaf delivery member.



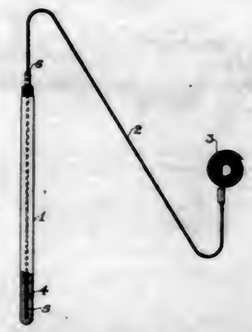
1,632,149. GREASE-GUN CONNECTION. HUGH W. SANFORD, Knoxville, Tenn. Filed June 12, 1922. Serial No. 567,593. 12 Claims. (Cl. 284—18.)

1. In a grease gun connection, the combination of an inner sleeve, an outer sleeve slidably surrounding the inner sleeve and having at its forward end means for engaging said outer sleeve relative to a grease receiving member, a handle coupled to said outer sleeve and said inner sleeve, a spring tending to relatively move the outer sleeve forward, a nozzle located in the inner sleeve and adapted to engage the inner sleeve and to have its forward end project out of the inner sleeve when the nozzle reaches its forward or rest position and having a longitudinal bore and a side admission port which is normally covered by the inner sleeve when the nozzle is



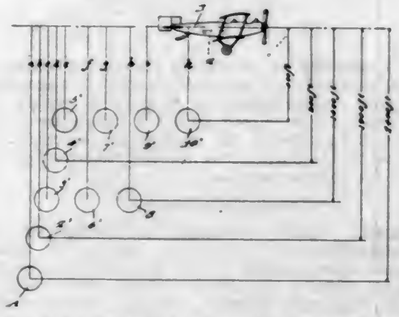
in its forward position relative to the inner sleeve, a spring tending to press the nozzle into its rest position in the inner sleeve, and means for limiting the rearward movement of the nozzle relative to the inner sleeve, substantially as described.

1,632,150. RADIORECORDER. HARRY P. SPARKES, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 23, 1921. Serial No. 502,645. 10 Claims. (Cl. 250—20.)



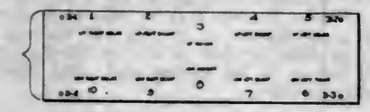
1. A detector of undulatory current comprising a crystal exhibiting the piezo-electric effect, a magnetizable tensioning member producing stress in the crystal, electromagnets in the circuit with the undulatory current in operative position to the magnetizable tensioning member, and means for detecting the electromotive forces set up by the changes in stress.

1,632,151. STRIP-APPLYING ATTACHMENT FOR TIRE-BUILDING MACHINES. CHARLES W. STEELE, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 14, 1926. Serial No. 135,325. 7 Claims. (Cl. 154—10.)



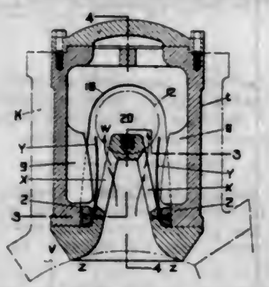
7. The combination with the frame and rotatable core of a tire building machine, of a plurality of pairs of spaced rollers journaled on said frame, a carriage comprising rods slidably engaging said rollers and cross members rigidly connecting said rods, one of the rods being extended beyond the cross member, a bracket rotatably mounted on said extended end adjacent the periphery of the core, a substantially L shaped member having its base arm pivotally supported from said extended end to rotate about an axis perpendicular to said extended rod, a pair of oppositely placed strip guides supported from the other arm of said L shaped member, and an applying roller supported from said other arm and cooperating with both said strip guides.

1,632,152. HIGH-TEMPERATURE VAPOR-PRESSURE RECORDER AND REGULATOR. KENNETH L. TATE, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed July 12, 1926. Serial No. 121,828. 5 Claims. (Cl. 73—118.)



1. In a thermometric device of the expansion thermometer type, the combination with a fluid-pressure container and fluid connection thereto, of a bulb consisting of a material capable of resisting temperatures in excess of 1000° F. and a mercury-thallium alloy therein containing substantially 60% mercury and substantially 40% thallium.

1,632,153. APPARATUS FOR SKYWRITING. EINAR THORESEN, Pittsburgh, Pa. Filed May 28, 1926. Serial No. 112,334, and in Norway June 8, 1925. 5 Claims. (Cl. 244—1.)

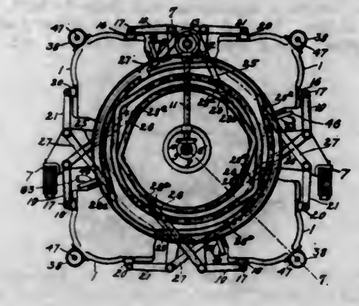


5. In a skywriting device, the combination with an air craft having an opening in the bottom thereof, a conveyor belt in the craft having one portion thereof extending over the opening, said belt having spaced openings therethrough, arranged in series to represent letters, figures or the like, a table below the belt and disposed to one side of the opening in the craft, said table having its top grooved longitudinally in a line with the openings in the belt and having hooks on the ends thereof in a line with said grooves and which hooks are disposed opposite the opening in the craft, a smoke bomb adapted to be received through each opening in the belt and to rest on the lower walls provided by the grooves in the table, each of said bombs having an explosive smoke powder chamber therein, a fuse, a firing device for the fuse, a cord housed in the bomb and connected with the firing device, a ring secured to the cord, each of said rings being in the path of engagement with one of the mentioned hooks, whereby the bombs will be suspended and exploded at different determined altitudes in the sky when the conveyor belt is moved longitudinally to bring the said bombs singly over the opening in the air craft, and the fuses of the several bombs being of different lengths for so timing the explosion of the bombs.

1,632,154. MACHINE OR DEVICE FOR LABELING X-RAY DENTAL FILMS. RICHARD TORPIN, Superior, Mont. Filed Jan. 13, 1925, Serial No. 2,144. Renewed Aug. 11, 1926. 6 Claims. (Cl. 250—34.)

1. The herein described film identifying device comprising a base having a plurality of recesses forming seats for sections of film, and a plate impervious to Roentgen rays adapted to be superimposed on the base and having Roentgen ray admitting openings located in registry with the recesses for admitting Roentgen rays to film occupying the recesses.

1,632,155. GAS COMPRESSOR. CARL W. VOLLMANN, Montreal, Quebec, Canada. Original application filed Feb. 15, 1922, Serial No. 536,626, and in Canada Jan. 13, 1922. Divided and this application filed Nov. 7, 1923. Serial No. 673,283. 1 Claim. (Cl. 251—119.)



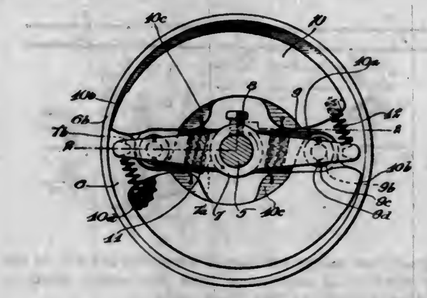
In a gas compressor of the type described, the combination with a combined cylindrical discharge member and valve chamber, of a circular base with converged lower side, such base having a hollow upwardly tapered member having in its sides parallel elongated ports, the lower end of such upwardly tapered member being spaced from the interior of the cylindrical member, flat steel spring check valves controlling the parallel elongated ports and having their lower ends within the said spaces, clamping bars accommodated within the said spaces and clamping the lower ends of the steel spring valves, the discharge member having a discharge opening in its side and an open top, a cap removably secured over the open top, and the top of the tapered member being flat and having a screw-threaded hole for the purpose set forth.

1,632,156. UNIVERSAL SYSTEM OF IDENTIFICATION MARKINGS FOR PROJECTILES. SAMUEL WILEY, Metuchen, N. J. Filed July 8, 1924. Serial No. 724,814. 2 Claims. (Cl. 102—26.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A system of identification for tracer projectiles consisting of forming markings on a projectile body to denote class and character of the contents, and uniting said markings to denote a tracer projectile.

1,632,157. INTERNAL-COMBUSTION TURBINE. FRANZ WONDRA, Schenectady, N. Y. Filed Sept. 27, 1921. Serial No. 503,614. 3 Claims. (Cl. 60—42.)

1. In a fluid pressure generator for internal combustion turbines in combination, a combustion chamber wherein combustion at constant volume intermittently takes place, means supplying separately air and fuel thereto, a steam jacket surrounding said combustion chamber, part of the heat generated by the combustion being utilized for generation of steam in said steam jacket, a gas nozzle discharging the products of combustion from said combustion chamber, a steam nozzle around said gas nozzle discharging intermittently steam from said steam jacket, the discharge of the products of combustion and the discharge of the steam occurring simultaneously.

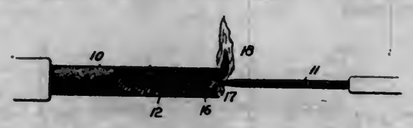


1,632,158. AEROPLANE. HARRY V. ALEXANDER, Bonne Terre, Mo. Filed Sept. 26, 1925. Serial No. 58,818. 4 Claims. (Cl. 244—20.)

1. An aeroplane of the character described comprising a fuselage, means for driving said aeroplane in a forward direction, a pair of brackets mounted upon said fuselage and extending slightly thereabove, spaced lugs carried by said brackets and extending upwardly, a pair of wings, lugs formed on the inner ends of said wings and received between the spaced lugs of said brackets, pins extending through said lugs of said wings and through said lugs of said brackets for pivotally connecting said wings to said brackets, an auxiliary engine mounted in said fuselage, and means operated by said auxiliary engine and connected to said wings for moving said wings in an up and down movement as said auxiliary engine operates.

1,632,159. CLUTCH. JAMES L. BALDWIN, Chicago, Ill. Filed Jan. 19, 1925. Serial No. 3,470. 12 Claims. (Cl. 192—105.)

1. A clutch comprising a drive shaft, a driver fast thereon, a driven element loose on the shaft, a centrifugally acting intermediate element engageable with the driven element, and a resilient element interposed between said driver and the centrifugally acting intermediate element for automatically transmitting pressure from the driver to the said intermediate element whereby to cause the engagement thereof with the driven element immediately the driver is started, the said resilient element holding the intermediate element in engagement with the driven element while the driver is moving at

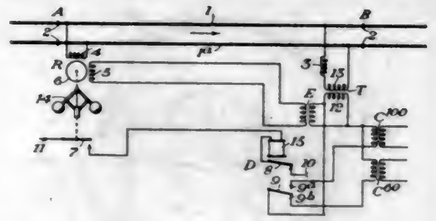


slow speeds and cooperating with centrifugal force to hold said intermediate element in engagement with said driven element when the driver is moving at high speeds.

1,632,160. BODY ADJUSTER FOR DECEASED PERSONS. WILLIAM G. BARNES, Kansas City, Mo. Filed Dec. 11, 1925. Serial No. 74,876. 16 Claims. (Cl. 27—13.)

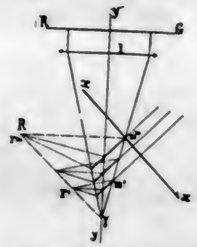
1. In a body adjuster the combination of a frame, head rest means for the frame, and arm supporting devices, and means slidably mounting the same for adjustment towards and away from each other on the frame.

1,632,161. ARC LAMP. PRESTON R. BASSETT, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed July 24, 1923. Serial No. 653,414. 4 Claims. (Cl. 176—52.)



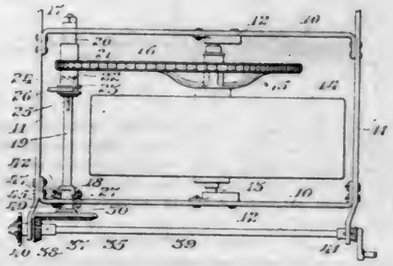
1. In an arc lamp, a cored positive electrode, the core containing carbon and a metal salt which are capable of forming a high boiling point carbide and the shell being of pure carbon, and means for operating the electrode at a sufficient current density to overload the core for the purpose specified.

1,632,162. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. CHARLES R. BEALL, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Aug. 4, 1926. Serial No. 126,970. 4 Claims. (Cl. 246—34.)



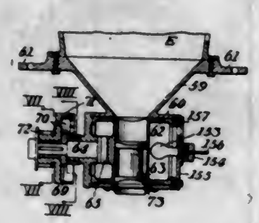
1. In combination, a section of railway track, a relay having two windings one of which is energized from the track rails of said section, two sources of alternating current differing in frequency, means for constantly supply-

ing current to the rails of said section from one of said sources when said relay is energized and for supplying current alternately from said sources when the relay is de-



energized, and means for always supplying current to the other winding of said relay from the source which is supplying current to the track rails.

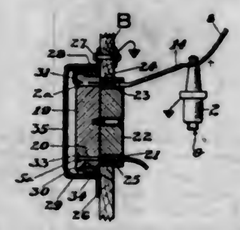
1,632,163. OPTICAL RECEIVER FOR TELETYPE MACHINES. EDOUARD BELIN, Rueil, France. Filed Nov. 1, 1923, Serial No. 672,206, and in France Nov. 4, 1922. 9 Claims. (Cl. 178—15.)



6. An optical device for tachy-telegraph and teletype systems of the class described composed of a plurality of successive reflecting surfaces arranged on a common axis and in different parallel planes.

1,632,164. ADJUSTABLE SELF-ALIGNING BUSHING. BERT R. BENJAMIN, Oak Park, and WILLIAM WEBBER, La Grange, Ill., assignors to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Sept. 9, 1922. Serial No. 587,177. 8 Claims. (Cl. 74—7.)

1. In a driving mechanism, a frame, a shaft mounted for rotation in said frame, a bushing carried in the frame and forming a bearing for the shaft, and means engaging the bushing for moving it in the frame axially along the shaft to adjust it with respect to said frame and permitting self-alignment thereof in the frame with respect to the shaft during rotation of the shaft.

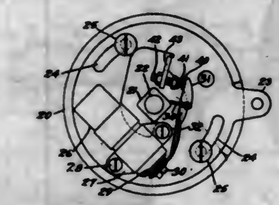


1,632,165. MEASURING DEVICE FOR PLASTIC MATERIAL. CHRISTIAN N. BERGMANN, Pittsburgh, Pa.; ELMER Z. TAYLOR, Newark, N. J.; and CYRUS TAYLOR, Hartford, Conn., assignors to Bergmann Packaging Machine Company, Pittsburgh, Pa., a Corporation of Delaware. Original application filed July 1, 1925, Serial No. 40,796. Divided and this application filed May 26, 1926. Serial No. 111,772. 8 Claims. (Cl. 221—102.)

4. In a unit measuring machine, the combination with a casing and communicating reservoir, of a rotatable drum having a measuring cavity, a heating device mounted in one end of the casing and extending into the drum, an apertured closing wall for the drum, and an adjustable damper plate thereon for varying the air circulation therethrough.

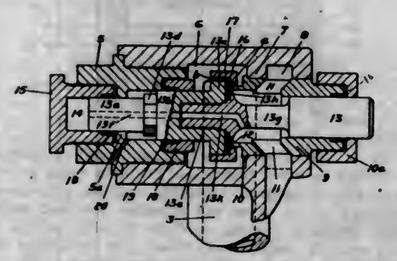
5. In a unit measuring machine provided with a casing having an upper inlet opening and a lower outlet opening, a reservoir communicating with the inlet opening, and a rotatable drum within the casing having a transverse plunger opening adapted to register with the inlet and outlet opening respectively; the combination with the casing of a supplemental guiding shell secured to the casing and depending downwardly below the outlet opening thereof.

1,632,166. IGNITION-TESTING DEVICE FOR INTERNAL-COMBUSTION ENGINES. CHARLES D. BOURCIER, Grafton, Mass. Filed June 20, 1923. Serial No. 646,582. 2 Claims. (Cl. 175—183.)



1. In an ignition testing device, a base composed of insulating material, a plurality of testing terminals mounted in said base, a metallic ring rotatably mounted on said base, a testing pointer connected to said ring, and a casing composed of insulating material attached to and entirely surrounding said ring, whereby to turn said ring and said pointer by manipulation of said casing.

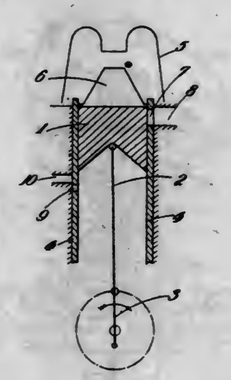
1,632,167. IGNITION TIMER. ZERBE C. BRADFORD, Dayton, Ohio, assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 27, 1924. Serial No. 702,459. 2 Claims. (Cl. 200—30.)



1. A breaker lever for an ignition timer comprising in combination, a flexible portion adapted to have its one end secured to a support; a rigid portion formed integral with the other end of the flexible portion; a rubbing

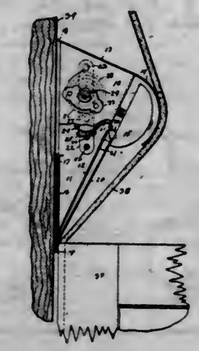
block; means formed between the flexible and the rigid portions for supporting said rubbing block, the flexible portion extending from the point of support to the rub-

bing block and the rigid portion extending beyond the rubbing block; and a contact carried by said rigid portion.



1,632,168. CONTROL VALVE FOR FLUID-PRESSURE DEVICES. HAROLD W. BUCKMAN and HUGH PRENTICE, Pittsburgh, Pa., assignors to Vance Engineering Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 23, 1925. Serial No. 45,524. 3 Claims. (Cl. 137—139.)

2. A fluid pressure valve comprising a housing having an opening extending therethrough, annular recesses in the opening arranged side by side and providing inlet and outlet chambers, means providing a valve seat between the inlet and outlet chambers, a valve stem in the opening and longitudinally movable therein, said valve stem having an exposed portion at one end and a reduced terminal at the other end, a bushing surrounding said other end providing a relatively small counter-pressure chamber, the stem having a central port opening from the reduced end wherein the counter-pressure chamber to the outlet chamber, an abutment on the stem intermediate its ends and in the fluid inlet chamber, a sealing element on the side face of the abutment and adapted to contact with the valve seat, means on the abutment for retaining said sealing means in place, said abutment and retaining means being of greater diameter than the diameter of the valve seat and having its opposite faces subject to the fluid pressure in the inlet chamber.

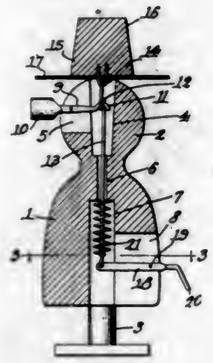


1,632,169. LIGHTER-THAN-AIR AIRCRAFT. CHARLES DENNISTON BURNEY, Westminster, London, England, assignor to Airship Guarantee Company Limited, Westminster, England, a British Company. Filed Jan. 23, 1925, Serial No. 4,175, and in Great Britain Jan. 26, 1924. 6 Claims. (Cl. 244—6.)

1. A method of regulating the buoyancy of lighter-than-air air-craft, which comprises introducing liquid fuel and the buoyant hydrogen into the engine cylinders and admitting a separate charge of air into said cylinders at a different time interval whereby the liquid fuel and

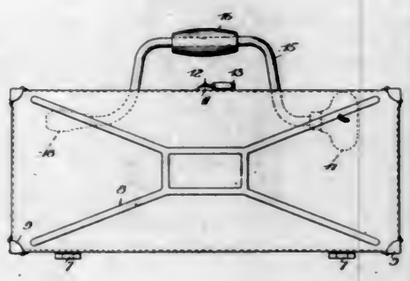
hydrogen, while being freely mixed together, are not too freely mixed with the air, and the rate of combustion is relatively slow.

1,632,170. BURGLAR ALARM. THOMAS R. CASTLES, Portland, Oreg. Filed Apr. 5, 1926. Serial No. 99,839. 1 Claim. (Cl. 116—82.)



A burglar alarm having, in combination, a wedge-shaped frame having one side hinged at the point thereof having means for frictionally holding same in an outward position; a bell on said frame; a hammer for striking said bell; a spring motor for actuating said hammer, said hinged side intercepting the movement of said hammer when held in an outward position, and adapted to release said hammer when said hinged side is moved toward said frame; and a guard on said frame adapted to permit same to be placed behind a sash cord without having said cord engage said hinged side unless a window is moved toward said frame.

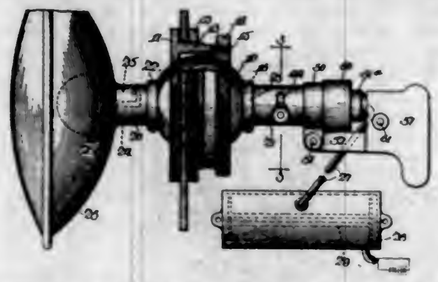
1,632,171. DOLL. HOWARD T. CHINN, Atascadero, Calif. Filed Sept. 13, 1926. Serial No. 135,139. 2 Claims. (Cl. 46—40.)



1. The combination with the body and head portion of a doll having communicating recesses in the upper and lower portions thereof and slots extending in opposite

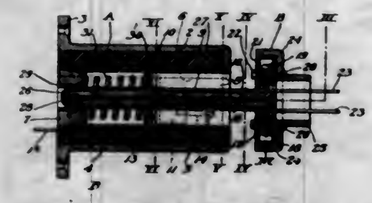
directions from the respective recesses, of a nose portion connected to and mounted to swing relative to the slotted head portion, a hat portion mounted on the head portion,

an actuating member within the slotted body portion, and means operated by said member for simultaneously shifting the nose portion and the hat portion.



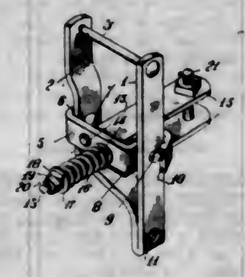
1,632,172. TOOL CONTAINER. WILEY C. CLIFFORD, Rochester, N. Y. Filed Sept. 10, 1923. Serial No. 661,804. 3 Claims. (Cl. 206—16.)

1. In a tool container, the combination of a brace having a crank handle intermediate its breast pad and chuck, and a container having separate parts including oppositely disposed aligned edge portions adapted to be closed about the shank of said brace with said pad and chuck thereof inside the container and said brace handle outside the container serving as a handle for the container, said brace being entirely supported by said aligned edge portions when the container is closed and free to drop away from the same upon opening the container.



1,632,173. LIGHTING DEVICE. IRVING H. COHEN, Chicago, Ill., assignor of one-half to Irwin D. Groak, Chicago, Ill. Filed Sept. 28, 1925. Serial No. 58,970. 6 Claims. (Cl. 240—61.)

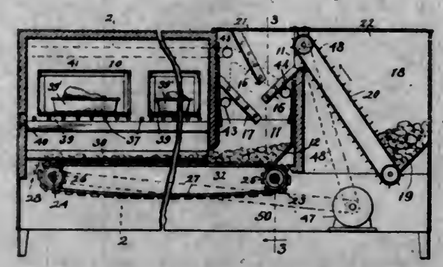
1. In a lamp construction the combination of a pair of lamp members one of which comprises a socket for holding a lamp, each lamp member having electrical contacts interengaging with those of the other when the lamp members are applied to each other end to end, and



readily releasable catch means independent of said contacts for holding the lamp members readily releasable in end to end relation.

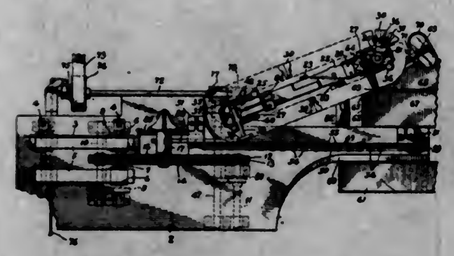
1,632,174. ELECTRIC SOCKET SWITCH. WILLIAM F. CONKLIN, Tarentum, Pa. Filed Sept. 20, 1921. Serial No. 502,021. 2 Claims. (Cl. 173—338.)

1. In an electric socket switch, an insulating body portion having an outer casing and an inner block provided with a slotted opening extending endwise therethrough and having at its inner end laterally arranged sockets, contact members forming portions of said sockets and having current supply connections, an insulating shell within the slotted opening providing an insertion space opening through the end of the casing and having an inner flange, a depressible washer plate adapted to bear against the flange, a spring bearing by one end against said washer plate and by its other end against an abutment within the casing, a rotatable insertable plug having lateral contacting extensions adapted to engage the washer plate, substantially as shown and described.



1,632,175. CLEVIS. WILBUR J. COULTAS, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed July 6, 1926. Serial No. 120,746. 3 Claims. (Cl. 278—96.1.)

3. A clevis including a vertical frame formed from a bar bent upon itself to present parallel arms spaced apart; one of said arms bent intermediate its length



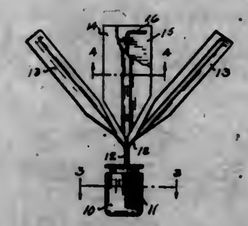
downwardly to the other arm; a bar extending from one arm to the other and rigidly secured thereto; an end portion of said bar extending forwardly from the adjacent arm and bent rearwardly and outwardly therefrom to form a stop; and a draft device attached to said bar.

1,632,176. STOVE. JOHN CRAIN, Painesville, Ohio. Filed Nov. 5, 1925. Serial No. 66,901. 6 Claims. (Cl. 126—1.)

1. In apparatus of the class described, the combination of a combustion chamber, an oven, means in said oven for supporting the articles to be cooked, and a continuous conveyor for carrying the burning fuel from said chamber through said oven.

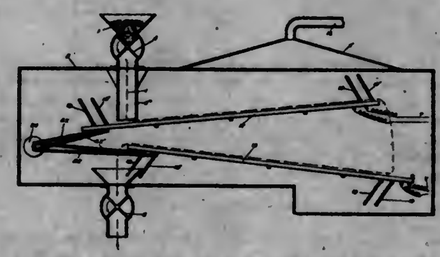
1,632,177. TOBACCO-STRIPPING MACHINE. JOHN T. DALTON, Durham, N. C., and BLAKE W. CORSON, Richmond, Va., assignors to The American Tobacco Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 20, 1925. Serial No. 24,586. 23 Claims. (Cl. 131—57.)

1. A tobacco stripping machine including cooperating sets of stripping devices having guided relative movement along a selected line, and moving mechanism for moving a succession of leaves past the stripping devices, said mechanism having guided movement in a direction diverging from the line of movement of the stripping devices, thereby to draw the stems longitudinally through the stripping devices, while the leaves are moving laterally, and a fixed blade arranged substantially parallel with the direction of movement of the stripping devices and having a cutting edge inclining downwardly in the direction of travel of the stems and so positioned that the stems will engage between the said edge and the stripping devices.



1,632,178. CONNECTER FOR WRIST-WATCH STRAPS. WILLARD A. DAVIS, Cranston, R. I., assignor to S. & B. Lederer Co., Providence, R. I., a Corporation of Rhode Island. Filed Apr. 8, 1926. Serial No. 100,763. 3 Claims. (Cl. 24—71.)

1. In a two-part wrist watch strap, a connecter for said parts comprising a pair of connecter plates hinged together at one end, means for detachably retaining said plates together in folded position, a series of holes in one of said plates, a glove-type resilient snap for fastening

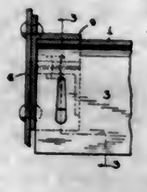


stud in one strap part to snap into said holes to secure the strap in different adjusted position, and means for securing the other strap part to the other of said plates.

1,632,179. DETONATING TOY. HERMAN FORRSTER, Indianapolis, Ind., assignor of one-half to Daniel M. Allred, Indianapolis, Ind. Filed June 14, 1926. Serial No. 115,773. 2 Claims. (Cl. 46—46.)

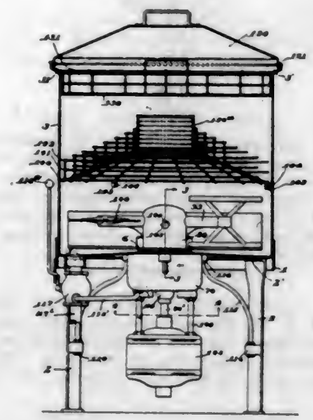
1. In a toy, the combination of a vertical cylinder open at the top and having a flat, closed base, a plunger adapted to be slidingly received in the cylinder, a plurality of wires fixed to and extending from the plunger and sheets of paper engaged together about said wires to form wings, said wires being capable of being bent to various angles.

1,632,180. APPARATUS FOR DRYING BERRIES. THOMAS W. W. FORREST, Fresno, Calif., assignor to Sun-Maid Raisin Growers of California, Fresno, Calif., a Cooperative Association of California. Filed July 13, 1926. Serial No. 122,083. 7 Claims. (Cl. 34—38.)



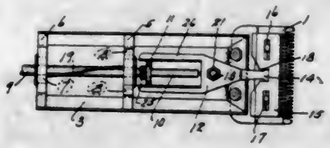
1. Apparatus of the character described comprising a shaker table formed of a metal grill of spaced bars, and means for passing a current of electricity through the bars of the grill for electrically heating the same.

1,632,181. CROSSTIE FOR RAILWAY CARS. KENNETH C. GARDNER, Greenville, Pa., assignor to The Greenville Steel Car Company, Greenville, Pa., a Corporation of Pennsylvania. Filed Jan. 12, 1927. Serial No. 160,614. 3 Claims. (Cl. 105—406.)



1. An article of the character described, having in combination a cross tie formed of a single sheet of metal bent to semi-circular cross-section adjacent its upper edge

and having depending side walls which approach each other adjacent their lower edges, a supporting member for each end of the cross tie, each having a plurality of parts adapted to be engaged over the adjacent end of

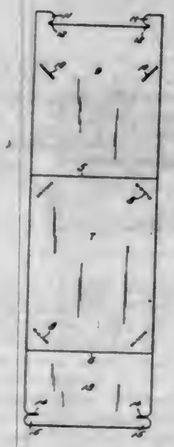


said cross tie and means formed in said supporting member and said cross tie for interengaging to prevent longitudinal displacement of said cross tie and means for securing said supporting member to the side walls of the structure to be braced.

1,632,182. DISHWASHING MACHINE. ARTHUR G. HASKINS, Weymouth, Mass., assignor to Alva M. Dow, Braintree, Mass. Filed May 6, 1921. Serial No. 467,350. 5 Claims. (Cl. 141—9.)

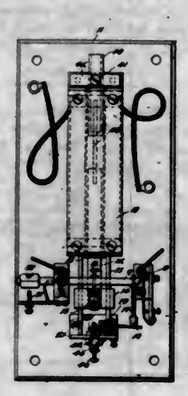
1. In a washer, a tank having a drain pipe, a rotor in said tank having a water inlet opening, a housing below said rotor having an inlet opening for the water from the rotor and a discharge opening, a drain valve controlling said drain pipe of the tank, and a connection between said discharge opening of the housing and the pipe at a point below said valve.

1,632,183. HAIR CLIPPER. JAMES H. HINES, Hobart, Okla. Filed Apr. 26, 1926. Serial No. 104,772. 1 Claim. (Cl. 74—14.)



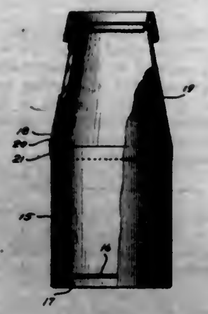
A transmission unit comprising a rotatable mounted shaft having an eccentric mounted on one end of said shaft, said eccentric being longitudinally adjustable on said shaft, in combination with a bifurcated lever having comparatively long parallel bifurcations in engagement with the operative or camming surface of the eccentric, the bifurcations and shaft being substantially parallel whereby the throw of the lever may be varied by adjustment of the eccentric upon the shaft.

1,632,184. COOLING ARRANGEMENT FOR ELECTROLYTIC CELLS. CARL FREDRIK HOLMBOE, Oslo, Norway, assignor of one-half to De Nordiske Fabriker, De-No-Fa, A/S., Oslo, Norway. Filed July 17, 1925. Serial No. 44,202. 1 Claim. (Cl. 257—208.)



In an electrolytic apparatus comprising a plurality of electrolytic vessels placed in flow-path relation to one another, and detachably mounted containers for a cooling liquid placed between the electrolytic vessels and in close proximity to at least two of said vessels, the containers for cooling liquid being connected in groups and being connected to the same source of cooling liquid.

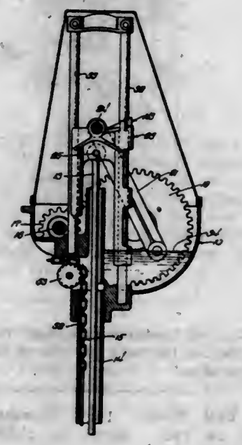
1,632,185. MAILING CARD. GEORGE O. JENNER, Los Angeles, Calif., assignor to Oxford Press Incorporated, Los Angeles, Calif., a Corporation of California. Filed May 2, 1925. Serial No. 27,544. 3 Claims. (Cl. 40—149.)



1. A tripartite mailing card comprising; a central portion; a shorter downwardly foldable upper flap having upwardly projecting side extremities with notches at their inner corners, and intermediate opposed diagonal slits adjacent its sides; and a still shorter upwardly foldable lower flap having deep side notches forming tabs at the extremities of its bottom edge; said flaps being adapted to fold forwardly over the central portion with the bottom flap outside the other and with said tabs insertable in said diagonal slits; and said flaps being also adapted to fold backwardly, and to have said notched portions mutually engageable to form an easel for exposing said central portion.

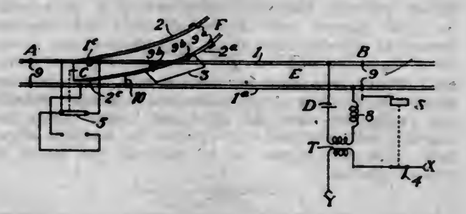
1,632,186. RELAY. ERNEST G. JOHNSON, Boston, Mass., assignor, by mesne assignments, to The Palmer Electric and Manufacturing Company, Cambridge, Mass., a Corporation of Maine. Filed Dec. 30, 1922. Serial No. 609,896. 10 Claims. (Cl. 200—94.)

3. In combination, a normally closed contact, a member movable in response to energy changes in a circuit and operative adjacent limits of its motion to open said contact, and means for causing the energy in said circuit to exert a drawing and holding effect on said member when adjacent said limits toward the respective limits.



1,632,187. BOTTLE. LYDIA B. KOCH, New York, N. Y., assignor to Reinforced Paper Bottle Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 23, 1923. Serial No. 676,631. 1 Claim. (Cl. 229—4.5.)

A bottle as characterized comprising a cylindrical body portion, and a frusto-conical neck portion, the meeting edges of said portions being interleaved and adhesively connected, the interleaved connections of said edge portions being beaded, said bead extending outward beyond the surface of said body portion to form a reinforcing element thereof.



1,632,188. WINDMILL CONSTRUCTION. HERMAN M. LORBER, Beatrice, Nebr., assignor to Dempster Mill Manufacturing Co., Beatrice, Nebr., a Corporation of Nebraska. Filed Nov. 15, 1923. Serial No. 674,849. 22 Claims. (Cl. 170—47.)

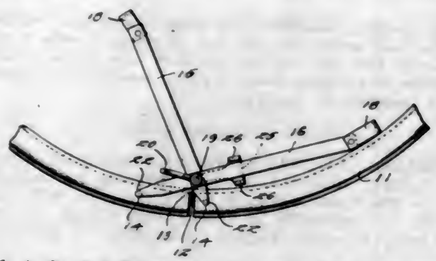
1. In a windmill, the combination of a wind wheel, a driving shaft, a main frame having a vertical pivoted tubular axle, a lubricant containing chamber in said frame, bearing hubs rigidly connected to the inner sides of oil chamber, gear wheels mounted upon said hubs, the hubs having projecting shoulders to keep said gear wheel in place, pinions mounted upon the driving shaft

for operating the gears, guide rods, a cross head working upon said guide rods, one side of which extends downwardly and dips into the lubricant upon its downward stroke, and pitmen connecting the cross head and gears for operating the pump rod.

1,632,189. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. RONALD A. MCCANN, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 27, 1926. Serial No. 144,509. 3 Claims. (Cl. 246—34.)

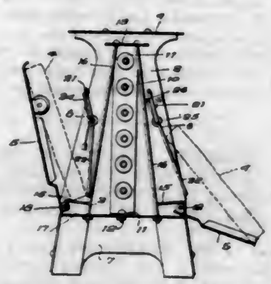
1. In combination, a section of main track having rails 1 and 1^a, a branch track having rails 2 and 2^a connected at times with said rails 1 and 1^a respectively by a switch, insulated joints on opposite sides of the frog at the point where rail 2^a crosses rail 1, a jumper in rail 2^a around said joints, and a second jumper connecting rail 1^a with the rail 2^a between said joints and said switch.

1,632,190. GARMENT. ISABELLE P. MCDONALD and WILLIAM MACMULLEN, Jr., Duluth, Minn., assignors to F. A. Patrick & Co., Duluth, Minn., a Corporation of Maine. Filed Feb. 7, 1927. Serial No. 166,477. 1 Claim. (Cl. 2—79.)



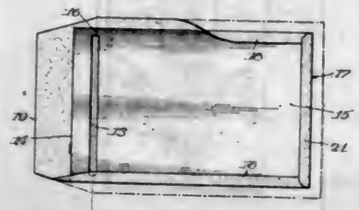
A garment of the character described having in combination therewith a belt securely stitched along the upper edge thereof about the back portion of the waist line, a waist flap beneath the belt about the back of the garment having slits upon either side thereof and ex-

tending above its lower marginal edge, a seat flap having its upper termini engageable through said slits, means for attaching the upper edge of the seat flap to



the waist flap, and means for uniting the upper corners of the seat flap to the body portion of the garment forwardly of the slits.

1,632,191. RIM TOOL. PETE OLABARRIA, Elko, Nev. Filed Feb. 24, 1927. Serial No. 170,664. 5 Claims. (Cl. 157—1.)

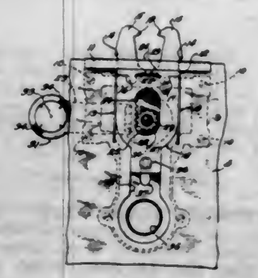


1. A tire tool for contracting split resilient rims comprising pivotally connected levers having at corresponding ends thereof lugs adapted to enter the openings formed at opposite sides of the split thereof, said levers being connected with the pivot thereof at points differently spaced from their lug bearing ends, said pivot extending to one side of the levers and a member slidable and oscillatable upon the pivot and having means engageable with said levers to maintain the levers in alignment with one another or to maintain the levers in crossed relation.

1,632,192. TOASTER. HENRY OSTERMANN, Chicago, Ill. Filed Oct. 24, 1925. Serial No. 64,578. 9 Claims. (Cl. 53—5.)

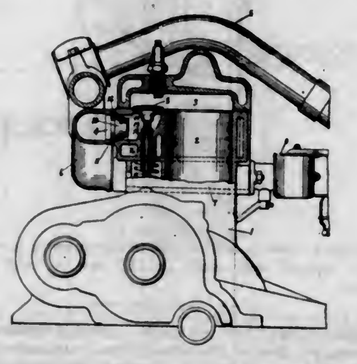
1. A toaster comprising a heating element, a hinged gate movable toward and away from said heating element, stationary means for supporting a slice of bread on edge between said heating element and gate, and manually operated mechanism adapted to engage the inner face of the slice for flipping the slice from said supporting means onto said gate while the latter occupies its open position whereby the slice is reversed in its position relative to said heating element upon the closing of said gate, said mechanism being normally inactive to permit said gate to be opened without flipping the slice.

1,632,193. BOOK COVER. ERNEST L. PERSONS, Chicago, Ill., assignor to The David J. Molloy Company, a Corporation of Illinois. Filed Feb. 4, 1926. Serial No. 85,821. 2 Claims. (Cl. 281—37.)



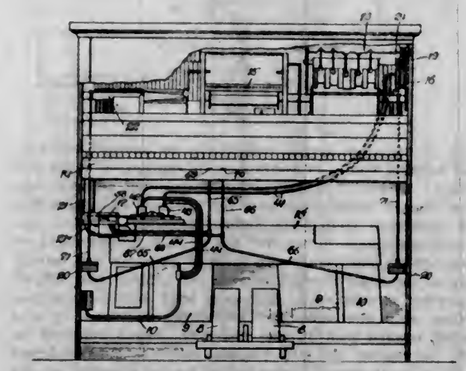
2. A back for a loose leaf binder comprising a reinforcing member including an attaching section and a hinged section spaced therefrom, strips structurally integral with said sections for connecting said sections for forming a hinge therefor, and a flexible finishing cover pasted to one side of both of said sections.

1,632,194. FISH AND FOWL DRESSING DEVICE. HENRY C. POSSEHL, Baker, Minn. Filed Aug. 4, 1924. Serial No. 729,965. 7 Claims. (Cl. 17—8.)



1. A holding device formed of sections, said sections including a wire frame, sheet metal plate members extending across and secured to the longitudinal side edges of each of said sections and supporting eyes formed in said frame integral therewith, adapted to support a holding clamp and adjustable hook respectively to form a supporting means between the ends of said members when they are secured together.

1,632,195. TRUNK LOCK. MARTIN RASMUSSEN, Racine, Wis., assignor to Hartmann Trunk Company, Racine, Wis., a Corporation of Wisconsin. Filed June 25, 1923. Serial No. 647,624. 8 Claims. (Cl. 292—25.)

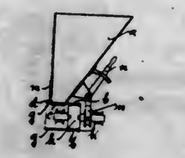


1. In a trunk, a pair of co-operating trunk sections, one of which is provided with a keeper, opposed catch members carried by the other of said sections for engaging said keeper, and means carried by the last mentioned section for drawing said catch members downwardly after they have engaged the said keeper, whereby the said sections may be drawn together.

1,632,196. INTAKE NOZZLE. HARRY E. RHOADS, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 7, 1920. Serial No. 408,696. 4 Claims. (Cl. 123—141.)

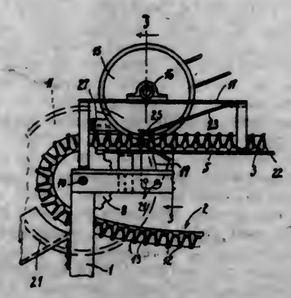
2. An internal combustion engine, having an intake manifold for conducting fuel to the engine, an intake port, an intake valve chamber, a groove formed at the intersection of the manifold and the port, an intake nozzle projecting into said chamber and provided with a shoulder located in said groove, and a flange located on said nozzle for causing a surging and an acceleration of the fuel passing from the chamber.

1,632,197. MUSICAL INSTRUMENT. ROY B. RICHMOND, Chicago, Ill. Filed Oct. 21, 1921. Serial No. 509,304. 9 Claims. (Cl. 84—47.)



1. The combination with an automatic piano having strings, hammers for vibrating the strings and a master record for controlling the action of the hammers to produce a musical composition, of an auxiliary record operated automatically and independently of the master record to vary the length of the hammer strokes and thereby give expression to the composition.

1,632,198. CARBURETOR. GEORGE F. RITTER, Toledo, Ohio, assignor to The Tillotson Manufacturing Company, Toledo, Ohio. Filed Apr. 9, 1917. Serial No. 160,703. 7 Claims. (Cl. 261—64.)

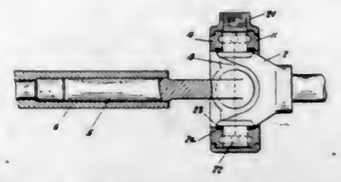


1. In a carburetor, the combination with an air supply passage; of a valve in said passage comprising a leaf spring operated automatically by air pressure; and a member normally engaged by said leaf spring and having a pocket in which the mixture of fuel and air is compressed as the spring moves into engagement with said member and closes said pocket to form a cushioning effect for the leaf spring.

1,632,199. MACHINE FOR SPREADING ARTIFICIAL MANURE. HEINRICH SCHNATH, Bielefeld, Germany, assignor to the Firm Kuxmann & Co., Komm.-Akt.-Ges., Bielefeld, Germany. Filed June 12, 1926, Serial No. 115,611, and in Germany July 10, 1924. 1 Claim. (Cl. 221—128.)

In a machine for spreading manure, the combination with a storage container having an outlet slot at its bottom, of a mechanically driven endless steel ribbon, integral distributing fingers thereon projecting into said container through its outlet slot, and a lever control in connection with said ribbon for laterally shifting the latter and thereby adjusting said fingers to a more or less deep engagement in said outlet slot.

1,632,200. MACHINE TO DECAPITATE AND CLEAN FISH. HENRY L. STAFFORD, Long Beach, Calif. Filed Aug. 23, 1926. Serial No. 130,814. 9 Claims. (Cl. 17—3.)

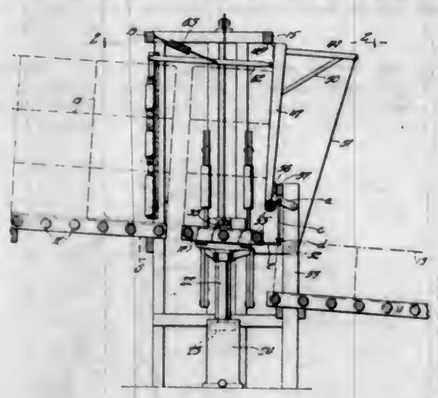


1. A machine to decapitate and clean fish comprising a frame, a conveyor, means to rotate said conveyor; fish receiving cups on said conveyor, a knife above said conveyor adapted to cut into the fish through the back bone, and a wedge plate adapted to enter the cut made by said knife to pull off the head and entrails of the fish.

1,632,201. PNEUMATIC TIRE. SAMUEL A. STEERE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 15, 1925. Serial No. 62,580. 9 Claims. (Cl. 139—426.)

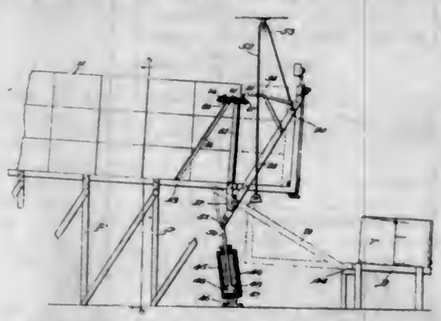
1. In a tire, a cord fabric carcass embodying cords having a substantially higher twist than that which is necessary to produce the maximum tensile strength therein.

1,632,202. UNIVERSAL JOINT. GEORGE JOSEPH THOMAS, South Bend, Ind., assignor, by mesne assignments, to Bendix Brake Company, a Corporation of Illinois. Filed June 18, 1924. Serial No. 720,865. 8 Claims. (Cl. 64—102.)



1. A device for enclosing and lubricating the bearing pins of a universal joint, comprising a pair of substantially similar rings having similarly formed and arranged recesses for the pins in their corresponding faces, each of said rings having a continuous, circular groove for lubricant in their corresponding faces with means for passing lubricant to said grooves, said grooves communicating directly with said recesses, and means for preventing the escape of lubricant from the recesses comprising a band encircling the outer periphery of said rings for clamping them securely together.

1,632,203. CONVEYER SYSTEM. LOUIS THREEFOOT and GEORGE W. ELKIN, Meridian, Miss., assignors of one-tenth to Louis Threefoot, one-tenth to Gladys Louise Threefoot, one-tenth to Frederick Marshall Threefoot, one-tenth to Gladys Lenora Threefoot, one-tenth to Henry Marshall Threefoot, one-sixth to George W. Elkin, one-sixth to Catherine Holman Elkin, and one-sixth to Mary Elkin. Filed Mar. 19, 1923. Serial No. 625,931. 34 Claims. (Cl. 193—35.)

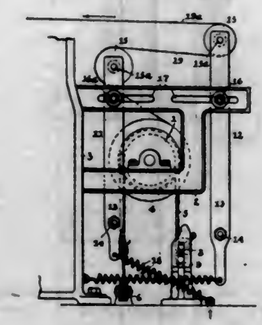


7. The combination with a first gravity conveyor for holding cases in ranks and files, and a third conveyer, of means for transferring said cases from said first gravity conveyer to said third conveyer, comprising a second gravity conveyer lying at a lower level than said first gravity conveyer and inclined toward said third conveyer, means including a reciprocable platform for receiving a plurality of cases simultaneously from said first conveyer and delivering them one by one to said second conveyer, and means for controlling the transfer of cases from said second gravity conveyer to said third conveyer.

29. The combination with a gravity conveyer for holding a plurality of cases in ranks and files, and a second conveyer for receiving said cases from said gravity conveyer, of means for transferring the cases from said gravity conveyer to said second conveyer, comprising a platform for successively receiving the files of cases from

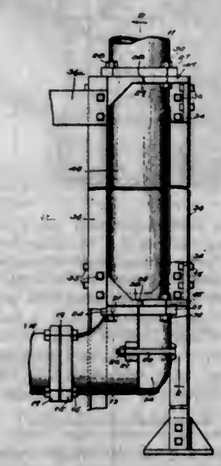
said gravity conveyer, and means for causing said platform to deliver said cases one by one to said second conveyer.

1,632,204. CONVEYER SYSTEM. LOUIS THREEFOOT and GEORGE W. ELKIN, Meridian, Miss., assignors of one-tenth to Louis Threefoot, one-tenth to Gladys Louise Threefoot, one-tenth to Frederick Marshall Threefoot, one-tenth to Gladys Lenora Threefoot, one-tenth to Henry Marshall Threefoot, one-sixth to George W. Elkin, one-sixth to Catherine Holman Elkin, and one-sixth to Mary Elkin. Filed July 19, 1924. Serial No. 727,004. 17 Claims. (Cl. 193—36.)



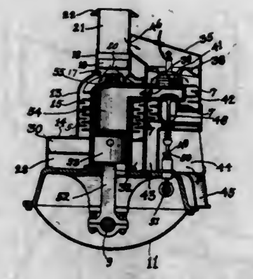
2. A conveyer system comprising an inclined conveyer for holding stacks of containers in contiguous ranks and files, a tiltable conveyer pivotally mounted adjacent one end of said inclined conveyer for receiving successive files of containers from said inclined conveyer, a third conveyer positioned at the free end of said tiltable conveyer when tilted away from said inclined conveyer and extending at an angle thereto, a latch for holding said tiltable conveyer in substantial alignment with said inclined conveyer, stop mechanism for preventing movement of said stack toward said tiltable conveyer, means actuated by the movement of said tiltable conveyer for rendering said stop mechanism inoperative, means actuated by the passage of a file of containers upon said tiltable conveyer, for releasing said latch, said last named means including a delayed action means for insuring the complete arresting of the movement of said stack before said latch is released, means for counter-balancing said tiltable conveyer, and means for controlling the rate of movement of said tiltable conveyer.

16. The method of automatically delivering articles from a stack of articles arranged in ranks and files, which



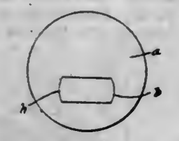
comprises separating one file from the rest of the stack, tipping the file as a whole over on its side, and separating the articles in the file one by one.

1,632,205. LET-OFF MEANS FOR LOOMS. JOHN S. TODD, Hawley, Pa. Filed Sept. 7, 1926. Serial No. 133,888. 4 Claims. (Cl. 139—97.)



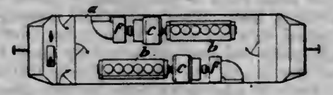
1. In combination, with supporting means and a let-off mechanism including, with the revoluble warp-beam, a friction-brake device therefor, a pair of parts around which the warp extends arranged to maintain reverse bends in the warp and each normally movable independently of the other under the pressure exerted theron by the warp in a direction to pass the other, and yielding means normally opposing such movement of each of said parts.

1,632,206. CONVEYING APPARATUS. EDGAR B. TOLMAN, Jr., Chicago, Ill., assignor to United Conveyor Corporation, Chicago, Ill., a Corporation of Illinois. Filed July 3, 1925. Serial No. 41,414. 2 Claims. (Cl. 137—75.)



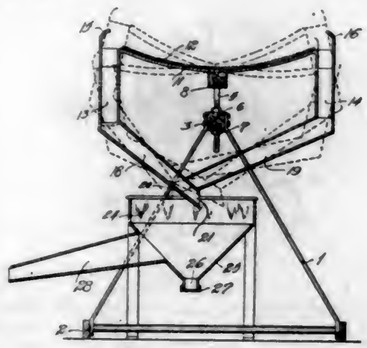
1. In apparatus of the character described, two tubular fittings, means for securing said fittings in spaced relation and including slotted plates secured to the fittings, a third tubular fitting having its ends removably positioned in said slots and aligned with said two fittings, and plates inserted in said slots for locking the third fitting against displacement relative to said two fittings.

1,632,207. AIR-COOLED ENGINE. ERNEST VAN TOFF, Chicago, Ill. Filed May 10, 1924. Serial No. 712,195. 14 Claims. (Cl. 123—171.)



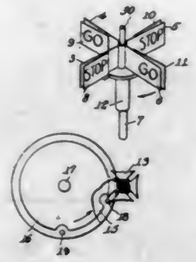
1. In an air cooled engine, a series of cylinders, a jacket surrounding each cylinder and having an upwardly extending neck, an adjustable hood over said necks adapted for admitting air to the jackets, an exhaust fan, and a separate air conduit extending from each cylinder to said fan.

1,632,208. LENS. FRANK BRUCE WATSON and EDWARD CULVER, London, England, assignors to United Kingdom Optical Company, Limited, London, England. Filed Nov. 21, 1925, Serial No. 70,586, and in Great Britain Apr. 29, 1925. 5 Claims. (Cl. 88—54.)



1. A lens consisting of a main lens, a glass plate secured to the main lens consisting of three pieces of glass made of a central portion and two segments, the central portion having a refractive index suitable for reading whilst the two segments have the same refractive index as that of the main lens.

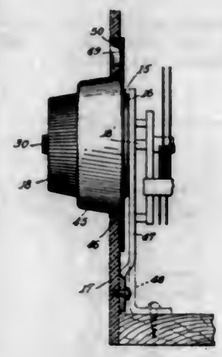
1,632,209. LOCOMOTIVE HAVING COMBINED INTERNAL-COMBUSTION AND ELECTRIC PROPULSION SYSTEM. EUGEN ZBINDEN, Winterthur, Switzerland, assignor to The Firm Sulzer Frères Société Anonyme, Winterthur, Switzerland. Filed July 24, 1926, Serial No. 124,731, and in Switzerland Aug. 7, 1925. 4 Claims. (Cl. 105—35.)



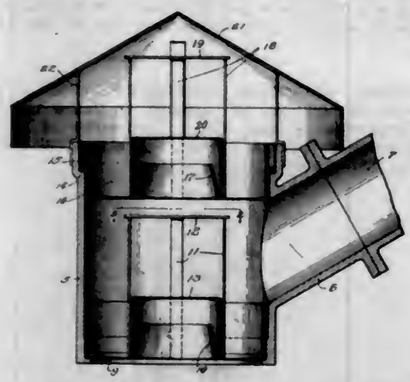
1. In a locomotive in combination a plurality of electric generators, a plurality of internal combustion engine sets and a plurality of motors connected to the driving axles of the locomotive and supplied with current by the said generators, the groups of internal combustion engines and electric generators of equal power being arranged parallel to each other and to the longitudinal axis of the vehicle frame at both sides of said frame, the combustion engines of each group situated at the one side of the frame facing the electric generators of each group placed at the other side of the frame.

1,632,210. MINERAL SEPARATOR. RALPH S. BALDWIN and WILLIAM A. JOHNSTON, Spokane, Wash. Filed Aug. 3, 1925. Serial No. 47,682. 2 Claims. (Cl. 209—441.)

1. The combination with a supporting frame of a pivoted table having a concave surface and adapted to oscillate on its longitudinal center, and a mat on the table having a longitudinally extending corrugated surface, said table having an outlet at one end and lateral launder chutes, and discharge troughs opening from said chutes.



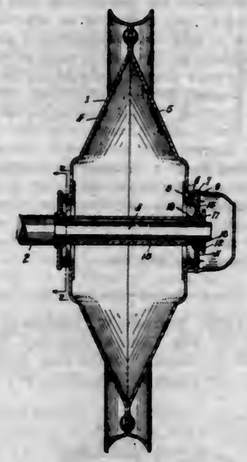
1,632,211. TRAFFIC SIGNAL. LOUIS E. BALTZLEY, Glen Ridge, N. J. Filed June 29, 1925. Serial No. 40,338. 12 Claims. (Cl. 116—63.)



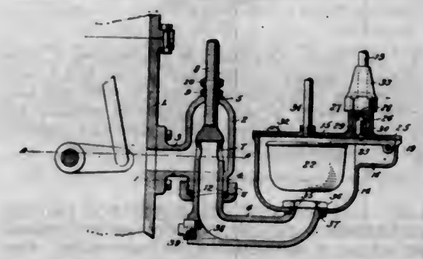
5. In traffic signals, a multi-bladed rotary signal unit bearing traffic starting indicia on the leading faces of only two of the signaling blades and traffic stopping indicia on all other faces of the blades, a second concentrically rotating multi-bladed signal unit bearing traffic starting indicia on the trailing faces of only two of the blades and traffic stopping indicia on all other faces of the blades and means for repeatedly intermittently alternately rotating said units, both in the same direction including intermittently operated gears connected respectively with the two units.

1,632,212. ADJUSTING DEVICE. LOUIS E. BALTZLEY, Glen Ridge, N. J. Filed Nov. 14, 1925. Serial No. 68,949. 12 Claims. (Cl. 74—7.)

1. An adjusting device comprising a metallic sleeve, a hub of insulating material fixed on said sleeve, an open center flat metallic ring attached to said hub, rearwardly projecting pivot studs fixed on the back of said ring, rollers slidably journaled on said studs at the back of said flat ring, an actuating roll journaled on the sleeve at the front of the hub projecting rearwardly through the open center of the flat ring and engageable at its inner end with the forward ends of the rollers and a track engageable by the rearward ends of the rollers.



1,632,213. LIQUID AND MECHANICAL SEAL. EDWARD E. BARTELS, Whiting, Ind., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed May 12, 1924. Serial No. 712,720. 8 Claims. (Cl. 277—61.)

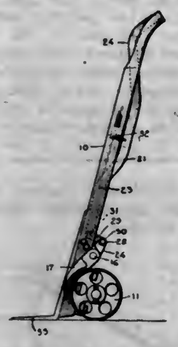


8. In a liquid and mechanical seal; a substantially cylindrical casing having an opening intermediate its height adapted for attachment to the vapor space of a liquid storage tank, the upper and lower ends of said casing being open to the atmosphere; a pan arranged in said casing above said opening; and a pan arranged in said casing below said opening; each of said pans being provided with an opening having a wall surrounding the same, and a cup over said wall, the opening formed between said wall and said cup being liquid sealed.

1,632,214. WHEEL-HUB CONSTRUCTION. JEREMIAH BINGHAM, Toledo, Ohio, assignor to The Bingham Stamping & Tool Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 18, 1926. Serial No. 81,889. 7 Claims. (Cl. 301—63.)

1. A disc wheel having a central opening in a disc thereof, a stamped hub member fitting in the disc opening and having a central hub-sleeve bearing opening and a flange portion lapping the inner portion of the disc and fixed thereto, a hub sleeve fitting in the opening of said hub member, said hub sleeve and the opening in which it fits being other than circular in cross-section to cause a turning of one with the other, an axle mounted in said sleeve and having driving engagement therewith, and means connected to the disc and forming a separate support for the hub sleeve.

1,632,215. OIL-LEVEL REGULATOR. ROBERT E. BORBECK and GEORGE C. TRUMAN, Los Angeles, Calif. Filed Dec. 24, 1921. Serial No. 524,805. 9 Claims. (Cl. 184—103.)

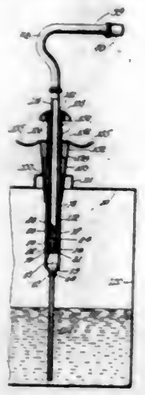


1. In a device of the class described, the combination of a casing adapted to house an operative part of an engine, a chamber in open communication with said casing, an oil supply conduit slidably fitted into said chamber from the underside thereof and having an outlet disposed within the chamber, and means for vertically adjusting said conduit within the chamber to determine the level of the lubricant within the casing.

1,632,216. TRAVELING VALVE FOR OIL-WELL PUMPS. WILLIAM BRADLEY, Thrift, Tex. Filed Aug. 10, 1926. Serial No. 128,362. 1 Claim. (Cl. 103—225.)

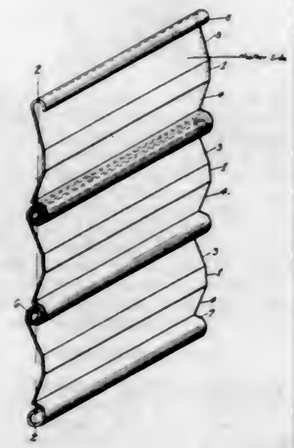
A traveling valve for oil well pumps comprising a central tube, upper and lower connecting heads, said heads including a tubular element, a plurality of cups above and below said central tube carried by said heads, a perforated nipple seated within the central tube; a coupling member interposed between the lower head and lower end of said central tube and including a port, a ball having its upward movement limited by a fixed transverse pin carried by said coupling and having its seat in said lower connecting head, said nipple supported by and communicating with said coupling, whereby said coupling, nipple and walls of said central tube form a sand collecting means, said tubular elements also being substantially similar in construction to each other, said cups having spacer rings interposed therebetween and the upper tubular element being perforated adjacent the uppermost of the cups for the purpose of allowing fine sand to escape.

1,632,217. WAREHOUSE-TRUCK BRAKE. JOHN H. BROWN, Jersey City, N. J. Filed Sept. 11, 1925. Serial No. 55,654. 3 Claims. (Cl. 188—22.)



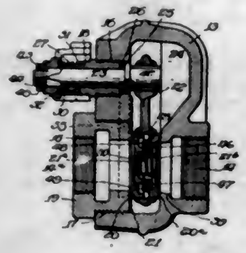
2. In combination with a hand truck having a longitudinally disposed frame and handles, of braking means therefor comprising a cross shaft pivotally mounted thereon carrying brake shoes capable of engaging the wheels of the truck, a crank arm disposed on said cross shaft and an operating member comprising a longitudinally disposed lever arm substantially parallel to said truck frame and handles, said lever arm being pivotally mounted in relation to said truck frame near the wheels thereof whereby the brake shoes are put into engaging relation by a downward movement of the lever arm, said lever arm terminating at its upper extremity in a handle portion comprising an auxiliary handle for the truck.

1,632,218. SPRAYER. HOWARD A. CHAFFIN and FRANK C. HOLMES, Chicago, Ill., assignors to Enos Chemical Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 8, 1922. Serial No. 599,635. 2 Claims. (Cl. 299—97.)



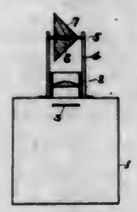
1. In a sprayer adapted to be detachably associated with containers of different depth and having delivery openings of different diameters, said sprayer including:

a pump barrel of a greater length than the depth of the deepest container with which the sprayer is adapted to be associated, said pump barrel having an intake orifice at its inner end arranged to be positioned at the bottom of any one of the containers; a piston within said pump barrel; a hollow piston rod connected to said piston and extending outwardly beyond the outer end of the pump barrel and terminating with a spray nozzle, and the said piston rod being formed outwardly of the pump barrel, to provide a hand grasp for reciproca-



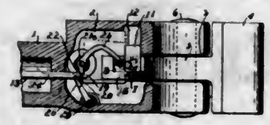
tion; intake and outlet valves associated with said pump barrel and piston; a plug adjustably threaded on the exterior of said pump barrel, said plug being exteriorly formed to adapt it for co-operation with the discharge openings of varying diameters of the containers; and finger pieces located adjacent said plug and extending laterally of the sprayer whereby the sprayer may be held in proper position in the container by said finger pieces by one hand of the operator and the piston and piston rod operated by the other hand of the operator.

1,632,219. FIRE SHUTTER. GEORGE E. DELLER, Covington, Ky. Filed July 30, 1926. Serial No. 126,038. 1 Claim. (Cl. 189—56.)



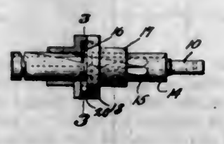
A slat for a rolling fire shutter having a weather side, said slat comprising an elongated piece of metal having a flat horizontal rib extending in a vertical plane across the horizontal medial line of the slat, and upper and lower portions of said sheet metal piece inclined at oblique angles in opposite directions from the upper and lower edges of said horizontal rib respectively, and hook shaped return bent portions and extending in opposite directions formed at edges of said obliquely inclined portions, said hook shaped portions at the upper edge being of smaller contour than the hook shaped portions of the lower edge, said obliquely angled portions inclining from said rib away from the weather side of said slat, and the hooked portion at the lower edge formed with not less than an angle of ninety degrees with said lower obliquely inclined portion, providing such a balance of weight, that substantially equivalent weights of the metal of the slat will be equally disposed with reference to a vertical line extended through said slat, and so that when freely suspended said flat slat will lie parallel with reference to said aforementioned vertical line.

1,632,220. VALVE. THOMAS W. DEMAREST, Pittsburgh, Pa., assignor to The Okadee Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 5, 1920. Serial No. 349,555. 20 Claims. (Cl. 251—18.)



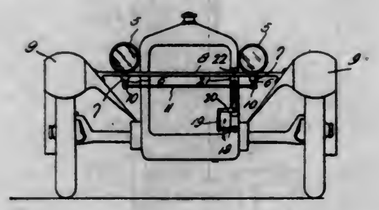
2. A valve device comprising, in combination, a valve body having a passage provided with a seat, and a valve for interrupting said passage by contact with said seat, said valve including a pair of relatively movable and slidably interlocked members and a yieldingly resistant element for constraining their relative movement.

1,632,221. METHOD AND APPARATUS FOR PRODUCING VARIABLE IMAGE EFFECTS IN PHOTOGRAPHY. LEON F. DOUGLASS, Menlo Park, Calif. Filed Sept. 28, 1925. Serial No. 59,024. 2 Claims. (Cl. 88—16.)



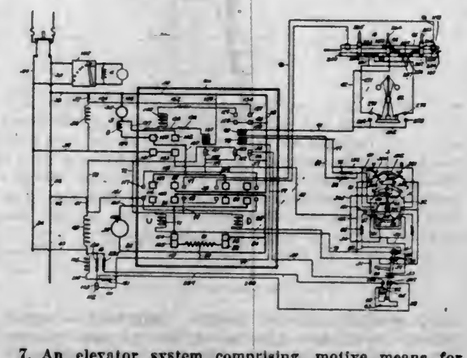
1. A device for producing images of an object in different positions on a photographic film comprising a lens, a large-angle 90-degree prism positioned in the path of the light rays from said object and in front of the lens, having its hypotenuse lying in a plane parallel to the axis of the lens and its front and rear surfaces disposed to the said axis of the lens so that the front surface refracts the light rays from the object to the hypotenuse, the hypotenuse reflects the said rays to the rear surface and the rear surface refracts the said rays through the lens onto a film.

1,632,222. CAR COUPLING. JOHN W. EASTER, San Jose, Calif. Filed July 28, 1926. Serial No. 125,438. 1 Claim. (Cl. 213—132.)



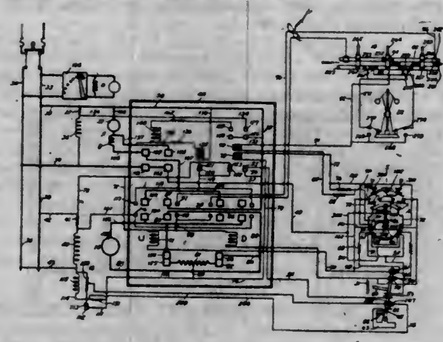
A device of the character described comprising a coupler adapted to be mounted upon a car body, and having a chamber formed therein, a knuckle pivotally mounted thereon with one end movable into said chamber and having a bolt engaging means formed on its upper surface and an angular slot in its lower surface, a gravity actuated bolt slidably mounted in the coupler and engageable with the said means, a rod having slidable engagement with said slot for advancing or retracting the same and actuating means for said rod, and rod actuated means for lifting said bolt oue of engagement with said knuckle.

1,632,223. CAM-SHAFT CONTROL. HOWARD MILLER FEY, San Antonio, Tex. Filed June 18, 1926. Serial No. 116,938. 5 Claims. (Cl. 64—90.)



1. In combination with a cam shaft of an engine, a shaft having an elongated opening formed therein and connected with the cam shaft, a sleeve mounted on the last mentioned shaft and having curved elongated openings formed therein, an actuating sleeve mounted on the first mentioned sleeve and having an offset portion, a pin mounted within the offset portion and extending through the curved opening of the first mentioned sleeve and through the elongated opening of the second mentioned shaft, and said actuating sleeve adapted to move the pin through the openings to rotate the cam shaft.

1,632,224. DIRIGIBLE HEADLIGHT CONSTRUCTION FOR AUTOMOBILES. SQUIRE FRANKLIN FLETCHER and HARRY J. SMITH, Lowell, Ind. Filed Aug. 31, 1926. Serial No. 132,758. 1 Claim. (Cl. 240—62.)



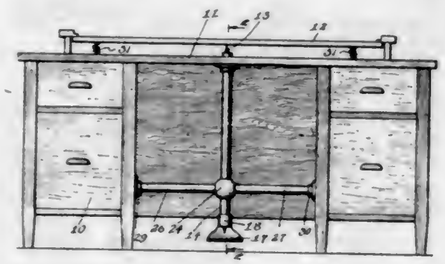
A dirigible headlight construction for automobiles comprising in combination, a pair of headlights mounted for rotation at the front of the automobile, posts depending from the headlights, a headlight supporting rod extending horizontally in front of the vehicle radiator and being connected at its opposite ends to the front fenders of the vehicle, and having openings through which the posts extend, a cross rod interconnecting the headlight posts to facilitate the simultaneous operation thereof, a shaft arranged longitudinally beneath the body of the automobile, means for interconnecting the inner end portion of the shaft with the steering mechanism of an automobile, a bracket clamped at its upper portion to said headlight supporting rod, the lower portion of the bracket being offset, a bell crank lever pivoted on said offset portion, the outer end of the horizontally disposed arm of said bell crank lever being operatively connected to the outer end of said shaft, the vertical arm of said bell crank lever being slotted, and a forwardly projecting pin carried by the aforementioned cross rod and operable within the slotted vertical arm of the bell crank lever whereby said cross rod is actuated to turn the headlights simultaneously with the turning of the steering wheels of the automobile.

1,632,225. ELECTRIC ELEVATOR SYSTEM. GRAHAM B. GROSVENOR, Chicago, Ill., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 23, 1922. Serial No. 563,094. 20 Claims. (Cl. 172—152.)

7. An elevator system comprising, motive means for raising and lowering the elevator, means for automatically initiating a reduction of the elevator speed to a definite low speed at different distances from a landing, and means for causing the definite low speed of the elevator to be directly in some proportion to the load on said motive means.

1,632,226. ELECTRIC ELEVATOR SYSTEM. GRAHAM B. GROSVENOR, Chicago, Ill., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Original application filed May 23, 1922, Serial No. 563,094. Divided and this application filed Oct. 1, 1925. Serial No. 59,912. 46 Claims. (Cl. 187—29.)

24. An elevator system control comprising in combination, a motor for driving the elevator, a motor control circuit, contact mechanism having stationary and travelling parts, the latter travelling through a space corresponding with the travel of the elevator, to make connection at successive spaced contacts related to the dis-

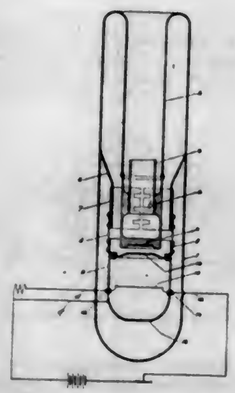


tance of the car from a landing, and another contact mechanism controlled by the speed of the elevator for connecting the motor control circuit selectively through one or another of said spaced contacts.

1,632,227. RESILIENT GRIP FOR IMPLEMENT HANDLES. CHARLES W. HALSEY, Evansville, Ind. Filed Feb. 10, 1926. Serial No. 87,469. 4 Claims. (Cl. 83—62.)

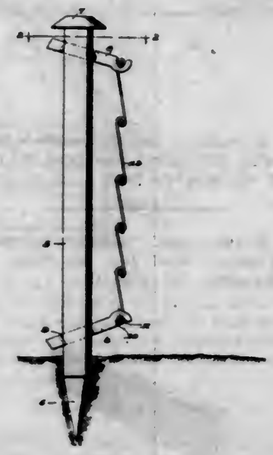
3. A resilient grip for handles comprising a hollow resilient casing open at one end, the internal diameter of the cavity in the casing being reduced at the open end thereof to form a flange to frictionally engage the handle, an internal inclined wall joining the closed end of the casing with the interior side walls thereof to abut the end edge of the handle to center the same and to provide an inner chamber, said inclined wall having a plurality of channels communicating with the inner chamber and the annular space around the handle, and the closed end wall having a central vent to admit air or water around the inner portion of the handle.

1,632,228. OPERATING DEVICE FOR BOOKKEEPING MACHINES AND THE LIKE. VINER J. HEDDEN, East Orange, N. J. Filed Apr. 10, 1925. Serial No. 22,222. 5 Claims. (Cl. 45—90.)



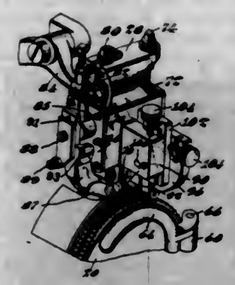
1. In an operating device for bookkeeping machines and the like, a tubular casing dependent from a support, a strap bent at its middle around the end of the casing, a bolt connecting the free ends of the strap, a pedal pivoted on said bolt, a spacing block disposed between the limbs of the strap between said bolt and the casing, said block acting as a spacing member and as an obstacle in the upward movement of the pedal beyond a predetermined point.

1,632,229. ROTARY SPRINKLER. LOUIS E. HOLLAND, Kansas City, Mo. Filed May 11, 1925. Serial No. 29,442. 2 Claims. (Cl. 299—68.)



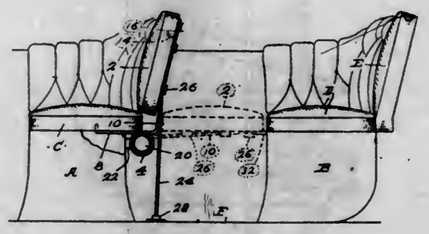
2. In a water sprinkler, a base, an upright water pipe carried by the base, a nozzle in communication with the discharge end of the said pipe, a bladed wheel having a circular series of inclined blades in the path of discharge of the nozzle, and a tip for the discharge end of the nozzle and adjustable to different angular positions relative to the blades of the wheel.

1,632,230. X-RAY TUBE. GILLES HOLST and ALBERT BOUWERS, Eindhoven, Netherlands, assignors to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Filed Jan. 15, 1925, Serial No. 2,559, and in the Netherlands Mar. 10, 1924. 2 Claims. (Cl. 250—35.)



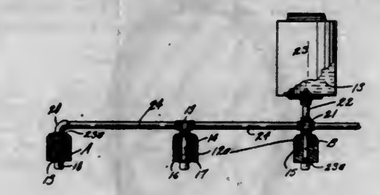
1. An X-ray tube comprising an incandescent cathode characterized in that the incandescent cathode is arranged within a metal vessel extending inside the outer wall of the tube, the anticathode being so insulated from the said vessel that this insulation is capable of resisting the operating voltage to be supplied between the incandescent cathode and the anticathode, the said vessel at the side of the anticathode being constricted to form an opening for the passage of the cathode rays, the part of the anticathode which is struck by the cathode rays being located near said vessel.

1,632,231. FENCE. WILLIAM M. HOLTZ, Shelton, Nebr. Filed Oct. 12, 1926. Serial No. 141,145. 3 Claims. (Cl. 256—23.)



1. The combination with a fence post and fence; of a member having a post receiving recess relatively larger than one cross sectional dimension of said post whereby to loosely receive the same, and fence supporting means carried by said member whereby the weight of a fence will rock said member to bind the edges of said recess to engage said post to hold the member in a set position.

1,632,232. STOCK-FITTING MACHINE. JAMES E. JACKSON, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 18, 1921. Serial No. 485,551. 15 Claims. (Cl. 12—27.)

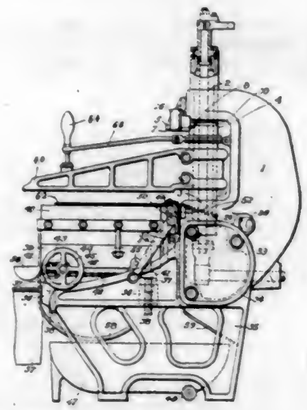


3. A machine for channeling McKay soles comprising, in combination, a sole-supporting feed wheel, a roller presser foot for engaging a sole supported by the feed wheel, an L-shaped channel knife having a horizontal portion extending beneath the roller foot shaped to provide a horizontal cutting edge approximately in the vertical plane through the axis of the roller foot and a vertical portion extending across one end of the roller foot shaped to provide a vertical cutting edge in the vertical plane through the horizontal cutting edge, and a roll arranged to engage the periphery of the roller foot to support the roller foot when the latter is pressed against the work.

1,632,233. CONVERTIBLE SEAT FOR MOTOR VEHICLES. THEODORE G. JOHNSON, Kansas City, Mo. Filed July 21, 1925. Serial No. 45,043. 1 Claim. (Cl. 155—7.)

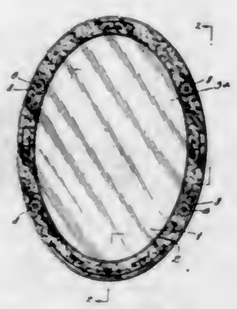
In combination with the front and rear seats of a motor vehicle, means yieldably supporting the back of the front seat so that said back may be adjusted from normal to a reclining position to cooperate with the front and rear seats in forming a bed, keepers secured to said back, rods removably mounted in said keepers to support said back in normal position, and bolts associated with the rear seat and adapted to engage certain of said keepers to secure the adjustable back in reclining position.

1,632,284. POULTRY ROOST. LEWIS J. KALVIG, Kanawha, Iowa. Filed Dec. 9, 1925. Serial No. 74,318. 2 Claims. (Cl. 119—25.)



2. A poultry roost comprising a plurality of spaced perch members, each perch member formed of two interfitting parts, one of said parts having a groove in its upper surface for receiving insecticide, the other of said parts being arranged to cover said groove, a supply pipe extending above the several perch members, stub pipes at right angles to the supply pipe and each extending through a perch member and in communication with the groove therein, a supply tank above said supply pipe for containing insecticide whereby the supply of insecticide will flow to the grooves in said perch members by gravity and means screwed on to said stub pipes on either side of said roost members for clamping the parts of the roost members together and sealing the stub pipes relative to the roost members.

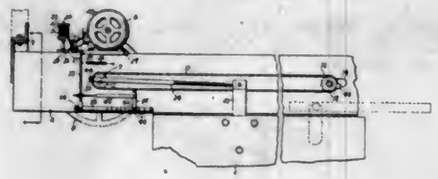
1,632,235. PRESS. FRANK BYCROFT KEALL, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 25, 1924, Serial No. 688,453, and in Great Britain Feb. 13, 1923. 19 Claims. (Cl. 164—23.)



1. In a machine of the class described, a work supporting member and a presser member relatively movable toward and from each other in pressure applying operations and also in directions laterally of each other, a post

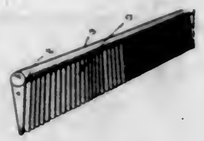
for supporting one of the members, and bearings for the post, some of the bearings being operative to maintain the post vertical while the machine is at rest and other

bearings being operative to take the lateral component of the stresses and strains which develop during a pressure applying operation.



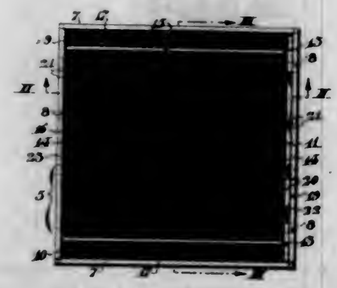
1,632,236. MIRROR. HUGO H. KIRK-SCHNEIDER, New York, N. Y. Filed Aug. 24, 1926. Serial No. 131,191. 4 Claims. (Cl. 41—22.)

1. A mirror comprising a glass plate of suitable dimensions and marginal contour having a central area provided with a reflecting surface and a marginal clear glass framing portion, a backing separable from and independent of the plate and provided with ornamentation visible through the clear glass for framing the reflecting portion, and means extending through the glass and backing for detachably connecting them together, said means harmonizing with the visible part of the backing and cooperating therewith in the ornamentation of the frame.



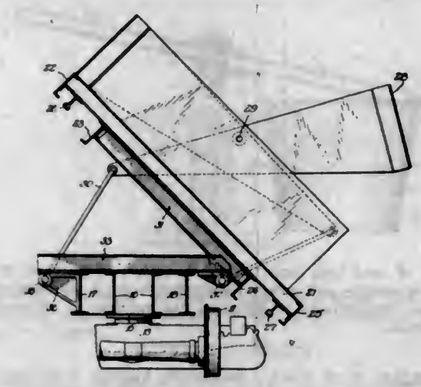
1,632,237. DOOR-OPERATING MECHANISM. FRANK R. LEMON, Vicksburg, Mich., assignor of one-third to Henry B. Crawford and Lulu Lemon Crawford. Filed June 18, 1925. Serial No. 37,977. 8 Claims. (Cl. 268—53.)

8. In a door operating mechanism, the combination of a motor, a pair of sprockets, a sprocket chain coacting with said sprockets and provided with a trip lug, a door connection on said chain, a motor control means comprising a switch lever, a spring acting to hold said switch lever in switch open position, a detent for holding said switch lever in closed position, a spring urging



said detent to engaging position, and a trip adjustably associated with said detent and lying in the path of movement of the said trip lug.

1,632,238. HAIR COMB. HERBERT LISTER, Montreal, Quebec, Canada. Filed Dec. 21, 1925. Serial No. 76,734. 3 Claims. (Cl. 132—18.)

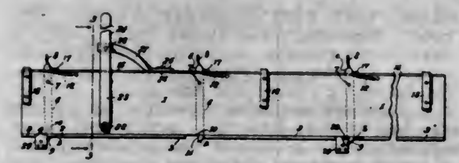


1. A hair comb, comprising a straight running bar, transversely circular in cross section and of identical diameter throughout, and a plurality of teeth having their inner ends in semi-arc construction and merging into said transversely circular running bar and projecting vertically therefrom and forming semicircular slideways between each tooth formed by the juncture of said teeth and transversely circular running bar.

1,632,239. EGG TRAY FOR INCUBATORS. JOHN F. MACKAY, Lancaster, Pa. Filed Mar. 1, 1924. Serial No. 696,122. 11 Claims. (Cl. 119—44.)

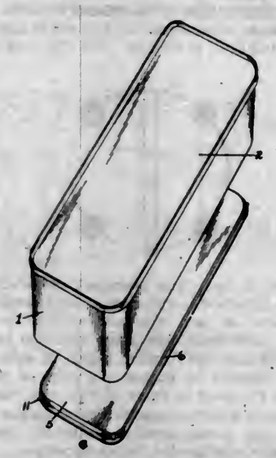
1. An egg tray for incubators comprising a frame, a recticulate bottom for supporting the eggs, means for moving said bottom to effect the necessary egg turning, and relatively narrow slidable means for preventing egg shells falling off the tray during the hatching period.

1,632,240. PLANT SERVICE CAR. EDWARD A. MALMGREN, Duluth, Minn. Filed Feb. 11, 1926. Serial No. 87,581. 3 Claims. (Cl. 105—272.)



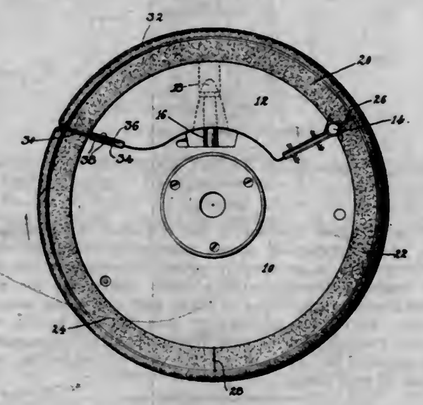
1. In a dump car, a center girder construction, a car body, a cross member fixed to the bottom of the car body, and a pair of transverse members, one upon each side of the cross member, said transverse members being hinged at one end to the center girder construction and at the other to the cross member.

1,632,241. METHOD OF GROWING TOBACCO. GEORGE HENRY MALOTT, Leamington, Ontario, Canada. Filed Dec. 9, 1926. Serial No. 153,655. 1 Claim. (Cl. 47—58.)



A method of growing tobacco consisting of first allowing the plant to grow until the head and seed pods are formed, then trimming off some of the upper leaves adjacent to the head whereby the surplus sap passes into the head, then allowing the plant to grow until maturity and then heading off the plant.

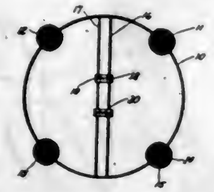
1,632,242. FLOOR-STRIP CLIP-SETTING DEVICE. THEODORE A. MOORE, Davenport, Iowa. Filed Mar. 21, 1924. Serial No. 700,937. 13 Claims. (Cl. 72—128.)



1. A device of the character described for setting clips including a support, plates secured to the support with their adjacent ends spaced to form recesses to receive the clips, and members connected to the support and engageable with the clips for holding them in position.

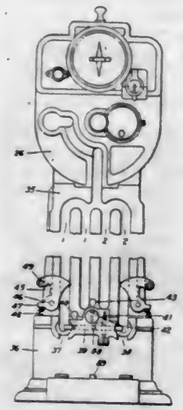
1,632,243. AUTOMATIC LATCHING DEVICE FOR BURIAL VAULTS. DON D. MYERS, Toledo, Ohio, assignor to The Sozonian Burial Vault Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 8, 1926. Serial No. 100,504. 2 Claims. (Cl. 292—250.)

1. The combination with a platform having a counter sunk ledge extending around the outer edge of said platform, a body member having an inturned flange on the lower edge thereof to seat in said counter sunk ledge, casings secured to the corners of said platform, ledge portions on said casings coincident with adjacent counter sunk ledge portions to provide a substantially unbroken supporting surface around said platform, each casing having a cavity, and a weighted latch member in said cavity and normally swung outwardly therefrom into the path of said inturned flange for engaging the latter for securing said platform and body member parts together.



1,632,244. LAST-SCOURING WHEEL. CHESTER L. PEARSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 26, 1922. Serial No. 609,006. 1 Claim. (Cl. 51—194.)

A last scouring wheel having, in combination, a wheel body comprising a main portion and a hinged section with means for locking them together, a relatively thick strip of felt secured to the periphery of the hinged section, a plurality of similar strips of felt secured to the periphery of the main portion and having their adjacent ends



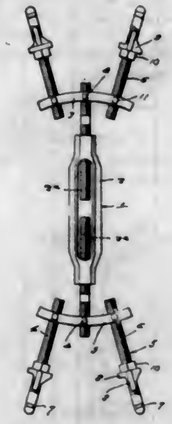
spaced apart, the felt strip on the hinged section also having its ends spaced from the remaining ends of the other strips, and an abrasive sheet supported by the strips of felt.

1,632,245. PERFUMER FOR ELECTRIC FANS. ANDREW RADEEFF, New York, N. Y. Filed Apr. 7, 1926. Serial No. 100,373. 2 Claims. (Cl. 261—24.)

1. A device of the class described comprising a ring adapted to be attached to the cage of an electric fan, containers mounted on said ring and adapted to use perfumed gauze, said containers being mounted in front of said fan, clamp members forming a part of said ring, said clamps being adapted to engage the cage of the electric fan to secure the ring in front of the cage, bars extending diametrically between opposite sides of the ring, said bars having the clamp members pivoted thereon, and springs normally closing said clamp members.

1,632,246. TOKEN SYSTEM. WALTER SIDNEY ROBERTS, Ormskirk, England, assignor of one-half to The Railway Signal Company Limited, London, England, a British Company. Filed Apr. 6, 1925, Serial No. 21,036, and in Great Britain Apr. 14, 1924. 6 Claims. (Cl. 246—19.)

1. In a token instrument for railways, the combination of a plurality of tokens authorizing travel in one direction only, a plurality of tokens authorizing travel in the opposite direction only, a token instrument for receiving both of said types of token, and controlling means on said instrument actuated by both types of tokens to permit the insertion of said tokens into the instrument and actuated by one type of token only to permit the removal of said token.

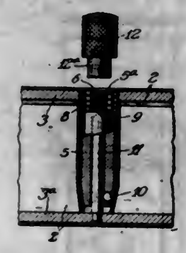


1,632,247. ROSIN DIPPER. EDWARD A. SMITH, Valdosta, Ga. Filed Aug. 18, 1926. Serial No. 130,094. 4 Claims. (Cl. 65—28.)

1. A dipper comprising an open top dipper body, a coupling member secured to the front thereof and including an inclined adjustable upper portion extending over the open top of said dipper body, a handle secured to the inclined portion of said member and extending rearwardly from said body, an upstanding support secured to the

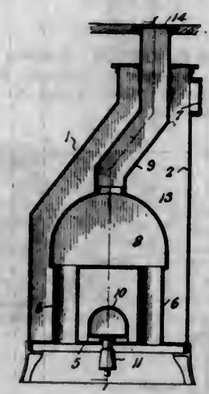
rear of said body and to said handle, said support being adjustable, and means for fixedly securing the support to the dipper body to maintain the support in adjusted positions.

1,632,248. RIM TOOL. ERNEST F. STARKE, Red Cloud, Nebr. Filed July 1, 1926. Serial No. 119,900. 1 Claim. (Cl. 157—1.)



In a rim tool of the class described, a turn buckle including a connector and a pair of screw threaded members, an arcuate head connected at a point between its ends to the outer end of said rod, a pair of screw bolts carried by the end portions of said head, said bolts having their outer ends provided with rim engaging hooks, a lug adjustably mounted on each bolt, said lug embodying a plate having a twisted outer end portion adapted to engage the rim, and a retaining nut threaded on each bolt and cooperable with the respective lug.

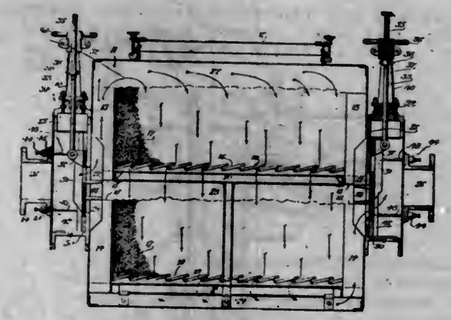
1,632,249. LOCK FOR LOOSE-LEAF BINDERS. WILLIAM J. STERNROD, Benton Harbor, Mich., assignor to Baker-Vawter Company, Benton Harbor, Mich., a Corporation of Michigan. Filed Aug. 30, 1926. Serial No. 132,403. 2 Claims. (Cl. 129—13.)



1. A ball-clutch mechanism for a pair of separable binder back members including a tube secured to one binder back member and formed with an interiorly coned end, a coaxially disposed post secured to the other binder back member, a ball-carrier having a hollow main portion coaxially arranged around said post within said tube and having a reduced threaded stem portion lying within the plane of said first-mentioned binder back member, said ball carrier being equipped with clutch balls and said first-mentioned binder cover being formed with

an orifice in alignment with said threaded stem of said ball-carrier of less diameter than the main portion of said ball-carrier, and a compression spring interposed

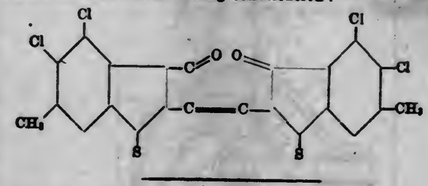
between the main portion of said ball-carrier and the marginal portion of said binder cover member around said orifice therein.



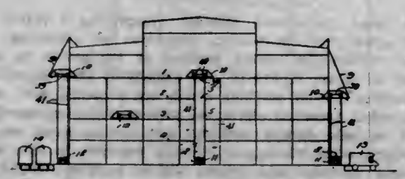
1,632,250. WARM-AIR GENERATOR. CHARLES A. STOLL, Kane, Pa. Filed Aug. 17, 1925. Serial No. 50,889. 2 Claims. (Cl. 126—116.)

1. In a warm air generator, the combination of an outer casing having a perforated bottom, a plurality of vertically disposed air flues positioned in parallel rows mounted in apertures in said bottom, a gas burner positioned intermediate of said air flue rows, a horizontally disposed air chamber mounted on the upper ends of said air flues provided with a common communication therewith, a rectangular formed discharge air port located in the upper wall of said air chamber and having a longitudinal dimension comprising several multiples of its dimensional width, an air discharge conduit mounted on said discharge port and formed with a warm air discharge opening in the upper end thereof and having substantially the same cross sectional form as the discharge port throughout its length.

1,632,251. GAS-PURIFYING APPARATUS. THOMAS W. STONE, Fort Wayne, Ind., assignor to Western Gas Construction Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Feb. 16, 1922. Serial No. 536,882. 11 Claims. (Cl. 183—48.)



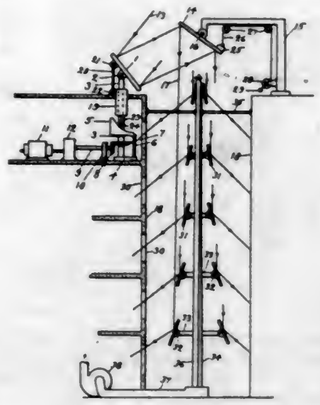
1. In a gas purifying apparatus, in combination; a purifying box provided with upper and lower tiers for supporting masses of a gas purifying agent and providing a gas passageway above the upper tier, a gas passageway below the lower tier and an intermediate gas passageway between said tiers; upper and lower gas flow channels located at the opposite ends of said boxes, the upper channels communicating only with the upper gas flow passageway and the lower channels communicating only with the lower gas flow passageway; a gas flow regulating means comprising a valve casing positioned at each end of the purifying box, each valve casing having



ports respectively communicating with the upper gas flow channel, the intermediate gas flow passageway and the lower gas flow channel, a valve body yieldingly held in juxtaposition with said ports and movable into positions for selectively opening any one of said ports, or the upper and lower ports simultaneously, and manually-controlled means for operating said valve body; substantially as specified.

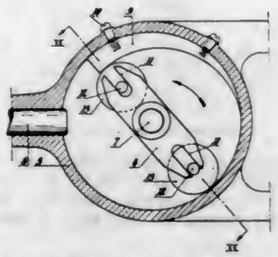
1,632,252. THIOINDIGO VAT DYESTUFFS AND PROCESS OF MAKING SAME. KARL THIESS, CARL JOSEF MÜLLER, and ERNST RUNNE, Hochst-on-the-Main, and ALBERT SCHAEFFER, Marxheim-on-the-Taunus, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed June 22, 1926, Serial No. 117,850, and in Germany June 27, 1925. 10 Claims. (Cl. 260—53.)

8. As a new product, the herein described thioindigo vat dyestuff of the following constitution:



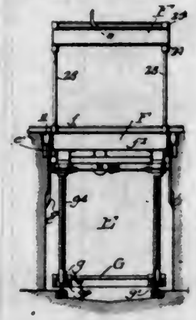
1,632,253. APPARATUS FOR LOADING AND UNLOADING FREIGHT. EDWARD J. TRIAY, Jr., Jacksonville, Fla., and PERCY L. FARMER, Richmond, Me. Filed Oct. 11, 1921. Serial No. 506,991. 4 Claims. (Cl. 214—14.)

1. A portable elevator comprising a base frame having an opening therethrough and a movable platform arranged within said frame, and adapted to pass through



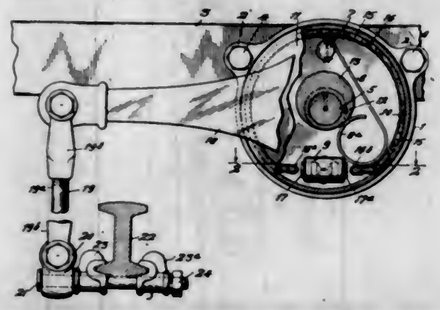
said openings, runways at each end of said base frame on line with said opening for loading and unloading the said platform.

1,632,254. WINDOW-LIGHTING SYSTEM. EUGENE VINOGRADOV, New York, N. Y. Filed Oct. 1, 1926. Serial No. 138,949. 4 Claims. (Cl. 88—25.)



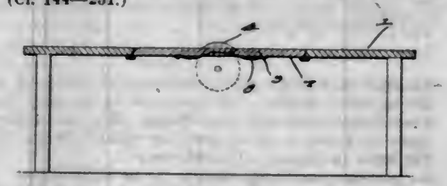
1. In a window lighting system, the combination with a plurality of stationary adjustable mirrors adapted to direct the sunlight into windows of a house, a movable mirror adapted to reflect the sunrays onto said stationary mirrors, means to rotate said movable mirror in a horizontal and vertical plane in accordance with the movement of the sun, means to stop said rotation when said mirror reaches a predetermined position, and means to start said rotation at a predetermined time.

1,632,255. ROTARY PERCUSSION IMPLEMENT. GEORGES ERNEST WAGNER, St.-Etienne, France. Filed May 13, 1926, Serial No. 108,930, and in France Jan. 16, 1926. 1 Claim. (Cl. 123—33.)



A rotary percussion element, comprising a casing; a high-speed shaft projecting thereinto; an actuating element within the casing secured at its center to said shaft to rotate therewith and embodying two oppositely-extending, forked portions which are provided with alining radial terminal slots; an impact roller mounted in each of said forked portions and having axles on its opposite sides which are slidably engaged in the slots therein whereby said rollers will be carried around by said actuating element in its rotation and will be forcibly pressed against the inner surface of the casing; and a member projecting into said casing to receive the full impact of each roller periodically during the rotation of the actuating element.

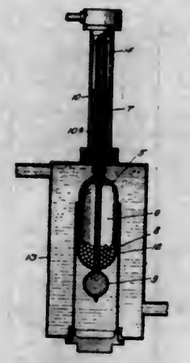
1,632,256. DROP PIT. ARTHUR L. WALTER, Chicago, Ill., assignor to Whiting Corporation, Harvey, Ill., a Corporation of Illinois. Filed Mar. 31, 1926. Serial No. 98,861. 22 Claims. (Cl. 104—32.)



1. In an equipment of the character described, the combination with a pit, of drop tables adapted to be lowered into the pit, means for locking the tables at the top of the pit, and raising and lowering mechanism whereby one of the drop tables may be raised from its locked position and replaced by another at the top of the pit.

1,632,257. SPRING GOVERNOR. THOMAS F. WILLIAMS, Fairhaven, N. J., assignor to Inglis M. Uppercu, Deal, N. J. Filed June 18, 1924. Serial No. 720,754. 14 Claims. (Cl. 188—130.)

1. A spring governor comprising a drum, a pivotal mounting therefor, a brake member located within and engaging the inner surface of said drum, an abutment member receiving the ends of the brake member thereagainst, and means actuated by the relative movement of said brake member and drum for effecting a local pressure of said member against said drum.



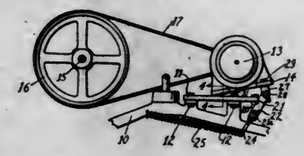
1,632,258. CUTTER GUARD FOR DADO WOODWORKING MACHINES. JOHN F. WILSON, St. Louis, Mo. Filed June 11, 1925. Serial No. 36,364. 4 Claims. (Cl. 144—251.)

1. In combination with a woodworking table having an opening therein, in which a cutting mechanism is adapted to operate, the table being provided with a slot

adjacent each side of the opening, of a guard for the cutting mechanism comprising a segmental plate slidable vertically in each of said slots, resilient means associated with said plates for normally urging the same upwardly, said plates adapted to move downwardly in the respective slots when a piece of work is moved across the opening and the cutting mechanism.

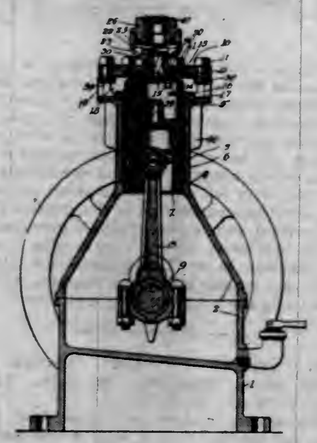
1,632,259. TESTING DEVICE. ROBERT E. WILSON, Chicago, Ill., and WILLIAM H. BAHLKE, Whiting, Ind., assignors to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Jan. 5, 1925. Serial No. 722. 2 Claims. (Cl. 265—46.)

1. A hydrometer for oils comprising a thermometer the liquid of which extends up the stem of the hydrometer, the level of the thermometric liquid coinciding with the oil level when the hydrometer is immersed in an oil of a predetermined specific gravity at a predetermined temperature, the hydrometer and thermometer being proportioned relatively one to the other so that a change of temperature effects an equal and opposite movement of the hydrometer and the thermometric liquid level.



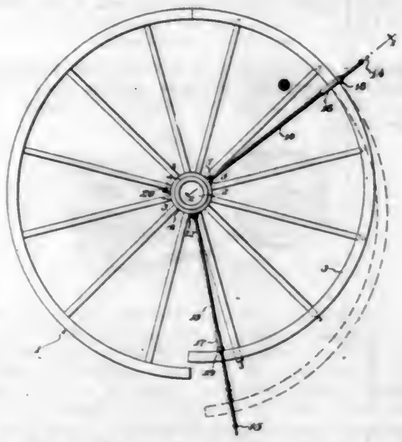
1,632,260. GARDEN TOOL. ROBERT B. WOODALL, Malvern, Ark. Filed Sept. 15, 1925. Serial No. 56,494. 2 Claims. (Cl. 97—66.)

1. In an agricultural tool, a handle portion, a pair of spaced resilient arms extending from one end of the handle portion and having laterally extended extremities, a head embodying blades extended at substantially right angles with respect to each other, pivotally supported on the laterally extended extremities of the arms so that the heads may be moved to bring either blade to its active position, flanges formed integral with one of the blades and extending laterally therefrom, fingers on the flanges and engaging the adjacent blade to secure the blades against movement with respect to each other, and lips formed on the edges of the flanges and adapted to engage the spaced arms when the head is moved to hold the head in its positions of adjustment.



2. In an agricultural tool, a handle portion, a pair of spaced resilient arms extending from one end of the handle portion, a head embodying blades extending at substantially right angles with respect to each other pivotally mounted on the arms, said head adapted to be moved to cause a blade to engage the arms, and means carried by the head and adapted to cooperate with the blade engaging the arms to hold the head in its adjusted position.

1,632,261. ADJUSTABLE SUPPORT FOR ELECTRIC MOTORS. OLIVER B. WOODROW, Newton, Iowa. Filed Oct. 15, 1924. Serial No. 743,765. 2 Claims. (Cl. 308—11.)



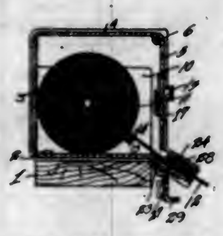
1. In a device of the class described, the combination of a stationary support, a base plate fixed in substantially horizontal position to the stationary support, a motor resting with one edge upon said base and having a driving pulley connected therewith, a belt passed around said pulley, a substantially U-shaped lever fulcrumed to a stationary support below the base and extended upwardly therefrom, means for pivotally connecting the upwardly extended ends of said U-shaped lever to the motor on the side opposite from the side thereof which engages the base, and a spring fixed to the lower end of the lever and to the stationary support tending to move the lever to position for causing the motor to swing to position resting flat upon said base.

1,632,262. FLUID COMPRESSOR. BURTON S. AIKMAN, Milwaukee, Wis., assignor to National Brake & Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 5, 1925. Serial No. 54,632. 19 Claims. (Cl. 230—6.)

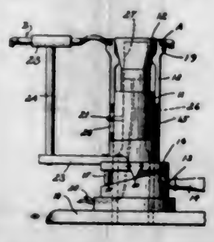
1. In combination, a cylinder head, a closed discharge valve chamber spaced from said head for retaining hot compressed air under pressure, a connection between said chamber and head of low heat conductivity to limit the travel of heat from said compressed air to said head, there being a passageway through said head and connection, a valve in said chamber controlling said passageway, and an intake valve having a seat supported by said head independently of said passageway.

1,632,263. DEVICE FOR EXPANDING WHEEL RIMS. WILLIAM A. ANDERSON, Kanorado, Kans. Filed Feb. 9, 1927. Serial No. 167,010. 3 Claims. (Cl. 157—2.)

1. A device of the class described, comprising a band for engagement with a wheel hub, screw shafts having their inner ends rotatably engaged with the band, and heads adjustable upon the shafts for engagement with the rim of the wheel.



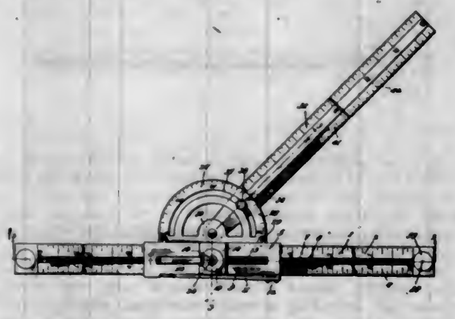
1,632,264. ENGINE-STARTING DEVICE. AUGUST AVIS, Malang, Java, Dutch East Indies. Filed Apr. 18, 1927, Serial No. 184,779, and in the Netherlands June 16, 1925. 4 Claims. (Cl. 185—41.)



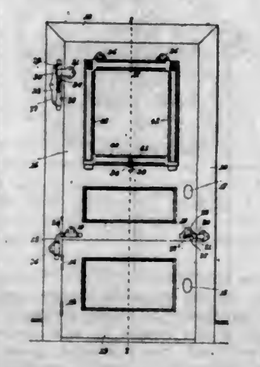
1. An engine starting device, comprising an elongated frame mounted for both endwise and vertical movement and embodying spaced upper and lower horizontal racks; a shaft extending transversely through the space between the racks and provided with a pinion; a starting spring connected to one end of the frame for pulling it endwise in one direction; a spring detent automatically engageable with the other end of the frame when the latter has moved a predetermined distance in the opposite direction; a shaft provided with a cam which is permanently connected with said frame for positively moving it vertically in either direction, so as to bring either rack into engagement with said pinion; and means operated by the rotation of the cam shaft for releasing said detent.

1,632,265. TICKET CABINET. EDWARD AXBERG, Spokane, Wash. Filed Feb. 16, 1926. Serial No. 88,551. 1 Claim. (Cl. 211—31.)

A ticket cabinet comprising a ticket roll container having a flat bottom, a rear wall, a top wall, closed ends and a front plate hinged to the front top edge of said top wall and having its lower edge disposed in slightly spaced relation above said bottom to form a ticket slot, means for locking said front plate in closed position, an inclined glass cover plate disposed over the ticket slot and having its forward edge placed to form a ticket cutter, an inclined delivery flange formed on the front edge of said container bottom beneath said cover plate and parallel thereto, said flange terminating inwardly of the outer edge of said cover plate to provide a finger clearance, a drop plate hingedly suspended from the forward edge of said delivery flange to hang in finger clearing position, said drop plate being formed for closing the ticket slot by being swung upwardly in abutting relation to said cover plate, and means for locking said drop plate in slot closing position.

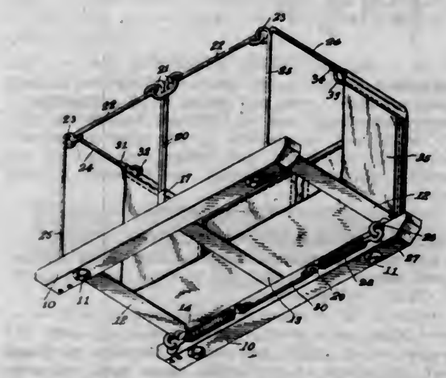


1,632,266. OPHTHALMIC-RIM STRETCHER. NELSON M. BAKER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Sept. 15, 1923. Serial No. 662,933. 6 Claims. (Cl. 81—3.5.)



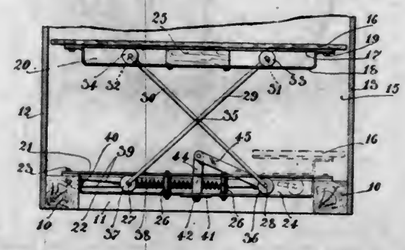
1. In a device of the character described, a base, a support thereon having a conical head, a split sleeve around the support having a seat for a lens rim in line with the conical head of the support, a cam engaging the sleeve whereby movement of the cam will slide the split sleeve on the support against the conical head thereof to expand the sleeve and the supported lens rim thereon.

1,632,267. DRAFTING INSTRUMENT. JOHN C. BEEM, Sawtelle, Calif. Filed Mar. 17, 1926. Serial No. 95,419. 3 Claims. (Cl. 33—110.)



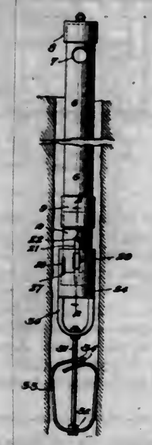
1. A drafting instrument of the class described comprising a base bar, a carriage slidably disposed upon the upper side of the base bar and adjustable longitudinally thereof and having a longitudinally extending slot, a ruler arm supported upon the carriage for angular adjustment with respect to the base bar, a rack upon the base bar extending longitudinally thereof and in alinement with the slot in the carriage, a pawl upon the carriage engaging between the walls of the slot in the carriage and coacting with the rack and reversibly adjustable to engage the rack in either direction with respect to the length thereof, the engagement of the pawl between the walls of the said slot serving to prevent displacement of the pawl, and means for actuating the pawl to exert a thrust against the teeth of the rack to effect adjustment of the carriage along the base bar.

1,632,268. COMBINED DOOR AND TABLE. CHARLES F. BERRY, Boston, Mass. Filed Apr. 3, 1926. Serial No. 99,466. 5 Claims. (Cl. 45—51.)



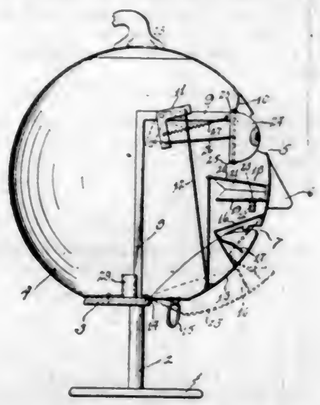
1. A single door element; a frame therefor; two vertically alined hinge connections between one side of said door element and said frame and about the axes of which said door is movable, one of said hinge connections serving both as a hinge for the door element and also a lock, said lock including a bolt which is movable into an unlocking position; and horizontally alined hinge connections between the bottom of said door element and said frame, the pin of one of said horizontal hinge connections being integral with the pin of the lower vertical hinge connection.

1,632,269. COLLAPSIBLE HAMPER. HARRY T. BRADLEY and FRANK JACOBI, Newark, N. J. Filed May 12, 1925. Serial No. 29,699. 7 Claims. (Cl. 150—49.)



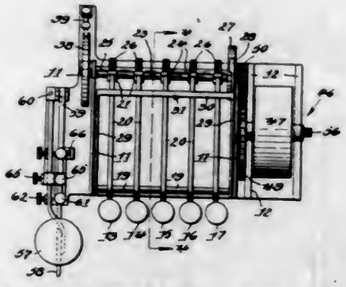
1. A collapsible hamper comprising a pair of spaced skids of rectangular cross section provided with bevelled ends having end and intermediate cross bars, a frame composed of corner, side and rim members interconnected by integral hooks and eyes at their outer ends and simultaneously foldable over said skids, all of the corner and side members having permanently hinged connections with the skids and presenting a regular rectangular structure when erect, and a woven covering at the bottom, sides and ends of the structure above the skids and cross bars thereof.

1,632,270. ADJUSTABLE BOTTOM FOR HAMPERS. HARRY T. BRADLEY and FRANK JACOBI, Newark, N. J. Filed Sept. 22, 1925. Serial No. 57,804. 4 Claims. (Cl. 217—64.)



1. A hamper comprising four walls, a bottom adjustable up and down therebetween, spaced bars attached to the under surface of said bottom, other spaced bars fixed on the hamper frame, rods disposed longitudinally below said bottom having their ends bent to form angular arms, said rods being pivoted at their points of intersection near the ends of said bottom, rollers carried by said rods operative respectively in the spaces between the bars on said bottom and the spaces between the frame carried bars, tension means tending to draw said rods towards each other whereby the bottom is caused to rise, and means for limiting the movement that can be imparted to said bottom.

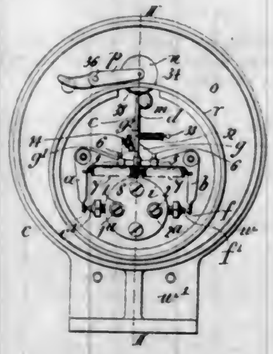
1,632,271. WELL-SEALING DEVICE. HARRY H. BREENE, Tulsa, Okla. Filed May 8, 1926. Serial No. 107,730. 8 Claims. (Cl. 294—69.)



1. A device for depositing sealing material in a well comprising a hollow member containing a valve, an outwardly-springing latch in said member engageable with said valve while depressed, and a sleeve longitudinally movable on said member depressing said latch while in one position and arranged to release said latch on movement to another position.

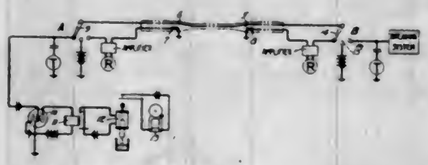
1,632,272. MOVABLE FEATURE FIGURE TOY. JOHN L. CENTLIVERE, Laramie, Wyo. Filed Feb. 19, 1926. Serial No. 89,386. 2 Claims. (Cl. 46—40.)

1. A device of the type described comprising a support, a head mounted upon said support, eye members mounted for movement toward and away from each other in said head, a movable jaw member, and means operatively connecting said eye members and said jaw member for simultaneously moving said eye members toward then away from each other when said jaw member is actuated.



1,632,273. TELEGRAPH TRANSMITTING INSTRUMENT. WILLIAM D. COOPER, White Bear, Minn., assignor of forty-nine two-hundredths to Henry Weiller and forty-nine two-hundredths to Robert C. Sweet, St. Paul, Minn. Filed July 9, 1923. Serial No. 650,345. 12 Claims. (Cl. 178—83.)

1. In a telegraph transmitting instrument, a normally stationary shaft, means for intermittently rotating said shaft, a switch bar adapted to be vibrated, means operatively connecting said shaft with said bar, a series of keys, means severally connecting said keys with said shaft whereby said shaft is allowed to rotate through predetermined different angles when the several keys are manipulated and means under control of the several keys for positively stopping rotation of said shaft upon the completion of predetermined combinations of vibrations of said bar.

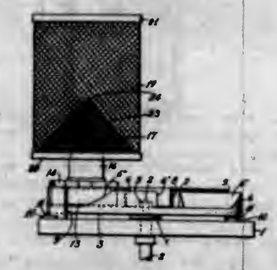


1,632,274. ELECTRIC TRANSMITTER FOR USE IN AUTOMATIC TELEGRAPHY. FREDERICK GEORGE CREED, Croydon, England. Filed June 27, 1922, Serial No. 571,262, and in Great Britain Aug. 16, 1921. 5 Claims. (Cl. 178—17.)

1. In an automatic telegraphic transmitter of the kind comprising a vertical support, two bell crank levers pivoted to the front side thereof and each having a horizontal arm and a depending arm, the two horizontal arms extending towards each other, a rotary tape feed wheel mounted at the front of said support, two upwardly extending peckers connected respectively to the inner ends of the two horizontal arms of said levers and adapted to co-operate with perforated tape, means for depressing the horizontal arms of said levers alternately and spring means tending to raise the horizontal arms of said levers and to move the depending arms of said levers towards

each other, the combination with the two depending arms of the levers of two movable electric contacts carried thereby, two stationary contacts arranged between the movable contacts and carried by said support but insulated therefrom and two insulated contact pins connected to said stationary contacts, extending through said support and adapted to make electrical connection with other insulated contacts, when the transmitter is mounted in position for use.

1,632,275. SIGNALING SYSTEM. AUSTEN M. CURTIS, East Orange, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Feb. 14, 1925. Serial No. 9,175. 21 Claims. (Cl. 178—63.)

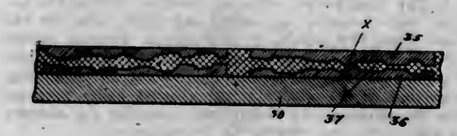


1. In a signaling system, transmitting and receiving mechanisms located at the respective stations, a leak circuit associated with said transmitting mechanism, a device substantially free of hysteresis included in said leak circuit and unresponsive to the operation of said transmitting mechanism, and means controlled by the receiving operator for effecting the operation of said device.

1,632,276. APPARATUS FOR CATCHING FLIES. CALIXTO DE LA TORRIENTE, Habana, Cuba. Filed Jan. 14, 1926, Serial No. 81,283, and in Cuba Nov. 11, 1925. 1 Claim. (Cl. 43—111.)

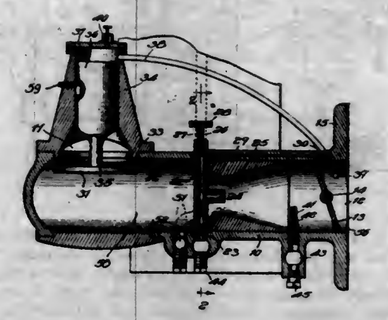
Apparatus for catching flies comprising a platform, a rotary wheel on a shaft mounted across the same and provided on its visible face with a plurality of spaced apart projections of trapezoidal shape with one edge vertically cut and the other edge forming an inclined plane, said projections leaving between them free hollow spaces, a lid covering part of the wheel and forming a tight passage for the projections of the wheel and having

on its end inlet portion an open section covered with a transparent plate and being provided at its outlet end with a hinged door adapted for sliding on each projection of the wheel and for sliding downwards from each inclined edge of the same and thereby forming a closure for the following free hollow space, an outlet element



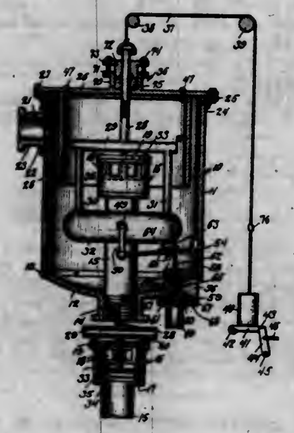
located above an opening of the said lid, near the said small plate and terminating in an upwardly opening trunk-cone, a second upwardly opening trunk-cone which surrounds the first trunk-cone whereby a chamber is formed between them, and a closed receptacle located around the said trunk-cones and removable therefrom.

1,632,277. BEADING AND THE LIKE. CHARLES DESOUTTER, London, England. Filed Jan. 15, 1926, Serial No. 81,532, and in Great Britain Jan. 22, 1925. 3 Claims. (Cl. 3—0.)



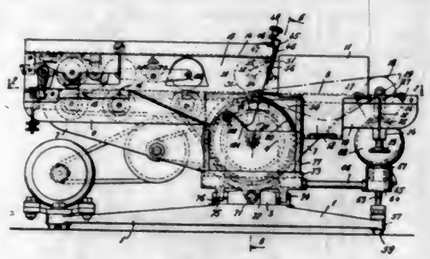
1. Beading for an edge of sheet material comprising a rod or wire having a longitudinal cut in one side to receive the edge of the sheet to leave a flush unbroken surface at the joint partly formed by one surface of the sheet and partly by the surface of the beading, and also having a flange extending therefrom and the inner surface of which serves to bear against the outer surface of the sheet material and is an extension of the outer side of said cut.

1,632,278. METHOD OF PRODUCING COLORED PHOTOGRAPHIC FILMS. LEON F. DOUGLASS, San Rafael, Calif. Filed Oct. 16, 1919. Serial No. 331,067. 6 Claims. (Cl. 95—2.)



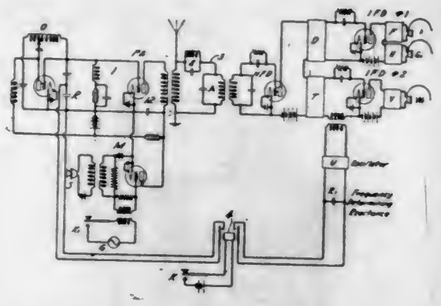
1. A method of producing colored photographic film which consists in exposing a film sensitized with a layer of silver halide emulsion from opposite sides thereof to produce within said layer an inner and outer series of images in registry and of selected intensity and color values, developing said images, toning and dyeing the outer series of said images, treating the outer series of said images with a solution adapted to leave the outer images the color employed in the dyeing step, and toning and dyeing the inner series of images.

1,632,279. CARBURETOR. NOBLE ECKLES, San Diego, Calif., assignor of three-fourths to Lewis W. Rhode, Los Angeles, and one-fourth to Claus Spreckels, San Diego, Calif. Filed Feb. 27, 1922. Serial No. 539,338. 3 Claims. (Cl. 261—41.)



1. In a carburetor, a carbureting chamber having an air inlet and a mixture outlet, a throttle valve in said mixture outlet, a main fuel nozzle discharging into said carbureting chamber, a passageway extending from said nozzle and terminating in said mixture outlet outside of said throttle, and air bleed means open at all times to said nozzle and being adjustable to control the connection of said passageway with said nozzle and said air bleed means.

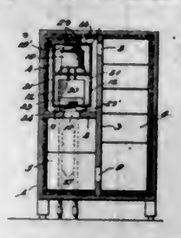
1,632,280. STEAM SEPARATOR. FRANCIS F. EMORY, Leominster, Mass. Filed May 29, 1926. Serial No. 112,632. 7 Claims. (Cl. 183—108.)



1. A separator structure of the character described, comprising a casing having an inlet adjacent the top thereof, a discharge pipe extending vertically within said casing and opening toward the lower portion thereof and having the upper end thereof formed to set up a plurality of apertures, a sliding valve within the upper portion of said pipe, a float element within the casing having connection with said valve to raise same upon the rise of water in the casing, to close the said apertures, and means for draining water from said casing.

1,632,281. STAMP-CANCELING MACHINE. JOHN W. ESKHOLME, East Orange, N. J., assignor to Red Star Appliances, Inc., New York, N. Y., a Corporation of Delaware. Original application filed Mar. 9, 1925, Serial No. 14,045. Divided and this application filed Nov. 17, 1925. Serial No. 69,592. 25 Claims. (Cl. 271—41.)

1. In a machine of the character described, the combination of a platform on which a stack of envelopes may be placed with their bodies substantially horizontal and their flaps hanging downward over the edge thereof in shingled relation, a feeding drum for withdrawing the lowermost envelope, and means for reducing the friction of that envelope on said platform.

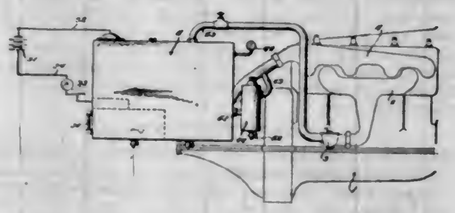


1,632,282. TWO-WAY WAVE TRANSMISSION SYSTEM. JOHN F. FARRINGTON, Flushing, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1923. Serial No. 683,305. 14 Claims. (Cl. 250—9.)

1. In a duplex wave transmission system, a source of outgoing carrier waves effective to aid in the reception of received waves, a local source of waves effective to beat with energy controlled by received waves, and a signaling element for causing equal and simultaneous changes in the frequencies of said outgoing waves and the waves produced by said local source of waves.

1,632,283. COOLING UNIT. JONATHAN P. B. FISKE, Detroit, Mich., assignor, by mesne assignments, to Electric Refrigeration Corporation, Detroit, Mich., a Corporation of Michigan. Filed Feb. 28, 1921. Serial No. 448,549. 3 Claims. (Cl. 62—116.)

1. A refrigerating apparatus comprising a refrigerant compressor, a motor to drive the compressor, a condenser, a vaporizer, and a housing directly supporting the said motor compressor and condenser parts and extending around the vaporizer with air openings through the exterior walls of the housing near the top and bottom parts of the vaporizer to induce circulation of air in and out of the housing, and thermally controlled means associated with the housing opening at the bottom part of the vaporizer for controlling the passage of air therethrough, said

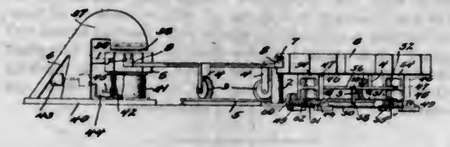


apparatus being assembled and movable as a unit and adapted by circulation of air through said housing to cool the air of any chamber in which the unit is placed.

1,632,284. SHEARS. ARTHUR GARDINER, Midland Junction, Western Australia, Australia. Filed July 9, 1923. Serial No. 650,551. 1 Claim. (Cl. 30—13.)

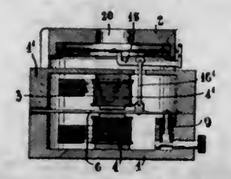
Shears including a pair of opposed handle members, cutting blades being laterally offset at the outer ends of said handles, one of said offset portions having an internally threaded socket projecting from the inner side thereof, an apertured boss formed on the offset portion of the other handle member and adapted to receive therethrough the threaded socket to form a pivot for the handles, and a headed screw adapted to be passed through the boss and threaded into the socket with its head contacting with the outer end of the boss to retain said handle members in their proper relative positions.

1,632,285. GAS GENERATOR. JOHN J. GEORGI, West Orange, N. J. Filed Dec. 6, 1923. Serial No. 678,926. 6 Claims. (Cl. 123—119.)



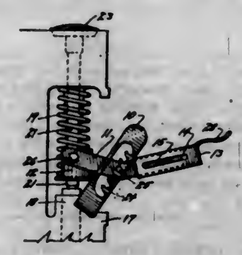
1. The combination with an internal combustion engine, the carbureter associated therewith, and the exhaust from the engine, of a receiving chamber, means for electrolytically decomposing water and delivering the evolved gases to the said chamber, means for conducting a portion of the gas from the exhaust under pressure into the chamber, and means for conducting the mixture of gases from the chamber to the carbureter.

1,632,286. CONCRETE-MOLDING MACHINE. WILLIS GRAHAM, Houston, Tex. Filed Dec. 10, 1923. Serial No. 679,767. 23 Claims. (Cl. 25—66.)



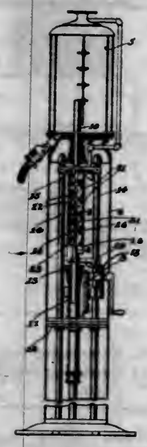
1. A molding device, comprising in combination, an elevated container for moldable material provided with means for regulating the discharge thereof, means for

compressing said material in molds, a conveyor adapted to receive compressed articles, and means for moving a series of pivotally mounted molds into cooperative rela-



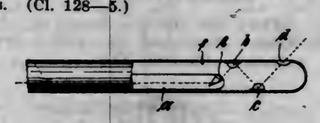
tion successively with said container, said compressing means and said conveyor and means to invert said molds successively to release their compressed contents on to said conveyor.

1,632,287. LOUD SPEAKER FOR WIRELESS TELEPHONY AND OTHER PURPOSES. PETER GRASSMANN, Berlin, Germany. Filed Mar. 20, 1925, Serial No. 17,123, and in Germany Feb. 9, 1925. 5 Claims. (Cl. 179—108.)



1. A loud speaker comprising in combination a sound box having a vibrating diaphragm mounted therein, a telephone casing having an electrically controlled magnet and an armature pivotally mounted therein, a wall separating the sound box from the telephone casing, a controlling pivoted member in the sound box connected to the centre of the diaphragm and a connecting member between the said controlling member and the armature, the points of connection of the connecting member with the said controlling member and with the armature respectively being eccentric with respect to the centre thereof and the controlling member passing through the wall separating the sound box from the telephone casing as set forth.

1,632,288. VALVE-SPRING COMPRESSOR. CLINTON HAYS and WELLINGTON M. THOMAS, Denver, Colo. Filed Aug. 31, 1925. Serial No. 53,505. 3 Claims. (Cl. 29—86.3.)

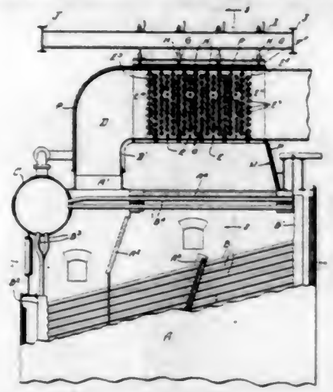


2. A valve spring compressor comprising a lever, a piece of sheet metal bent to partially surround said lever; and a hand rest formed on said sheet metal, said sheet metal being slidable on said lever to form an extension thereof.

1,632,289. LIQUID-DISPENSING TANK. LLOYD S. HENWOOD, Lancaster, Pa., assignor to The National Store Specialty Co., Lancaster, Pa., a Corporation of Pennsylvania. Filed May 20, 1926. Serial No. 110,549. 3 Claims. (Cl. 221—100.)

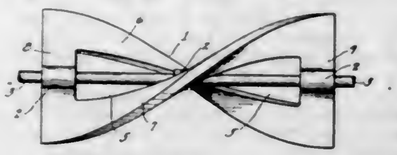
1. The combination with an elevated liquid container and a vertically adjustable overflow pipe movable therein, of a rigid element carried by the overflow pipe and projecting laterally therefrom, a spring urged element associated with the rigid element and slidably received on the latter, and graduated means arranged parallel to the overflow pipe and adapted to be engaged by the spring urged manipulating and latching element whereby to hold the overflow pipe in any predetermined position.

1,632,290. INSTRUMENT FOR THE INSPECTION OF PIPES, CANALS, AND CAVITIES OF THE HUMAN OR ANIMAL BODY. PAUL HEYMER, Berlin-Reinickendorf-Ost, Germany, assignor to Hans Kollmorgen, Berlin-Charlottenburg, Germany. Filed June 27, 1925, Serial No. 40,042, and in Germany July 1, 1924. 4 Claims. (Cl. 128—5.)



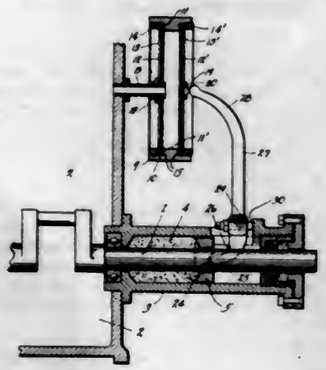
1. Instrument for the inspection of pipes, canals and cavities of the human or animal body comprising an outer tube provided with a lateral window, an inner picture-forming optical system and a reflector located between the window and the distal end of the optical system so as to allow the distance between them to be made at least equal to the tube's diameter.

1,632,291. ECONOMIZER BOILER. EUGENE S. HIGHT, Peoria, Ill., assignor to Power Specialty Company, New York, N. Y., a Corporation of New York. Filed Sept. 18, 1924. Serial No. 738,431. 5 Claims. (Cl. 122—421.)



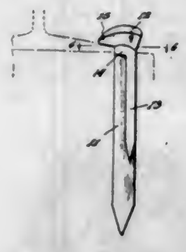
1. In an economizer boiler unit, the combination with a water tube boiler and its housing having a heating gas outlet at the top of the housing adjacent one side of the latter of an economizer located above the boiler and comprising a housing having a heating gas inlet adjacent said one side of the boiler and a heating gas outlet adja-

cent the opposite side of the boiler and spaced away from the top of the boiler housing to provide a heat insulating space, a conduit for passing heating gases from



the boiler outlet to the economizer inlet closing one side of said space, and heat insulating walls closing the other side of said space.

1,632,292. PROPELLER. ONEY A. HONKANEN, Portland, Oreg. Filed June 3, 1926. Serial No. 113,456. 2 Claims. (Cl. 170—156.)



1. A propeller of the character described comprising a rectangular plate having the parts thereof lying at opposite sides of its longitudinal axis formed in half-turn spirals directly opposite each other, said plate being provided for axial mounting on a propeller shaft and having its body portion cut away to provide openings of equal area at opposite sides of the axis.

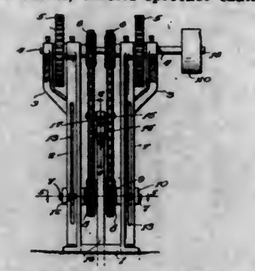
1,632,293. STUFFING BOX. JOHN G. JOHNSON, Tacoma, Wash. Filed June 13, 1925. Serial No. 36,994. 3 Claims. (Cl. 286—31.)

1. In a compressor or the like of the character described, having its driving shaft extended through a wall of the compressor, with a stuffing box encircling the shaft and a packing material within the box as a means of preventing leakage of pressure from the compressor, a gland slidable on the shaft within the box, a drum connected with the compressor casing and adapted to expand and contract in accordance with variations of pressure therein, a pivotally mounted lever bearing at one end against the drum and at its other end against the gland whereby the pressure of the gland against the packing material is caused to vary in accordance with the variation of pressure in the compressor.

1,632,294. RAILROAD SPIKE. CHARLES W. JONES, Richmond, and ROBERT R. GORDON, Glenallen, Va. Filed Aug. 31, 1926. Serial No. 132,870. 1 Claim. (Cl. 85—19.)

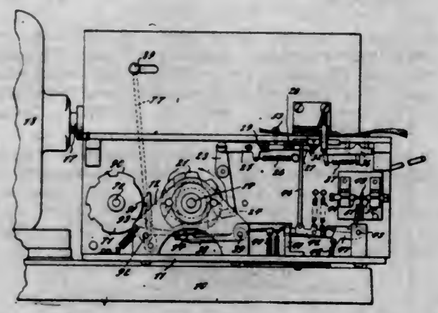
A spike comprising a shank, a head for said shank having a rail-engaging bill projecting forwardly from the shank and side portions projecting from opposite sides of the shank, and wings extending longitudinally of said shank at opposite sides thereof and projecting transversely therefrom with their rear faces flush with the rear face of the shank, said wings having their upper ends formed with heads spaced below the projecting side portions of the head of said shank with their forward ends terminating flush with the front rail-engaging face of the shank.

1,632,295. CONTINUOUS MILL AND METHOD OF ROLLING STRUCTURAL SHAPES. WM. LARIMER JONES, Pittsburgh, Pa., assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 30, 1925. Serial No. 5,842. 12 Claims. (Cl. 80—66.)



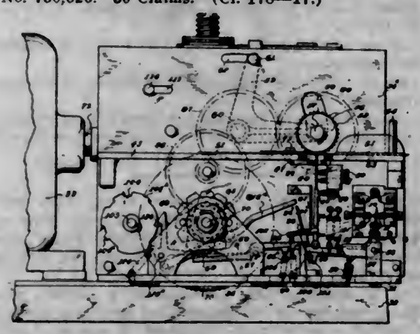
1. A continuous rolling mill for producing structural shapes and other products comprising a series of stands of horizontal rolls forming successive passes for reducing the billet or blank to approximately the shape of the finished product in combination with a stand of vertical and horizontal reducing rolls for finishing the product, the rolls of each pass being adjustable independently of the others.

1,632,296. PUMP JACK. EDMOND E. KINSEY, San Angelo, Tex. Filed Mar. 17, 1926. Serial No. 95,373. 2 Claims. (Cl. 74—14.)



1. A pump jack comprising a head, including spaced uprights formed with longitudinal slots, a yoke having outwardly disposed bearings received in the slots of the uprights, shafts mounted in the bearings of the yoke and spaced apart at their inner ends, other shafts mounted

in the upper ends of the said uprights and spaced apart at their inner ends, sprocket wheels upon the inner ends of the respective shafts, endless sprocket chains connect-

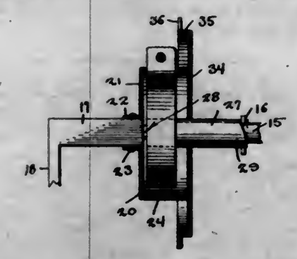


ing the sprocket wheels of corresponding shafts, a pin connected at its ends with the sprocket chains, and a pump rod connected to the said pin.

1,632,297. PRINTING TELEGRAPHY. EDWARD E. KLEINSCHMIDT, Brooklyn, N. Y., assignor, by mesne assignments, to Morkrum-Kleinschmidt Corporation, Chicago, Ill., a Corporation of Delaware. Filed Oct. 3, 1921. Serial No. 504,862. 103 Claims. (Cl. 178—17.)

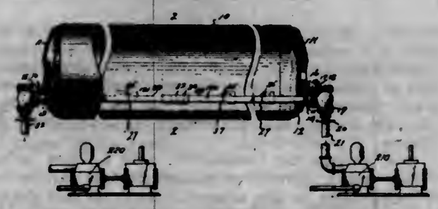
1. Apparatus for transmitting code combinations of electrical impulses comprising a single transmitting contact, actuating means for said transmitting contact, and means embodying a perforated control tape for controlling said actuating means in accordance with the code combinations to be transmitted.

1,632,298. SIGNALING TRANSMITTER. EDWARD E. KLEINSCHMIDT, Brooklyn, N. Y., assignor, by mesne assignments, to Morkrum-Kleinschmidt Corporation, Chicago, Ill., a Corporation of Delaware. Original application filed Dec. 22, 1920. Serial No. 432,564. Divided and this application filed Nov. 18, 1924. Serial No. 750,626. 30 Claims. (Cl. 178—17.)



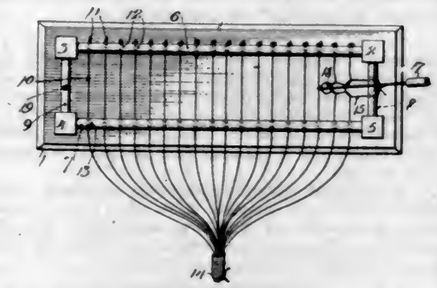
1. A transmitter comprising contact carrying means; means for actuating said contact carrying means to transmit code combinations of electrical selecting conditions; and means for actuating said contact carrying means to precede each code combination with an electrical condition differing in character from the last electrical condition of the preceding code combination.

1,632,299. PROCESS FOR THE PREPARATION OF MAGNESIUM CHROMATES. GEORG KRÄNZLEIN and ARTHUR VOSS, Hochst-on-the-Main, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed June 3, 1926. Serial No. 113,552, and in Germany June 22, 1925. 8 Claims. (Cl. 23—56.)



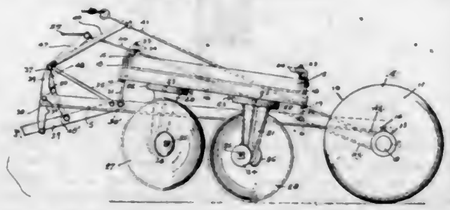
1. A process of preparing magnesium chromates which comprises reacting a chromate of an alkali-forming metal with a magnesium salt of an acid which forms with the alkali-forming metal a salt which is more difficultly soluble in water than the magnesium chromate.

1,632,300. CRANKING DEVICE FOR AUTOMOBILES. TALMAGE H. LE FEVER, New Bloomfield, Mo. Filed Sept. 20, 1926. Serial No. 136,676. 5 Claims. (Cl. 123—185.)



4. A cranking device comprising an angular hand crank, a cylindrical casing secured upon the hand crank having an opening formed in its periphery, a ratchet plate secured to the inner end of the housing and having ratchet teeth formed on its outer periphery, an auxiliary crank rotatably associated with the hand crank, a disc fixed upon the outer end of the auxiliary crank and disposed within the housing, a flexible brake band positioned above the periphery of the disc having angular clip members secured thereto arranged to permit adjustment of the band and projecting through the opening in the housing, the said clip members being secured to the housing and movable therewith, and a pivoted pawl supported upon a rigid bracket arm normally engageable with the ratchet teeth to permit operative movement of the crank and prevent reverse rotary movement thereof.

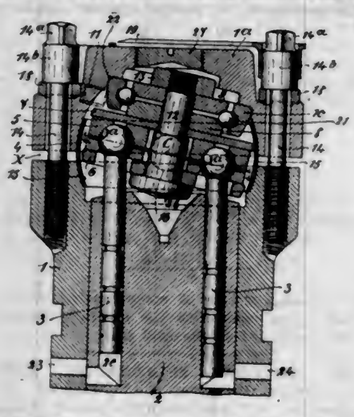
1,632,301. STEAM-BOILER FEED. NATHAN E. LEWIS, Plainfield, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed May 5, 1923. Serial No. 636,839. 7 Claims. (Cl. 122—451.)



1. In combination, a drum for a steam boiler, a feed pipe extending through said drum and projecting through the ends thereof, means for forcing feed water to each end of said pipe, and means for discharging the water from said pipe at a plurality of points longitudinally thereof into the drum.

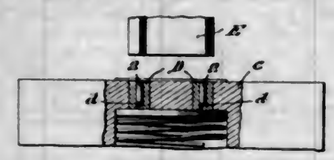
1,632,302. DEMONSTRATING DEVICE. HENRY E. LICHTENSTEIN, New York, N. Y. Filed July 22, 1926. Serial No. 124,145. 4 Claims. (Cl. 35—16.)

3. A demonstrating device comprising a plurality of spaced supports, a plurality of threads spanning the space between said supports, and adapted to be interlocked with each other to form stitches or loops, and a starting loop adapted to be interlocked with one of said first mentioned threads or cords.



1,632,303. DITCHING MACHINE. JESSE G. LINDEMAN, Yakima, Wash. Filed Apr. 10, 1926. Serial No. 101,168. 4 Claims. (Cl. 97—55.)

1. A ditch digging machine comprising a main frame having bearings, an axle rotatably mounted in said bearings, ground wheels adjustable axially of the axle, a supplemental frame disposed transversely of the main frame and adjustable vertically thereon, supports adjustably connected to the supplemental frame and movable into alinement with the ground wheels, hangers depending from said supports and adjustably connected thereto and ground cutting disks rotatably mounted upon the hangers and adjustable therewith, said disks being concavo-convex in cross section and disposed in pairs at the opposite end portions of the supplemental frame, the disks of each pair being further arranged with their respective concave faces presented outwardly and inwardly with respect to the main frame for the purpose described.



1,632,304. PUMP FOR VISCOUS LIQUIDS. JOHANN ALFRED MAURER, Breslau, Germany, assignor to Maurer-Textil-Maschinen G. m. b. H., Konstantin-Schnierstrasse, Breslau-Carlowitz, Prussia, Germany, a Joint Stock Company of Germany. Filed Mar. 9, 1925, Serial No. 14,298, and in Germany Aug. 21, 1923. 7 Claims. (Cl. 103—162.)

1. In a pump, the combination, with a rotary drum provided with a plurality of pockets disposed parallel to and eccentrically of the axis of rotation of said drum, plungers or pistons provided within said pockets and adapted to be reciprocated therein, an annular swash member formed internally with bevelled race ways, a disk shaped member within said swash member formed externally with bevelled race ways, anti-friction balls confined between said pairs of raceways, a guide member connected with said disk shaped member and formed with a guide pocket disposed transversely of the axis of said

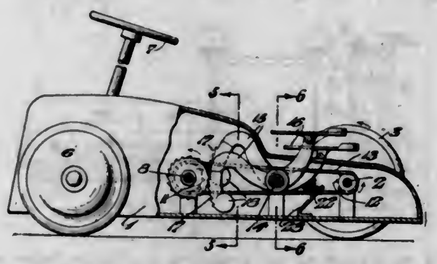
drum, and slide members within said pocket and in universal engagement with the projecting ends of said pistons or plungers.

1,632,305. PROCESS FOR THE PRODUCTION OF STAMPED FIGURES. JEREMIAH MCGREVY, Richmond Hill, N. Y., assignor to Solidarity Watch Case Company, New York, N. Y., a Corporation of New York. Filed June 24, 1925. Serial No. 39,301. 3 Claims. (Cl. 29—160.6.)

1. The process of forming figures to be applied to surfaces, which consists in swaging a metal blank of approximate size for the desired figure with properly located lugs on one surface thereof and then locating such blank in a blanking press by such lugs and punching out the figure with the lugs thereon.

1,632,306. PREPARATION OF SOLUTIONS OF COMPOUNDS INSOLUBLE OR SPARINGLY SOLUBLE IN WATER. WALTER MINNICH, Montreux, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Nov. 10, 1924, Serial No. 749,046, and in Switzerland Nov. 19, 1923. 5 Claims. (Cl. 167—7.)

1. As an article of manufacture, solutions of camphor in phenylacetylene.



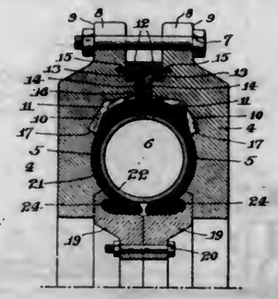
2. As an article of manufacture solutions of camphor and lipoids in phenylacetylene.

5. As an article of manufacture, solutions of camphor and unsaturated acid esters of cholesterol in phenylacetylene.

1,632,307. PEROXIDE OF LEAD, ZINC, AND SULPHURIC-ACID ACCUMULATORS. ARTURO MIOLATI, Padova, Italy, assignor to Rene Leprestre, Rome, Italy. Filed Apr. 22, 1924, Serial No. 708,314, and in Italy May 3, 1923. 4 Claims. (Cl. 136—30.)

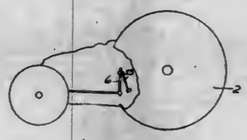
1. In a sulphuric acid accumulator, a positive plate composed entirely of absolutely pure lead and peroxide of lead, a negative plate composed of non-zinciferous material, and an electrolyte free from any trace of impurities more electrolytically negative than zinc.

1,632,308. TOY VEHICLE. SARAH MERTIE MOURER, Philadelphia, Pa. Filed July 6, 1926. Serial No. 120,666. 2 Claims. (Cl. 208—36.)



1. In a device of the character stated, a body provided with a rear axle having a sprocket wheel and including a pair of traction wheels, a pair of forward wheels including a steering wheel for said body, a cross-shaft having a pair of multilated toothed wheels and a sprocket wheel, a sprocket chain connecting said sprocket wheels, a rock shaft and a pair of spring pressed bell-crank levers upon said rock shaft one end of each lever having a foot pedal and the opposite end of each lever being toothed for engagement with a toothed wheel, whereby the operator may stand upon said pedals and maintain his balance by grasping said steering wheel.

1,632,309. PRESERVATION OF ETHER. FERDINAND W. NITARDY, Brooklyn, N. Y., assignor to E. R. Squibb and Sons, New York, N. Y., a Corporation of New York. Filed Apr. 20, 1926. Serial No. 103,259. 10 Claims. (Cl. 23—250.)

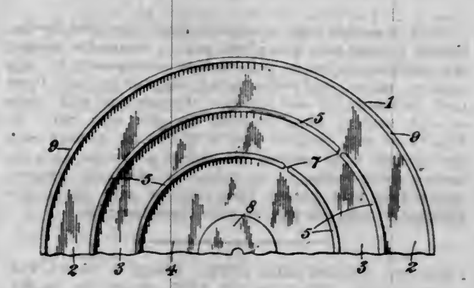


6. The improved package containing ether and comprising a metal container including copper.

1,632,310. TIRE MOLD. JOHN CLIFFORD PAYNTER, Philadelphia, Pa., assignor to Paynter Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed June 14, 1924. Serial No. 720,008. 2 Claims. (Cl. 18—42.)

1. A tire mold comprising separable members forming a chamber to receive the carcass of a tire, means to secure said members together, one of said members having an annular groove formed therein, a set of interchangeable molding sections seated in said groove, and a part having a molding surface detachably secured to said grooved member and holding said sections in place therein.

1,632,311. ATTACHMENT FOR TRACTORS. LOWELL S. PHELPS, Laramie, Wyo. Filed Aug. 2, 1926. Serial No. 126,661. 2 Claims. (Cl. 280—150.)

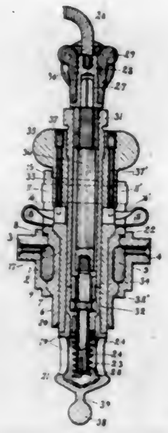


1. In a device of the type described, a foot pedal, means for fastening said pedal to a steering mechanism, and means cooperating with said fastening means for securing said pedal in any desired position.

1,632,312. PROCESS OF CONVERTING CHEMICAL FERTILIZERS TO YEAST AND OTHER ORGANIC SUBSTANCES. FREDERICK C. RAETH, Milwaukee, Wis. Filed Jan. 25, 1924. Serial No. 688,606. 1 Claim. (Cl. 195—20.)

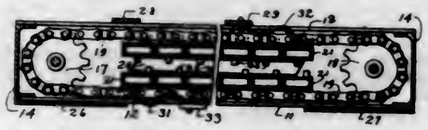
The process of converting inorganically combined nitrogen to organically combined nitrogen for use as fertilizers and foods, consisting in inoculating with yeast an equeous solution of the following composition: to 2 grams yeast fermentable sugar and ½ gram ammonium sulphate, ½ gram ammonium phosphate, ½ gram monopotassium dihydrogen phosphate, 1/20 gram magnesium sulphate, 1/20 gram sodium chloride, approximately $\frac{1}{10}$ gram calcium carbonate, 1/100 gram ferrous sulphate, 1/200 gram manganese sulphate, water approximately 100 grams, and aerating for a period of from 10 to 20 hours.

1,632,313. GRAMOPHONE RECORD. HAROLD ALFRED ROGERS, Cardiff, Wales. Filed Dec. 18, 1923, Serial No. 681,436, and in Great Britain Dec. 19, 1922. 4 Claims. (Cl. 274—42.)



1. A gramophone or like record of the disc type, produced by recording sounds in a rotating blank, said blank rotating at a speed which varies in such manner that the needle velocity changes from the beginning to the end of the record in a ratio which lies between unity and the ratio of the initial to the final radial distances of the needle on the record.

1,632,314. IGNITION PLUG FOR INTERNAL-COMBUSTION MOTORS. CARL AUGUST RUDQVIST, Staket, Sweden. Filed June 26, 1923, Serial No. 647,931, and in Sweden June 7, 1923. 3 Claims. (Cl. 123—145.)

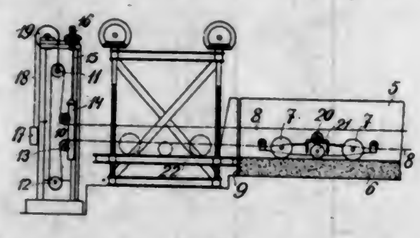


1. An ignition plug, comprising, in combination, a sleeve adapted to be secured in the cylinder wall of an

internal combustion engine, a bushing axially movable in said sleeve and carrying an igniter element adapted to be retracted into and protracted from said sleeve, and a

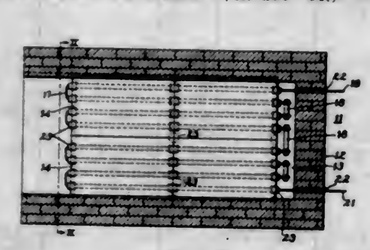
pair of resilient members carried by the bushing and adapted to engage said sleeve thereby to yieldably lock said bushing in its retracted position.

1,632,315. MOVING SIGN. MORRIS SACHS and SOLOMON FLIEDERBAUM, New York, N. Y. Filed Sept. 28, 1926. Serial No. 138,228. 7 Claims. (Cl. 40—78.)



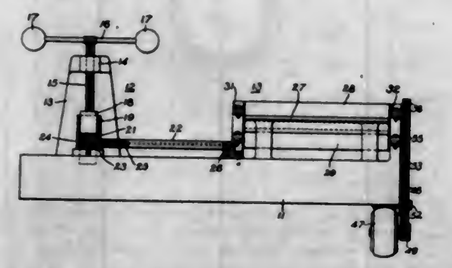
1. In a moving sign an endless flexible member having therein a front part and a rear part, a means for moving the same, two series of sign pockets encompassed by said member one of said series being engaged by said front part, interiorly of said member, the other of said series of sign pockets being engaged by said rear part, interiorly of said member, and a means for moving each sign pocket, as it reaches the end of its series, in a direction transversely to the plane of said sign, thereby disengaging said pocket from one of said parts and bringing it into engagement with the other part.

1,632,316. RENEWABLE FUSE. PHILIP A. SAVOY, Fullerton, Calif. Filed Jan. 28, 1926. Serial No. 84,375. 5 Claims. (Cl. 200—131.)



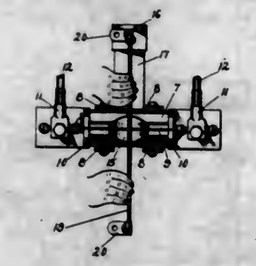
1. A renewable fuse comprising two solid end members having integral collar-shaped sockets in their opposed faces, an insulating member having its ends extending into said collar-shaped sockets and serving to rigidly connect said end members together, a fusible element connecting the end members, and a sleeve removably positioned over the ends of the end members, fusible element and insulating member.

1,632,317. MEANS FOR THE PRODUCTION OF BUILDING BLOCKS. HEINRICH SCHLEGEL, Duisburg-Ruhrort, Germany. Filed July 7, 1926, Serial No. 120,920, and in Germany Oct. 8, 1924. 5 Claims. (Cl. 25—2.)



1. In a plant for the production of slabs or blocks in successive layers, the provision of a mould into which the material is introduced in successive layers, rollers for compressing the material after the introduction of each layer, means for actuating the rollers comprising a motor, a cable passed over guide rolls and connected with the said rollers, and counter-weights for tensioning the said cable, and means for adjusting the height of the rollers to conform with the height of the material in the mould.

1,632,318. ELECTRIC HEATING UNIT. FRANK C. SIMMS, East Palestine, Ohio. Filed May 29, 1925. Serial No. 33,585. 13 Claims. (Cl. 204—64.)



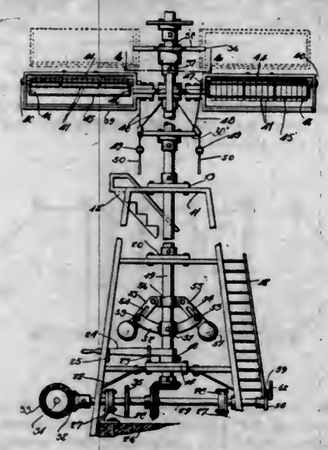
1. A combined muffle and resistor-support, comprising a plate of refractory, heat-and-electric-conducting material, and a tubular member, of electric-insulating material, in said plate for removably receiving a resistor member.

1,632,319. METHOD OF MAKING CERAMIC MEMBERS. FRANK C. SIMMS, East Palestine, Ohio. Filed Nov. 18, 1925. Serial No. 69,766. 11 Claims. (Cl. 25—156.)

1. In a method of making ceramic members, the steps comprising extruding a member of initially semi-moist dust, placing said member under restraint laterally thereof, and quickly drying said member while under restraint.

1,632,320. INSULATION-SEVERING DEVICE. ERNEST H. SIPPEL and NORMAN J. WRIGHT, Toledo, Ohio, assignors, by mesne assignments, to The Electric Auto-Lite Company, Toledo, Ohio, a Corporation of Ohio. Filed June 4, 1920. Serial No. 386,498. 2 Claims. (Cl. 81—9.5.)

1. In a device of the class described, a support, an insulating unit carried by said support and having an axial groove therein, and an electrical heating element partially embedded in the bottom of the groove in said unit and having a thin flat upper edge; said unit being cut away adjacent the center thereof to expose said heating element.

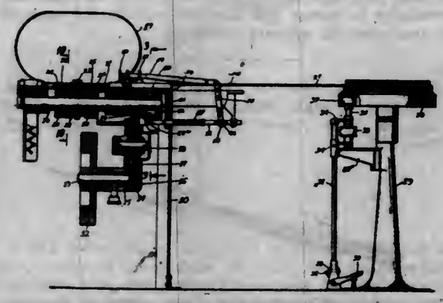


1,632,321. BLOOD-TREATING PROCESS. ALFRED STERNBERG, Berlin-Grunewald, Germany, assignor to Societa Industria Globelte, Milan, Italy. Filed Dec. 4, 1924, Serial No. 753,981, and in Germany Sept. 29, 1923. 5 Claims. (Cl. 99—5.)

1. Process for the preparation of coagulated blood which comprises coagulating said blood, partially drying the coagulum and comminuting the partially dried coagulum.

1,632,322. WINDMILL. LUKE S. STRIPLING, Burkburnett, Tex., assignor of one-half to Robert L. Gragg, Burkburnett, Tex. Filed June 3, 1926. Serial No. 113,486. 14 Claims. (Cl. 170—20.)

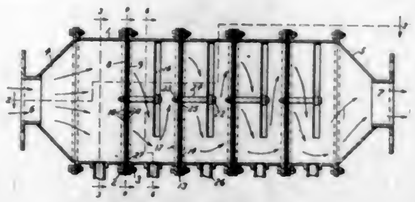
1. In a windmill, a wing including a frame, a shutter rod extending longitudinally of the frame adjacent the upper part thereof, a series of shutter leaves mounted on said rod to swing relative thereto, means to limit the swinging movement of said leaves, a trip bar engaging the rear faces of the leaves, means to support the trip bar for swinging movement about an axis adjacent the



top of the frame, a rock arm operatively connected to the trip bar for swinging the same, and a pull cable connected to the rock arm.

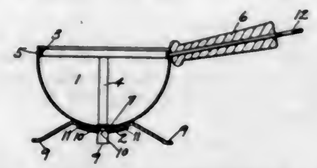
1,632,323. PLASTER BLOCK AND PARTITION CONSTRUCTION FORMED THEREOF. FREDERICK M. VENZIE, Philadelphia, Pa. Filed May 2, 1923. Serial No. 636,059. 3 Claims. (Cl. 72—118.)

1. A clip of the character stated comprised of a backing plate having extended therefrom pairs of oppositely disposed arms to form U-shaped block receiving sockets and channel iron engaging arms arranged between said first mentioned arms some of said arms having serrated, block engaging edges.



1,632,324. BUNDLE-TYING MACHINE. GEORGE D. WALKER, Morgan City, La., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Filed May 18, 1921. Serial No. 470,521. 6 Claims. (Cl. 100—31.)

1. In apparatus for wire-tying an object, a reel, means for controlling the rotation of same, means for retaining wire unwound from the reel in loop formation about the

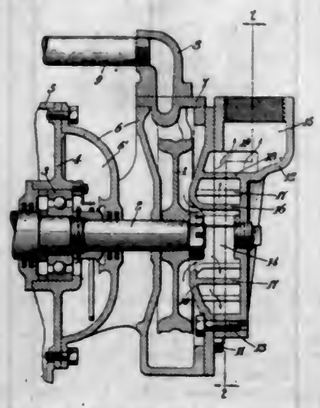


object, wire-tying and cutting mechanism, a clutch controlling the movement of said tying and cutting mechanism and means for tripping the clutch adapted to be actuated by the tensioning of the wire about the object by the rotation of the reel.

1,632,325. GAS SCRUBBER. EVALD ANDERSON, Alhambra, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed May 26, 1924. Serial No. 715,877. 7 Claims. (Cl. 183—112.)

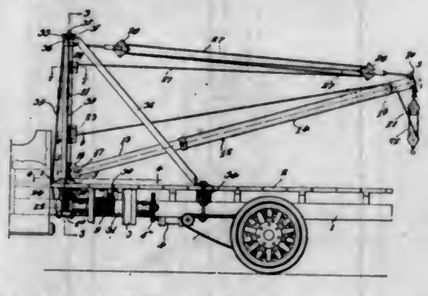
1. A gas scrubber comprising a plurality of separable units connected for passage of gas therethrough successively, each of said units comprising, first, housing means adapted to confine such gas; second, agglomerating means provided with a velocity-producing plate having openings of relatively small total area and an impact plate presenting surfaces opposite said openings in the velocity-producing plate and itself provided with openings adjacent said surfaces and of relatively large total area; third, eliminating means following said agglomerating means and adapted to cause a change in direction of flow of gas while presenting a relatively large total open area for passage of gas therethrough; and fourth, drain means for removal of liquid from the bottom of said unit.

1,632,326. COOKING UTENSIL. SAMUEL J. BELL, West Springfield, Mass. Filed Oct. 21, 1925. Serial No. 63,873. 3 Claims. (Cl. 53—1.)



1. The combination, in a cooking utensil of the class described, with a cup having a bottom perforation therein, of a support beneath said cup, a separator blade within said cup, and lugs passing from said blade through said perforation to engage said support, whereby the blade is actuated when the support is rotated.

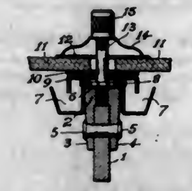
1,632,327. MANNER OF MAKING SICKLE HOOKS. MATTHEW RUSSELL BEROZA, Philadelphia, Pa. Filed Jan. 13, 1926. Serial No. 80,969. 1 Claim. (Cl. 29—148.)



The manner of constructing a new article of manufacture which consists in taking stock metal of T-bar configuration and shearing the forward end in three directions to form a pointed penetrating end and also shearing the single rib of said bar rearwardly throughout the balance of its extent, and thereafter subjecting the sheared bar to a bending operation to provide a rounded supporting portion.

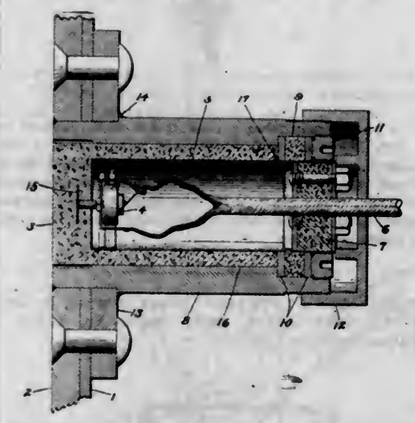
1,632,328. EXHAUST MUFFLER. WILLIAM F. BOUCHÉ, Lancaster, and ELI J. BLAKE, Buffalo, N. Y., assignors, by mesne assignments, to Gould Car Lighting Corporation, Rochester, N. Y., a Corporation of Maryland. Filed Feb. 16, 1922. Serial No. 536,900. 7 Claims. (Cl. 60—64.)

3. Apparatus of the class described comprising a turbine and its casing having an exhaust outlet substantially at the turbine axis and a muffler rigidly secured with respect to the turbine casing and having its inlet connected with said exhaust outlet and also substantially at the turbine axis.



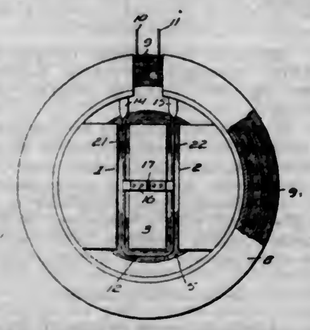
1,632,329. DERRICK CRANE. FRANK W. HAKE, Philadelphia, Pa. Filed Jan. 12, 1925. Serial No. 1,866. 6 Claims. (Cl. 212—59.)

1. A derrick adapted to operate on the platform of a truck in which a hoist is mounted beneath the platform, said derrick having a pipe mast with its lower end rotatably and removably mounted on the platform; a boom associated with the mast; a stiff leg secured to the platform; a second stiff leg secured to the platform and to a support secured to the chassis of the truck and spaced from the first mentioned leg; means rotatably connecting the upper end of the pipe to the legs; and means adapted to be controlled by the hoist beneath the platform for raising said boom and for causing said boom to lift a load.



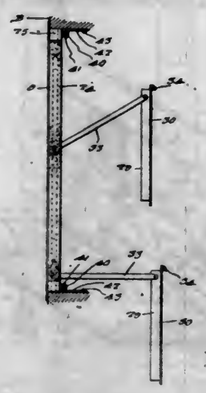
1,632,330. GLASS STRUCTURE. HAROLD B. HAWES, Fairfield, Conn. Filed Aug. 20, 1926. Serial No. 130,407. 4 Claims. (Cl. 108—16.)

1. In a glass structure unit as described, a plain rafter bar, a series of lugs secured to said bar at spaced locations, upwardly extending bolts secured to said lugs, a cap through which the free ends of said bolts extend, glass sections and associated parts supported by said lugs



intermediate the latter and said cap, and nuts driven on the ends of said bolts against the cap whereby all parts are secured in their assembly.

1,632,331. SUBMARINE SOUND RECEIVER. HARVEY C. HAYES, Washington, D. C. Filed Jan. 2, 1924. Serial No. 684,092. 5 Claims. (Cl. 181—0.5.)



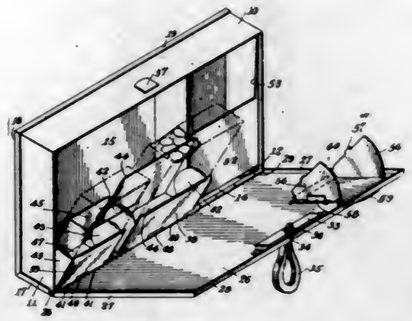
1. In a sound signal receiver, a body provided with an opening, a member of relatively high inertia extending from said opening, a resilient lining within said member, and vibratory responsive means supported by said lining.

1,632,332. ELECTROMAGNETIC SOUND REPRODUCER. HARVEY C. HAYES, Washington, D. C. Filed Sept. 28, 1925. Serial No. 59,110. 12 Claims. (Cl. 179—114.)

1. An electromagnetic sound reproducer comprising in combination, a permanent field magnet system, magnetic gaps interposed in said field magnet system across which a permanent magnetic flux is established, a conductive broken ring like member having a portion of the conductive section thereof disposed between said magnetic gaps, and means for inducing variable currents in said ring member, whereby vibrations are imparted to that portion of said ring member which is situated between said magnetic gaps.

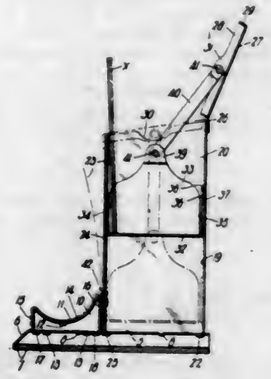
1,632,333. WINDOW STRUCTURE. EDWARD C. HEALY, Muscatine, Iowa. Filed June 5, 1925. Serial No. 35,136. 4 Claims. (Cl. 20—56.1.)

1. A window sash including side and top members, each member made up of a body U-shaped in cross section, a rail U-shaped in cross section and arranged reversely to and slidable laterally in the body with its intermediate portion opposed to and spaced from the intermediate portion of the body, said rail having a channel in its intermediate portion, a screw having a head countersunk in the outer side of the intermediate portion of the body, means disposed in the body for holding said screw against endwise movement relative to said body, a second screw, and a nut on said second screw and disposed in the channel of the rail, the last-named screw alined with the first-named screw and having within the rail a tubular interiorly threaded portion abutting against the inner side of the intermediate portion of the rail and receiving and engaging the first-named screw.



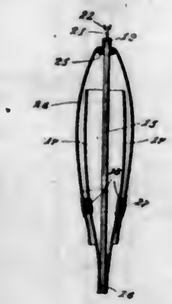
1,632,334. BAG-FRAME HINGE. WILLIAM C. HIBBING, Newark, N. J., assignor to J. E. Mergott Co., Newark, N. J., a Corporation of Delaware. Filed Oct. 7, 1924. Serial No. 742,161. 1 Claim. (Cl. 150—29.)

A bag frame hinge comprising in combination with a pair of channel frame sides, of hinge elements extending integrally from the adjacent members of said channel ends, said elements being substantially half the depth of the frame channels, said elements being coiled to produce cylindrical bights and arranged respectively at the right and left hand ends thereof, L shaped transverse



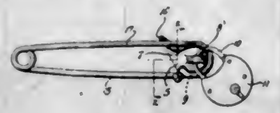
bars at the end of each extension, said bars being tightly engaged with the frame side over the bight, a clip integral with the frame sides adjacent the extensions to retain the bar on the frame side, and a pin passing through each pair of bights, the axes of said pins being in register.

1,632,335. ARTICULATED CASE FOR SMOKERS' REQUISITES. WILLIAM C. HIERING, Newark, N. J., assignor to J. E. Mergott Co., Newark, N. J., a Corporation of Delaware. Filed Apr. 27, 1925. Serial No. 26,175. 3 Claims. (Cl. 206—1.)



2. A cabinet comprising a hollow rectangular body having a hinged, normally closed front cover, said cover containing an opening, a plate hinged on said cover to close the opening, side elements on said plate extending into the body, means to limit the outward swing of said plate, a container removably held in said body, said container having an opening in the upper portion of its front wall, means in said body to press said container against the upper wall of said body and guide means at the bottom of said plate to conduct material into said container.

1,632,336. CARD CONTAINER AND DESK TRAY. WILLIAM C. HIERING, Newark, N. J., assignor to J. E. Mergott Co., Newark, N. J., a Corporation of Delaware. Filed Oct. 3, 1925. Serial No. 60,197. 8 Claims. (Cl. 129—43.)

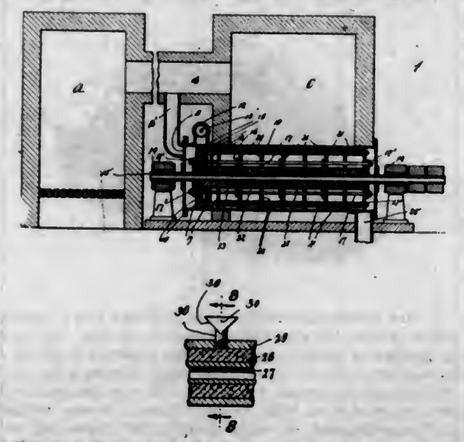


1. A desk appliance comprising a hollow elongated rectangular base, a tray rigidly fixed on the level front portion of said base, a casing narrowly spaced rearward of said tray and fixed to said base, said casing having an inclined top, and a flanged cover hinged to the rear wall of said casing to fold over the top thereof forming a dust proof closure.

1,632,337. PURSE AND LIKE RECEPTACLE. WILLIAM C. HIERING, Newark, N. J., assignor to J. E. Mergott Co., Newark, N. J., a Corporation of Delaware. Filed May 29, 1926. Serial No. 112,465. 3 Claims. (Cl. 150—28.)

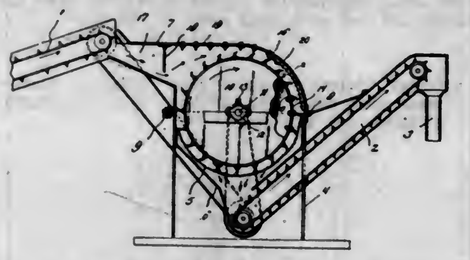
1. A purse comprising a central flat wall, pockets having their lower and side edges fixed to said wall, a channel fixed on said wall, curled grooves formed by the edges of said channel, covers over said pockets having their upper edges pinched in said grooves, snap fasteners between said pockets and covers, and means by which said purse is carried.

1,632,338. PIN FASTENER. EDWIN HORTON, Brooklyn, N. Y. Filed May 1, 1925. Serial No. 27,171. 6 Claims. (Cl. 24—157.)



1. In a safety pin, the combination with a body portion, a penetrating member connected to one end thereof, and a loop member to receive the penetrating member and hold the pin closed, of a removable abutment member to prevent movement of the pin relative to its receiving loop and a lock to hold said abutment member in pin closing position.

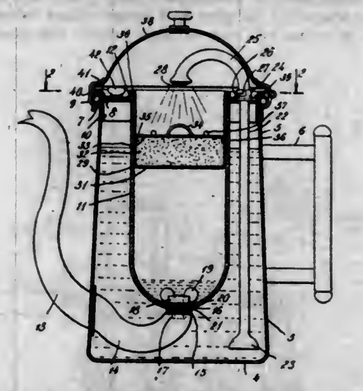
1,632,339. METHOD AND MEANS OF EXTINGUISHING FIRES. KENNETH H. KIEFER, Baltimore, Md. Filed Mar. 14, 1923. Serial No. 625,172. 18 Claims. (Cl. 23—13.)



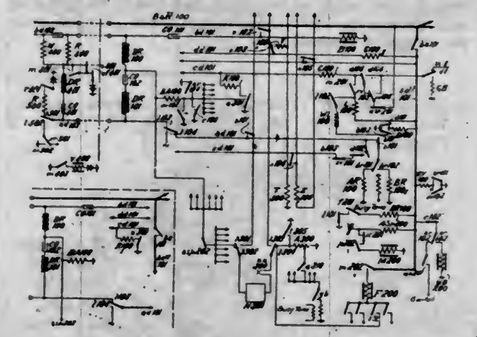
11. In a process of extinguishing fires within bodies of granular combustible material disposed in barges, holds, bins, bunkers, pits, and other confined places, introducing into the burning material a non-combustible, non-flammable, non-aqueous liquid comprising a substance which readily forms with a constituent of the atmosphere a product readily detectable by its visibility until a cloud or smoke appears on the surface of the granular material.

1,632,340. APPARATUS FOR SPEEDING REACTIONS. HERMAN B. KIPPER, Muskegon, Mich. Filed Aug. 1, 1921. Serial No. 489,030. 3 Claims. (Cl. 23—286.)

1. In an apparatus of the character described, a rotary internally cooled shaft, internally cooled hammers carried by said shaft and means for insulating said shaft and hammers to reduce their chilling effect on the reaction material and to simultaneously reinforce the said shaft and hammers, said insulation means including packings and external pipes enclosing said packings.



1,632,341. FEED GRINDER. JOHN KOCH, Eustis, Nebr. Filed Aug. 27, 1926. Serial No. 131,920. 3 Claims. (Cl. 83—11.)

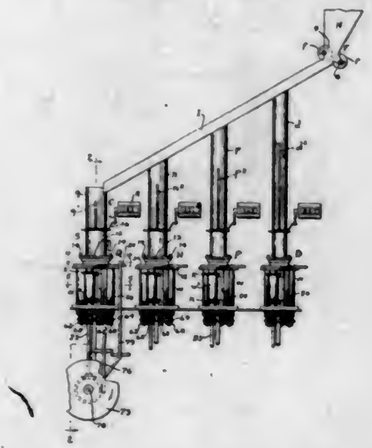


1. In a feed grinder and in combination, a casing, a concave having openings, supported in the casing, a throat or hopper leading to the casing and having its discharge portion disposed above one end of said concave, a cylinder mounted to be rotated in the casing and having spaced hammers on its perimeter, spaced cross bars carried by the top of the casing in front of the throat and extending downwardly from said casing top, and teeth carried by the casing top and arranged curvilinearly in front of the said spaced cross bars with reference to the direction of rotation of the cylinder; the peripheral portion of the cylinder being imperforate, and the space between the cylinder and the curvilinearly arranged teeth being of less width than the space between the cylinder and the transverse bars.

1,632,342. COFFEEPOT. VICTOR LAMBERT, Brooklyn, N. Y., assignor to Aaron M. Sloss, New York, N. Y. Filed Apr. 5, 1924. Serial No. 704,306. 10 Claims. (Cl. 53—3.)

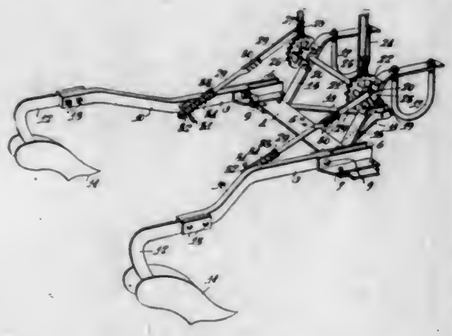
1. In a coffee pot the combination of a vessel having an opening, an annular member having a flange overlying the edges of the opening, a cylindrical member having an open end and a closed end, supported by the annular member with its closed end lying within the vessel, the two members with the vessel providing a coffee compartment within the cylindrical member and a water compartment surrounding it, means mounted in the cylindrical member for supporting granular coffee, a pipe mounted in the annular member and extending from a point near the bottom of the vessel to a point above the supported coffee, and a spout mounted in the vessel and connected with the coffee compartment.

1,632,343. AUTOMATIC TELEPHONE SYSTEM. FRITZ LUBBERGER, Berlin-Schmargendorf, and EDGAR HAHN, Charlottenburg, Germany, assignors to Siemens & Halske Aktiengesellschaft, Wernerwerk, Siemensstadt, near Berlin, Germany. Filed July 2, 1925, Serial No. 40,980, and in Germany July 18, 1924. 5 Claims. (Cl. 179—18.)



1. In an automatic telephone system, a main and a sub-exhange, a group of trunks between said exchanges, a source of current at said main exchange, a single battery conductor between said exchanges, automatic switching equipment in said exchanges, subscribers' lines terminating in said exchanges, means controlled by a calling subscriber for extending a talking connection between the main and sub-exchange over one of the trunks of said group, the current for positioning and controlling said sub-exchange automatic switching equipment being received from said main exchange source over said battery conductor and selected trunk respectively.

1,632,344. WRAPPING MACHINE. FRANK E. MODLIN, Glendale, Calif., assignor of one-eighth to Frank E. Modlin, jr., Glendale, Calif.; one-eighth to Clarence A. Modlin, Kansas City, Mo.; and three-eighths to David L. Walker, Oklahoma City, Okla. Filed Mar. 9, 1926. Serial No. 93,366. 9 Claims. (Cl. 93—5.)



1. In a machine of the character described, a wrapping mechanism comprising a plurality of wrapping rollers, a pair of crimpers at the lower and upper ends respec-

tively of one of said rollers, a plunger between the lower ends of said rollers, means whereby a stack of coins may be introduced between said rollers onto said plunger, means whereby a wrapper may be introduced between the stack of coins and one of said rollers, and means for

rotating said rollers and crimpers to roll the wrapper around the stack and to crimp the ends of the wrapper over the end coins of the stack, and means for elevating said plunger to eject the wrapped stack of coins from the wrapping mechanism.

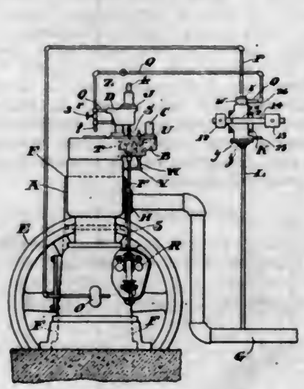
1,632,345. PLOW. GERHART F. MUEHLHAUSE, Bartlett, Tex. Filed Mar. 15, 1926. Serial No. 94,919. 3 Claims. (Cl. 97—47.)

1. A device of the class described comprising a flat draw bar adapted to be secured at its center to the draft lug of a tractor, a pair of upper bracket arms secured to and projecting forwardly upwardly from the draw bar and having provision at their ends for securing them to the rear axle housing of a tractor adjacent the ends thereof, a pair of lower bracket arms secured to and projecting downwardly forwardly and inwardly and terminating in opposed apertured ears adapted to be secured to the side faces of the rear axle central gearing housing beneath the axle and by the bolts commonly employed to secure to said housing parts together, and cultivator elements mounted on the draw bar.

1,632,346. SWEATER. JOHN P. NISSEN, Philadelphia, Pa. Filed May 3, 1924. Serial No. 710,895. 4 Claims. (Cl. 2—90.)

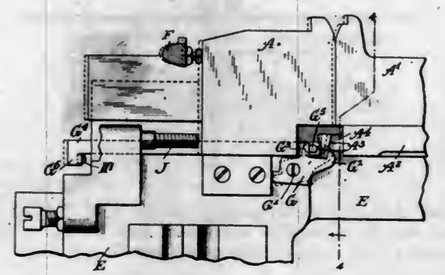
1. The combination with a knitted jacket and a knitted collar carried thereby and adapted to lie over the back of the jacket or be raised about the wearer's neck, of a hood piece carried by the underside of the collar and overlaid by the same when the collar is in its lower position, said hood piece having its outer margin secured to the collar and its inner margin free therefrom and terminating at points in rear of the body of the jacket, and said inner margin being formed of elastic material that will effect a close fit about the face of the wearer when the collar is raised and the hood piece is placed over the head of the wearer, and means on the outer margin of the collar at the juncture of the ends of the hood piece with said collar and at points removed from the juncture of the collar with the body of the jacket for detachably fastening together beneath th chin, the collar and ends of the hood piece.

1,632,347. BOTTLE PROTECTOR. JAMES A. PIPKIN, Waco, Tex. Filed Apr. 18, 1925. Serial No. 24,073. 4 Claims. (Cl. 215—100.)



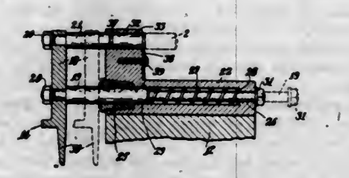
1. A protector for use on drinking vessels comprising a cup having a body portion designed to fit snugly against and surround at least the lower portion of the periphery of the body of the vessel, said body portion having an open top and a bottom closing the lower end of the body portion and designed to fit snugly against the bottom of the vessel, said body portion and the bottom of said cup being constructed of moisture absorbent material, the upper end of the body portion being shaped to present an edge area greater than the cross sectional area of the body portion to increase the moisture absorbent capacity of the upper end, said upper end being fitted snugly against and flatly engaging the periphery of the body of the vessel throughout the entire linear extent of the edge area of the upper end.

1,632,348. COVER FOR FLATIRON STANDS. ETHEL M. PRIOR, Hartford, Conn. Filed Aug. 13, 1921. Serial No. 491,940. 2 Claims. (Cl. 68—27.)



1. A cover of flexible material formed to receive and inclose a flatiron stand, said cover comprising a top part located over and a bottom part located underneath said stand and connected together, one of said parts being formed of a material to prevent the transmission of heat from a flatiron resting upon said cover and stand to the surface upon which the cover rests.

1,632,349. GOVERNOR REGULATOR. EDWARD RATHBUN, Toledo, Ohio, assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey, and The Rathbun-Jones Engineering Company, Toledo, Ohio, a Corporation of Ohio. Filed Aug. 26, 1926. Serial No. 131,660. 5 Claims. (Cl. 230—3.)

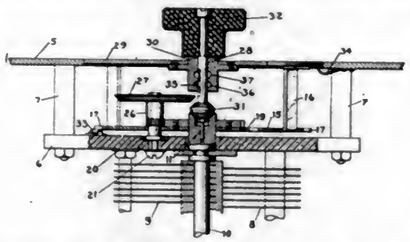


1. A governor regulator for the centrifugal governor of an engine driven compressor or pump unit, comprising a regulating device responsive to pressure from the source of pressure fluid supplied by the unit and to be maintained at substantially constant pressure by varying the speed of the engine, a source of oil under pressure and connections from said source to the regulating device controlled by said device, and a controlling device operated by said oil under pressure and adapted to vary the load on the governor, said controlling device comprising a casing, a stem movable in the lower portion of the casing and supported on the governor push rod, a compression spring supported by said stem, and a hollow piston carried by said spring, whereby variations in pressure in the source of pressure fluid supplied by the compressor unit, cause the said controlling device to change the characteristics of the governor, which in turn varies the speed of the engine as required.

1,632,350. LINE-CASTING MACHINE. ISIDORE T. REMAS, Woodhaven, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Jan. 2, 1926. Serial No. 78,758. 9 Claims. (Cl. 199—50.)

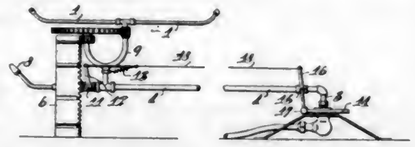
1. In a line casting machine, the combination of a relatively fixed jaw, an opposing jaw movable into contact therewith, a mold, means for advancing the latter against the jaws, and means operable by the mold advancing means for locking the jaws together during casting.

1,632,351. LOOM TEMPLE. FRANK K. SPARLING, New Bedford, Mass., assignor to Frank K. Sparling, Archibald E. Sparling, William D. Sparling, jr., and Thomas Sparling, a Copartnership doing business under name of Sparling Bros. Machine Company, New Bedford, Mass. Filed July 9, 1926. Serial No. 121,360. 4 Claims. (Cl. 139—299.)



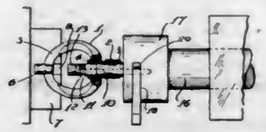
1. A loom attachment comprising a temple adapted to guide the selvage edge of a web and provided with a loose spurred web-engaging roll, an upstanding ear, a shank, and a steady-pin, said shank and pin being attached in spaced apart relation to the ear, and a temple holder adapted to be attached to the breast beam of a loom and provided with a shank guide in which the shank is movable, a spring in said guide, and an upstanding ear having a guide in which the steady-pin is movable, the temple being movable in one direction by the loom lay, and in the opposite direction by the spring, the steady-pin and its guide preventing lateral movements of the shank and minimizing wear of the contacting surfaces of the shank and its guide.

1,632,352. ELECTRICAL CONDENSER. JOHN M. STEWART, Clarendon, Va. Filed Nov. 4, 1924. Serial No. 747,877. 3 Claims. (Cl. 74—7.)



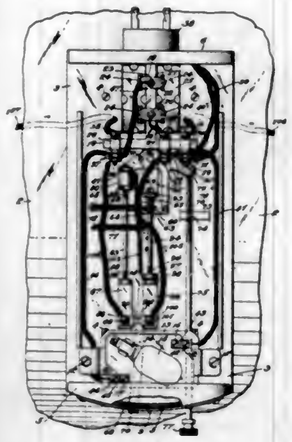
2. A control mechanism including a support, a shaft journaled in the support, a gear housing affixed to the shaft, a train of gears within the housing for imparting motion thereto, means for rotating the shaft consisting of a spindle journaled in the housing and movable parallel with the shaft, means upon the end of the spindle engageable directly with the end of the shaft for direct

rotation thereof by the spindle in its inward position and engageable with the train of gears for the indirect rotation of the shaft by the spindle in its outward position



and means for maintaining the means upon the end of the spindle in pressure engagement with the end of the shaft at the inner position of the spindle.

1,632,353. TRAVELING SPRINKLER. WILLIAM C. TODD and JAMES WILLIAM POMEROY, Victoria, British Columbia, Canada. Filed Dec. 31, 1925. Serial No. 78,606. 1 Claim. (Cl. 299—50.)

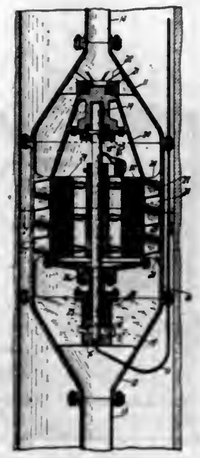


In a traveling lawn sprinkler, a central support, a horizontal pipe rotatably mounted at one end on said support, means for delivering water to said end of said pipe, means on said pipe for moving it around the support as an axis, said means including a reaction sprinkler mounted on said pipe, a traction wheel mounted on said pipe and gear connected with said reaction sprinkler, a supplementary jet pipe extending from the outer end of said horizontal pipe, a valve between said jet pipe and the place where said reaction sprinkler is mounted so as to control water passing through said jet pipe without effecting the flow of water to said reaction sprinkler, a cam plate on said support, a lever pivoted to said horizontal pipe and having an end to cooperate with said cam plate, a rod connecting said lever to said valve, and a spring for holding the lever in cooperative relation to said cam plate and for continuously tending to close said valve.

1,632,354. VALVE-SEAT CUTTER. EMIL TYDEN, Evanston, Ill. Filed May 21, 1923. Serial No. 640 358. 5 Claims. (Cl. 90—12.5.)

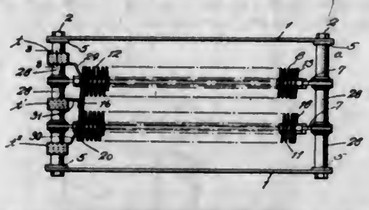
1. A tool for the purpose indicated comprising a stem, a cutter holder mounted at the forward end thereof, and a blade fixed in the holder and provided with a cutting edge at its free extremity, said blade projecting from the rear face of the holder but lying entirely within the projected outline of the holder, and said holder being adjustable with respect to the stem for shifting the cutting edge of the blade laterally beyond the projected outline of the stem for operating upon a forwardly facing area of a piece of work through which the stem is protruded.

1,632,355. THERMOSTATIC CONTROL MECHANISM. VALENTINE WEBER and EDWIN G. PRICE, Newark, N. J. Filed Oct. 8, 1925. Serial No. 61,220. 4 Claims. (Cl. 200—139.)



1. A thermostatic control-mechanism comprising a base, a crank-device movably mounted upon said base, a pair of contact-making and breaking switch-arms associated with said crank-device, an index-arm carried by said crank-device, a screw-threaded projection upon said base, and a screw-threaded setting arm movably disposed in said projection for setting said crank-device and its index-arm, associated with a thermostatic means for independently actuating one of said switch-arms for breaking the electrical contact of said switch-arms, consisting of a bearing with which said base is provided, a rod oscillatorily disposed in said bearing, said rod having a lower portion extending from said bearing, an arm-portion extending from said lower portion of the rod, and a strip of thermostatic metal attached to said bearing adapted to engage the arm-portion of said rod for actuating said last-mentioned switch-arm.

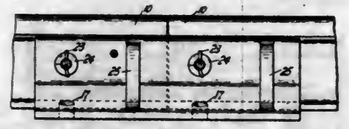
1,632,356. INFLATABLE TOY. ROY B. WEIMER, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 19, 1925. Serial No. 57,360. 2 Claims. (Cl. 46—40.)



1. An inflatable toy comprising a main compartment simulating a human body, head, and leg, supplemental compartments simulating the other leg and both arms connected thereto and interiorly communicating therewith, said supplemental compartments having portions overlying the body portion of the main compartment, an envelope enclosing the body portion of the main compartment and overlying portions of the supplemental compartments only, and means for inflating the compartments.

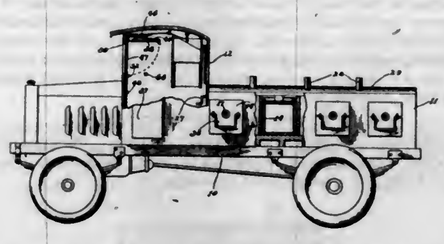
1,632,357. PUMP OR IMPELLER. HARRY WHITE, Kenmore, Ohio. Filed May 24, 1926. Serial No. 111,108. 4 Claims. (Cl. 103—87.)

1. A self-contained pump comprising a pump casing, a fluid-tight motor casing rotatable within the pump casing, an impeller carried by the motor casing, a vane on the pump casing with which the impeller cooperates, a fixed hollow shaft extending through the motor casing, a motor armature secured on said shaft, a motor field secured within the casing about the armature, and means leading into the pump casing and through the hollow shaft into the motor casing for supplying electricity to the motor.



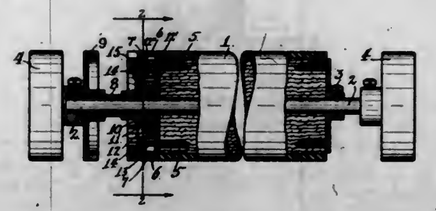
1,632,358. TERMINAL FOR RHEOSTATS. GEORGE H. WHITTINGHAM, Baltimore, Md. Filed June 18, 1925. Serial No. 38,009. 3 Claims. (Cl. 201—63.)

2. In a rheostat, a frame having cross-bars at each end, coil supporting members supported at their ends by said bars, edge wound resistance coils on said members, flat clamps fitting on to said coils, a terminal rigidly secured to and insulated from two of said bars at one end of the frame, and a flexible metal connection between said terminal and one of said clamps.



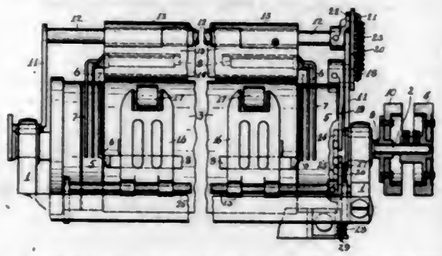
1,632,359. RAIL JOINT. ORVAL L. WILLIAMS, Kenmore, Ohio. Filed Jan. 15, 1927. Serial No. 161,295. 5 Claims. (Cl. 238—182.)

5. A rail joint including the rail and similar joint bars on opposite sides of the rail connecting adjoining ends of the rail sections, each joint bar comprising an upright member for fitting the fishing space, the inner face of said member being beveled to clear the rail excepting at the top edge thereof, the top edge of the upright member being arranged to engage under the rail head and against the rail, a foot flange for resting on the rail flange, a base member for engaging under the base of the rail and beveled on its upper face so as normally to contact the base of the rail only at its inner edge, and pairs of integral studs, one stud of each joint



bar being arranged to project through an aperture in a rail section adjacent its end and an aperture in the adjoining rail section more remote from its end, said studs being elongated so as to extend through the rail.

1,632,360. ARMORED TRUCK FOR TRANSPORTING VALUABLES. CALVIN H. WILSON, McCracken, Kans. Filed May 21, 1924. Serial No. 714,060. 4 Claims. (Cl. 296—24.)

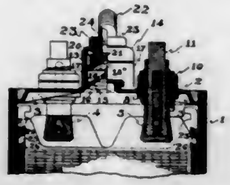


1. An armored truck comprising a cab and a body portion constructed of bullet-proof sheet metal, said body portion being provided with cells opening through the sides thereof, a safety box fitting in each of said cells, and means for locking each box in position; said means including a lever adapted to grip the box, a rotary shaft carrying said lever, and means in said cab for rotating said shaft and moving the lever to a releasing position.

1,632 361. VARIABLE-SPACING PLATEN CLUTCH FOR TYPEWRITERS. HUBERT MCL. ARMISTEAD, San Francisco, Calif., assignor to Manifold Impressions Corporation, Carson City, Nev., a Corporation of Nevada. Filed May 18, 1925. Serial No. 30,908. 9 Claims. (Cl. 197—123.)

1. A variable-spacing platen-clutch for typewriters comprising, in combination with a platen, its rotatable shaft and its definite line-spacing control ratchet; a clutch ring associated with the platen; an annular, expansible split clutch shoe within and coacting with said clutch ring; a radially slidable yoke operatively associated with said control ratchet, said yoke having a wedge to coact with the severed ends of the split clutch shoe to effect and control its expansion; and a cam independently rotatable about the platen shaft and operating within said yoke to move it radially.

1,632,362. MANIFOLDING ATTACHMENT FOR TYPEWRITERS. HUBERT MCLEAN ARMISTEAD, San Francisco, Calif., assignor to Manifold Impressions Corporation, Carson City, Nev., a Corporation of Nevada. Filed May 20, 1925. Serial No. 31,525. 15 Claims. (Cl. 197—126.)

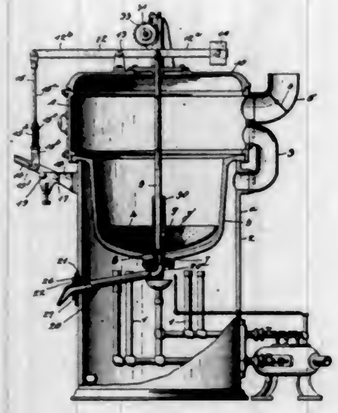


1. In a manifolding device for typewriters, the combination of a manifolding member associated with the platen-carriage of the machine, and adapted to be depressed to functional position in the line of type impact and to be elevated therefrom; and a shield plate mounted on the platen-carriage and overlying approximately the full length of the platen above the elevated position of the manifolding member, and adapted to deflect the uprising paper from the platen and separate it from said elevated manifolding member.

1,632,363. SHOCK-RESISTING GLASS. WILLIAM C. BULL, Brooklyn, N. Y. Filed Mar. 15, 1926. Serial No. 94,730. 3 Claims. (Cl. 49—92.)

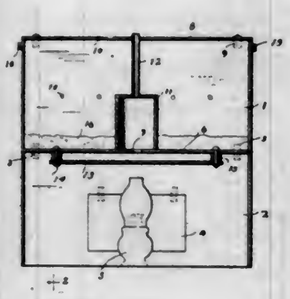
1. As an article of manufacture, a laminated glass product composed of sheets of glass held together by a transparent membrane and at least one of said sheets containing therein only spaced strands of disconnected wires in non-crossing relation.

1,632,364. BATTERY CELL. CAMPBELL C. CARPENTER, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Oct. 23, 1920. Serial No. 418,938. 2 Claims. (Cl. 136—177.)



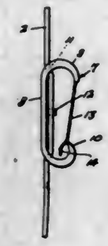
1. In combination, a cell post having a hole extending longitudinally therethrough, said post comprising a member of acid-resisting material having a leading-in conductor embedded therein, said conductor being spaced from said hole by the acid-resisting material.

1,632,365. PROCESS OF PRODUCING PAINTS AND STAINS. GEORGE WASHINGTON CARVER, Tuskegee, Ala. Original application filed June 13, 1923, Serial No. 645,199. Divided and this application filed Jan. 29, 1925. Serial No. 5,638. 8 Claims. (Cl. 134—58.)



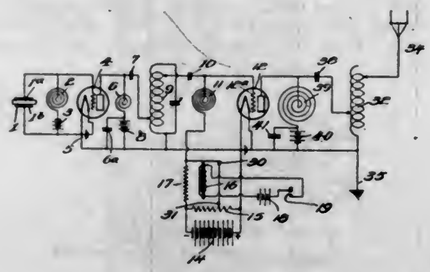
1. The process of producing pigment or the like which comprises treating ferruginous clay with acid, and adding a potassium-iron-cyanogen compound.

1,632,366. MELTING FURNACE. WILLIAM H. CHENOWITH and GEORGE C. SCHIMPF, Curtis Bay, Md., assignors to Harry D. Harvey, Baltimore, Md. Filed Nov. 8, 1924. Serial No. 748,675. 2 Claims. (Cl. 263—14.)



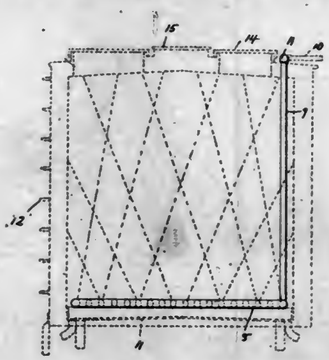
2. In a melting furnace, a casing, a melting pot within the casing and having an outlet opening in its base and a valve seat in said opening, a valve stem extending downwardly through the pot and having a valve at its lower end adapted to fit on said seat when the stem is lowered, a lever fulcrumed on the top of the furnace and having a pivotal connection with said stem, a hand lever pivoted to one side of the furnace, a link connecting said levers, said link comprising two parts and a yielding connection between said parts, and means for locking the hand lever when the valve is seated.

1,632,367. BROODER. HANS A. CHRISTIANSEN and LESLIE E. MERRICK, Agar, S. Dak. Filed July 28, 1926. Serial No. 125,499. 2 Claims. (Cl. 119—32.)



1. A brooder comprising separable upper and lower chambers, a heater in the lower chamber, the upper chamber having a bottom which extends over and closes the top of the lower chamber and said bottom having a centrally disposed opening, a plate attached to the bottom of the upper chamber and spaced therefrom, and terminating at its edges a short distance from the enclosing walls of the lower chamber and a drum supported upon the bottom of the upper chamber in line with the opening therein and having a vent pipe extending from the top thereof through the top of the upper chamber.

1,632,368. TRACE CARRIER. STANLEY J. COLTON, Binford, N. Dak. Filed Sept. 15, 1926. Serial No. 135,620. 1 Claim. (Cl. 54—56.)



As a new product of manufacture, a trace carrier comprising a single body having its opposite ends bent into hooked formation, the bills of the hooks being disposed somewhat in the same plane, one hook forming a keeper for a trace cockeye, the body being formed at its points of connection with the hooks with slots for passage of a carrying strap, being also provided with a central angularly disposed stud for passage through an opening in said strap, a spring latch connected to the free end portion of one of the hooks and extending downwardly beyond the bill of said keeper hook, the extending portion being curved longitudinally to form a seat for reception of said cockeye to facilitate disconnection of the latter.

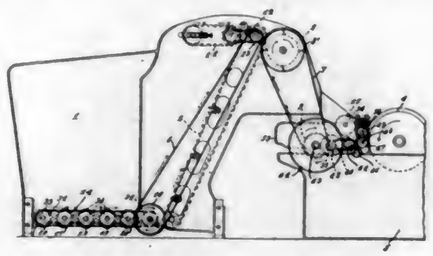
1,632,369. RADIO SIGNALING SYSTEM. ALFRED CROSSLEY, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 12, 1925. Serial No. 62,199. 3 Claims. (Cl. 250—19.)

1. In a signaling system the combination of an electron tube having grid, filament and plate electrodes, input and output circuits interconnecting said electrodes, a source of negative potential arranged to be normally connected with said grid electrode, a resistance interposed between said source and said grid electrode, a potentiometer shunted across said source, an independent connection between a point along said potentiometer and said grid electrode, a relay system, relay contacts actuated by said relay system and interposed in said independent connection on opposite sides of said resistance, and a keying circuit for controlling said relay system whereby said grid electrode may be normally connected with said source of negative potential, and said connection shifted to said point along said potentiometer for changing the value of the negative potential on said grid electrode in accordance with the operation of said keying circuit.

1,632,370. COMBINED GRATING AND SPRAY FOR REFRIGERATOR CARS. LAWRENCE CRUNCLETON and FRED L. CRUNCLETON, Pharr, Tex. Filed June 29, 1926. Serial No. 119,485. 1 Claim. (Cl. 62—15.)

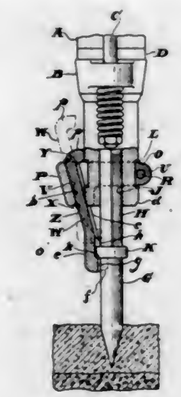
In combination with the bunker of a refrigerator car, a combined grating and spray contrivance in the bottom thereof formed with a rectangular tubular frame having a plurality of tubes across the frame, and a pipe rising from the corner thereof, said tubes and frames being perforated.

1,632,371. PENCIL. GEORGE W. GILMAN, Attleboro, Mass., assignor, by mesne assignments, to The Parker Pen Company, Janesville, Wis., a Corporation of Wisconsin. Filed Nov. 7, 1921. Serial No. 513,226. 22 Claims. (Cl. 120—18.)



19. In magazine pencils wherein is provided a holder with a lead guide, a plunger for feeding the leads, and a screw for moving the plunger forwardly and reversely; the combination with the plunger and screw of means effective at the end of the plunger's forward stroke for holding the plunger and screw in position for engagement upon reverse rotation of the screw while permitting the screw to rotate in the forward direction freely without projecting the plunger.

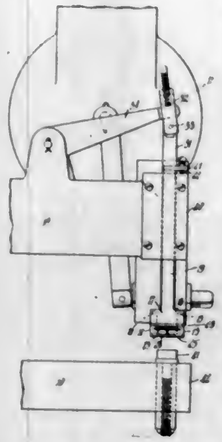
1,632,372. MACHINE FOR OPENING AND PREPARING COTTON. JAMES W. GOODROE, Experiment, Ga. Filed July 29, 1926. Serial No. 125,720. 6 Claims. (Cl. 19—79.)



1. A conveying device for conducting in a forward direction cotton to the elevator of a cotton preparing

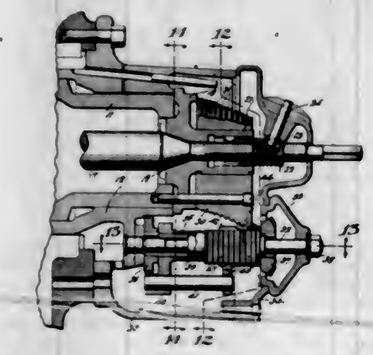
machine comprising a set of lengthwise opposed, spaced, closely arranged, lengthwise corrugated, synchronously operable, forwardly revoluble conveyor rolls, said set

consisting of a rear end roll, a forward end roll and a plurality of intermediate rolls, and means for driving said rolls synchronously.



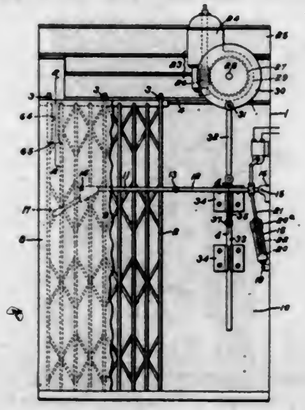
1,632,373. STEEL RETAINER. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 15, 1926. Serial No. 122,677. 5 Claims. (Cl. 121—32.)

1. In a rock drill, the combination of a front head having an annular groove, a drill steel in the front head, a yoke loosely engaged by the groove, said yoke having an inclined longitudinal slot, a retainer arm slidable in the slot whereby it is guided into positions for retaining the drill steel in the front head and for releasing the drill steel therefrom, and means integral with said retainer arm for limiting longitudinal movement of the retainer arm.



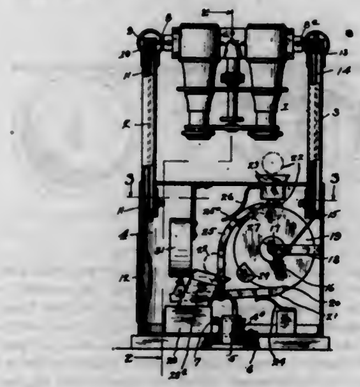
1,632,374. FASTENER-SETTING MECHANISM. ARTHUR R. HAVENER, Wayland, Mass., assignor to Judson L. Thomson Manufacturing Co., Waltham, Mass., a Corporation of Massachusetts. Filed Apr. 22, 1926. Serial No. 103,923. 3 Claims. (Cl. 1—3.)

3. A mechanism for setting an annular pronged fastener having, in combination, a driver provided with an annular groove adapted to receive the head portion of said fastener, a spring-actuated plunger in said driver adapted to frictionally engage the inner face of said annular fastener and hold it positioned thereon, the forward end of said plunger normally projecting out of said driver beyond the annular groove therein, an anvil in alignment with said driver, a support for said fastener comprising a stationary member and a pair of fingers pivoted thereto normally interposed between said driver and anvil and movable toward and away from each other, and a spring acting to move them toward each other,



and means to impart a reciprocatory movement to said driver and plunger, whereby a fastener positioned in said fingers will be engaged and gripped by said driver and plunger, the fastener pushed through between said fingers and its prongs clinched in a piece of material interposed between the fingers and anvil.

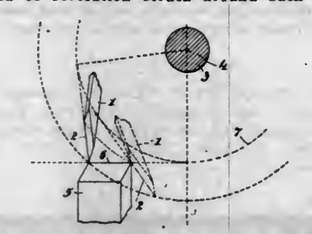
1,632,375. SHAPER. ROBERT T. HAZELTON, Cincinnati, Ohio, assignor to The Cincinnati Shaper Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 25, 1924. Serial No. 733,883. 12 Claims. (Cl. 90—39.)



1. In a metal shaping machine, a ram, a crank gear therefor, a carriage cross-feed screw, a multiple cam rotatable with said crank gear, a ratchet feed transmission mechanism connecting said cam and cross-feed screw including a rocker member engaging said cam, and laterally translatable across said cam for selective engagement with the various cam surfaces, to obtain the varying degrees of feed screw rotation in synchronism with the ram.

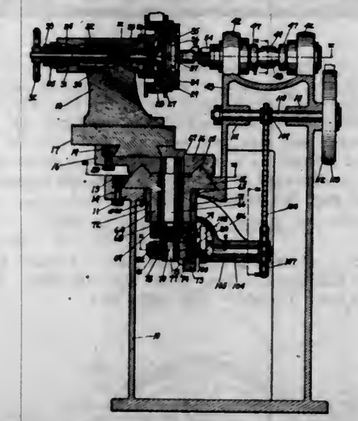
1,632,376. ELEVATOR SYSTEM. JOSEPH R. JACKSON, Jr., Boston, Mass., assignor to A. B. See Elevator Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 27, 1924. Serial No. 695,491. 11 Claims. (Cl. 187—52.)

4. In an elevator system, the combination with manually operable self-closing elevator shaft door operating means, of an elevator car and a motor driven power unit adapted to operate through said shaft door operating means to open said door.



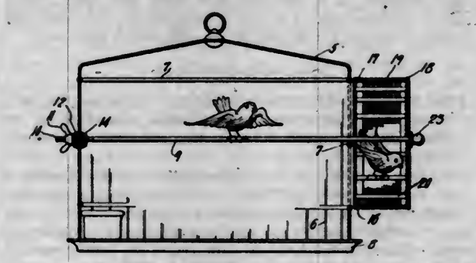
1,632,377. COIN-CONTROLLED OPTICAL INSTRUMENT. HERMAN M. JOHNSON, Portland, Oreg. Filed Nov. 13, 1924. Serial No. 749,652. 8 Claims. (Cl. 194—61.)

1. In a device of the character described, a base, spaced vertical supports carried by said base, an optical instrument carried by said supports, means for locking said instrument in position facing said base which thus serves as a shield therefor, coin controlled means for releasing said locking means, said locking means being reset by a movement of said instrument to its original position.



1,632,378. PAPER-CUTTING MACHINE. FRIEDRICH LERNER, Vienna, Austria. Filed May 9, 1925, Serial No. 29,095, and in Austria May 15, 1924. 13 Claims. (Cl. 164—68.)

1. For a paper cutting machine a transverse cutter comprising a rotary cutter having a rectilinear edge crossing the axis of revolution and constituting in any of its positions a rectilinear generatrix of one set of a hyperboloid of revolution struck around such axis and



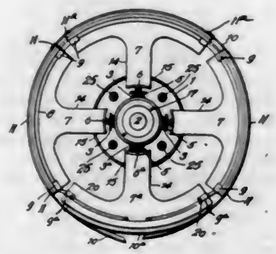
further comprising a stationary knife having a rectilinear edge constituting a generatrix of the other set of the same hyperboloid.

1,632,379. GRINDING MACHINE. HANS LUTZ, Elmira, N. Y., assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 27, 1919. Serial No. 333,766. 8 Claims. (Cl. 51—97.)

1. In a machine of the class described, the combination of a base, an adjustable slide upon said base having a circular track thereon, means for locking said slide in different positions of adjustment, a carriage mounted for oscillation upon said track, a work holder upon said carriage, a shaft journaled upon said slide and connected with said carriage, a bracket connected with said track, a second slide reciprocably mounted upon said bracket, means for reciprocating the same, and means connecting said shaft with said second slide whereby, when the latter is reciprocated, oscillation of said shaft and said carriage will be effected.

1,632,380. BIRD CAGE. HASCAL MARCUS, Brooklyn, N. Y. Filed Nov. 20, 1926. Serial No. 149,621. 2 Claims. (Cl. 119—17.)

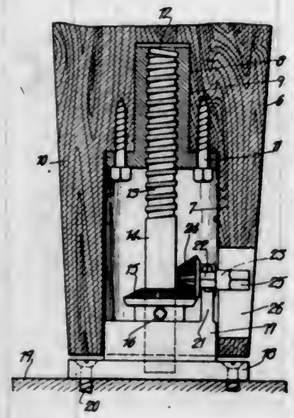
1. A bird exercising device for attachment to bird cages comprising a rod threaded at one end, a clamp at



said end for engagement with the cage bars, a lock for the end of the rod for securing said clamp, a revolvable wheel carried at the opposite end of said rod, and said rod constituting a bird perch within the cage.

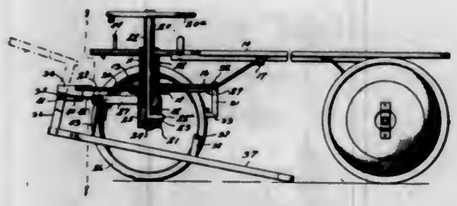
1,632,381. VENTILATOR CANOPY. ROBERT E. PECK, Cincinnati, Ohio, assignor to The Peck, Hannaford & Peck Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 29, 1924. Serial No. 740,637. 6 Claims. (Cl. 98—115.)

1. A ventilation canopy for collecting and disposing of vapors or the like emitted from machines, of sectional casing structure comprising a stationary top adapted to be suspended above the machine and having a vent duct therethrough, and side wall sections about said top combined and slidable as a unit upon said top adapting the same to be depended therefrom and with the top provide a closure over the machine to be vented.



1,632,382. AUTOMOBILE WHEEL. ANTON TOMIS SACRE, San Antonio, Tex. Filed June 10, 1925. Serial No. 36,190. 1 Claim. (Cl. 152—20.)

A combined wheel and rim comprising an expansible wheel having a plurality of sections certain of said sections movable toward and from the center of the wheel at the same rate, a rim section carried by the wheel sections movable at the same rate, and another wheel section movable at a different rate from said first named wheel sections having a rim section secured thereto, and common means for operating all said wheel sections.

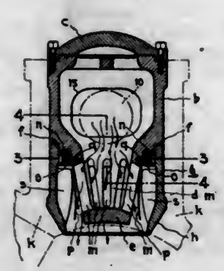


1,632,383. LEVELING DEVICE. SAMUEL SEIDEN, Bronx, and CHRISTOPHER G. MCBRIDE, New York, N. Y. Filed Apr. 9, 1926. Serial No. 100,965. 3 Claims. (Cl. 45—135.)

1. The combination with the leg of a table having a bore in the lower end thereof and an opening adjacent said bore, of an elongated sleeve in the bore fixed to said leg, a screw operable in said sleeve, means disposed in said opening for operating said screw to cause vertical movement of the table, a base for keeping the screw in vertical alignment, the base having an upwardly disposed extension which fits snugly within the bore and serves as a guide for the leg during its movement and an extended foot portion on said base adapted to be secured

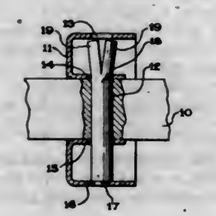
to the floor to form an anchor for the table and a bracket associated with the base and arranged to support the screw operating means.

1,632,384. STEERING MECHANISM FOR COASTER WAGONS. ERNEST SINCLAIR SHOWERS, Champion, Mich. Filed Apr. 29, 1926. Serial No. 105,568. 6 Claims. (Cl. 280—87.5.)



1. A coaster wagon having a body, a front axle and wheels thereon, a steering post operatively connected to the front axle, a tongue operatively pivoted to the front axle and adapted to be shifted from a pulling position to an inoperative position beneath the body, means permitting the tongue to be longitudinally shifted relative to the body in a rearward direction when the tongue is disposed beneath the body, means beneath the body for supporting the tongue when it is disposed beneath the body and shifted rearward, and means for latching the tongue against rearward shifting movement when the tongue is turned into its pulling position.

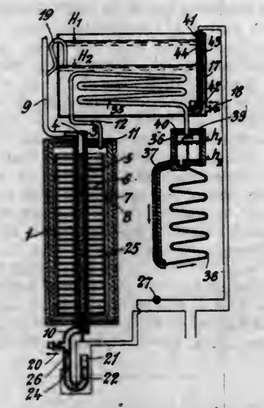
1,632,385. COMPRESSOR. CARL W. VOLLMANN, Montreal, Quebec, Canada. Filed Feb. 15, 1922. Serial No. 536,626. 2 Claims. (Cl. 251—119.)



1. In a compressor for gaseous fluid, an intake member of circular cross-section at its upper portion and having an intake opening in its side and its top permanently closed, the member being reduced in diameter at its lower portion forming a shoulder, the lower portion consisting of a hollow member of truncated conical form

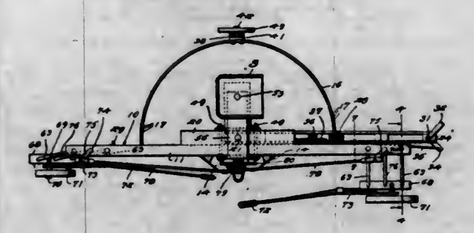
and closed at its truncated lower end and having a surrounding series of longitudinal ports radially opening, a valve case equal in diameter to the upper portion of the intake member and seated against the shoulder and enclosing the truncated conical member, a plurality of separate and distinct check valves equal in number to the

number of the openings and of uniform width throughout their length and controlling the ports, each valve independently controlling only one of the ports, and means for securing the valves at the ends of the ports from which the flow passes therethrough and permitting them to open in the direction of the flow.



1,632,386. PIN. GEORGE A. WATERS, Newkirk, Okla. Filed June 30, 1922. Serial No. 571,935. 1 Claim. (Cl. 287—53.)

The combination of a shaft having a transverse bore, a pulley mounted on the shaft and having inner and outer spaced portions and a plurality of alined openings in registration with said bore, and a pin occupying said openings and bore for holding the pulley on the shaft, said pin having a reduced end portion received by a pulley opening of corresponding reduced size and also having a shoulder bearing against the inner side of the pulley portion in which the reduced end of the pin is disposed, the opposite end of the pin being split longitudinally and defining separated portions arranged within the outer portion of the pulley and adapted to bear outwardly against the latter at diametrically opposite sides of the adjacent opening for the purpose specified.

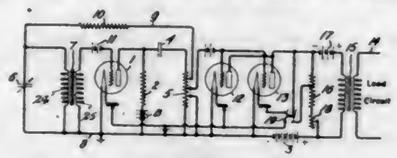


1,632,387. REFRIGERATING MACHINE OF THE ABSORPTION TYPE. IVAR AMUNDSEN, Oslo, Norway. Filed Feb. 21, 1925, Serial No. 10,972, and in Norway Feb. 22, 1924. 1 Claim. (Cl. 62—5.)

A refrigerating plant, comprising a generator-absorber vessel, a stationary cooling water tank, a cooler for the vessel, an intermittent outlet device discharging from the tank, to said cooler, controlled by the water level in the tank, an inlet pipe for the tank, and an outlet pipe for said cooler, control means in the inlet and outlet pipes whereby the duration of the filling and emptying periods of the tank can be accurately controlled and varied as desired, a heating element for the vessel, and a member

actuated by the intermittent flow of water from said tank for cutting the heating element into and out of operation.

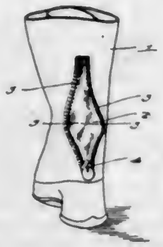
1,632,388. PLOW. WALTER J. CLOER, Young Harris, Ga., assignor of one-half to William M. Fain, Murphy, N. C. Filed Oct. 19, 1926. Serial No. 142,710. 6 Claims. (Cl. 97—24.)



1. In combination, a plow beam, supporting wheels at opposite ends thereof, a plow secured to the beam at the center of the beam and including oppositely facing shares having a comomn land side, an operator's seat rotatably supported from the beam, a draft beam pivoted at one end to the center of the plow beam and shiftable to parallel either end of the plow beam and a connection between the draft beam and the driver's seat, rotating the driver's seat to maintain an occupant of the seat in a position where he constantly faces the free end of the draft beam.

3. In combination, a plow beam, supporting wheels at opposite ends thereof, a plow secured to the beam at the center of the beam and including oppositely facing shares having a common land side, an operator's seat rotatably supported from the beam, a draft beam pivoted at one end to the center of the plow beam and shiftable to parallel either end of the plow beam, a connection between the draft beam and the driver's seat, rotating the driver's seat to maintain an occupant of the seat in a position where he constantly faces the free end of the draft beam and an arcuate track secured at its ends to the plow beam and with which the center of the draft beam engages, the draft beam and track having coacting means for locking the draft beam in a position where it parallels either end of the plow beam, each end of the plow beam having at that face thereof confronted by the draft beam an outwardly extending lug, the draft beam having

openings into which said lugs may extend to thereby prevent vertical displacement of the plow and draft beams.



6. In combination, a plow beam, a plow secured to the beam at the center of the beam and including oppositely facing shares having a common land side, an operator's seat rotatably supported from the beam, a draft beam pivoted at one end to the center of the plow beam and shiftable to parallel either end of the plow beam and a connection between the draft beam and the driver's seat, rotating the driver's seat to maintain an occupant of the seat in a position where he constantly faces the free end of the draft beam, a vertically pivoted shaft at each end of the plow beam, each shaft having an arm, a wheel mount at each end of the plow beam and connected with the plow beam by links pivotally engaged with the plow beam at opposite sides of the associated shaft and with the block adjacent the ends thereof, the free end of the arm of the shaft having a vertical extension rotatably engaged in a bearing in the center of the wheel mounting block, means at the center of the beam operable to rotate said shafts and a land wheel vertically adjustably mounted upon each wheel mounting block.

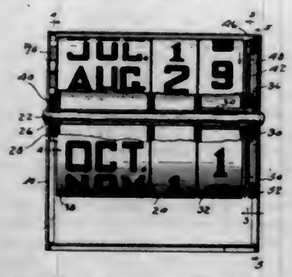
1,632,389. OSCILLATION GENERATING AND SUPPLY SYSTEM. AUSTEN M. CURTIS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 8, 1923. Serial No. 679,316. 4 Claims. (Cl. 250—36.)

1. An oscillator for producing frequencies of the order encountered in Morse telegraph practice comprising an electron relay having input and output circuits coupled by a transformer, said transformer having a core comprising a magnetic material having permeability higher than that of iron of magnetizing forces of 2/10 gauss or less and comprising at least 30% nickel and the balance iron, said core operating to limit the amplitude of the energy supplied by said output circuit to said input circuit.

1,632,390. ARCTIC. JOSEPH M. DIETZ, Ridgway, Pa. Filed Dec. 6, 1926. Serial No. 152,930. 1 Claim. (Cl. 36—50.)

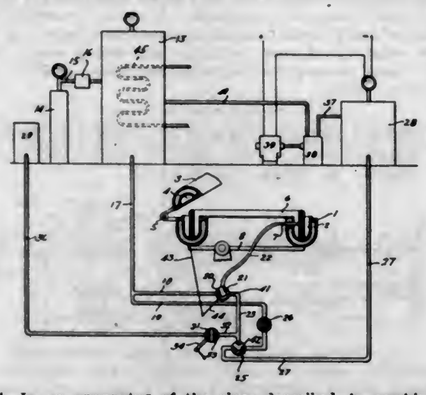
An arctic including a relatively high entrance neck having an elongated opening on its rear side extending from a point just above the heel to a point spaced downwardly from the open top of the neck, and means for bringing the edges of the opening together and fastening them, together with an expansible web fastened to the inner side of the neck and extending across said opening.

1,632,391. SHADE HOLDER. LEROY C. DOANE, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a Corporation of Connecticut. Filed June 16, 1925. Serial No. 37,418. 10 Claims. (Cl. 240—129.)



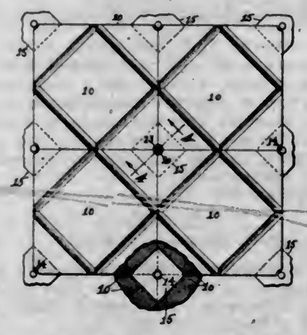
10. A shade holder comprising a flat sheet metal ring and integral legs bent from the inner side of the ring over above the top of the ring and spaced from the top of the ring to receive the flange of a shade and a reinforcing ring attached to the upper ends of the legs.

1,632,392. TOILET ARTICLE. JOHN W. DOUGHERTY and WHEELER E. TOWNLEY, Owensboro, Ky. Filed Sept. 9, 1924, Serial No. 736,719. Renewed Oct. 29, 1926. 2 Claims. (Cl. 132—87.)



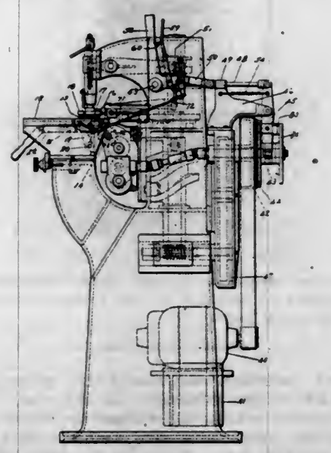
1. A toilet article comprising a brush having a chambered back, a block removably fitted to the back of the brush and adapted to close the end of the chambered portion thereof, said block having a recess in its inner end to receive a mirror and a comb-carrying pocket, and a cushion within the chambered portion of the brush back adapted to frictionally engage the mirror and retain the same and said block upon the brush back.

1,632,393. DESK CALENDAR. GEORGE WALTER ESAU, Milwaukee, Wis. Filed Oct. 27, 1924. Serial No. 746,033. 3 Claims. (Cl. 40—112.)



1. In a calendar of the class described, the combination of a housing, a shaft extending through and secured to the housing walls, a sleeve rotatable on said shaft, a tens date wheel secured on said sleeve to rotate therewith, a units date wheel journaled on said sleeve to rotate thereon, an actuating member concentric with said shaft and adapted to rotate independently thereof and of said units wheel, said actuating member having 31 teeth thereon, means for inserting coins into said housing and against said actuating member to advance such member one tooth for each coin inserted, a driving gear connected with said actuating member, a pinion secured to said units wheel, a transmission gear between said driving gear and said pinion, a second driving gear connected with said actuating member, a pinion secured on said sleeve, and a transmission gear between said second driving gear and said sleeve pinion, said units wheel having ten date indications 1 to 0 thereon, said tens wheel having the indication series 1, 2, 3 and blank three times repeated, said transmission gears being proportioned to cause one step advancements of said wheel for each one tooth advancement of said actuating member.

1,632,394. APPARATUS FOR PRODUCING PNEUMATIC TUBES. WALTER L. FAIRCHILD, New York, N. Y. Filed Oct. 19, 1925. Serial No. 63,368. 5 Claims. (Cl. 18—38.)



1. In an apparatus of the class described, in combination, a mold comprising a pair of mating sections having complementary vulcanizing channels, said mold sections when positioned in mating relation forming a continuous circular vulcanizing chamber adapted to receive a tube to be vulcanized, means for withdrawing air from said tube, means for introducing an inert gas into said tube partially to expand it within the lower section of the mold, said upper section being adapted to be closed upon said lower section to enclose said partially expanded tube, automatically controlled means for thereafter introducing a further quantity of said inert vulcanizing gas into said tube for expanding it within said mold, and means for withdrawing said vulcanizing gas from said tube when the vulcanizing operation thereon has been completed.

1,632,395. RESILIENT WEARING SURFACE. JOHN WILLIAM FELLOWS, Arlington, Mass., assignor to Boston Woven Hose & Rubber Co., Cambridge, Mass., a Corporation of Massachusetts. Filed Jan. 11, 1926. Serial No. 80,468. 5 Claims. (Cl. 94—13.)

1. The combination with a foundation member, of a plurality of resilient members co-operating to form a wearing layer for the foundation member, resilient members connecting together a plurality of the members of said wearing layer and provided with a reinforcing member, and fastening devices extended through said resilient connecting members and said reinforcing member for securing the wearing layer to said foundation member.

1,632,396. METHOD OF CUTTING LEADERS, GEARS, OR RACKS. MARK E. FERNALD, Southboro, Mass., assignor to C. C. Blake, Incorporated, Boston, Mass., a Corporation of New York. Filed Jan. 3, 1923. Serial No. 610,442. 10 Claims. (Cl. 90—3.)

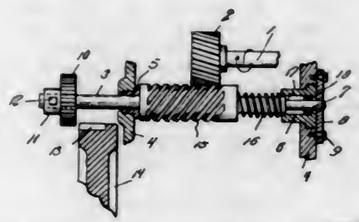
1. That improvement in the process of making leaders, gears and racks which consists in providing a suitable blank for a leader, gear or rack; cutting teeth having a predetermined circular pitch along said blank; stopping the cutting of said teeth with the blank short a predetermined number of teeth; determining the amount of circular pitch necessary to evenly space the said predetermined number of teeth in the remaining uncut portion of the blank, and then cutting the said predetermined number of teeth having the determined circular pitch to finish the blank.

4. That improvement in the progress of making leaders, gear and racks which consists in providing a suitable blank for a leader, gear or rack; providing the blank with a pair of trips or cams spaced apart a distance equal to a predetermined number of teeth having a predetermined circular pitch; inserting the blank into a cutting machine having its feed adjusted to the predetermined circular pitch; operating the machine to cut teeth having the predetermined pitch along said blank; stopping the machine upon engagement with one of the trips; measuring the distance remaining uncut on the blank to determine the amount of circular pitch necessary to evenly space the said predetermined number of teeth in the remaining uncut portion of the blank; changing the feed of the machine in accordance with the determined circular pitch; restarting the machine to cut the said predetermined number of teeth having the determined circular pitch, and stopping the machine upon engagement with the second trip on the blank.

1,632,397. COOLING TOWER. JOHN SIMON FLUOR, Los Angeles, Calif., assignor to Fluor Construction Co., Los Angeles, Calif., a Corporation of California. Filed Oct. 27, 1925. Serial No. 65,123. 10 Claims. (Cl. 261—108.)

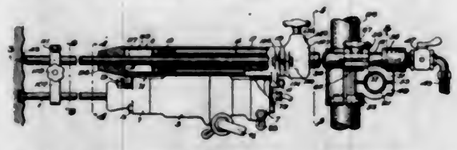
3. In a cooling tower of the class described, a plurality of supporting posts, angular brackets secured to said supporting posts in superimposed relationship, said brack-

ets having flat, upwardly inclined supporting portions, louvers resting at their lower ends upon said angular portions between the brackets and the supporting posts,



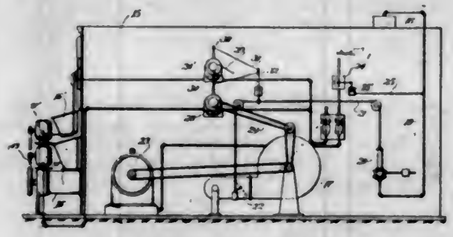
and means connected to each louver intermediate its ends serving to fasten it to the bracket next above on said supporting posts.

1,632,398. METHOD OF PRODUCING TUBULAR ARTICLES FROM PULPOUS MATERIAL. CLEM H. FRANKS, La Grange, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 7, 1924. Serial No. 742,104. 22 Claims. (Cl. 92—54.)



1. A method of forming a tubular article, which consists in applying moist pulp to a continuous elongated flexible strand, severing the pulp coated strand into a plurality of sections, and withdrawing the strand from the individual sections.

1,632,399. STARTING DEVICE. ULYSSES S. GEIGER, North English, Iowa. Filed Aug. 16, 1926. Serial No. 129,446. 1 Claim. (Cl. 74—7.)

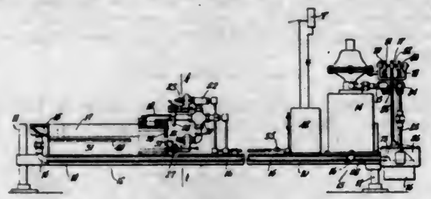


In an engine starting device of the class described, a support including spaced side walls provided with registering openings, bushings arranged in the respective openings, a driven shaft journaled at its end portions in said bushings, said driven shaft being adapted for axial movement, the inner end of the driven shaft being reduced, a cover plate secured on the outer face of the inner side wall of said support over the opening therein, said cover plate being provided with an opening through which the reduced inner end of the driven shaft extends, a gear mounted on the outer end of the driven shaft and adapted to engage a member of the engine to be started, a drive shaft arranged in parallel spaced relation with respect to the driven shaft, a driving pinion secured on the outer end of said drive shaft, a relatively wide spiral gear keyed on the driven shaft at the intermediate portion thereof, said spiral gear cooperating with the driving pinion on the drive shaft to effect the axial movement of the driven shaft whereby the gear mounted on the outer end of the driven shaft is moved into operative engagement with said aforementioned member, and a normally expansible coil spring encircling the driven shaft and disposed between the inner end of the wide spiral gear keyed on the driven shaft, and the inner bushing for returning the driven shaft to its initial position.

1,632,400. DRILLING MACHINE. GEORGE H. GILMAN, Belmont, Mass. Filed July 18, 1921. Serial No. 485,707. 27 Claims. (Cl. 121—9.)

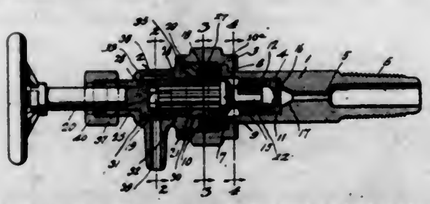
1. A drilling machine having, in combination, an elongated supporting part adapted to be supported at spaced points lengthwise thereof, a drill steel actuator arranged in parallel relation to said part, means including a feed cylinder for slidably supporting said actuator on said part between said spaced points, said feed cylinder being rotatable about the axis of said part.

1,632,401. STOKER-RAM DRIVE. DALLAS F. GRAHAME, Toronto, Ontario, Canada, assignor, by mesne assignments, to Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 28, 1922. Serial No. 532,429. 12 Claims. (Cl. 110—103.)



1. The combination with an underfeed stoker having a plurality of rams, a boiler, and a boiler-pressure responsive device, of respective ram-plunger driving means, an electric motor for each said means, a circuit control switch for each motor to start and stop the same, and means controlled by said boiler-pressure responsive device controlling the periodicity of such operation of said switches, whereby the duration of dwells between ram-plunger reciprocations is varied.

1,632,402. OIL BURNER. ALBERT E. GRANT, New York, N. Y., assignor to Caloroil Burner Corporation, a Corporation of Delaware. Filed May 2, 1921. Serial No. 466,183. 7 Claims. (Cl. 158—73.)

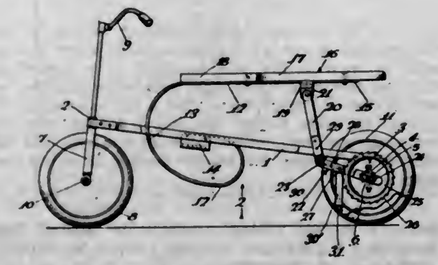


1. A portable burner to be installed in connection with a furnace, comprising a unitary base member adapted to be supported within the furnace at one end,

steam generating and flame forming apparatus detachably mounted at the furnace end of said base member, fuel and water control means detachably mounted on the

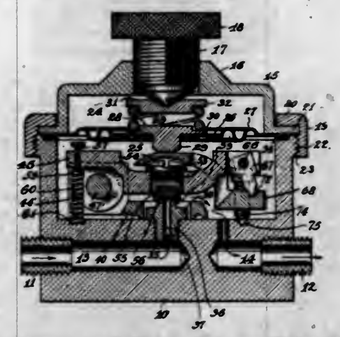
other end of said base member, and connections between said steam generating and flame forming apparatus and control means extending along said base.

1,632,403. GAUGE COCK. JOHN WALTER GRANTLAND, Cincinnati, Ohio, assignor to The Edna Brass Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 30, 1925. Serial No. 65,853. 2 Claims. (Cl. 251—22.)



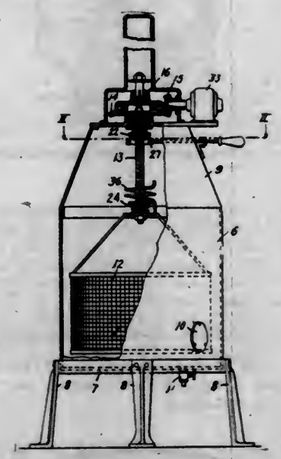
1. A valve, comprising, a valve body having a valve seat therein, a bonnet removably secured to the body, a renewable valve seat disposed between said valve seat and bonnet, a two part valve stem, said parts splined together, one part hand rotatably extending through the bonnet, a nut within the bonnet securing said first stem part against translation, the second valve stem part threaded in the valve body between the renewable valve seat and the valve seat in the body, said second stem part adapted to seat on either valve seat selectively.

1,632,404. CEMENTING MATERIAL. JAMES THOMAS GRIFFIN, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 12, 1922. Serial No. 587,673. 4 Claims. (Cl. 87—17.)



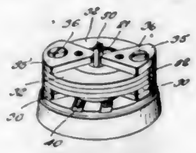
4. A cementing material for joining ceramic articles, consisting of granulated lead borate glass held in tablet form by naphthalene.

1,632,405. VEHICLE. ARTHUR W. HARRISON, Los Angeles, Calif., assignor of one-half to John E. Osborne, Los Angeles, Calif. Filed Mar. 22, 1926. Serial No. 96,558. 3 Claims. (Cl. 208—35.)



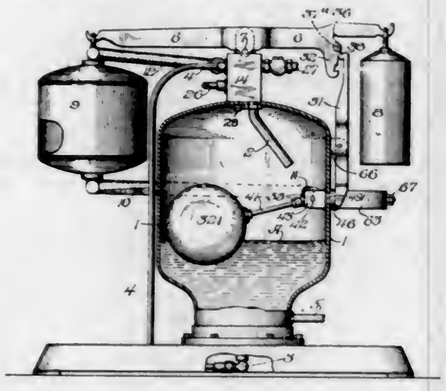
1. A vehicle comprising in combination a framework, a driving axle having a plurality of wheels, a front axle having a steering wheel, a leaf spring attached to the frame, a seat mounted on the free end of the spring, a link connected to the seat, a ratchet gear attached to the driving axle, a yoke having slots with the driving axle extending through the said slots, a pivotal connection between the yoke and the link, and a pawl on the yoke engaging the ratchet.

1,632,406. PRESSURE-REGULATING VALVE. WILLIAM C. HEYDECKER, Jr., New York, N. Y. Filed June 22, 1926. Serial No. 117,712. 4 Claims. (Cl. 50—26.)



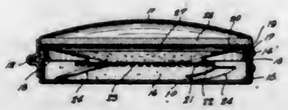
1. A pressure regulating valve comprising a casing formed with a communicating inlet and outlet, a rocker member positioned in alignment with said communication, a screw valve carried by said rocker member at its center, a lever mounted in alignment with said rocker member, the free end of said lever being positioned directly above and in alignment with said screw valve, and a screw operatively connected to said lever and mounted directly above and in alignment with said lever, rocker member and screw valve whereby said screw valve is positively operated.

1,632,407. WASHING MACHINE. JOHN S. JENKS, Pittsburgh, Pa. Filed Dec. 29, 1919. Serial No. 347,992. 13 Claims. (Cl. 68—18.)



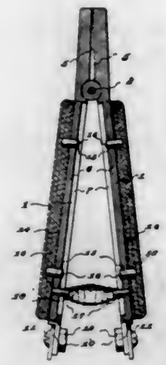
1. In a washing machine, a fluid container, a movable container therein for holding the article to be cleaned, means for raising the movable container while rotating it in the fluid, means for automatically permitting the movable container to rotate a predetermined amount when lifted from the fluid container, and means for releasing the movable container to permit it to return to the fluid while being rotated at a relatively high rate of speed.

1,632,408. SOUND-PRODUCING DEVICE. FRANK J. KAEHNI and WILLIAM L. KAEHNI, Cleveland, Ohio, assignors to The Cleveland Trust Company, trustee, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 9, 1924. Serial No. 742,633. 8 Claims. (Cl. 197—100.1.)



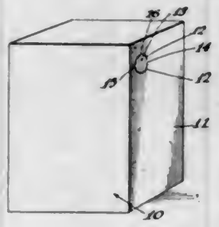
1. The combination with a phonograph reproducer having a rockable stylus and sound reproducing diaphragm, and a magnetic device responsive to audio-frequency variations in an electric circuit and consisting of a base member, and a permanent magnet of flat arcuate pieces, pole members secured thereto to form in effect with the said pieces a continuous magnetic annulus and extending inwardly from such annulus, a vibrating member between the poles, an electromagnetic coil for subjecting the vibrating member to variable magnetic flux, said vibrating member adapted to be connected with the rockable stylus.

1,632,409. CARBONATOR. ALPHONSO L. KOENIG, Chicago, Ill., assignor to The Koenig Carbonators, (Inc.), a Corporation of Illinois. Filed Dec. 5, 1923. Serial No. 678,576. 12 Claims. (Cl. 261—27.)



1. In combination, a carbonating chamber, a liquid-delivery pipe, a gas-delivery pipe, a float in said chamber, and means controlled jointly by said float and by the weight of a body of liquid that has been delivered to said chamber for opening and closing communication between said pipes and said chamber.

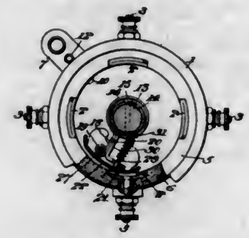
1,632,410. VANITY BOX. ANKER S. LYHNE, Bridgeport, Conn. Filed Oct. 21, 1925. Serial No. 63,981. 6 Claims. (Cl. 132—83.)



1. In a vanity box, cover and body sections, one of said sections including a loose powder container, a cover for said container having an opening, and a closure for said opening comprising a plate disconnected from the cover provided with integral, downwardly extending resilient fingers to engage the bottom of the container and yieldingly hold the closure over the opening, said fingers being arranged to extend transversely of radial lines from the center of the plate and spaced from this center.

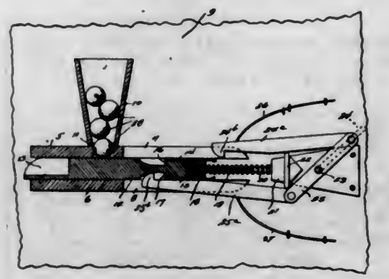
1,632,411. WELDING TOOL. ROYAL MATTICE, Bethlehem, Pa. Filed July 7, 1925. Serial No. 42,000. 6 Claims. (Cl. 219—8.)

1. Welding tongs comprising two members pivoted to each other at a point intermediate their ends, and a telescopic spring connected to said members on one side of said pivot and normally urging the portions of the members on the other side of said pivot toward each other.



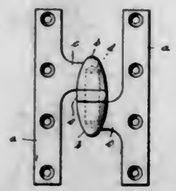
1,632,412. DISPENSING CARTON. ROBERT C. MCCRYSTAL, Los Angeles, Calif., assignor of one-half to Herbert D. Field, Los Angeles, Calif. Filed Jan. 19, 1926. Serial No. 82,217. 4 Claims. (Cl. 229—7.)

4. A carton having incisions formed in one of its walls defining a cut-out forming a door which is connected by webs to the wall in which it is formed on which the door may swing, said webs being arranged on opposite sides of the cut-out so that a line connecting the center of the webs divides the cut-out portion into sections of unequal area, whereby inward pressure upon the larger section causes the smaller section to swing outwardly.



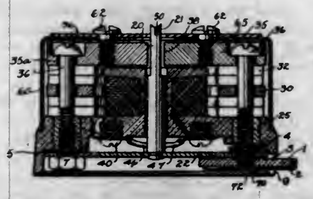
1,632,413. SPARK TIMER. ARTHUR R. MOSLER, New York, N. Y. Filed June 10, 1924. Serial No. 719,077. 2 Claims. (Cl. 200—26.)

1. In a spark timer, a casing having one or more contacts, a rotary shaft, a sleeve carried thereby having a divided arm, one branch being developed into an eye and the other branch into a stop, a reversible contact element, a removable pin engaging said eye and also the



element at one of two points, for pivoting the trailing portion of the element to the arm, and a spring pressing the element outwardly.

1,632,414. BOMB DROPPER FOR AEROPLANES. ANTON NOSAN, Cleveland, Ohio. Filed Aug. 18, 1926. Serial No. 129,984. 2 Claims. (Cl. 244—1.)

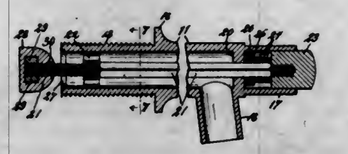


1. A bomb dropper comprising a bomb hopper, and a spring pressed plunger working under the same, a lever, a pair of spring pressed pawl bars connected to the lever and alternately engageable with opposite sides of the plunger to advance the same and compress its spring, and means to release the pawl bars from the plunger, to permit the spring to return the plunger and discharge the bomb.

1,632,415. OLIVE-KNUCKLE HINGE. STUART W. PARSONS, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed Sept. 8, 1926. Serial No. 134,270. 2 Claims. (Cl. 16—128.)

1. A hinge formed of sheet metal having an attaching portion, a shank portion extending therefrom, and a dome shaped knuckle integrally connected with the outer end of said shank portion, said knuckle having a single and practically invisible line of juncture in its wall extending from a point adjacent the apex of the knuckle down to and along the shank portion.

1,632,416. ADJUSTING MEANS FOR SOUND-REPRODUCING MECHANISM. CARL E. PEARSON, Cleveland, Ohio, assignor to The Cleveland Trust Company, trustee. Filed Oct. 13, 1926. Serial No. 141,404. 13 Claims. (Cl. 179—100.1.)

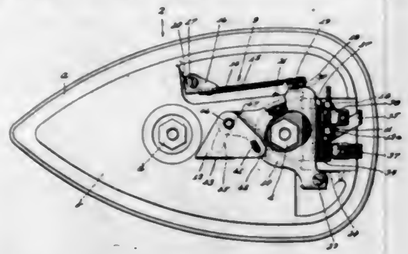


1. In a sound reproducing device the combination of an annular magnet, pole pieces mounted on said magnet and having an air gap therebetween, a ferro-magnetic reed positioned in the air gap and adapted to vibrate therein, a leaf spring member for carrying said reed, positioned diametrically of said annular magnet and secured thereto at one end and means for adjustably securing the other end of the spring to the magnet whereby the reed may be moved in the said air gap.

1,632,417. MACHINE-CONTROL APPARATUS. LUDWIG ROEBEL, Mannheim, Germany, assignor to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed Mar. 4, 1926, Serial No. 92,299, and in Germany Mar. 12, 1925. 5 Claims. (Cl. 74—39.)

5. Apparatus for conjointly controlling a plurality of prime movers, comprising concentrically pivoted members arranged in juxtaposition, a plurality of handles on each member, handles on the different members being arranged to be grasped conjointly with one hand.

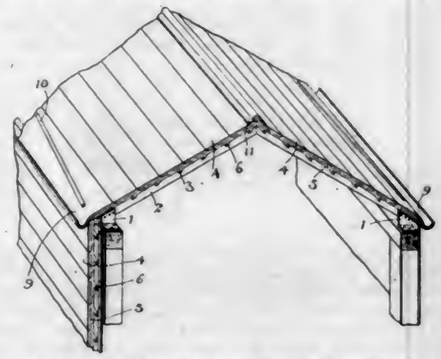
1,632,418. FAUCET. LEONARD RUEGG, Los Angeles, Calif. Filed Aug. 28, 1926. Serial No. 132,094. 4 Claims. (Cl. 251—137.)



1. A faucet having a hollow casing with a valve seat formed on the inner end thereof, a straight spring-held valve stem longitudinally movable centrally in said casing and threaded at its inner end, means for preventing the valve stem from turning in the casing, an imperforate valve made of rubber and the like and an angular nut embedded in and enveloped by said valve with the major thickness of the valve extending inward beyond the nut and surrounding the valve stem so that

the nut is not removable therefrom and is adapted to screw on the threaded end of the valve stem and is behind the main portion of the valve that engages the valve seat, substantially as set forth.

1,632,419. CONCENTRATION OF METALLIFEROUS ORES. TUDOR REES SIMPSON, Johannesburg, Transvaal, South Africa, assignor to Minerals Separation North American Corporation, New York, N. Y., a Corporation. Filed May 27, 1926, Serial No. 112,129, and in the Union of South Africa June 9, 1925. 13 Claims. (Cl. 209—166.)

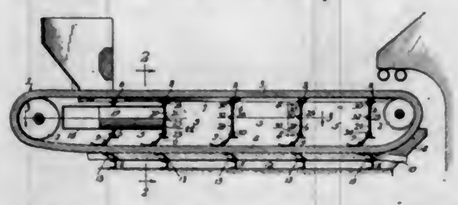


1. The process of concentrating a material carrying floatable mineral and gangue which consists in agitating a pulp of the suitably ground material with a mineral-frothing agent in the presence of an organic sulphhydric compound and an organic protective colloid substance adapted to selectively inhibit the flotation of a large proportion of normally floatable gangue material, and separating a froth carrying a large proportion of a mineral present.

1,632,420. THERMAL CIRCUIT BREAKER. JOSEPH F. SMART, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed July 31, 1923. Serial No. 654,890. 14 Claims. (Cl. 200—138.)

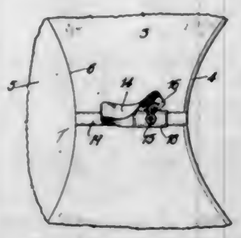
1. A thermal circuit breaker including a circuit closer, and thermostatic means normally holding said closer in circuit closing position, said means including a plurality of thermostats, one of which is arranged to normally hold said closer in circuit closing position and the other of which is arranged to move said first thermostat, said thermostats being so arranged that their responses to temperature changes are combined to effect release of the closer.

1,632,421. HOUSE CONSTRUCTION. GEORGE STEVENSON, Toronto, Ontario, Canada. Filed July 21, 1924. Serial No. 727,292. 2 Claims. (Cl. 72—19.)



1. A building structure, comprising a plurality of structural frames spaced apart and each having a plurality of spaced notches in their outward sides, boards formed of concrete extending horizontally between and bridging said frames, and longitudinal ribs arranged on the inner side of said concrete boards adapted to enter said notches to secure the boards to said spaced frame.

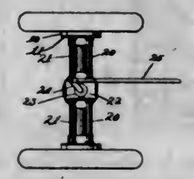
1,632,422. QUOIN. HOSEA H. STRAIT, Overland, Mo. Filed Jan. 4, 1923. Serial No. 610,547. 1 Claim. (Cl. 254—41.)



A quoin consisting of two parts comprising a plate provided with an integrally formed internally threaded hub portion projecting therefrom, and another plate adapted to be operatively associated with said first named plate, said second named plate being provided with a threaded shank rigidly affixed thereto, and said second named plate being also provided with means whereby said threaded shank may be rotated within said hub on said first named plate.

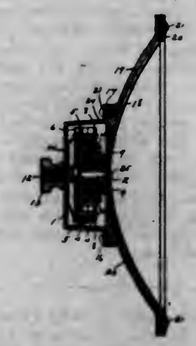
1,632,423. FORCED-DRAFT STOKER. ARTHUR P. STRONG, Chicago, Ill. Filed Jan. 24, 1923. Serial No. 614,515. 8 Claims. (Cl. 110—40.)

1. In a forced draft stoker, the combination with an endless chain grate, of means between the upper and lower grate leads providing a plurality of separate draft compartments opening upward toward the upper lead and downward toward the lower lead so that the latter may carry droppage from the compartments, said compartments having communication whereby forced draft may be supplied to all compartments from one of the same, and means whereby said draft may be initially supplied to one of said compartments.



1,632,424. GARMENT. MARK H. STRYKE, Brooklyn, N. Y. Filed Nov. 12, 1926. Serial No. 147,905. 1 Claim. (Cl. 241—12.)

In combination with a garment having a shoulder portion, means attached to the inside of said shoulder portion for retaining the shoulder straps of undergarments in proper relation to the shoulder of the wearer

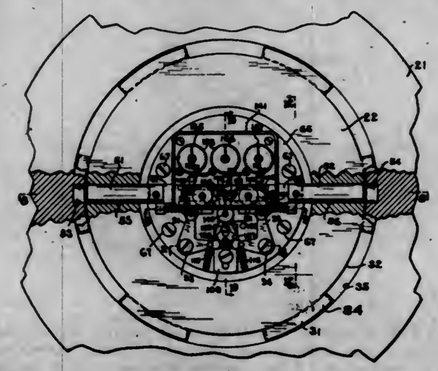


under said shoulder portion, comprising a ribbon carrying near its opposite ends the cooperating parts of a snap fastener the cooperating faces of which parts are on the opposite faces of said ribbon when the ribbon is extended in flat position, said ribbon being sewed near one end to the inside of the shoulder of said garment with the portion of the fastener on that end exposed leaving the remainder of said ribbon free, whereby the free portion of said ribbon may be passed under the shoulder straps of undergarments and the free end of said ribbon must be folded in upon itself when the part of the fastener thereon is brought into cooperative relation with the part of the fastener on the other end of said ribbon.

1,632,425. OIL FRICTION BRAKE. FRED R. YEARY and DON E. YEARY, Santa Ana, Calif. Filed Apr. 6, 1926. Serial No. 100,053. 4 Claims. (Cl. 188—92.)

1. A vehicle brake comprising a housing mounted upon the axle of the vehicle and held against rotation thereon, a gear rotatable within the housing and connected to a wheel of the vehicle so as to be driven thereby, a pinion rotatable in the housing and meshing with the gear, a fluid in the housing, means providing a by-pass having its ends connected to the housing upon opposite sides of the point of engagement between the gear and pinion, means for opening and closing said by-pass, and means for collecting fluid which may leak from said housing and returning it to the interior of the housing.

1,632,426. LOUD-SPEAKING TELEPHONE RECEIVER. GEORGE J. ZISCH, West Orange, N. J. Filed Jan. 23, 1924. Serial No. 687,929. 11 Claims. (Cl. 179—116.)

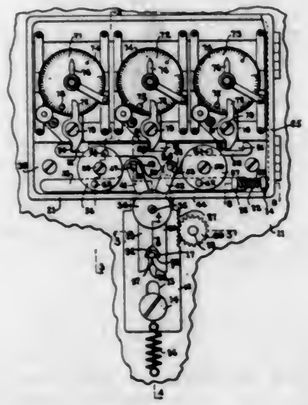


1. In a telephone receiver, the combination of a plane armature diaphragm and a spherically concave secondary diaphragm, a spacing member connecting the centers of said diaphragms, a supporting member located between said diaphragms and forming therewith two connected air chambers of uniform thickness conforming in shape respectively with adjacent faces of said diaphragms.

1,632,427. VEHICLE WHEEL. CHESTER B. ALLEN, Memphis, Tenn., assignor of one-half to William H. Russe, Memphis Tenn. Filed Mar. 28, 1922. Serial No. 547,439. 20 Claims. (Cl. 301—63.)

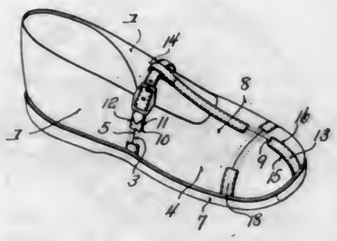
1. A dished wooden disk for vehicle wheels having a flat central portion and an annular reversely curved zone surrounding said central portion, there being a block secured to the wheel on the convex side of the dish, said block fitting over the central flat portion of the wheel and the adjacent portions of said curved zone.

1,632,428. SAFE-LOCKING MECHANISM. WILLIAM T. BENHAM, Norwood, and JOHN E. DWYER, Cincinnati, Ohio, assignors to The Hall's Safe Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 16, 1924. Serial No. 713,770. 13 Claims. (Cl. 109—3.)



1. The combination with time mechanism, of oppositely movable bolts, oppositely operating bolt-moving elements, and time-lock actuated releasing mechanism for the latter comprising oppositely moving retaining parts moving in opposite directions into holding relation for holding said bolt-moving elements in locking relation and in opposite directions for releasing relation for releasing said bolt moving elements, and said time mechanism having operative connection with said releasing mechanism.

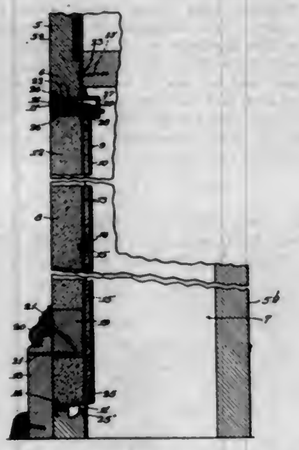
1,632,429. TIME-LOCK MECHANISM. WILLIAM T. BENHAM, Norwood, and JOHN E. DWYER, Cincinnati, Ohio, assignors to The Hall's Safe Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 16, 1924. Serial No. 713,771. 8 Claims. (Cl. 70—26.)



1. In time lock mechanism, the combination of clock mechanism, a bolt-works part, oppositely movable connected operating parts, said clock mechanism comprising

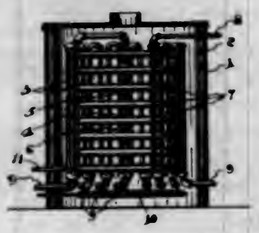
means for automatically operating said connected operating parts, and holding means for said bolt-works part, said oppositely movable operating parts having operative

connection with said holding means, said oppositely movable operating parts movable in opposite directions for automatically actuating said holding means for release relation in said holding means.



1,632,430. CHILD'S SHOE. THOMAS W. BROCKEL and PAUL F. EBLING, Milwaukee, Wis. Filed July 23, 1925. Serial No. 45,583. 1 Claim. (Cl. 36—45.)

A shoe comprising a sole, an upper secured thereto, and having a rear portion and a forward portion contacting with each other in an abutting manner, and a buckle strap placed over said abutting portions and stitched flatly to said portions, said forward portion being composed of two half blanks having abutting edges approximately centrally of the shoe, and a longitudinally extending strap overlapping the abutting central portions and stitched thereto, each of said half blanks having a rear portion and a front cap portion arranged in abutting relation, and a third strap extending transversely across the joint between the front cap portion and the rear portion and stitched flatly over such joint.

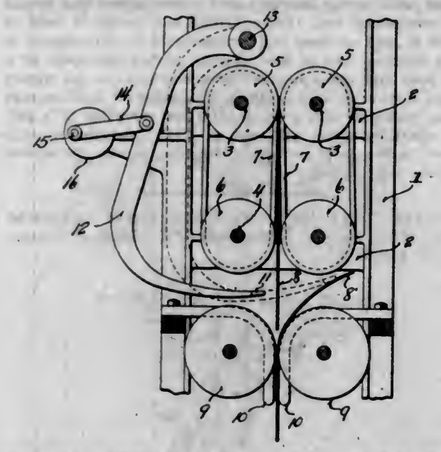


1,632,431. WALL PANEL. ROBERT M. BROWN, Chicago, Ill., assignor of forty-five one-hundredths to Alexander Pow, Glencoe, Ill. Filed Mar. 13, 1926. Serial No. 94,460. 7 Claims. (Cl. 72—40.)

1. The combination of a wall having an opening therein, a frame for said opening, means for anchoring said frame in place, and a panel for closing said opening comprising a frame having an edge member and a back member, a filler of wall material in said frame, means for anchoring said filler in said frame and means operable

by one movement to secure said panel in place and operable by another movement to eject said panel from said opening.

1,632,432. OIL-GAS APPARATUS. EDWARD CAMERON, New York, N. Y. Filed Apr. 4, 1925. Serial No. 20,870. 3 Claims. (Cl. 48—94.)

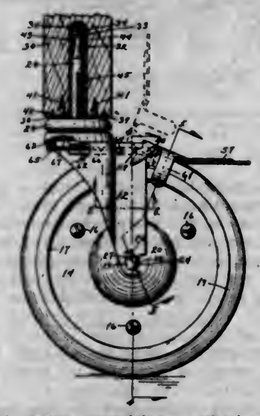


1. In oil gas making apparatus, the combination of a series of superimposed gas generator sections, each having a substantially horizontally arranged passage formed therein for the passage of fluid, the outlet of one section being in communication with the inlet of the section above it whereby fluid may flow through said sections in series; the lowermost section having a fluid inlet and the uppermost section a fluid outlet; a series of vertically arranged gas generator sections surrounding the first mentioned series of sections, said vertically arranged generating sections being connected alternately at their lower and upper ends; the first of said vertically arranged sections being in communication with the oulet of the upper horizontal section; and means for heating said horizontal and vertical sections.

1,632,433. MACHINE FOR SUPERIMPOSING PAPER SHEETS. PETER JOSEPH CHRISTMAN, Jr., Green Bay, Wis. Filed Mar. 17, 1926. Serial No. 95,275. 2 Claims. (Cl. 270—58.)

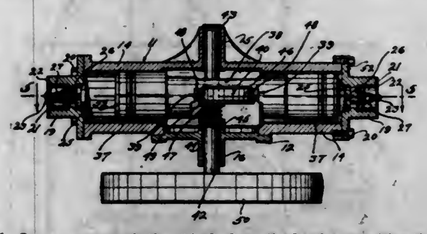
1. Mechanism for superimposing sheets comprising two pair of spaced rollers, belts passing over said rollers and adapted to receive the sheets, said belts having opposed operative stretches diverging towards the delivery end thereof, a second pair of rollers adapted to receive the sheets from said belts, a tucker blade mounted for reciprocation between said second pair of rollers and said

first mentioned rollers and adapted to deflect the rear end of the sheets while they are gripped by said second



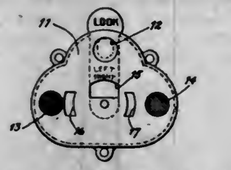
mentioned rollers, and means for oscillating said tucker blade, said second mentioned rollers travelling at a lesser rate than said first mentioned rollers.

1,632,434. LOOSE-LEAF BINDER COVER. CLAUDE M. CONOVA, Kansas City, Kans., assignor to Irving Pitt Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed Nov. 2, 1925. Serial No. 66,239. 4 Claims. (Cl. 281—29.)



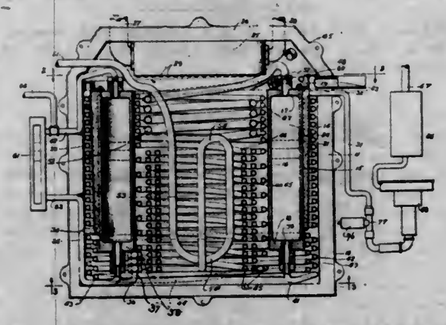
1. A book cover comprising a body member, a U-shaped channel member with a notch cut out of the bight thereof engaged with one edge of said cover, notches formed in said edge of said body member behind the notches of said channel and hinge pins mounted in said body member notches.

1,632,435. SWIVEL CASTER WITH BRAKE AND LOCK. WALTER RALEIGH DARNELL, Long Beach, Calif. Filed Aug. 19, 1926. Serial No. 130,172. 6 Claims. (Cl. 16—35.)



1. A swivel caster comprising a wheel yoke, a stem rising therefrom and a wheel journaled in said yoke, in combination with a brake device comprising a lever pivoted on said yoke and formed between its ends with spaced spring wings adapted to engage and grip opposite sides of the peripheral portion of said wheel.

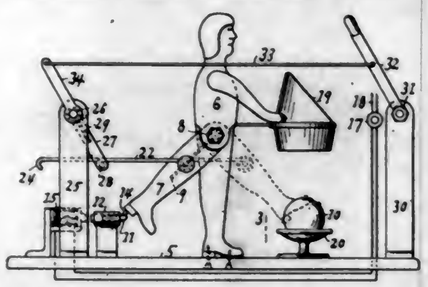
1,632,436. RECIPROCATING PUMP. LAURITS DINESEN, Minneapolis, Minn. Filed Nov. 27, 1925. Serial No. 71,630. 13 Claims. (Cl. 230—27.)



1. In a pump of the kind described, the combination with a casing adapted to contain oil and having a laterally extended cylinder, of a hollow piston working within said cylinder, inwardly opening check valves in the outer end of said cylinder and in the outer end of said piston, and means for reciprocating said piston and for splashing oil within said casing, said casing having an air-discharge port and said piston having an air-discharge port opening from the upper portion thereof and arranged to discharge air into the upper portion of said casing and away from the oil therein contained.

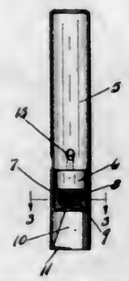
1,632,437. DIRECTION INDICATOR. ANDRO DURCHIN, Kelayres, Pa. Filed Sept. 22, 1921. Serial No. 502,394. 2 Claims. (Cl. 177—327.)

1. The combination of a slotted housing provided with a plurality of openings, with a semaphore arm bearing different signaling indicia arranged in parallel rows one over the other, said openings being arranged to show different signals upon reversal of position of the arm, and means for operating said arm to assume right and left hand horizontal positions.



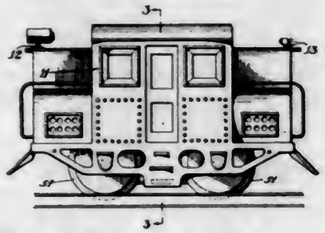
1,632,438. STEAM GENERATOR. WILLIAM B. EWING, Chicago, Ill. Filed Nov. 12, 1921. Serial No. 514,607. 3 Claims. (Cl. 122—169.)

1. A steam generator, comprising a casing, a tank providing an inner flue, and an outer flue in connection with said casing, water coils in the outer flue, flash coils in



the inner flue, the arrangement of said coils being such that the flow of water through the feed coils is in a reverse direction to the flow of steam in the flash coils.

1,632,439. FOOTBALL-PLAYING DEVICE. ANDREW B. FOANS, New York, N. Y. Filed Dec. 8, 1926. Serial No. 153,224. 6 Claims. (Cl. 46—40.)

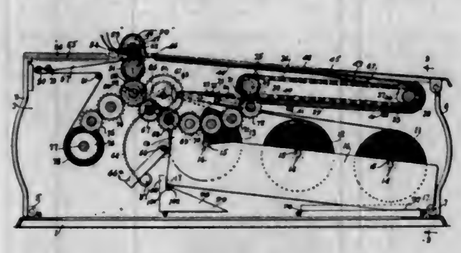


1. In a foot ball playing device the combination with a figure representing a player having a spring propelled swinging leg adapted to kick a ball, means for locking the leg in its retrograde position, and means including a link pivoted to a leg controlled by the operator coacting with the propelling means normally out of action when the leg is locked brought into action when the leg is unlocked for moving the leg backward after it has struck the ball.

1,632,440. CLEAN-OUT ROUTER BIT. JAMES M. FOLLETT and LOUIS LEHNER, Bay City, Mich. Filed Dec. 11, 1925. Serial No. 74,729. 4 Claims. (Cl. 144—136.)

1. A router bit comprising a shank, the lower end of which forms a cutter, a collar revolubly mounted on said shank directly adjacent the cutting end, said collar being of the same diameter as the cutting end.

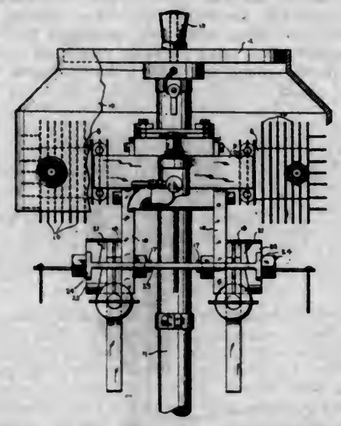
1,632,441. TOY SET. JULIUS FORCHHEIMER, Newark, N. J. Filed Apr. 24, 1926. Serial No. 104,250. 8 Claims. (Cl. 105—49.)



1. A set of toy parts comprising an electric motor, a plurality of casings in each of which the motor may be mounted, each of said casings comprising a pair of sections provided with means for securing the two sections of the pair together and said sections being further provided with motor bearings and motor supporting means so constructed and arranged that said motor is held in place in said sections and is removable by detachment of said sections, one of said casings having the form of a car body and being provided with bearings for car wheels to be driven by said motor and another of said casings being provided with a bearing for the reception of a pulley shaft, whereby said motor, when mounted in said other casing, may supply mechanical power to devices outside said casing.

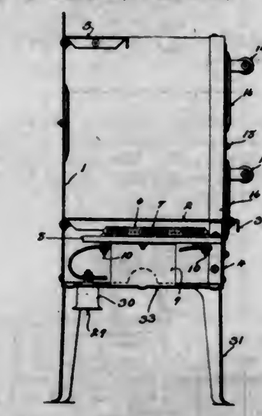
1,632,442. GOLF BAG. WILLARD T. GRUBB, Springfield, Ill. Filed Dec. 21, 1925. Serial No. 76,693. 6 Claims. (Cl. 150—1.5.)

1. A golf bag provided with a ball carrying pocket extending transversely thereof within its open end, the pocket defining spaced compartments for the storage of clubs and terminating a short distance inwardly from the open end.



1,632,443. AUTOGRAPHIC REGISTER. PHILIP A. JACKSON, Dayton, Ohio, assignor to The Egry Register Company, Dayton, Ohio, a Corporation of Ohio. Filed Dec. 26, 1924. Serial No. 758,074. 23 Claims. (Cl. 282—16.)

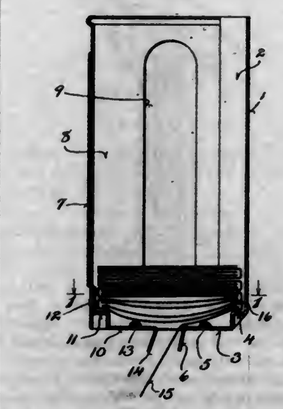
1. In an autographic register having a writing table, means for supporting a plurality of rolls of paper from which sheets can be withdrawn, means to align said sheets progressively near the point of departure from the supply rolls, co-operating means for disengaging the aligning means from the sheets and drawing said sheets along to deliver the sheets upon the writing table.



1,632,444. ROWBOAT MOTOR. ALBERT P. KNAUBER, Milwaukee, Wis. Filed Jan. 11, 1926. Serial No. 80,539. 6 Claims. (Cl. 115—18.)

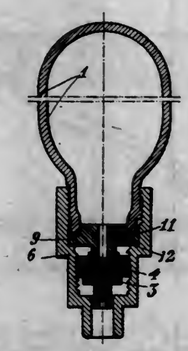
1. In a motor propeller for boats, the combination of an engine, a pair of mounting brackets each pivotally connected with the engine and adapted for attachment to a boat, the pivotally mounted portions of said brackets having cam faces, and a manually operable locking member having complementary cam faces engaging said first-

mentioned cam faces and movable to wedgingly engage the same to prevent movement between the engine and said brackets.



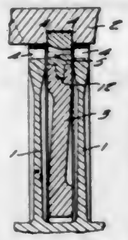
1,632,445. TOY ELECTRIC RANGE. REMUS KOENIG, Two Rivers, Wis., assignor to Metal Ware Corporation, Two Rivers, Wis. Filed Oct. 30, 1926. Serial No. 145,228. 2 Claims. (Cl. 219—35.)

2. A toy electric range comprising a body portion having a bottom plate and a back plate and a top plate, a shell positioned within said body portion and having a top and a bottom spaced from the top and bottom of said body portion, said shell having a back plate provided with flanges engaging the main portion of the shell and provided with tongues engaging the back plate of said body portion, and a heating element located intermediate the top and bottom of said shell, a heating element located below said shell, and a box-like protecting member surrounding the intermediate heating element.



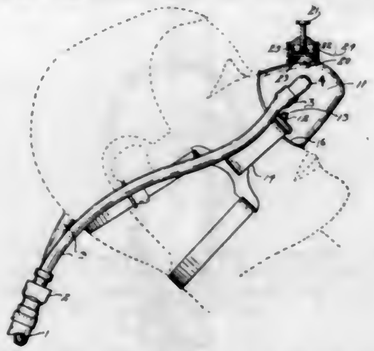
1,632,446. DISPENSING CABINET. HERMAN W. KRUEGER, Green Bay, Wis., assignor to Northern Corrugating Co., Green Bay, Wis., a Corporation of Wisconsin. Filed Oct. 17, 1925. Serial No. 63,064. 1 Claim. (Cl. 211—29.)

A dispensing cabinet comprising a vertical body portion adapted to receive interfolded paper sheets, a bottom portion carried thereby and having ledges at opposite sides adapted to receive the folded edges of the sheets and to thus support the stack, said bottom portion having its major part spaced downwardly from such ledges



and having a slot provided with rounded edges and extending thereacross for the discharge of the sheets, said bottom having a pair of ribs projecting upwardly and spaced from the edges of the slot and from said ledges.

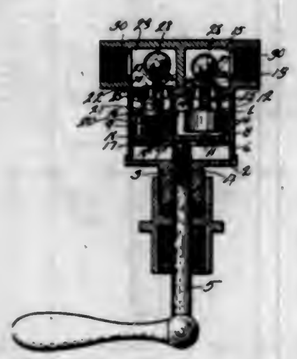
1,632,447. DEVICE FOR CLOSING COMPRESSED OR LIQUID GAS CYLINDERS. LOUIS LEMOINE, Paris, France, assignor to Société Anonyme d'Applications des Gaz Liquéfiés, Paris, France, a Limited Joint Stock Company of France. Filed Mar. 8, 1923, Serial No. 623,605, and in France Apr. 20, 1922. 2 Claims. (Cl. 220—3.)



1. In a device for closing cylinders for compressed or liquefied gas, the combination with the cylinder and the closing cap therefor, of an internally screw-threaded socket, adapted to be screwed on an outer thread provided at the end of the cylinder thus constituting a joint with said cylinder, said socket terminating in an annular portion coaxial with the socket and adapted to provide the required joint for the filling and discharging of the cylinder, said socket having a reduced inner diameter towards its free end, said closing cap being screwed onto a threading provided within said socket between the end of the cylinder and the free end of said socket and adapted to close the mouth of the cylinder, the reduced inner diameter of said socket forming an abutment for said closing cap, preventing it from being completely removed.

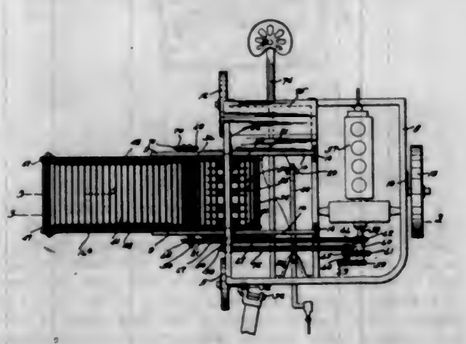
1,632,448. STATIONARY GUIDE-NOZZLE CONSTRUCTION AND ASSEMBLY FOR TURBINES. FRANZ LÖSEL, Brunn, Czechoslovakia. Filed July 17, 1924, Serial No. 726,458, and in Austria July 26, 1923. 5 Claims. (Cl. 253—78.)

1. In a multistage disc wheel turbine a casing element having an annular guide groove formed on the interior thereof, and a diaphragm and nozzle unit disposed in the plane of the groove and separating two adjacent rotating wheel elements, comprising an inner disc member and an outer ring of individual abutting nozzle elements forming the stationary guide means and carried on the disc periphery and pins adapted to secure said nozzle elements to the diaphragm, said nozzle ring having its outer peripheral edge disposed in and guided by the groove in the casing element and the unit including the nozzle elements being radially relatively separable from the casing element and said guide nozzle elements being radially relatively separable from the diaphragm member.



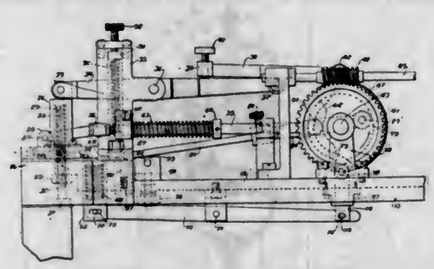
1,632,449. MASK. ELMER I. MCKESSON, Toledo, Ohio. Filed July 17, 1924. Serial No. 726,476. 3 Claims. (Cl. 128—195.)

3. A mask having a pliable unitary inelastic body providing an opening, there being a flexible elastic web integral with said body and continuous from both the inner and outer walls of the mask body and inwardly extending from the body at said opening for restricting said opening effective extent, said web being held by the body against curling and in mask use upon the face of a patient being directed by the body into flat adherent position over the patient's face as a marginal seal for the mask.



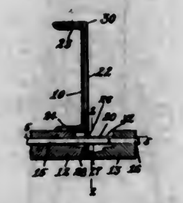
1,632,450. MIXING VALVE. GEORGE J. MORRIS, Omaha, Nebr., assignor to George E. Morris, Los Angeles, Calif. Filed Dec. 23, 1925. Serial No. 77,167. 2 Claims. (Cl. 277—18.)

1. A mixing valve comprising a casing having a mixing chamber therein, a wall at one side of said chamber and having ports therein in communication with the mixing chamber, said casing having intake chambers on the other side of the wall in communication with the mixing chamber through the ports, disc valves cooperating with valve seats carried by the wall in the ports, an inwardly and outwardly movable bar within the mixing chamber, one of said disc valves being adjustably connected to the bar, the other disc valve being yieldably connected to the bar whereby it will remain seated for a limited length of time



upon outward movement of the bar and other disc valve, a handle member connected to the bar, ball valves within the intake chambers, valve seats around the ports through the wall and within the intake chambers and with which the balls cooperate valve seats around the ports of supply to the intake chambers, and adjustable members carried by the disc valves and cooperating with the ball valves through the ports and normally maintaining the same unseated.

1,632,451. QUACK-GRASS DIGGER. ELMER PITCHER, Minneapolis, Minn., assignor to Pitcher Quack Grass Digger Co., Minneapolis, Minn., a Corporation of Minnesota. Filed Dec. 26, 1925. Serial No. 77,747. 7 Claims. (Cl. 97—10.)

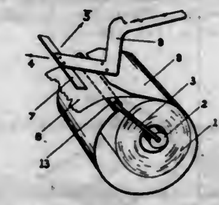


1. In a machine of the kind described, means for turning up the earth and weeds, a primary conveyor receiving the upturned earth and weeds, said primary means having openings permitting the precipitation of the earth therethrough, a secondary conveying means receiving from said primary conveying means and spaced therefrom to permit the downward discharge of large rocks and the like, a rotary beater working over said primary means, and means for imparting vertical shaking movements to the operative portion of the secondary conveying means.

1,632,452. MACHINE FOR FOLDING THE CORNERS OF BOOK COVERS. CARL G. ROLINE and CHARLES NORBE, Chicago, Ill. Filed June 10, 1922. Serial No. 567,265. 9 Claims. (Cl. 154—41.)

1. A machine for folding round corners of book covers, embodying means for holding the work, a shaper adapted to coincide with the corner, two separate folding means operating upon the work and transversely to each other, and means for withdrawing the shaper at a predetermined time in the cycle of operation of the machine, the said holding means embodying a reciprocable clamping element, said element supporting the said shaper for movement therewith and with respect thereto, portions of the work engaging surface of the said element being cut away to prevent pressure upon the portion of the material which has not been completely folded.

1,632,453. BUILDING CONSTRUCTION. THOMAS ROWAN, Brooklyn, N. Y., assignor to Structural Gypsum Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 3, 1925. Serial No. 20,555. 8 Claims. (Cl. 72—68.)



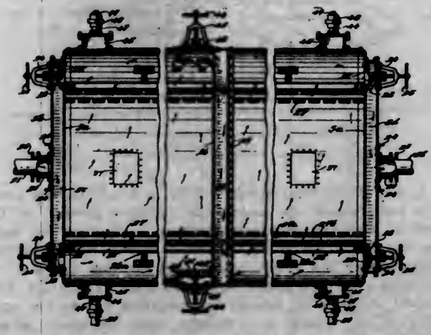
2. The combination with a floor beam, of a pre cast ceiling slab of plastic material provided with a slot in the end thereof, a device embedded in the slab and extended into said slot, and means attached to the floor beam and engaging said device within the slot for suspending the slab below the floor beam.

1,632,454. METHOD OF CANNING MEATS. CARL A. SAHLBERG, Chicago, Ill. Filed June 17, 1926. Serial No. 116,745. 2 Claims. (Cl. 99—8.)

1. A method of canning meat consisting in initially searing the meat and packing it loosely in cans, sealing the cans and then placing them in a retort for a period of time necessary to complete the cooking action of the meat within the cans.

1,632,455. SANITARY TOILET COVER. WILLIAM STELZER, Chicago, Ill. Filed Nov. 24, 1926. Serial No. 150,511. 1 Claim. (Cl. 4—247.)

In a device of the class described a sheet metal helical casing formed of one piece and open at the sides, a paper roll incased in said casing provided with resilient arms attached to the casing to permit the roll to be removed from the casing, a bracket secured to the under side of

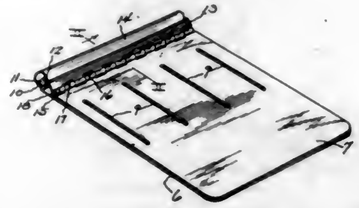


the toilet seat, said bracket having a cutting bar attached to the forward edge, and means for attaching the helical casing to the bracket.

1,632,456. METHOD OF FORMING PAVING COMPOSITIONS. CHARLES SWAN, Long Beach, Calif. Filed Aug. 17, 1925. Serial No. 50,853. 4 Claims. (Cl. 106—31.)

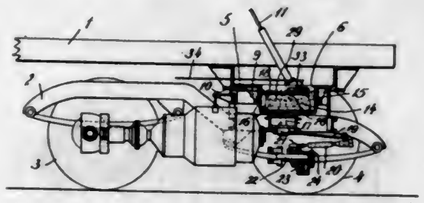
1. A method of forming paving compositions which comprises: separately preheating naturally fluent asphalt, showing a penetration of about .40 to .75 under conditions which result in a pentration of only about .35 in the case of Trinidad asphalt, and diatomaceous earth to temperatures about 300° F., the diatomaceous earth being heated to a higher temperature than the asphalt and incorporated therewith in proportion between 5% and 35%; separately preheating an aggregate mixture to a temperature above 300° F.; and mixing the resultant asphaltic-diatomaceous earth mixture with said aggregate mixture at an elevated temperature.

1,632,457. GAS-PURIFYING APPARATUS. CHARLES I. TENNEY, Ames, Iowa, and PAUL W. THAYER, Minneapolis, Minn.; said Thayer assignor to American Gas Construction Company, Newton, Iowa, a Corporation of Iowa. Filed Aug. 28, 1925. Serial No. 53,170. 12 Claims. (Cl. 183—46.)



1. A gas purifying apparatus having in combination, a cylindrical casing, trays extending across a chord of said casing, said trays comprising spaced series of spaced slats adapted to support gas purifying material, the openings between adjacent slats in one series being staggered with the spaces between adjacent slats in the other series and means for rotating said casing to reverse the position of said purifying material.

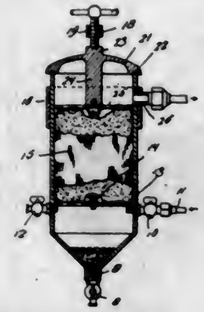
1,632,458. FILTER AID AND PROCESS OF MAKING SAME. HARRY S. THATCHER, Los Angeles, Calif., assignor to The Celite Company, Los Angeles, Calif., a Corporation of Delaware. Filed July 29, 1925. Serial No. 46,850. 7 Claims. (Cl. 210—208.)



1. A filtering material comprising not more than 50% nor less than 15% by weight of particles which settle in distilled water at 20° C., at a rate of and greater than about 0.36 cm. per minute.

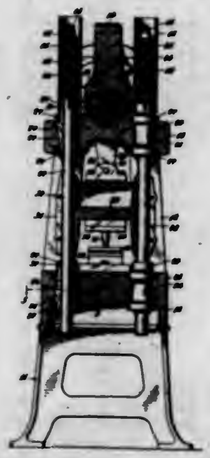
1,632,459. LOOSE-LEAF HOLDER. RICHARD M. VAN VALKENBURGH, Kansas City, Mo., assignor to Irvingpitt Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed July 3, 1925. Serial No. 41,378. 7 Claims. (Cl. 129—37.)

1. A loose-leaf holder comprising a back, leaf-clamping means supported by said back, a pivot pin interposed between said back and said leaf-clamping means and resilient means for maintaining said back and leaf-clamping means in direct sliding engagement with said pivot pin, the ends of said back and leaf-clamping means adjacent said pivot pin adapted to abut and limit movement therearound.



1,632,460. STEERING MECHANISM FOR VEHICLES. OLIVER F. WARHUS, Albany, N. Y., assignor to Versare Corporation, a Corporation of New York. Filed Apr. 17, 1925. Serial No. 23,794. 2 Claims. (Cl. 280—81.5.)

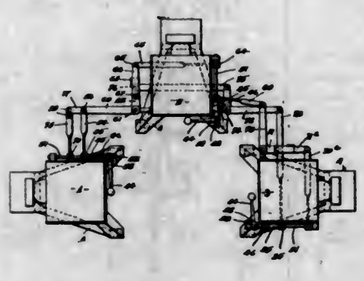
1. A vehicle comprising a body, a truck having front and rear wheels on which the forward portion of the body is pivotally mounted, steering mechanism for turning the front wheels of the truck, means for preventing swiveling of the truck beyond the position in which it occupies a predetermined maximum angular relation with respect to the body, mechanism operating during the swiveling of the truck to reversely turn the front wheels toward alignment with the rear wheels and means effective when the truck is in its maximum angular relation with respect to the body to limit turning of the front wheels in the direction tending to cause the truck to swivel beyond said maximum angular position.



1,632,461. OIL FILTER. WILLIAM GORDON BURHANS, Kingston, N. Y. Filed Nov. 2, 1926. Serial No. 145,829. 1 Claim. (Cl. 210—165.)

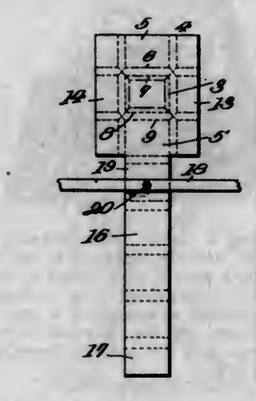
In a filter of the class described, a cylindrical body open at its top, an oil inlet cock extending into the lower portion of the body, an air cock extending into the body at a point diametrically opposite the oil inlet cock, said cock being disposed in the same plane, an oil outlet extending from the upper portion of the body, a sediment drain cock arranged within an opening in the extreme lower end of the body, a perforated plate removably disposed within the body and supported on the inner ends of the oil and air cocks, filtering material disposed within the body upon said plate, a cap for the open end of the

body, and means associated with the cap for compressing the filtering material between the perforated plate and the oil outlet.



1,632,462. POWER PRESS. ZENAS P. CANDEE, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 1, 1925. Serial No. 27,214. 11 Claims. (Cl. 78—36.)

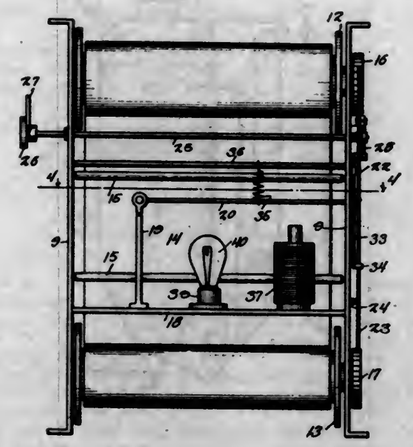
1. In a power press, a frame having a bed and a head located above the bed in spaced relation thereto, bearings carried by the head, bearings carried by the bed and alined with the respective bearings of the head, a gate between the bed and head, a plurality of guide rods, and means to fixedly secure the guide rods to the gate intermediate the ends of the rods, the rods having their ends projecting above and below the gate and being movable in the respective bearings.



1,632,463. TRIPLE TANDEM-PRESSING-MACHINE MECHANISM. ALBERT B. CLISSON, Syracuse, N. Y., assignor, by mesne assignments, to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Aug. 9, 1924. Serial No. 731,039. 6 Claims. (Cl. 68—9.)

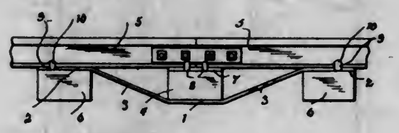
1. The combination of more than two pressing machines arranged in series, each machine comprising cooperating pressing elements, one of which is movable toward and from the other, a power member connected to the movable element for applying pressure thereto and means for effecting the application of power to the power member including a manually operable part, and connections between said parts of all the machines whereby

the operation of said part of any one machine of the series operates the corresponding part of the next machine in the series to open the same, and the operation of such part of the last machine of the series to close the last machine operates the part of the first machine of the series to open it.



1,632,464. RAILWAY SIGNAL TORPEDO. JOHN WILEY EDMANDS, Newton, Mass. Filed Mar. 18, 1926. Serial No. 95,707. 8 Claims. (Cl. 246—487.)

1. A railway signal torpedo comprising a blank having a substantially square head adapted to be folded around an explosive tablet, and an integral projecting stem portion of a length to be wrapped around the folded head for the purpose described.

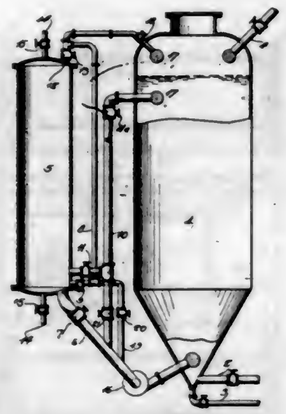


1,632,465. STATION INDICATOR. GEORGE W. FARMER, Oakland, Calif. Filed May 24, 1926. Serial No. 111,459. 4 Claims. (Cl. 40—55.)

1. In a station indicator, an upright frame, reels respectively journaled in the frame at the top and bottom of the latter, a vertically swinging actuating lever pivoted in the frame between said reels and projecting outwardly through one side of the frame, ratchet wheels rigid with the reels outwardly of said side of the frame, a pair of pawls pivoted to the projecting end of the actuating lever and extending to the respective ratchet wheels, yieldable means to normally swing the pawls toward and in operative relation to the respective ratchet wheels,

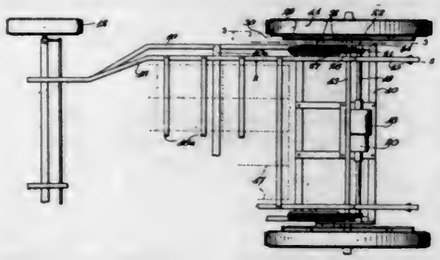
and manually operable means for swinging either desired pawl to an inoperative position away from the associated ratchet wheel and simultaneously allowing the other pawl to swing toward and in operative relation with the associated other ratchet wheel.

1,632,466. RAILROAD-TIE TRUSS. JOHN E. FEAGANS, Dresden, Ohio. Filed Oct. 26, 1926. Serial No. 144,342. 3 Claims. (Cl. 238—168.)



1. A tie truss comprising a metallic strip bent adjacent its center and ends to provide intermediate and end tie engaging portions and other portions connecting the said end portions with opposite ends of the intermediate portion and supporting the end portions in a plane above the plane of the intermediate portion, the said end portions being adapted to be secured upon the upper faces of ties spaced from opposite sides of a tie resting upon said intermediate portion and constituting tie plates upon which rails are to rest.

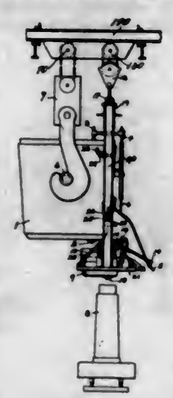
1,632,467. PROCESS AND APPARATUS FOR MAKING PULP FROM FIBROUS MATERIAL. FREDERICK K. FISH, Jr., San Francisco, Calif. Filed July 15, 1925. Serial No. 43,851. 29 Claims. (Cl. 92—7.)



1. The process of making pulp from fibrous material, consisting in removing air from the fibrous material to reduce the pressure therein below atmospheric, then digesting said fibrous material in digesting liquor highly heated and under pressure and with a space above the body of liquor, suddenly reducing the pressure corre-

spondingly in said space and in the liquor and directing the fluid flowing as a result of such pressure reduction into a closed tank, raising the temperature of the fluid in the

tank and thereafter reintroducing the fluid from the tank into the digesting liquor to mix with said liquor for further use in the same cook.

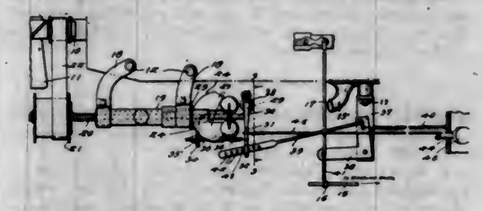


1,632,468. DRIVE GEARING. ANTONIO FONDEVILA, Chicago, Ill. Filed Oct. 19, 1925. Serial No. 63,381. 6 Claims. (Cl. 74—7.)

1. A drive gearing for a vehicle wheel comprising a drive sprocket, a gear carried by the vehicle wheel, a pinion assembly applied to said gear, a sprocket-wheel assembly carried by the pinion-assembly, an intermediate sprocket-wheel assembly, a chain drive between the drive sprocket and the intermediate sprocket-wheel assembly, a chain drive between the latter and first mentioned sprocket-wheel assembly, and a regulating sprocket-wheel associated with said last mentioned chain drive and geared to the intermediate sprocket-wheel assembly.

1,632,469. METAL-CASTING APPARATUS. ANDREW FORREST and GEORGE MARSHALL SMITH, Chicago, Ill. Filed Oct. 25, 1924, Serial No. 745,804. Renewed Apr. 13, 1927. 6 Claims. (Cl. 22—79.)

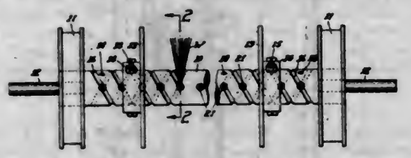
1. In a metal casting apparatus, the combination with a traveling crane, and a ladle suspended from the crane and having a bottom pouring nozzle, of a pouring device comprising a carrier suspended from the crane independently of said ladle, a pouring-box on the carrier beneath said ladle-nozzle and having a plurality of pour-



ing passages to supply different molds and a central well in rear of its passages, and independently operated stoppers for said box-passages.

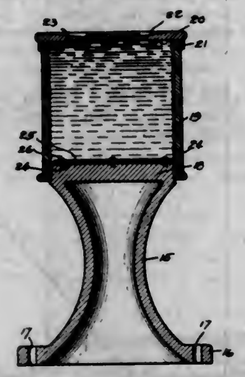
1,632,470. COMBINED MOP AND WRINGER. BARNETT GERSHOVITZ, Canton, Ohio. Filed Jan. 31, 1927. Serial No. 164,733. 1 Claim. (Cl. 15—120.)

A mop including a handle, a link pivotally connected thereto, a holder pivotally connected to the link intermediate its ends, a pair of jaws carried by the forward end of the holder, a loop arranged to be drawn between the jaws for clamping a mop cloth, a lever upon the holder for operating the loop, a crank carried by the handle and a loop upon the crank for receiving the mop cloth.



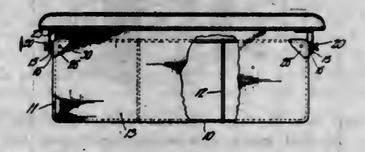
1,632,471. GOVERNOR FOR GAS ENGINES. WILTON A. GIRARDIER and BENJAMIN B. HIBBARD, St. Clair, Mo. Filed June 3, 1926. Serial No. 113,564. 3 Claims. (Cl. 264—3.)

1. An automatic speed regulator for an explosive engine including a governor actuated shaft, gas feeding means including a throttle opening and closing lever,



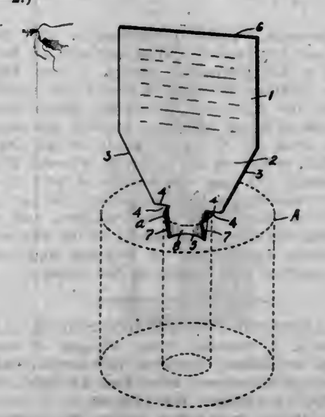
spring means normally urging the lever toward throttle closed position, spring urged means normally engaged with the shaft and operatively connected with the lever for holding the latter in its throttle opened position and arranged to be moved by said shaft, and means for moving said spring urged means away from the shaft whereby to permit the closing lever to be moved toward throttle closed position by said spring means.

1,632,472. WARP-END HOLDER FOR WARP BEAMS. ALBERT A. GORDON, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 25, 1926. Serial No. 143,978. 6 Claims. (Cl. 242—118.)



1. In a warp beam, a hollow barrel having passages through the periphery thereof for groups of warp threads, a flexible slack member extending along the interior of the barrel, and a plurality of non-fibrous guides interposed between the flexible member and the groups of warp threads, movement of the flexible member compensating for unevenness in tying the groups to the guides and said guides preventing direct operative contact between the groups and the flexible member.

1,632,473. INK DISPENSER. WALTER R. GREENLAND, Los Angeles, Calif. Filed Oct. 8, 1925. Serial No. 61,343. 1 Claim. (Cl. 221—79.)

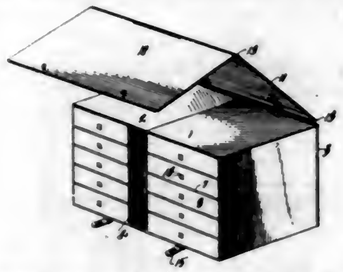


An ink dispenser comprising a vertical support having a flanged base through which fastening members are adapted to be extended for securing the support to a table, said support having its upper end flared to provide a flat topped cylindrical head externally threaded, said head constituting a plunger, an open ended barrel threaded internally for threaded engagement with the head, said barrel threaded externally at its upper end, a cap having a depending flange threaded internally for threaded engagement with the upper end of the barrel, said cap having its upper surface concave to provide a cup portion and having a centrally disposed port through which ink in the barrel is adapted to be supplied to the cup portion when the barrel is rotated to feed downwardly on the head, a thread cleaning member on the flat top of the head and comprising a disk of fibrous material of slightly larger diameter than that of the head, a clamping plate on the disk, and fastening members extending through the plate and disk and into the head for securing the disk upon the latter with its peripheral edge projecting into the threads of the barrel so that when the barrel is rotated, the disk will have wiping engagement with the threads to prevent clogging of the latter by the ink.

1,632,474. AUTOMOBILE WINDSHIELD VISOR. OWEN E. GRIGSBY, Park Ridge, Ill., assignor to Grigsby-Grunow-Hinds Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 28, 1922. Serial No. 557,216. 1 Claim. (Cl. 296—95.)

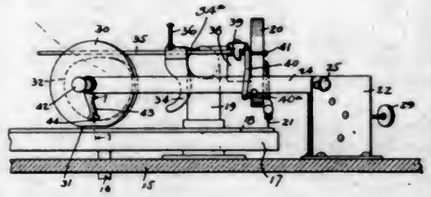
In an automobile windshield visor, a visor frame, a yieldable sheet metal corrugated hinge at each end having one portion secured to the frame and another portion for attachment to the automobile top, said top attaching portion being a bent over horizontal concavo-convex plate extension of the frame attaching hinge portion and adapted to seat along its longitudinal outer edges only in intimate contact with a substantially flat face on the supporting member of the automobile top, said plate having fastening screw receiving openings and said plate being yieldable under fastening screw pressure when attached.

1,632,475. DISPLAY CARD FOR TOILET-PAPER ROLLS. FREDERICK W. HOEFLER, Phoenix, N. Y. Filed Jan. 22, 1924. Serial No. 687,744. 1 Claim. (Cl. 40—2.)



A display card having the opposite edges of its lower end tapered and the tapered edges provided with transverse slits extending inwardly therefrom, the portion below the slits forming resilient wings of greater width at the top than at the bottom and capable of being sprung laterally to enter an opening in the article to be displayed, the walls of the slits above the wings serving as stops to limit the entrance of the card into said article.

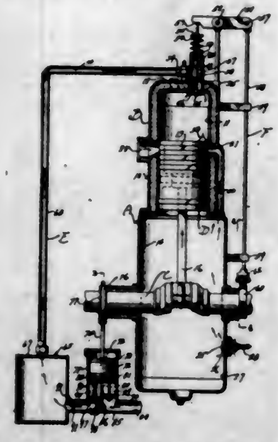
1,632,476. STUDENT'S PORTABLE DESK. SAMUEL J. HOLDERMAN and RAY E. CRYDER, Morris, Ill. Filed June 30, 1924. Serial No. 723,289. 4 Claims. (Cl. 45—69.)



1. In combination, a panel, a pair of chests one hinged at each end of the panel, each chest provided with

a plurality of compartments, drawers in said compartments, auxiliary closure panels hinged together and to the first panel so as to be positioned one on top of the

chest and one in front thereof when they are folded against the first panel, and means for locking the panel in front of the chest to the bottom thereof.



1,632,477. PHONOGRAPH REPEATER. HERMAN HOUSE, Vancouver, British Columbia, Canada. Filed Jan. 5, 1926. Serial No. 79,401. 8 Claims. (Cl. 274—15.)

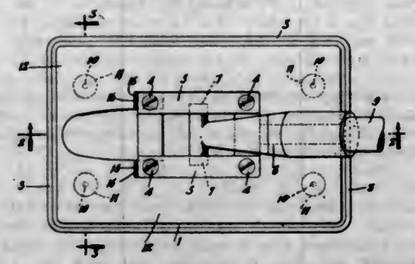
1. A phonograph repeater comprising an arm adapted to extend over a turntable, a disk rotatable on the arm and having a flat peripheral portion, a cam fixed to the disk for rotation therewith, a second arm secured to a tone arm for movement therewith, means operable by the second arm for initiating rotative movement of the cam to bring the curved periphery of the disk into contact with a record on the turntable whereby the disk and consequently the cam will be rotated with the cam frictionally engaging the arm to actuate the latter and thus return the tone arm to normal position, and means for controlling the rotative movement of the disk so that the flat portion thereof will be returned and held in disengaged position with respect to the record.

1,632,478. INTERNAL-COMBUSTION ENGINE. ALFRED W. HUBBELL, Bartlesville, Okla., assignor of one-half to Phillips Petroleum Company, Bartlesville, Okla., a Corporation of Delawnre. Filed June 11, 1926. Serial No. 115,322. 6 Claims. (Cl. 123—69.)

3. In an internal combustion engine the combination of an engine housing having a cylinder chamber therein, a crank shaft rotatably supported by the engine housing, a piston in the cylinder chamber, means connecting the crank shaft with the piston for reciprocation in the cylinder chamber, said housing having oppositely disposed air inlet and exhaust ports communicating with the cylinder chamber intermediate the ends thereof and adapted to be uncovered only at the inner end of the piston stroke, said cylinder chamber having an elongated fuel inlet passageway in the outer end thereof, a valve stem slidable in said fuel passageway having a control head adapted to seat over the inner end of the passageway to close the same off from the cylinder chamber and having a piston member slidable in the passageway in spaced relation with the head, a conduit connected in communicating relation with the passageway between the piston member of the valve stem and the valve head, spring means normally acting to seat the valve head to close the passageway off from communication with the cylinder chamber, a cam on the crank shaft at one side of the connection of the same with the piston, means carried by the housing operated by the cam for operating the valve, a fuel storage tank in which the conduit above mentioned is connected, a pump for pumping fuel into the fuel storage tank, cam means carried by the crank

shaft at the opposite side of the piston from the valve operated cam above mentioned for operating said fuel pump, and check valve means in the engine housing for operation upon the upstroke of the piston to draw air into the housing at the opposite side of the piston from the fuel inlet passageway, said air being compressed on the down stroke of the piston for port feed thru air inlet port when the latter is uncovered by action of the piston.

1,632,479. LAWN TRIMMER. AUGUST HUBERTY, Canton, Ohio. Filed June 2, 1925. Serial No. 34,326. 5 Claims. (Cl. 56—241.)



1. A lawn trimmer including a shoe, a handle connected to the rear end of the shoe, a fixed shear blade upon the forward end of the shoe, a movable shear blade pivotally connected to the forward end of the shoe and cooperating with the fixed blade, a link connected at one end to the free end portion of the pivoted blade, a spring arm directly connected at its free end to the other end of the link for normally holding the pivoted blade in open position and means directly connected to the spring arm for operating said link to close the pivoted blade.

1,632,480. PITMAN BOXING. HARRY L. HUNT and LINCOLN A. HUNT, Bigelow, Mo. Filed Mar. 20, 1926. Serial No. 96,265. 5 Claims. (Cl. 287—93.)

1. In combination with a wrist pin and pitman rod, of a two part bearing, a yoke-shaped frame supporting the bearing in wrist pin embracing position, a removable yoke in the open end of the frame, an adjusting rod connected to the removable yoke and said pitman rod and in movable relation to one of said bearing's parts, and means for moving the adjusting rod and frame relative to each other whereby to tighten said bearing and take up on the pitman rod.

1,632,481. WAXER AND POLISHER. JOSEPH S. JUDGE, Brooklyn, N. Y. Filed Mar. 26, 1925. Serial No. 18,648. 1 Claim. (Cl. 15—114.)

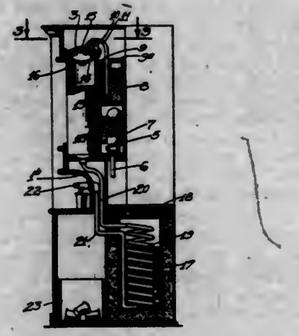
A brush comprising bristles, a base for said bristles, a casting secured to said base, a handle pivotally secured to said base by said casting, a removable weight on said base surrounding said casting, said handle being of narrow width adjacent the pivotal connection, one side of said weight having a narrow slot, said slot being of a greater width than that of said handle adjacent the pivotal connection to permit of removal of the weight when raised and rotated through an angle of ninety degrees.

1,632,482. SLEEVE PULLER FOR AUTOMOBILES. EUGENE O. KROELLS, Paso Robles, Calif. Filed Sept. 13, 1926. Serial No. 135,261. 1 Claim. (Cl. 29—88.2.)

A sleeve puller comprising a bar, a hammer slidably mounted on the bar, said bar having a hammer-stop on one end, and a hook on the opposite end of the bar from the hammer-stop, in combination with a bracket having an L on one end adapted to rest on the end of the sleeve and a shorter L on the other end of the bracket adapted to fit within the sleeve to hold the bracket against the bar, whereby the hook is held firmly in the sleeve hole.

1,632,483. MANUFACTURE OF HYPOCHLORITES. ROBERT BURNS MACMULLIN, Niagara Falls, N. Y., assignor to The Mathieson Alkali Works, New York, N. Y., a Corporation of Virginia. Filed Aug. 22, 1925. Serial No. 51,863. 6 Claims. (Cl. 23—86.)

1. The method of producing hypochlorites which comprises treating an aqueous solution containing hypochlorous acid with a tertiary alcohol, separating the tertiary alkyl hypochlorite formed from the aqueous solution, dissolving the separated alkyl hypochlorite in a solvent in which water is soluble and treating the solution of the alkyl hypochlorite with an alkaline substance in the presence of water to form the corresponding hypochlorite.



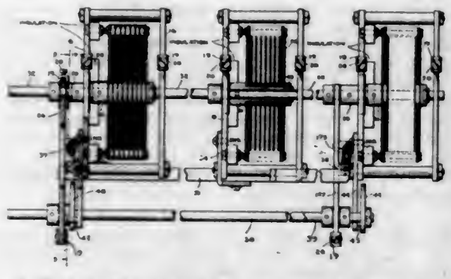
1,632,484. MANUFACTURE OF HYPOCHLORITES. ROBERT BURNS MACMULLIN, Niagara Falls, N. Y., assignor to The Mathieson Alkali Works, New York, N. Y., a Corporation of Virginia. Filed Aug. 22, 1925. Serial No. 51,864. 8 Claims. (Cl. 23—86.)

1. An improved method of producing basic calcium hypochlorite which comprises treating an alkyl hypochlorite with lime in the presence of water to form a solution containing calcium hypochlorite and substantially free from chlorides and precipitating the basic calcium hypochlorite from this solution with lime.

1,632,485. MANUFACTURE OF HYPOCHLORITES. ROBERT BURNS MACMULLIN, Niagara Falls, N. Y., assignor to The Mathieson Alkali Works, New York, N. Y., a Corporation of Virginia. Filed Sept. 23, 1925. Serial No. 58,118. 13 Claims. (Cl. 23—86.)

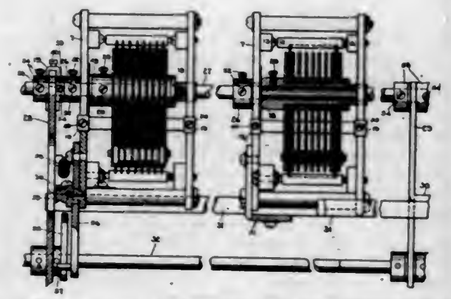
1. The method of producing hypochlorites which comprises treating an aqueous solution containing hypochlorous acid with a tertiary alcohol, separating the tertiary alkyl hypochlorite formed from the aqueous solution, and causing the separated alkyl hypochlorite to react with an alkaline substance to form the corresponding hypochlorite.

1,632,486. BEVERAGE DISPENSER. PAUL MAIWURM, San Diego, Calif. Filed Apr. 29, 1925. Serial No. 26,653. 7 Claims. (Cl. 225—28.)



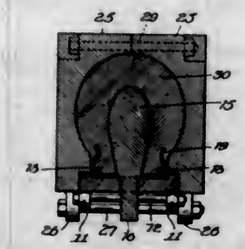
1. In a liquid dispenser, a supporting means, an hermetically sealed mixed-liquid container supported thereby, a diluting-liquid supply tank positioned at the one side near the lower end of said mixed-liquid container, a concentrated-liquid container positioned contiguous to said first mentioned container, conductors communicating with the lower portions of said tank and said concentrated-liquid container and with the upper end of said mixed-liquid container, and check valves at the ends of said conductors extending into said tank and said concentrated-liquid container, said conductors being provided at their ends extending into said mixed-liquid container with orifices adapted to permit the discharge of the liquid in said tank and said concentrated-liquid container to be discharged into said mixed-liquid container in definite predetermined proportions.

4. In a beverage dispenser, a plurality of mixed drink containers arranged vertically and contiguous to each other, a long water tank connected with a source of water supply positioned behind and at the lower portions of said mixed drink containers and provided with a predeter-



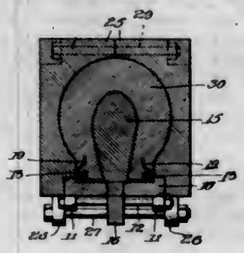
mined water level control valve for supplying water to said tank from said source, a plurality of syrup containers positioned on said water tank, one behind each of said mixed drink containers, conductors connecting the lower portions of said water tank and said syrup containers with the upper ends of each of said mixed drink containers, and check valves at the ends of said conductors extending into said water tank and into said syrup containers, said conductors being provided at their ends extending into said mixed drink containers with orifices of such a size as to provide for the discharge of the water from said tank and the syrup from said syrup containers into said mixed drink containers in definite predetermined proportions.

1,632,487. VARIABLE CONDENSER. RAY H. MANSON, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 16, 1924. Serial No. 693,382. 13 Claims. (Cl. 175—41.5.)



1. In a multi-unit variable condenser, a frame having a plurality of pairs of bearings, a shaft rotatable in one of said pairs of bearings, a plurality of rotor units secured in spaced relation on said shaft, a stator unit secured to said frame in electrical relation to one of said rotor units, a second stator unit movable on said shaft in electrical relation to a second rotor unit, a second shaft movable in a second pair of said bearings for moving said second stator unit to vary the electrical relation between it and its associated rotor unit, and saddles secured to said frame for varying the adjustment of at least one pair of said bearings.

1,632,488. VARIABLE CONDENSER. RAY H. MANSON, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 24, 1924. Serial No. 751,899. 12 Claims. (Cl. 175—41.5.)

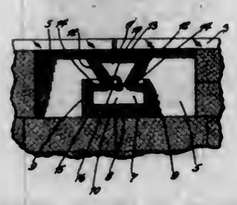


1. In an electrical condenser, a frame provided with two bearings in alignment, a stator unit secured to said frame, said unit consisting of a plurality of spaced metal plates in conducting relation, a hollow shaft mounted in said bearings, a drive shaft mounted within and adjustably coupled to said hollow shaft, and a plurality of spaced rotor plates in conducting relation secured on said hollow shaft, said hollow shaft and its rotor plates being movable with respect to said stator plates.

1,632,489. TIRE. WILLIAM C. MARTIN, Chicago, Ill. Filed Feb. 20, 1922. Serial No. 537,912. 2 Claims. (Cl. 152—1.)

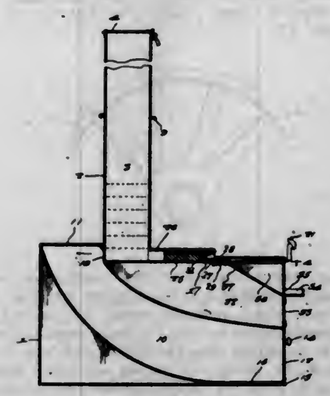
1. A molded integral solid rubber tire having a base-portion adapted to fit between the flanges of a tire rim and having a cylindrical inner surface extending to the lateral surfaces of the base; said tire containing air cells at intervals open at the inner circumference of the tire and adapted to be covered by the rim, said base-portion having a fabric vulcanized thereto and provided with slots registering with said air cells and having out-turned margins embedded and vulcanized in the rubber forming the body of the tire.

1,632,490. METHOD OF MANUFACTURING CUSHION TIRES. WILLIAM C. MARTIN, Milwaukee, Wis. Original application filed Feb. 20, 1922, Serial No. 537,912. Divided and this application filed Nov. 20, 1926. Serial No. 149,663. 2 Claims. (Cl. 18—55.)



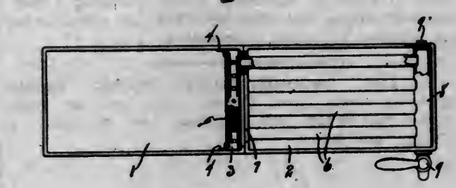
1. The method of making a cushion tire which comprises supporting a fabric provided with slots on a sectional annular base equipped with radiating cavity-cores which project through said slots, placing pieces of rubber upon said fabric and about said cores and lodging the margins of said fabric in the rubber, applying a mold to the structure, subjecting the structure in the mold to vulcanizing action, and removing the mold and sectional base.

1,632,491. FLOATING DRY DOCK. PAUL MATTHIESSEN and ADOLF DETLEF MÖLLER, Hamburg, Germany. Filed May 12, 1926, Serial No. 108,627, and in Germany May 18, 1925. 7 Claims. (Cl. 114—46.)



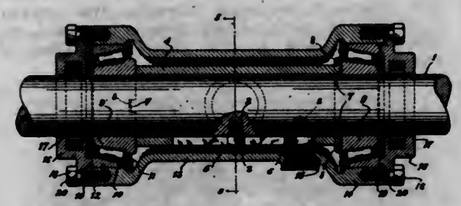
1. A floating dry dock having longitudinal box-like sides and a similar bottom, the box-like bottom being divided at the longitudinal center plane to form two independently buoyant sections, characterized by this that each section is provided with fingers and between the fingers with recesses in the upper part of the box-like bottom, the fingers of one section being adapted to enter the recesses of the other section, so that the two sections engage one another like two combs at a certain height above the floor of the box-like bottom.

1,632,492. HUMIDIFIER FOR OVENS. SALLY MAYER and HERMANN NAHRSTEDT, St. Louis, Mo. Filed Mar. 15, 1926. Serial No. 94,707. 5 Claims. (Cl. 107—64.)



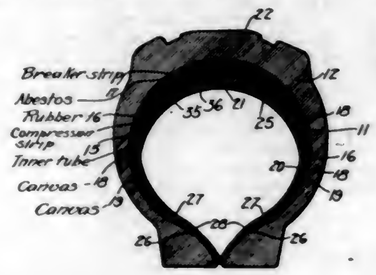
1. In a bake oven, the combination with a fire chamber and an oven with an intermediate horizontally disposed wall therebetween, of a chamber formed in said wall, a humidifying device mounted in said chamber comprising a trough portion and a dome portion with intermediate outlet passages, a spray pipe connected into said humidifying device, and means for controlling the supply of liquid to said spray pipe.

1,632,493. COIN-CONTROLLED VENDING DEVICE. FLOYD JAMES MCFARLAND, West Point, N. Y. Filed Oct. 24, 1925. Serial No. 64,636. 1 Claim. (Cl. 211—8.)



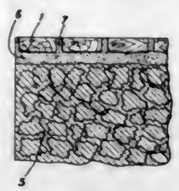
A vending device comprising a casing body, a delivery chute therein, a support in the casing body for superposed articles of commodity and extending to the upper wall of the chute at the upper end of said wall, a container for said articles having its lower end open and spaced above said support and also having its rear wall spaced above said upper end of the chute wall, a wall extending forwardly from the lower end of the forward wall of the container and spaced above said support to form therewith a housing, an ejector movable rectilinearly between the support and said forwardly projecting wall and having a rear comparatively thick portion and longitudinal channels in the upper side of said portion and also having a forward low comparatively thin portion and a handle at the forward end thereof, retractile springs for returning the ejector to normal position, said springs resting in the longitudinal channels in the ejector and connected at their forward ends to said forwardly projecting wall and at their rear ends to the rear end of the ejector, and a swingable member disposed below the rear wall of the container and hingedly connected with the casing body and adapted to gravitate to closed position at the rear end of the support.

1,632,494. MILK COOLER. GARRETT V. MILLAR, Fort Worth, Tex. Filed June 7, 1924. Serial No. 718,679. 2 Claims. (Cl. 31—4.)



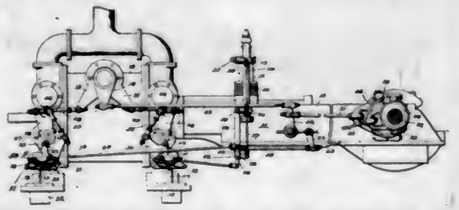
1. A milk cooler comprising a strainer compartment for storing the milk to be strained provided with an inclined bottom, a cooling compartment for containing cooling elements, a strainer in said strainer compartment adjacent to said cooling compartment, inclined pipes in said cooling compartment and connected to said strainer, and a discharge pipe in said cooling compartment and connected to all of said inclined pipes and projecting out of said cooling compartment.

1,632,495. ANTIFRICTION BEARING DRIVE AND HANGER BOX. GEORGE LEE MILLER, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Dec. 10, 1923. Serial No. 679,595. 9 Claims. (Cl. 308—207.)



1. In combination with a shaft having an aperture for the reception of a driving lug, a driving sleeve upon the shaft having a keyhole slot for the reception of the driving lug, bearing cones connected to the sleeve, a hanger box surrounding the sleeve and bearing cups mounted in the box.

1,632,496. INTERLINER FOR PNEUMATIC TIRES. RICHARD H. MULLINEAUX, Los Angeles, Calif. Filed Nov. 2, 1921, Serial No. 512,270. Renewed Feb. 4, 1924. 1 Claim. (Cl. 152—18.)

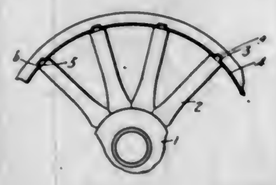


In an interliner for pneumatic tires, the combination of: a liner element adapted to fit within a casing, and a body of partially vulcanized rubber extending circumferentially within said liner, said body of rubber being in a condition of lateral compression.

1,632,497. WOODEN MOSAIC WORK. ERNEST ANTOINE NOËL, Paris, France. Filed Oct. 20, 1925, Serial No. 63,713, and in France Oct. 28, 1924. 1 Claim. (Cl. 94—3.)

An ornamental marquetry comprising a support, a layer of magnesium cement thereon and a number of small flat-faced parts of suitable shape of ornamental materials and chiefly of different woods, pressed into and surrounded on all sides except one with the magnesium cement, with only enough cement projecting between said small parts to anchor them and allow for expansion and contraction caused by atmospheric changes, the cement between said small parts having the same degree of resistance to wear as the small parts and flush on its exterior surface with the uncovered surfaces of the small parts.

1,632,498. VARIABLE-CAPACITY AIR COMPRESSOR. BRUNO V. NORDBERG, Milwaukee, Wis.; Helena C. Nordberg executrix of said Bruno V. Nordberg, deceased. Filed Sept. 8, 1923. Serial No. 661,649. 8 Claims. (Cl. 230—24.)

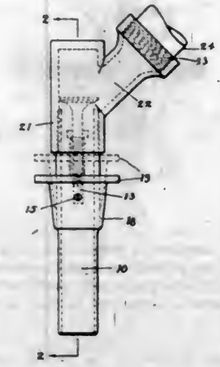


1. The combination of a compressor having inlet and discharge values; a variable cut-off valve arranged to be held to its seat by inlet pressure and to control the flow of gas through the inlet valve; and means for varying the point of cut off of said cut-off valve.

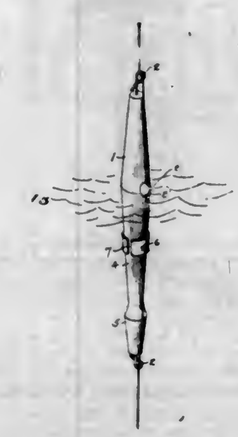
1,632,499. ALARM MECHANISM. ANDRU G. PAPPADAKIS, Detroit, Mich. Filed Dec. 3, 1925. Serial No. 73,023. 6 Claims. (Cl. 116—97.)

4. In a device of the character described; an alarm mechanism having a bell, a hammer to strike the bell, and hammer actuating means, comprising a gear and pinion; and a manually controlled reciprocating device for shifting the relative position of the gear or pinion, whereby they are disconnected from each other and the alarm mechanism rendered inoperative, this device comprising a slide that is actuated from the exterior of the lock and having a yoke portion which during the inward movement of the slide travels in a path at substantially a right angle to the length thereof, and engages a part adjacent to the gear or pinion and imparts axial movement thereto, and a second slide having an operative engagement with the first slide and by means of which the latter is moved in an outward direction.

1,632,500. AUTOMOBILE WHEEL. JOHN HENRY PARTRIDGE, town of Trail, British Columbia, Canada. Filed Sept. 7, 1926. Serial No. 134,088. 3 Claims. (Cl. 301—67.)



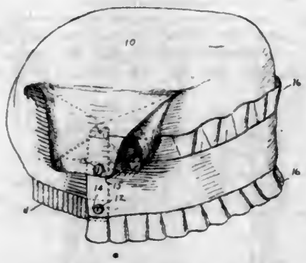
2. In an automobile wheel, the combination with the wooden spokes having a tenoned upper end and a metal rim having a tenon receiving orifice and having an annular flange formed around its outer edge, of a nipple adapted to be driven into the orifice and into the spoke end around the tenon and having a beaded upper edge adapted to fit over the annular flange edge of the orifice when the nipple is driven into position.



1,632,501. VALVE MECHANISM FOR DISPENSING FLUIDS. NOBLE M. PATRICK and PLEASANT W. HORN, Charlotte, N. C. Filed Apr. 28, 1926. Serial No. 105,186. 4 Claims. (Cl. 251—116.)

2. In a valve, an approximately Y-shaped hollow member, a valve and valve stem mounted in the lower portion of said member and having its seat above the junction point of the lower portion with its branches, sliding

means on the Y-shaped member adapted to actuate the stem to open the valve when a pre-determined amount of pressure is applied to said sliding means, a spider member having a hole therein serving as a guideway for the valve stem, and a coiled spring for closing the valve mounted around the valve stem below the valve.

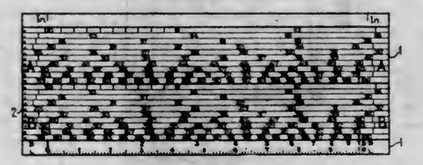


1,632,502. FISHING FLOAT. FRANK J. PECKHAM, Troy, Ohio. Filed Apr. 17, 1924. Serial No. 707,118. 4 Claims. (Cl. 43—49.)

1. In a fishing float, an elongated buoyant body tapered throughout a portion of its length, line guides at its opposite ends, a split spring tapered collar slidingly engaging and conforming to the tapered portion of the body through which the line is passed, the line being clamped in different positions of adjustment by the contraction of the split collar which is placed under tension by the wedging action of the tapered portion of the float, and an enlarged head at the smaller diameter of the tapered portion to insure engagement of the collar and body.

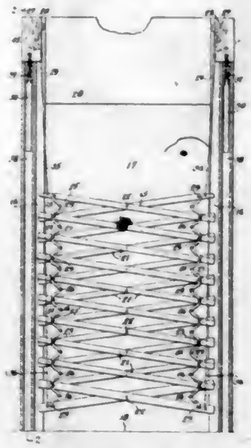
1,632,503. DUST CAP. WARREN POCKMIRE, Charleston, W. Va. Filed June 2, 1925. Serial No. 34,373. 2 Claims. (Cl. 2—198.)

1. A fabric cap including a rectangular body having an elastic strip across one end and secured at its ends thereto, the body being arranged to be folded on its transverse median line, means for detachably connecting the side portions of one end of the body with corresponding side portions of the other end, and means for connecting the intermediate portions of the sides of the body with said ends.



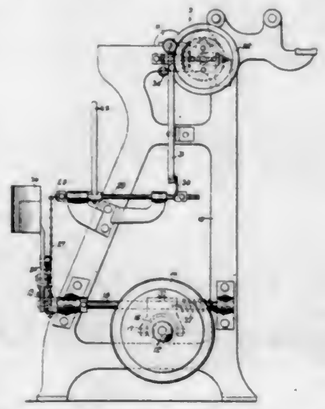
1,632,504. DISPLAY DEVICE. CLARENCE E. PRESTON, Oklahoma City, Okla. Filed Dec. 2, 1924. Serial No. 753,449. 1 Claim. (Cl. 40—17.)

A device of its kind, consisting of a blank having bighted edges for card edge receivers, indicating cards having their edges seated in the bights, a leaf spring at the rear of the cards to press the edges against the forward or front side of the bights, and leaf springs just offset from the bights to press against the front side of the cards, for the purposes set forth.



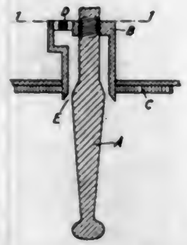
1,632,505. SLIDE RULE. HERMAN RITOW, Chicago, Ill. Filed Apr. 16, 1925. Serial No. 23,483. 5 Claims. (Cl. 235—70.)

1. In a slide rule the combination of a logarithmic scale of ten times the graduated length of the rule, cut into ten equal lengths or folds placed one below the other and numbered successively 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, with a uniformly graduated scale of the graduated length of the rule, said ten fold logarithmic scale corresponding with said uniformly graduated scale so that the logarithm



of any reading on said ten fold scale is found by writing after the decimal point the number of the fold followed by the reading of the uniform scale directly opposite the said reading of the ten fold scale.

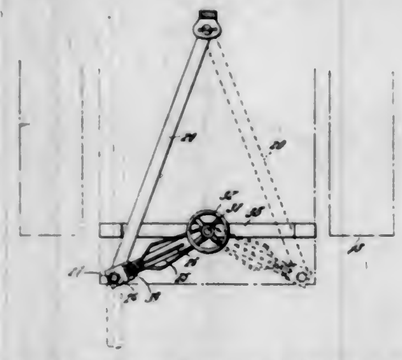
1,632,506. GATE OR DOOR OPERATING MECHANISM. THOMAS E. ROBINSON, Philadelphia, Pa. Filed Jan. 17, 1924. Serial No. 686,736. 30 Claims. (Cl. 187—51.)



9. The method of operating a collapsible vertically movable gate, which consists in supporting the gate at the top and bottom by counterweighting and operating about interconnected pulleys, the counterweighting for the upper part of the gate being smaller than that of the lower part of the gate and thus collapsing the gate as it is raised.

1,632,507. STOP MOTION FOR WINDERS. EPPA H. RYON, Waltham, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 18, 1922. Serial No. 595,417. 5 Claims. (Cl. 33—136.)

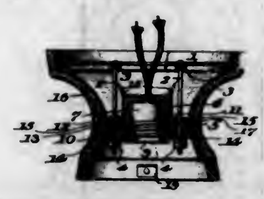
1. A winder having, in combination, a measuring roll, driving mechanism therefor, means to make and manually maintain a driving connection to said driving mechanism, and a stopping device effective to disable said manual means and stop said measuring roll while said manual means remains in its normally operative position.



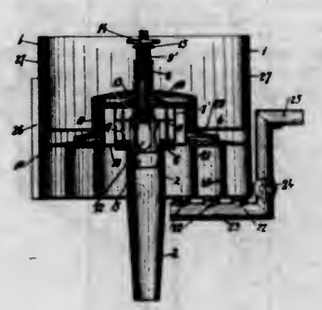
1,632,508. METHOD OF PRESERVING WOOD AND THE LIKE. CARL SCHANTZ, Freiburg, Germany. Filed Jan. 25, 1927, Serial No. 163,517, and in Germany Jan. 16, 1926. 4 Claims. (Cl. 99—12.)

1. Method of preserving wood and the like, which consists in forcing the preserving agent under pressure along a piercing device into the wood, said piercing device remaining in the wood during the forcing in of the preserving agent.

4. In a device for preserving wood, in combination, a solid pointed pin adapted to be forced into the wood, a charging device surrounding the upper projecting portion of said pin and leaving an annular space between itself and said pin through which the preserving agent is adapted to be forced along said pin into the spread apart wood, a non-return valve upon said charging device, and a force pump connected with said valve.



1,632,509. TRACTOR HITCH. WILLIAM E. SCHNITGER, Garden Grove, Calif. Filed Sept. 1, 1926. Serial No. 133,052. 1 Claim. (Cl. 280—33.12.)

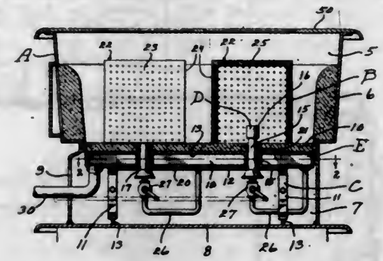


In a device of the class described, a draw bar, a spring held arm pivoted at one end to the draw bar and connected therewith, the arm being movable in a horizontal plane, a stem circular in cross section and rotatable about an axis perpendicular to the arm and engaging the end of the latter, and a retaining and guiding device having one end partly surrounding the stem, and having its other end secured, said guiding device normally holding the end of the arm in locking engagement with the stem, and the arm being movable by the stem and alongside of the latter to release position.

1,632,510. ATTACHING BRACKET FOR LIGHTING FIXTURES. ROY W. SCHWEIKER, Lansdale, Pa., assignor to Franklin Pottery, Lansdale, Pa., a Corporation of Delaware. Filed Mar. 11, 1925. Serial No. 14,662. 7 Claims. (Cl. 240—78.)

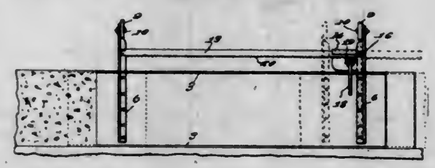
2. In an attaching bracket for lighting fixtures, the combination with a base plate, of a one-piece supporting member engaged with the interior of the fixture above the lower end thereof, said fixture having shade holding means disposed below the point of engagement of the supporting member with said fixture, means depending from the base plate which suspends the supporting member, and a lamp socket comprising a base section which carries a lamp receiving metal shell, and a screw threaded ring section which is fastened to the base section through the medium of its screw threads, the supporting member being located between, and clamped by, the sections of said lamp socket, and a cushioning gasket interposed between one of said sections and said member.

1,632,511. DEVICE FOR SEPARATING AND STRAINING LIQUIDS. JARMILA ŠEDIVÁ, Pribram, Czechoslovakia. Filed Jan. 12, 1923, Serial No. 612,241, and in Czechoslovakia Jan. 13, 1922. Renewed May 12, 1927. 5 Claims. (Cl. 210—157.)



1. In a device of the character described for separating and straining liquids, the combination with a funnel having a discharge stem which projects back into the funnel body, of strainers supported in a vertical position above the level of the stem, a protecting hood supported above the strainers, a valve arranged in the upper end of the stem so that it can be adjusted for regulating the inlet to the same, and an upright tube extending above said hood as a guide and support for the valve.

1,632,512. PULLEY. ADAM A. SERVA, Canton, Ohio, assignor to the United Electric Company, Canton, Ohio, a Corporation of Ohio. Original application filed Sept. 23, 1922, Serial No. 590,113. Divided and this application filed Nov. 3, 1923. Serial No. 672,625. 2 Claims. (Cl. 64—45.)

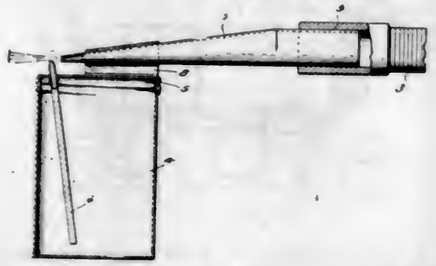


1. A metal shaft with an integral hexagonal portion thereon having a reduced neck substantially the same diameter as the shaft and a hard rubber pulley shell molded upon said hexagonal portion and reduced neck and conforming to the contour of the neck.

1,632,513. GAS BURNER. JOSEPH W. SHARP, Philadelphia, Pa. Filed Oct. 27, 1926. Serial No. 144,556. 5 Claims. (Cl. 126—39.)

1. The combination with a coal burning stove including a fire box and an ash pit provided with a bottom wall, of a gas burner attachment therefor including a supporting bracket arranged in the ash pit and resting upon the bottom wall thereof, a hollow heater supported horizontally by said bracket, a plate of refractory material resting in surface contact upon the upper face of the heater and forming a partition between the fire box and ash pit of the stove, burner tubes extending vertically thru the heater and plate and projecting into said fire box, feed pipes connecting said burner tubes with the hollow heater, and a gas supply pipe connected with the heater and extending from the ash pit of the stove.

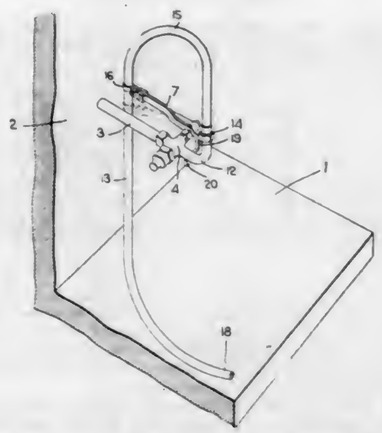
1,632,514. WALL-BUILDING DEVICE. GEORGE J. SEILER, Danville, Ill. Filed Jan. 12, 1927. Serial No. 160,673. 8 Claims. (Cl. 25—131.)



1. A wall building machine, comprising a mold made up of spaced mold boards, a carriage mounted on the mold and normally arranged at one end thereof for closing the mold, and means between the carriage and mold for causing the carriage to move on the mold and the mold to be moved on the carriage.

8. A machine for erecting plastic walls in longitudinal series, comprising a longitudinally movable mold which includes side plates, means adjustably connecting the plates for varying the widths of a wall to be cast between said plates, plates arranged between the side plates and closing one end of the mold, means for imparting a longitudinal movement to the last mentioned plates between the side plates of the mold, members pivotally secured to one of the side plates at the open end of the mold, brackets on said members, adjustable means carried by the brackets for contacting the said side plate, whereby to arrange the brackets angularly with respect to said plate, and a laterally adjustable plate supported by said members.

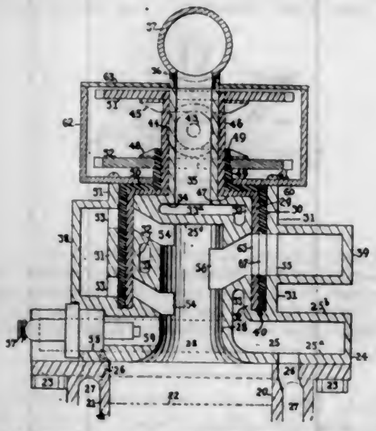
1,632,515. SPRAYER. WILLIAM M. SMITH, Bemidji, Minn. Filed Dec. 21, 1925. Serial No. 76,750. 1 Claim. (Cl. 91—45.)



In a device of the character described, a receptacle open at its top, a removable cover for the open upper end of said receptacle, an outlet tube carried by said cover with its upper portion projecting through the cover and its lower end adjacent the bottom of the receptacle

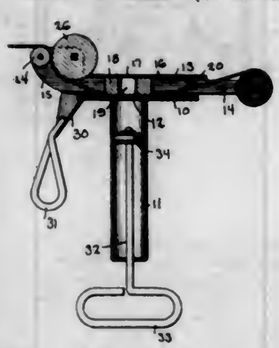
when the cover is in place, a bracket carried by said cover and including a longitudinally tapered socket open at its ends and having its smaller end disposed towards the upper end of said tube, and a nozzle having one end adapted to be connected with a conduit for fluid under

pressure, the nozzle being tapered towards its other end and wedged into said tapered socket with its free end projecting from the smaller end of the socket and terminating adjacent the upper end of said tube for directing a blast of fluid across the same.



1,632,516. AUTOMATIC VALVE FOR USE IN FISH STALLS AND LIKE PLACES. FOSTER M. SPURR, Mattapan, Mass. Filed Jan. 23, 1924. Serial No. 687,935. 2 Claims. (Cl. 299—81.)

1. The combination with a self-closing valve comprising a rotary valve element having an arm rigid therewith, which arm by its downward swinging movement opens the valve, a flexible hose secured to the valve, said hose extending upwardly from the valve and then downwardly thereby forming an inverted U-shaped portion, a clamp secured to the free side of the U-shaped portion, and a link pivotally connecting the arm and the clamp whereby a downward pull on the hose will open the valve.

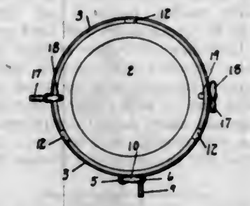


1,632,517. INTERNAL-COMBUSTION ENGINE. BURNHAM C. STICKNEY, Rutherford, N. J. Filed Sept. 12, 1923. Serial No. 662,198. 23 Claims. (Cl. 123—190.)

1. The combination with an engine-cylinder, of a head detachably mounted thereon, an explosion-chamber in said head and having intake and exhaust ports, valve means fitting around said explosion-chamber, means for continuously revolving said valve means, a chest within which said valve means is fitted, said chest having intake and exhaust ports, said explosion-chamber being hollow-walled, and provision being made for passage of cooling fluid therethrough, said detachable engine-head opening into the cylinders of an engine and comprising a fluid

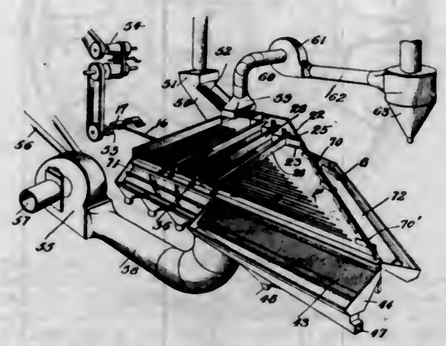
jacket in open communication with said explosion-chamber walls, and means for causing water to circulate through said detachable engine-head and said explosion-chamber walls.

1,632,518. SOUNDING-TOY FILM BURSTER. LAWRENCE H. STRAYER, Kent, Ohio. Filed Dec. 18, 1926. Serial No. 155,736. 5 Claims. (Cl. 46—46.)



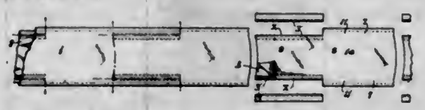
1. A gun of the class described comprising a carrier frame having an opening formed in the bottom thereof, a cylinder secured to the bottom of the carrier frame and communicating with the opening, a piston arranged for reciprocating movement in the cylinder, a magazine frame pivotally mounted on the carrier frame, a block carried upon the magazine f ame adapted to be adjusted above the cylinder and formed with transverse openings through the block, a pair of material actuating rollers rotatably supported on the magazine frame, a strip of material rotatably formed on one end of the magazine frame and fed through the said rollers, and a bracket adapted to actuate one of the rollers to intermediately feed the material through the frames.

1,632,519. CAN OPENING AND CLOSING DEVICE. FRANK J. STREIT, Cincinnati, Ohio. Filed Nov. 15, 1926. Serial No. 148,346. 1 Claim. (Cl. 220—51.)



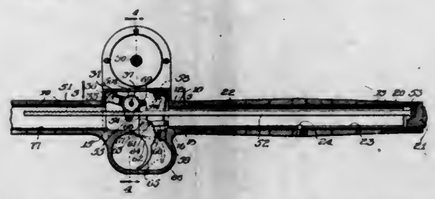
In a device of the character described, a band, said band capable of passing around a condensed milk can, at the upper part thereof, tube-like formations on said band, perforator members, said perforator members extending

into said tube-like formations and capable of moving upwardly or downwardly and turning therein, said perforators capable of perforating a can top through



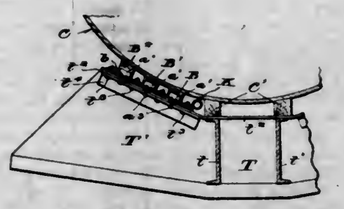
pressure exerted thereon and capable of being raised out of said perforations and moved out of line therewith, said perforators also capable of being moved back into position, to seal the perforations in the can top.

1,632,520. PROCESS OF AND APPARATUS FOR SEPARATING, CLEANING, AND GRADING ALL KINDS OF NUTS, CEREALS, AND LEGUMES. HENRY MOORE SUTTON, WALTER LIVINGSTON STEELE, and EDWIN GOODWIN STEELE, Dallas, Tex. Filed Dec. 13, 1919, Serial No. 344,583. Renewed Sept. 15, 1926. 62 Claims. (Cl. 209—467.)



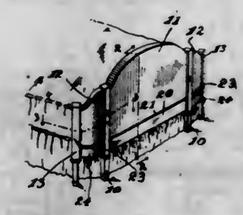
3. The process of separating a mass of nuts or the like having different characteristics consisting in feeding the mass and supporting the same upon a transversely inclined surface by gaseous cushioning means to permit stratification thereof, removing the lighter particles of the mass stratified, imparting to the mass a positive movement, subjecting the heavier zone of the mass to an air blast to remove the lighter particles entangled therewith and separately collecting the separated nuts.

1,632,521. MULTIPLEX BAG AND THE METHOD OF MAKING IT. WILLIAM L. TAYLOR, Cincinnati, Ohio. Filed Nov. 21, 1925. Serial No. 70,592. 2 Claims. (Cl. 93—35.)



2. The herein described method of forming a multiplex bag which consists in gluing together superposed strips of paper of different widths at spaced apart intervals near their longitudinal edges to form a multiply strip, then dieing out from said multiply strip individual bag blanks each having one side wider than the other side and one side of the lining wider than the adjacent cover whereby securing flaps are provided, then folding said securing flaps inwardly, then gluing the exposed surface thereof, then folding said blank transversely and pressing the sides of the bag together upon the glued flaps to form the completed bag.

1,632,522. FISHING REEL. CECIL A. THAYER, Gary, Ind. Filed May 6, 1926. Serial No. 107,248. 9 Claims. (Cl. 43—20.)

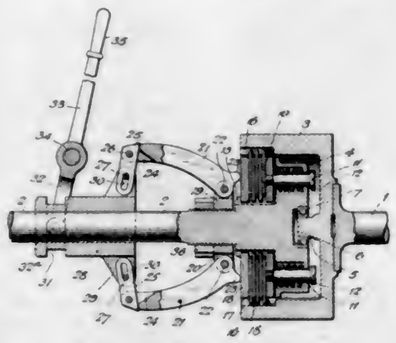


1. A fishing-reel comprising, in combination, a supporting structure, a spool journalled thereon, a reciprocable rack, and means in driving engagement with said rack for rotating said spool and mounted to be swung into and out of a position for rotating said spool.

1,632,523. METAL-TRANSOM CUSHION-BLOCK CONTAINER. SAMUEL E. TURNER, Wichita Falls, Tex., assignor to Panhandle Refining Company, Wichita Falls, Tex. Filed Jan. 19, 1926. Serial No. 82,308. 6 Claims. (Cl. 105—362.)

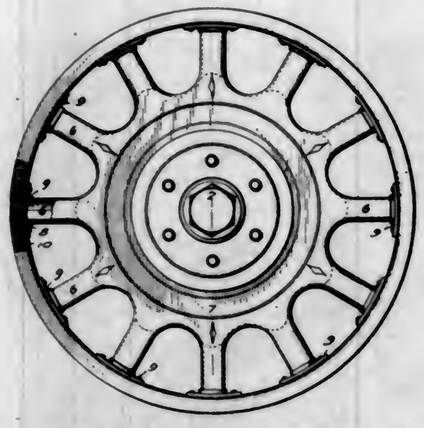
1. In a tank car, an underframe having transoms, a tank body, and a support for said tank body extending longitudinally thereof from one transom to another and comprising a bed plate corrugated to form a plurality of panels, longitudinal cushion blocks resting between the corrugations on said panels, and means carried by said bed plate to prevent longitudinal displacement of said cushion blocks.

1,632,524. METHOD OF MANUFACTURING METAL BEDS. ADOLPH WEISMAN, Brooklyn, N. Y. Original application filed Aug. 22, 1924, Serial No. 733,520. Divided and this application filed Mar. 14, 1925. Serial No. 15,608. 5 Claims. (Cl. 29—148.)



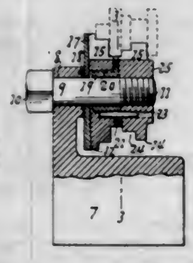
1. The method of forming head and foot board panels for metal beds which consists in interposing a template between two sheets of bendable metal, folding the edges of the sheets around three sides of the templates and joining certain of said edges together and then withdrawing the template through the open side edge of the hollow panel thus formed.

1,632,525. SHEARS. CLARENCE H. WILKES and GEORGE E. CALHOUN, Amsterdam, N. Y., assignors to Amsterdam Cutlery Company, Incorporated, Amsterdam, N. Y., a Corporation of New York. Filed May 26, 1925. Serial No. 32,911. 1 Claim. (Cl. 30—13.)



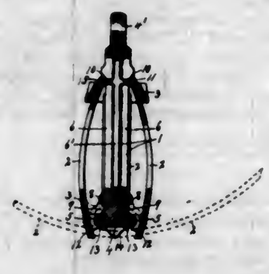
In shears of the class described, a pair of levers crossing each other to form blade-supporting arms at one end and handles at the opposite end, separate shearing blades removably mounted on adjacent faces of said arms and extending across the intersection of the levers to overlap at the crossing, one of said levers having an extension across the overlapping ends of the shearing blades and upon the outer face of the adjacent portion of the other lever to bind the intersecting portions of said levers and overlapping portions of the blades together, a pivotal pin passing through registering openings in said levers, blades and extension for holding the levers and blades co-axial with the pivotal pin, and additional devices for holding the blades against lateral movement relatively to their respective levers when engaged with said pivotal pin and for releasing the blades when the pivotal pin is removed.

1,632,526. CLUTCH. ANDREW V. D. WILLGOOS, Upper Montclair, N. J., assignor to Wright Aeronautical Corporation, a Corporation of New York. Filed Apr. 24, 1925. Serial No. 25,409. 5 Claims. (Cl. 192—69.)



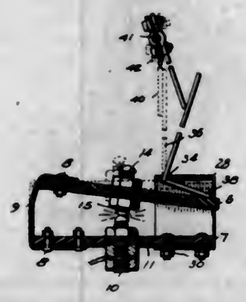
1. A clutch comprising in combination a driving shaft, a driven shaft and a coupling means therebetween, comprising a cup-shaped member having internal splines, and attached to one of said shafts, a disc member positioned within said cup-shaped member, attached to the other of said shafts, and having splines cooperating therewith, a plurality of annular friction-disc members, successive discs alternately having internal and external notch sectors, adapted to engagement with said splines, means comprising a plurality of buffer springs positioned in openings in said attached disc member, and a plurality of bolts extending through said attached disc member, cooperating with one of said friction disc members, and holding said springs under initial compression, for yieldably supporting said friction disc members, and link-lever means for frictionally engaging said friction disc members.

1,632,527. VEHICLE WHEEL. EDWIN C. WINTERS, Detroit, Mich. Filed Feb. 24, 1926. Serial No. 90,295. 11 Claims. (Cl. 301—64.)



4. A metallic wheel comprising a blank of metal having an annular reinforcing corrugation dividing the blank of metal into a hub portion and a spoke section, the spoke section being formed with a plurality of seamed tubular spokes, the outer portions of which are formed with external annular flanges, a felly engaged by said flanges, and one-piece mounting plates having drawn necks receiving the outer portions of said spokes, said mounting plates being rigidly connected to said felly and locking the spokes to the felly.

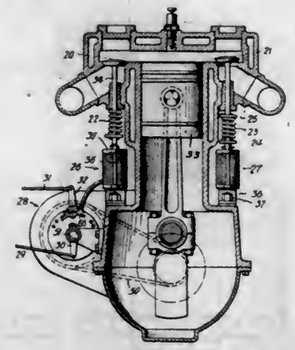
1,632,528. CIRCULAR FORMING TOOL. HUGO ZEIDLER, Brooklyn, N. Y. Filed Dec. 21, 1925. Serial No. 76,925. 3 Claims. (Cl. 29—102.)



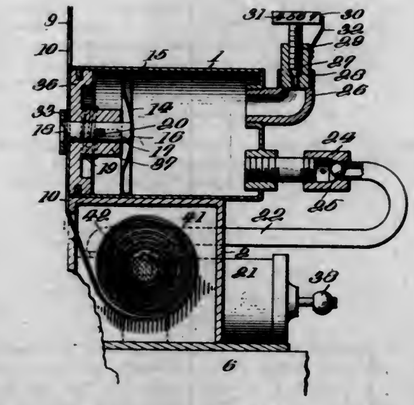
1. A forming tool comprising a shaft, a pair of circular heads secured to the shaft each having a notch provided with a cutting edge forming an inclined plane, and a tapered notched washer arranged between the heads made to register with the notches in the heads.

1,632,529. ANCHOR. WILLIAM J. BAUER, Syracuse, N. Y. Filed June 14, 1926. Serial No. 115,739. 3 Claims. (Cl. 114—208.)

1. An anchor comprising a stem having means at one end for attachment to a cable, flukes arranged in uniformly spaced relation circumferentially around the axis of the stem and having one end pivoted to the other end of the stem to fold toward and from the stem, said pivoted ends being provided with tapered extensions abutting against each other across the lower end faces of the stem when the flukes are unfolded.



1,632,530. CIRCUIT CLOSER. GREEK P. BEASTON, Coin, Iowa, assignor to Jonnna McCracken, Coin, Iowa. Filed June 3, 1925. Serial No. 34,671. 5 Claims. (Cl. 200—59.)



1. A switch for use in connection with starting motors comprising fixed and movable blocks, a U-shaped leaf spring connecting said fixed and movable blocks, contacts carried by the blocks and adapted for connection with the wires of an electric starting circuit, an actuating bar having a laterally projecting terminal portion engaged with said movable block, an arm for engaging said actuating bar, said arm being provided with means whereby the same may be connected to the spark control rod of an automobile, and a guide member having spaced sides arranged at opposite edges of the movable block to hold the same against lateral movement and cooperating with said movable block in supporting said actuating bar.

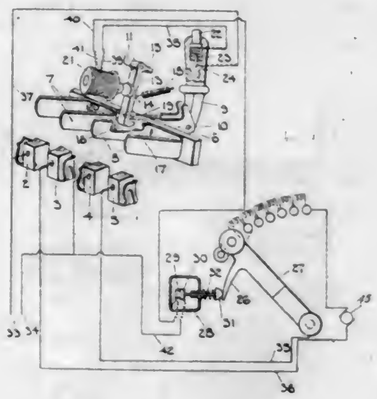
1,632,531. ELECTROMECHANICAL VALVE-OPERATING MEANS FOR INTERNAL-COMBUSTION ENGINES. LEONARD NORWOOD BLAND, North Sydney, New South Wales, Australia, assignor to Bland Magnetic Valves Limited, Sydney, New South Wales, Australia, a Corporation of New South Wales, Australia. Filed Sept. 12, 1925, Serial No. 56,008, and in Australia Oct. 20, 1924. 4 Claims. (Cl. 123—41.)

1. Valve operating means for an internal combustion engine, comprising inlet valves, having springs arranged to close them and solenoids arranged to open them against said springs; exhaust valves with springs arranged to open them and solenoids arranged to close them against said springs during the period in which the gas pressure acting on the valve heads is insufficient to overbalance the action of the opening springs and to hold them closed against said springs; and a distributor with a driving connection to the engine and arranged to close the circuit of a source of curent through the respective solenoid windings in operative timed order.

1,632,532. AUTOMATIC CLOSURE FOR WINDOWS AND THE LIKE. LOUIS VANCE BLUE, Pittsburgh, Pa., assignor of one-fourth to William A. Falson, Chester, Pa. Filed Mar. 11, 1926. Serial No. 93,956. 14 Claims. (Cl. 70—26.)

1. A device for automatically closing windows comprising a pressure receiving cylinder, a spring actuated member in the cylinder and adapted to be forced in the opposite direction by pressure in said cylinder, means movable past the said member which is connected with the window, said spring actuated member adapted to lock and release the said movable means by the action of the spring and the air pressure within the tank.

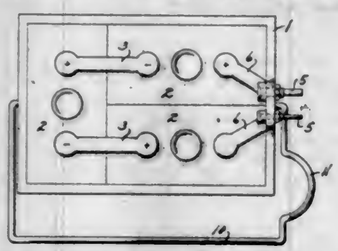
1,632,533. PROCESS OF FORGING GEAR BLANKS. CHARLES A. BRAUCHLER, Canton, Ohio. Filed Oct. 4. 1922. Serial No. 592,276. 4 Claims. (Cl. 29—159.)



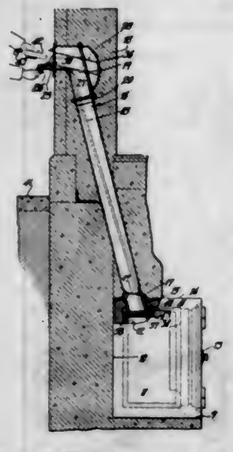
1. The method of forming gear blanks consisting in cutting a flat ended blank from a bar, said blank having a

length greater than the diameter thereof, upsetting the blank endwise producing a barrel shaped product and placing the barrel shaped product in a forging die and

forging the same endwise, causing the outer grain of the blank to flow outward from the hub portions into the teeth portion of the gear blank.



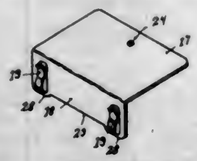
1,632,534. SWITCHING AND STARTER APPARATUS OF ELECTRIC MOTORS. HELIER OSWALD BREE, Auckland, New Zealand. Filed Aug. 28, 1926, Serial No. 132,226, and in New Zealand July 31, 1926. 3 Claims. (Cl. 172—179.)



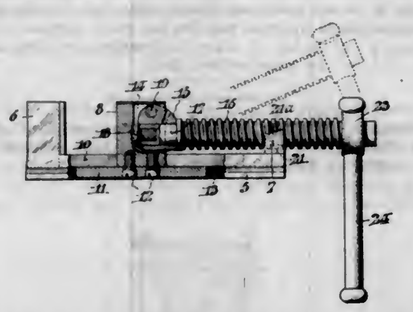
1. In combination with a circuit breaker for opening and closing an electric circuit, a handle for said circuit breaker, a starting resistance, a controller arm for varying said resistance, a latch for holding said circuit breaker in open position, an electromagnet adapted when energized to release said latch, a pair of circuit closing switches in series with said electromagnet and normally open when said resistance is cut out, means on said handle for closing one of said switches, and means on said controller arm for closing the other of said switches when the resistance is in series with the circuit.

1,632,535. BATTERY AND CONNECTER. SAM G. BREEDEN and PAUL L. BREEDEN, Memphis, Tenn. Filed Aug. 2, 1926. Serial No. 126,516. 1 Claim. (Cl. 136—166.)

A battery of the class described comprising a casing, a pair of cells in the casing arranged longitudinally thereof and parallel to each other, a third cell arranged transversely in the casing and having one side abutting the ends of the other two cells, bars connecting the cells together, a pair of terminals supported by one end of the casing and bars connecting the terminals with the plus and minus posts of the parallel cells.

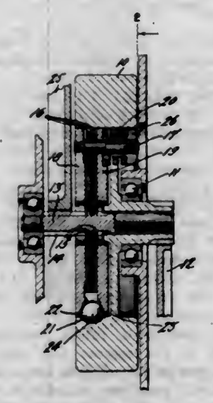


1,632,536. CHUTE. GEORGE T. BREEN, New Rochelle, N. Y., assignor to Herring-Hall-Marvin Safe Company, New York, N. Y., a Corporation of New York. Filed Feb. 5, 1926. Serial No. 86,305. 8 Claims. (Cl. 193—34.)



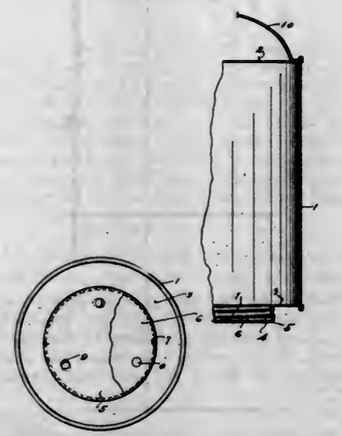
7. In a chute, an oscillatable receiving hopper, a series of spaced-apart, transversely-extending fingers normally hold in chute-closing position but yieldingly withdrawn to permit a one-way passage for articles bearing on said fingers within the chute, a door normally slidable to close the lower end of the chute, and an operative connection extending between said hopper and door through said fingers for normally maintaining the door in open inoperative position, but allowing the door automatically to close the chute whenever said hopper is displaced from its operative position in the chute.

1,632,537. PRICE TAG AND TAG HOLDER. CHARLES E. BRIGEL, Cincinnati, Ohio. Filed May 8, 1926. Serial No. 107,807. 1 Claim. (Cl. 40—11.)



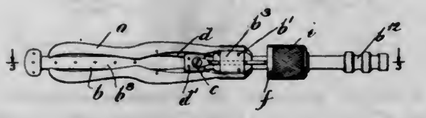
A tag-holder comprising a substantially horizontal tag-holder section to lie flat upon the upper face of a shelf, a substantially vertical section at right angles to said first section to rest against the front edge of the shelf, and a pair of resilient fingers integral with and stamped from the body of said vertical section near opposite ends thereof, and occupying positions in front of said vertical section in position to resiliently and detachably hold a price-tag near opposite ends thereof in contact with the face of said vertical sections and reinforcing sections integral with said vertical section and adjacent to and below the bases of said fingers to strengthen the bases of said fingers and permit the price-tags to cover substantially all of the face of said vertical section.

1,632,538. VISE. JOAH BROGDEN, Melrose Park, Pa. Filed Aug. 17, 1925. Serial No. 50,677. 6 Claims. (Cl. 81—36.)



1. In a vise of the character described, the combination of a base, a stationary clamp jaw and a screw threaded abutment integral with said base, an opposing clamp jaw movable in the interval between said stationary jaw and abutment, and an actuating screw pivoted in the movable jaw and normally seated in—and half-surrounded by—the threaded abutment, whereby said screw is held substantially parallel to the plane of the base, the axis of said pivot being offset relative to the axis of rotation of the actuating screw.

1,632,539. LOAD-LIMITING CLUTCH. ROLAND CHILTON, Keyport, N. J., assignor to Healey-Aeromarine Bus Company, Inc., a Corporation of New York. Filed May 5, 1926. Serial No. 106,905. 11 Claims. (Cl. 64—99.)

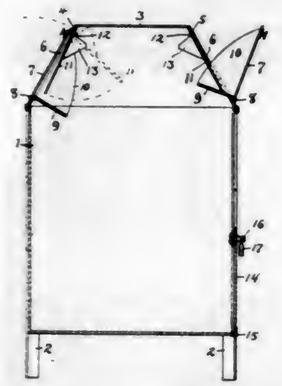


1. In apparatus of the class described the combination of, a plurality of driving and driven friction clutch members, a spring adapted to normally press said members into frictional driving contact, opposed inclined faces on a pair of said driving friction members, a driving member having inclined faces, and rolling means constituting the driving means from the driving member to the driving clutch members and adapted to exert a separating tendency therebetween.

1,632,540. FERTILIZER DISTRIBUTOR. HENRY R. CLARKE, Tarrant, Ala. Filed July 15, 1926. Serial No. 122,699. 2 Claims. (Cl. 221—119.)

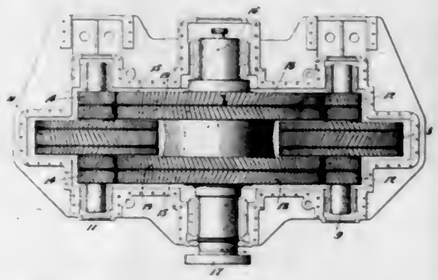
1. A fertilizer distributor, comprising a container having a closed top end provided with a handle, and a bottom provided with an open neck, a disk having apertures therein adapted to seat over the neck, and a screw cap having apertures adapted to mount the disk on the neck and to be adjusted to bring its apertures into or out of registration with the apertures in the disk.

1,632,541. DOUCHE NOZZLE. AUGUSTO J. D. CORTES, New York, N. Y. Filed June 29, 1926. Serial No. 119,270. 5 Claims. (Cl. 128—244.)



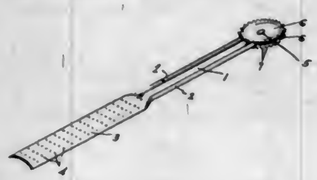
1. In a douche nozzle, in combination, a fluid tube, dilators pivoted on the tube, an annulus slidable on the tube, links between the dilators and the annulus, an annulus slidable on the tube on the opposite side of the pivots of the dilator from the first annulus, means to connect the two annuli and a sleeve on the tube, swiveled on the last named annulus and having an inwardly directed lug engaged in a helically shaped groove formed in the tube.

1,632,542. TRASH RECEPTACLE. JAMES E. P. DILLON, South Bend, Ind. Filed Oct. 4, 1926. Serial No. 139,300. 3 Claims. (Cl. 220—32.)



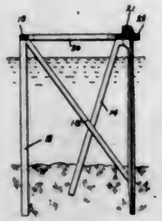
1. A trash receptacle comprising a box having a permanent cover the front and back faces of which slant inwardly, there being an opening in said front and back;

a movable pocket member for closing each of said openings and having hinged support at its lower end so as to swing outwardly; and a flap hinged at its upper end at the top of each opening and extending into the corresponding pocket member so that said opening is closed



by said flap when the corresponding pocket member is in open position, each flap having a stop thereon operable to limit inward swinging movement of the flap by contacting with the top of the said cover; and a lock controlled door for the box in the lower part thereof.

1,632,543. STEAMSHIP-DRIVING MECHANISM. ANDREW FLETCHER, Jr., Morristown, and JAMES A. CAPSTAFF, Grantwood, N. J. Filed Dec. 5, 1921. Serial No. 519,898. 2 Claims. (Cl. 74—7.)



1. Driving mechanism for steamships comprising a large driven gear having teeth in reversed symmetry about a plane perpendicular to the mid point of its axis and constructed to permit ready reversal to change the trailing faces of the teeth to forward faces; an intermediate shaft symmetrical about its mid point; intermediate gear means mounted centrally on said intermediate shaft, the teeth of said intermediate gear means being in reversed symmetry about a plane perpendicular to the mid point of the intermediate shaft to permit the intermediate gear to be reversed by reversing the intermediate shaft in its bearings; a pinion shaft symmetrical about a plane perpendicular to its mid point; and a pinion mounted centrally on said shaft, said pinion having its teeth in reversed symmetry about a plane perpendicular to the mid point of the shaft to permit the pinion to be reversed by reversing the pinion shaft in its bearing; said construction permitting the ready reversal of all gear elements of the series whereby when teeth become worn all of the gear elements may be reversed to change all of the trailing faces into forward faces.

1,632,544. TIRE-REPAIR SCRAPER. RICHARD W. FOX, Birmingham, Ala. Filed Aug. 19, 1926. Serial No. 130,174. 2 Claims. (Cl. 152—27.)

2. As an article of manufacture, a handle having a pair of closely associated disked rollers pivotally mounted concentrically thereon and having their marginal edges sharply out-turned in opposite direction and roughened, as and for the purposes described.

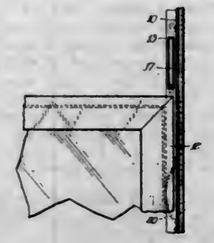
1,632,545. WATER BARRIER. WILLIAM H. GILLEN, Milwaukee, Wis. Filed Sept. 11, 1925. Serial No. 55,779. 3 Claims. (Cl. 61—4.)

1. A water overflow barrier, comprising a wall formed of a plurality of precast piles having tongue and groove connections, some of said piles having a female locking member of semi-circular shape embedded in the upper portion of the inner face, a top member cast on said wall and engaging said piles, the wall and top member having interpenetrating reinforcing means, brace members engaging said female locking members and said top member and bracing the wall.

1,632,546. WELDING ROD. J BIRCHARD GREEN, Chicago, Ill., assignor to Fusion Welding Corporation, Chicago, Ill., a Corporation of Illinois. Filed Sept. 20, 1926. Serial No. 136,725. 3 Claims. (Cl. 219—8.)

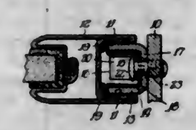
1. A welding rod or wire of ferrous metal containing carbide, the major portion of which carbide is in globular form.

1,632,547. COMBINED BRASSIÈRE AND DRESS SHIELD. VICTOR GUINZBURG, New York, N. Y., assignor to I. B. Kleinert Rubber Company, New York, N. Y., a Corporation of New York. Filed Nov. 12, 1925. Serial No. 68,522. 1 Claim. (Cl. 2—54.)



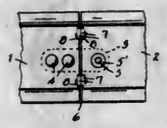
An article of the class described consisting of a garment having a body portion composed of a continuous strip of light, open-mesh fabric adapted to extend around the body of the wearer and enclose the busts, the upper and lower edges of said strip being made expansible by means consisting of elastic bands secured along said edges, arm pit shields secured in said body, each of said shields being composed of a body flap and an arm flap, the body of the garment having its widest parts located in front of and at the back of said shields, the top edges of the widest parts of said strip extending

at least as high as the top of the body flap on each shield, and shoulder straps secured to the expansible top edges of the strip at positions remote from the shields,



so that parts of the expansible top edge of the strip are located between the point of securement of the shoulder straps and the shields.

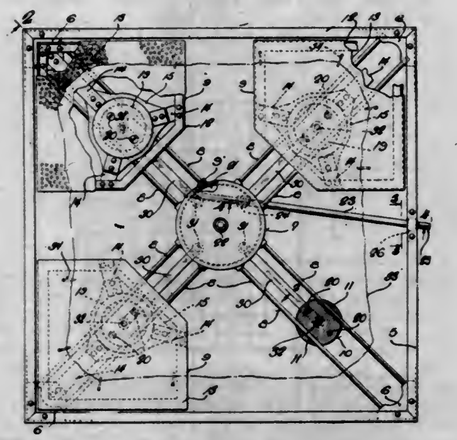
1,632,548. SASH GUIDE. THOMAS W. HOLT, Elkhart, Ind., assignor, by mesne assignments, to The Adams & Westlake Company, Chicago, Ill., a Corporation of Illinois. Original application filed May 25, 1925, Serial No. 32,536. Divided and this application filed Oct. 9, 1926. Serial No. 140,540. 6 Claims. (Cl. 20—69.)



1. The combination with a sash having a groove in the stile thereof, of a guide comprising a channel strip adapted to be attached to a window jamb and contained within the groove, a plurality of spring-pressed sash-engaging elements projecting laterally from one side of the strip against one side of the groove for pressing the other side of the groove against the other side of the strip, and a plurality of other spring-pressed sash-engaging elements projecting outwardly from the channel against the bottom of the groove.

1,632,549. SASH GUIDE. THOMAS W. HOLT, Elkhart, Ind., assignor, by mesne assignments, to The Adams & Westlake Company, Chicago, Ill., a Corporation of Illinois. Original application filed May 25, 1925, Serial No. 32,537. Divided and this application filed Oct. 9, 1926. Serial No. 140,541. 6 Claims. (Cl. 20—69.)

1. The combination with a sash having a groove in the stile thereof, of a guide comprising two channel strips arranged one within the other to form in effect a rib for insertion within the groove, the inner strip having a resilient portion projecting from the contour of the outer strip for resiliently yieldable engagement with the sash at a point within the groove.

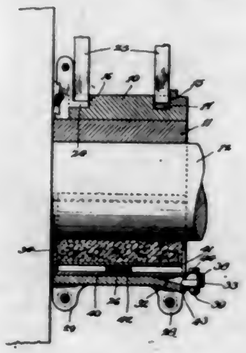


1,632,550. JOINT FOR SPLIT RIMS AND METHOD OF MAKING THE SAME. EMIL R. JACOBI, Jackson, Mich., assignor to Hayes Wheel Company, Jackson, Mich. Filed June 26, 1925. Serial No. 39,715. 7 Claims. (Cl. 29—159.)

4. A split rim joint comprising the meeting ends, and a tie bar detachably coupling the same, the metal of said ends being formed with an upset contacting projection.

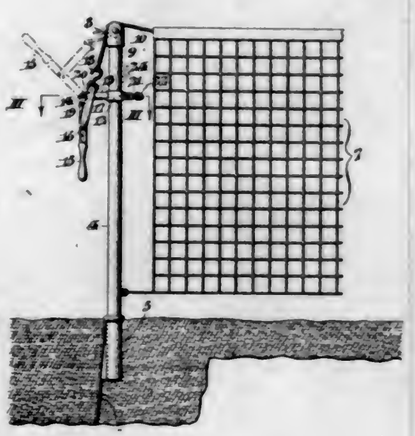
5. The method of manufacturing a split rim joint comprising coupling the meeting ends together as by a tie bar, and then subjecting the meeting ends of the joint to the stamping action of punch ends at each side of said tie bar to upset the metal and form contacting projections therebetween thus making a close fitting joint.

1,632,551. APPARATUS FOR STRETCHING SKINS AND LEATHER. IRA MILTON JONES, Milwaukee, Wis., assignor to Carl A. Bechstein and Ewald E. Kornitz, Milwaukee, Wis. Filed Apr. 9, 1925. Serial No. 21,830. 9 Claims. (Cl. 149—21.)



8. In an apparatus for stretching skins and leather, comprising a plurality of frame members having work engaging surfaces, means mounting the frame members for movement only in a common plane and permitting rotation thereof on an axis transversely of the plane of movement, and means for producing movement of the frame members on a common plane.

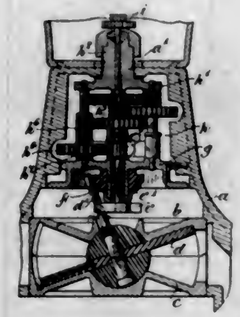
1,632,552. JOURNAL BOX. ARTHUR T. KUEHNER, St. Augustine, Fla. Original application filed Jan. 18, 1921, Serial No. 478,646. Divided and this application filed July 20, 1922, Serial No. 576,343. Renewed Sept. 10, 1925. 5 Claims. (Cl. 308—83.)



1. A journal box including a box body having legs, a shelf secured between said legs, a cellar supported by said shelf, a follower disposed within the cellar, and yieldable means extending through the bottom wall of the cellar to project therebeneath and coacting between

the follower and the shelf, the cellar being insertable between the legs by sliding the cellar inwardly upon the shelf and the shelf being provided with means to coact

with the lower end of said yieldable means for directing said yieldable means onto the shelf when the cellar is shifted inwardly.



1,632,553. APPARATUS FOR SUPPORTING LAWN-TENNIS NETS AND THE LIKE. MOSES R. LANE, Ardmore, Pa. Filed Sept. 26, 1925. Serial No. 58,701. 5 Claims. (Cl. 273—29.)

3. In apparatus for supporting lawn tennis nets and the like, the combination of a post having a series of longitudinally spaced indentations, and a toggle net-tensioning device including a retractable spring-influenced pin for engaging the indentations to rigidly lock said net-tensioning device in adjusted positions along the post.

1,632,554. WATER METER. WILLIAM L. MARDEN, Elmhurst, N. Y., assignor to Neptune Meter Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 28, 1924. Serial No. 746,278. 1 Claim. (Cl. 74—7.)

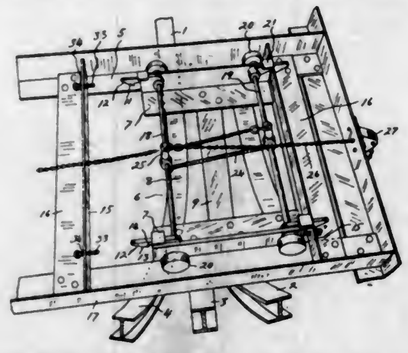
In a water meter wherein, a partition divides the interior of a main casing, a gear train above the partition including a sleeve toothed at one end to form a pinion and shouldered to provide a seat at the other end, a gear mounted in the seat, a groove in the sleeve between the gear and its end, a yoke shaped spring member engag-

ing the groove and bearing upon the gear at its extremities whereby a frictional connection is had between the two, and means for driving the gear.

1,632,555. COMPOSITION OF MATTER. GEORGE E. MESSINGER, New York, N. Y. Filed Oct. 22, 1923. Serial No. 669,944. 1 Claim. (Cl. 134—24.)

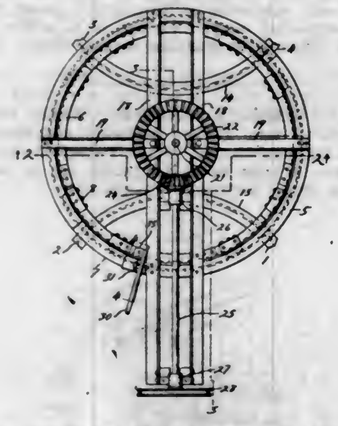
A composition of matter for use as a cleaning and polishing agent, comprising a mixture combined substantially in the following proportions in one gallon of the composition, mineral oil thirty fluid ounces, infusorial earth ten ounces, hydrochloric acid (37% solution) six and one-half fluid ounces, methyl salicylate one-half ounce and sufficient water to make up one gallon.

1,632,556. HAND FAN. SAVERIO MINUNNO, New York, N. Y. Filed Dec. 3, 1926. Serial No. 152,454. 8 Claims. (Cl. 230—258.)



1. In a hand fan, the combination of a frame, a motor mounted thereon, a fan driven by the driven shaft of the motor, a pair of meshed bevel pinions, one of which is connected with the drive shaft of the motor, a stem on which the other pinion is fixed, a guide on the frame, and a longitudinally movable and rotatable handle guided by said guide and on which said other pinion is fixed.

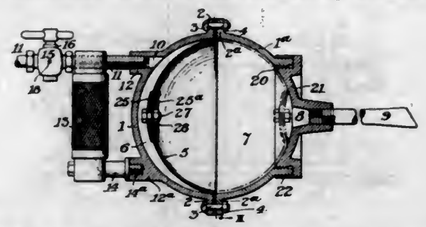
1,632,557. TROLLEY SWITCH. CHARLES L. MOON, Detroit, Mich., assignor to The Cecil R. Lambert Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 18, 1926. Serial No. 82,142. 6 Claims. (Cl. 104—102.)



1. The combination with a stationary track section and a movable track section having one end registerable with an end of said stationary track section, of a carriage

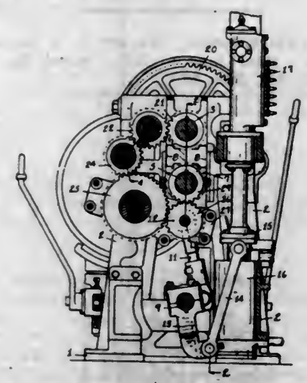
movable transversely of said stationary track section and supporting said movable track section, a shaft upon said carriage, means for supporting said carriage, including

wheels journaled upon said shaft, a latch upon said shaft for securing said carriage in position to register the ends of said track sections, and means for releasing said latch.



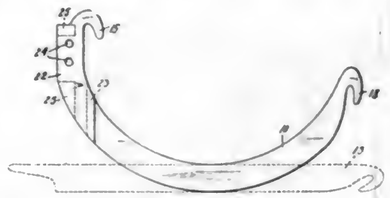
1,632,558. ROTARY CROSSOVER SWITCH. CHARLES L. MOON, Detroit, Mich., assignor to The Cecil R. Lambert Company, Detroit, Mich., a Corporation of Michigan. Filed June 21, 1926. Serial No. 117,646. 5 Claims. (Cl. 104—99.)

1. The combination with stationary track sections arranged at right angles to each other and an annular frame, of an annular carriage located within said frame, trolley wheels upon said carriage traveling upon said frame for supporting the former from the latter and track sections upon said carriage having their ends alternatively registerable with the ends of different pairs of said stationary track sections.



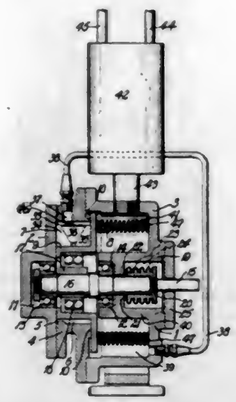
1,632,559. CALKING MACHINE. HOWARD ASHLEY PEDRICK, Bala, Pa., assignor to Ev-Air-Tight Calking Co., Philadelphia, Pa., a Corporation of Delaware. Filed Dec. 22, 1923, Serial No. 682,174, and in Canada Feb. 12, 1923. 17 Claims. (Cl. 18—3.5.)

1. In a calking device, the combination of a casing comprising a pair of hemi-spherical sections separable upon a substantially equatorial line; one of said sections having an inlet for fluid under pressure and forming a head for said casing and the other having an outlet passage, a discharge nozzle connected to said latter section in line with said outlet passage, a reinforced flexible diaphragm disposed within the chamber of said casing and confined between the sections of the same, and means for controlling the flow of fluid pressure to the chamber



defined by the wall of said head and the diaphragm for causing the latter to act upon and expel material from the casing through the discharge nozzle.

1,632,560. RIM-ROLLING MACHINE. EMIL J. PETERSON, Jackson, Mich., assignor to Hayes Wheel Company, Jackson, Mich. Filed May 1, 1924. Serial No. 710,276. 6 Claims. (Cl. 80—5.)

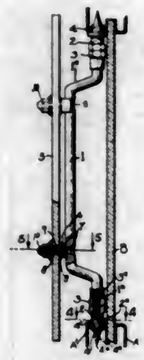


1. In a rim rolling machine, the combination of a frame, an upper roll on a fixed shaft, means for driving the same, a lower movable roll on a shaft, a slide with journal bearings for said movable roll, means for advancing said slide and roll, a driving means for the fixed roll shaft, a chain of gears driven from the fixed roll shaft, one of which is supported on a rocker and connected to drive the movable roll, a compensating gear in the said chain of gears comprising independently revoluble gears with compensating pawl and ratchet drive means therebetween, the driving gear being recessed on its face and carrying a pawl and the driven gear of which has a hub-like extension with ratchet teeth disposed in said recess, a pawl recess in the face of the driving gear with a cylindrically curved convex rear portion to engage the rear end of the pawl and with a square front portion to permit the movement of the pawl therein and maintain its rear engagement, a pawl with its rear end curved to pivot in the pawl recess and with its front end squared to engage the ratchet teeth and to move freely into the said recess, the said pawl having a longitudinal slot through the rear end and in its upper face, and a spring with projecting ends and a central coil disposed in the said slot reacting between the said pawl and the bottom wall of the recess to urge said pawl into engagement, the pawl and ratchet parts being of such dimension that its outer corner remains within the square end of the recess at all times whereby the driven gear may be carried forward out of engagement with the driving gear to compensate for the varying movements of the rolls in contact with the stock when the movable roll is driven from the fixed roll more rapidly than the rate of drive of the chain of gears.

1,632,561. GUTTER HANGER. EVA RACHLIN, Brooklyn, N. Y. Filed Mar. 17, 1926. Serial No. 95,306. 1 Claim. (Cl. 108—29.)

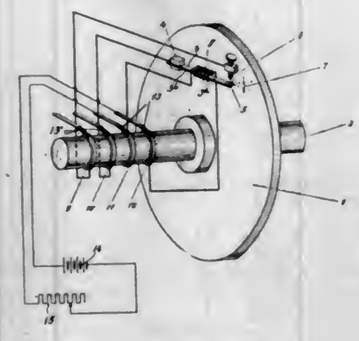
A gutter hanger circle stamped from a single straight strip of sheet metal bent edgewise into an arc of a circle and including a body portion and a heel portion, said heel portion being bent out of the plane of said body portion to form a vertical shoulder at the juncture of said body and heel portions, and said bent out heel portion being provided with a plurality of projections arranged in a vertical line and spaced from said shoulder.

1,632,562. COMPRESSOR. WALTER G. E. ROLAFF, St. Louis, Mo. Filed June 1, 1925. Serial No. 33,952. 13 Claims. (Cl. 230—30.)



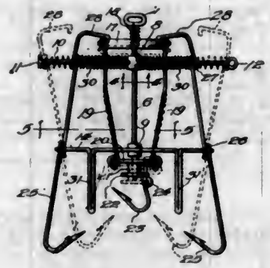
1. In a machine of the class described, in combination with a cylinder, a rotor eccentrically mounted therein for gyratory movement within the cylinder and in rolling engagement with the wall thereof and having releaseable contact with both ends of the cylinder, and means for positioning the rotor ends in exact line with the cylinder ends.

1,632,563. BUMPER. JAMES H. SAGER, Rochester, N. Y., assignor to J. H. Sager Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 14, 1927. Serial No. 167,967. 2 Claims. (Cl. 293—55.)



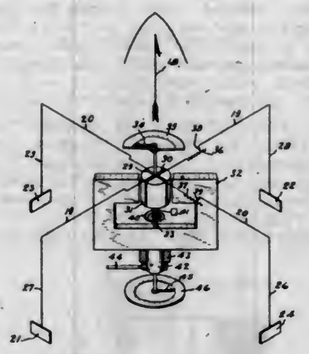
1. The combination with a tubular impact member of a cap fitting over the same, a bumper supporting spring and a single bolt securing the tubular impact member, the cap and the bumper supporting spring.

1,632,564. SIDE WINDSHIELD FOR VEHICLES. CHARLES A. SAYERS, San Diego, Calif. Filed July 1, 1926. Serial No. 119,812. 9 Claims. (Cl. 269—84.)



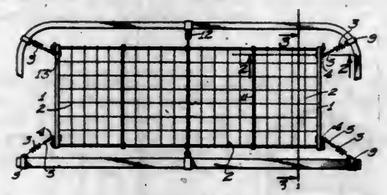
1. In a means of the class described, the combination with the frame forming a side opening of a vehicle, of a supporting member adapted to be supported at its opposite ends between opposite sides of said frame and provided with a piercing and pivot means at one end for piercing said frame and for providing a pivoted support for said supporting member, and a shield secured to said supporting member adapted to be shifted therewith and deflect wind from the opening formed by said frame.

1,632,565. SPEED REGULATOR. KARL SCHMIDT, Lichtenrade, near Berlin, Germany, assignor to C. Lorenz-Aktiengesellschaft, Berlin-Tempelhof, Germany. Filed Jan. 5, 1926, Serial No. 79,364, and in Germany Mar. 24, 1925. 6 Claims. (Cl. 200—80.)



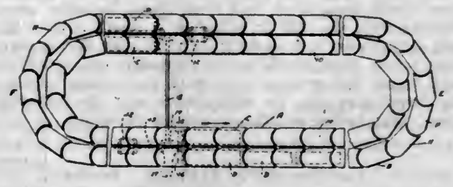
1. In a speed regulator of the character described, in combination, a rotating member, a contact fixed thereon, a co-operating oscillating contact arranged upon a resilient support also mounted on said rotating member and adapted to close said two mentioned contacts influencing a speed-controlling means intermittently once during each revolution by the joint co-operation of centrifugal force and gravity action upon said oscillating contact, and means whereby the temperature of the contact-bearing members may be regulated.

1,632,566. FISHING APPARATUS. CARL F. SCHNEIDER, Chicago, Ill. Filed Nov. 26, 1926. Serial No. 150,992. 5 Claims. (Cl. 43—89.)



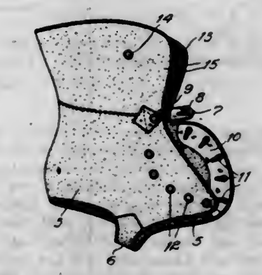
1. In combination with a stem to which is connected fast a pivotal support and guiding means, trap hooks mounted to swing upon the pivotal support and receive guidance from said means and arranged to approach each other at their acting ends, a bait hook carried slidably on the stem, and having an associated wall, there being a catch on each trap hook adapted to engage releasably with the wall to retain said hooks in one position, spring means tending to swing the trap hooks from the wall to a second position, and other tension means exerting a force on the wall auxiliary to the pull of a fish on the bait hook whereby to release the several trap hooks, substantially as described.

1,632,567. SPEED AND COURSE INDICATOR FOR CONVEYANCES. FREDERICK GRANT SIMPSON, Seattle, Wash. Filed Nov. 28, 1923. Serial No. 677,471. 10 Claims. (Cl. 175—183.)



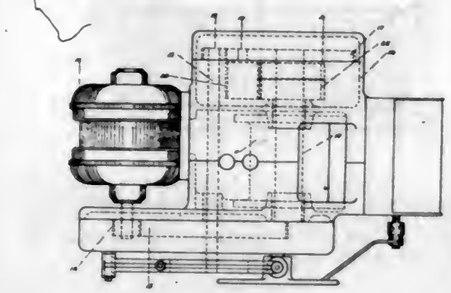
1. Measuring devices of the class described embodying a plurality of electrically separated electrically conductive elements carried on a conveyance movable in an electrically conductive medium and arranged to cut the vertical component of the earth's magnetic field, at the velocity of said conveyance in a plane parallel to the earth's surface, whereby electromotive forces proportional to the rate at which said vertical component of the earth's magnetic field is cut will be generated, means including in part said electrically conductive medium for completing the circuits of which said electrically conductive elements form a part and means for utilizing said electromotive forces to determine the characteristics of horizontal motion of said conveyance.

1,632,568. HAT AND PARCEL CARRIER. HARRISON G. SLOANE, San Diego, Calif. Filed July 31, 1923. Serial No. 654,911. 8 Claims. (Cl. 224—29.)



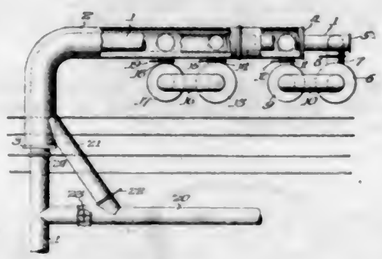
5. In a carrier of the class described, a main supporting means, and a basket like rack resiliently suspended adjacent to and parallel with said support whereby said rack may be quickly forced away from said support for placing articles in said rack.

1,632,569. TRANSPORTATION SYSTEM. HERMAN E. TAYLOR, Detroit, Mich. Filed Oct. 6, 1924. Serial No. 742,002. 20 Claims. (Cl. 104—25.)



1. A transportation device comprising a platform, means for moving said platform at a constant relatively high speed, a second platform adjacent the first and means for moving the second platform as a unit throughout its length alternately at substantially the same speed of the first platform and then at a relatively low speed.

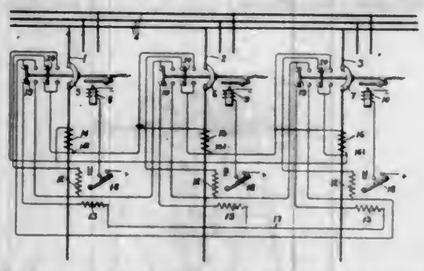
1,632,570. FOOTWEAR. CHARLES TWEEDIE, Jefferson City, Mo. Filed July 3, 1922. Serial No. 572,538. 5 Claims. (Cl. 36—2.)



1. An article of footwear comprising an inside quarter and an outside quarter, which are secured together along the back of the article and whose front edges substantially meet at the front line of said article near the throat thereof and are provided with means passing across said throat for detachably securing said quarters together, said inside quarter having an upper fly and a lower fly which extend beyond said front line and are provided with means for detachably securing them to said outside quarter.

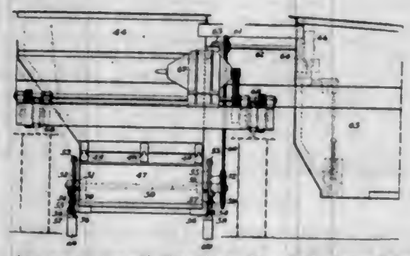
1,632,571. HOIST. ARCHIBALD S. WATSON, Detroit, Mich., assignor to Detroit Hoist and Machine Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 19, 1925. Serial No. 3,444. 2 Claims. (Cl. 254—186.)

1. In a hoist, a frame, a drive shaft, a drum shaft, a drive pinion on the drive shaft, a drum on the drum shaft, a driven gear fixed to the drum shaft and a second gear loosely mounted on said drum shaft, the latter gear meshing with the said drive pinion, a pinion carried by said second gear and meshing with the said driven gear fixed to the drum shaft, and a stationary gear fixed to said frame and meshing with said last named pinion, the latter gear and the said driven gear fixed to the drum shaft having a different number of teeth.



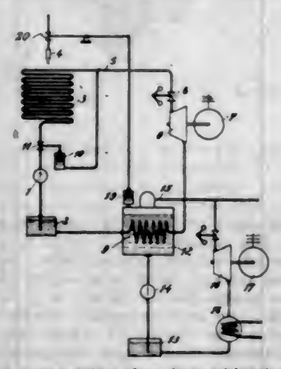
1,632,572. GAS-WASHING SYSTEM. FREDERICK H. WILLCOX, Chicago, Ill., assignor to Freyn, Brassert & Company, Chicago, Ill., a Corporation of Maine. Filed Mar. 9, 1923. Serial No. 623,950. 5 Claims. (Cl. 261—10.)

1. Gas washing mechanism comprising a pair of gas conductors, in enveloping relationship with one another, one of said conductors having communication with hot gas emitting mechanism, gas washing means having communication with said one conductor and having means for delivering clean gas to the other of said conductors, stop means for said one conductor at its end opposite to the point of its communication with said gas emitting mechanism, said gas washing means having communication with said one conductor at a point adjacent to said stop means.



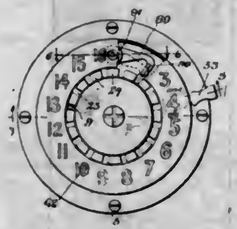
1,632,573. PROTECTIVE SYSTEM. RAOUL WILLHEIM, Vienna, Austria, assignor to General Electric Company, a Corporation of New York. Filed Aug. 31, 1925, Serial No. 53,697, and in Germany Sept. 20, 1924. 5 Claims. (Cl. 175—294.)

1. A protective system for parallel lines comprising a relay for each line, each of said relays having two co-operating windings connected to be energized respectively in accordance with the differences between the currents



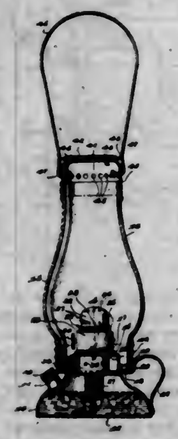
in the line with which the relay is associated and another line and between the currents in a third line and the line with which the relay is associated.

1,632,574. BEET-HANDLING APPARATUS. GEORGE W. YANNEY, Alliance, Ohio, assignor to The Alliance Machine Company, Alliance, Ohio, a Corporation of Ohio. Filed Oct. 5, 1921. Serial No. 505,497. 10 Claims. (Cl. 105—247.)



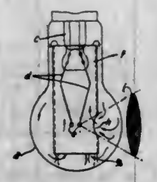
1. An apparatus of the class described, comprising a movable hopper, a plurality of discharging gates carried thereby, a counterweight for holding said gates in closed position when the hopper is empty, a manually controlled automatically released brake cooperating with said counterweight to hold the gates in closed position when the hopper is loaded, and flexible tension means intermediate said brake and said gates, substantially as described.

1,632,575. ARRANGEMENT OR SYSTEM FOR THE GENERATION OF STEAM. WILHELM ABENDROTH, Berlin-Charlottenburg, Germany, assignor to Siemens-Schuckertwerke Gesellschaft mit beschrankter Haftung, Berlin-Siemensstadt, Germany, a Corporation of Germany. Filed Oct. 23, 1926, Serial No. 143,654, and in Germany July 7, 1925. 2 Claims. (Cl. 60—49.)



1. In a vapor generating plant in combination a supply well, a pipe system constituting a primary vapor generator, a pump for forcing operating liquid from said well into said generator, means for heating the liquid in said primary generator to a suitable temperature to generate vapor at critical values, a prime mover connected to said generator, a condenser system connected to the exhaust side of said prime mover, a secondary vapor generator containing said condenser system as its source of heat supply, means for feeding operating liquid into said secondary generator, a second prime mover connected to said secondary generator, and means connected with said secondary generator and responding to varying load conditions therein caused by the varying load of the second prime mover, said means being connected with said primary vapor generator to control its vapor output in accordance with the load variations of the secondary prime mover.

1,632,576. LOCK FOR AUTOMOBILES. RAFFAELE ALFISI, Brooklyn, N. Y. Filed Apr. 9, 1926. Serial No. 100,936. 5 Claims. (Cl. 70—127.)

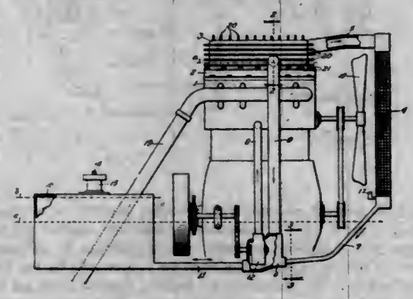


1. A lock for automobiles provided with an ignition circuit comprising a valve for controlling the gasoline pipe of the automobile engine, means acting as a switch contacts interposed in said ignition circuit, a manually actuated structure for connecting said contacts and simultaneously opening said valve, and means co-acting with the manually actuated structure for preventing the bridging of said contacts and the opening of the valve when the manually actuated structure is moved to other than a particular point.

1,632,577. LANTERN. CLAUDE MELBOURNE ANDERSON, Guys Hill, Jamaica, British West Indies. Filed Apr. 8, 1926. Serial No. 100,579. 5 Claims. (Cl. 240—37.)

1. A device of the character described comprising a base section, a fuel reservoir arranged in said base section, a burner, a wick carried by said burner, means arranged on said base section for supporting said burner so that the wick thereof extends into the reservoir, said burner having means arranged thereon for supporting a candle, and means arranged on said burner for reversing the same in order that the wick may be illuminated or a candle may be supported thereby.

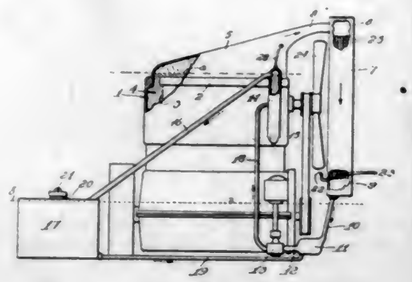
1,632,578. ARC LAMP OF THE SEALED TYPE. FRITZ BAHR, Charlottenburg, Germany, assignor to General Electric Company, a Corporation of New York. Filed Feb. 21, 1924, Serial No. 694,406, and in Germany May 4, 1923. 5 Claims. (Cl. 176—1.)



1. In an electric lamp, the following elements in combination, a source of light sealed within an envelope, said envelope having a gas enclosed therein, a tube, said source located within said tube, and opening in said tube, said elements so disposed as to create a draft of said gas through said opening for preventing the passage of emanations from the light source through said opening, said tube vertically disposed and having said opening at the side and having also an opening at the top with the lower end closely whereby the said draft after passing through said opening, passes out through said top opening.

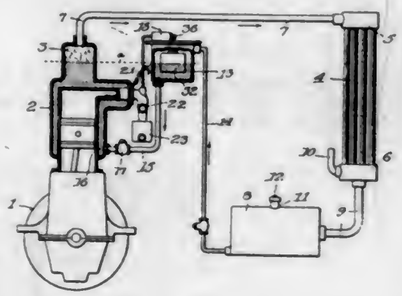
1,632,579. PROCESS FOR TREATMENT OF FRUIT IN THE PREPARATION OF FRUIT FOR MARKET. WILLIAM R. BARGER and LON A. HAWKINS, Washington, D. C., and CLARENCE P. BLATZ, Pasadena, Calif., assignors, by mesne assignments, to the People of the United States. Filed Jan. 25, 1926. Serial No. 83,706. 1 Claim. (Cl. 99—1.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

A process for the preparation of fruit for the market, consisting in washing the fruit in hot water, and then subjecting the fruit for a period of ten minutes to a bath of liquid such as water with an antiseptic dissolved therein, maintained at a temperature of 35° F.



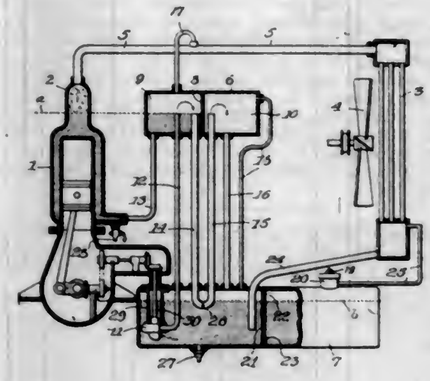
1,632,580. VAPOR-COOLING SYSTEM. LESTER P. BARLOW, Stamford, Conn. Filed Apr. 10, 1926. Serial No. 101,062. 6 Claims. (Cl. 123—174.)

1. In a cooling system for internal combustion engines, the combination with a cylinder jacket and a condenser, of two circuits, one for conveying vapor from the jacket



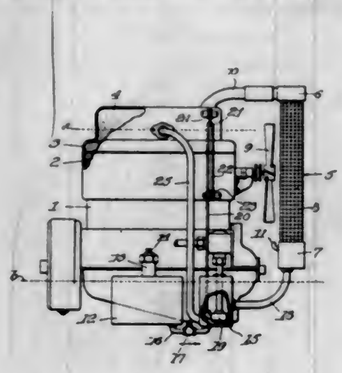
to the condenser and condensate therefrom, and the other permitting circulation of cooling liquid through the jacket without passing through the condenser, a circulating pump in the system, and a reservoir located below the jacket and connected with both of said circuits to supply liquid thereto but disposed out of the path of either of the circuits.

1,632,581. ENGINE-COOLING SYSTEM. LESTER P. BARLOW, Stamford, Conn. Filed Aug. 5, 1926. Serial No. 127,257. 12 Claims. (Cl. 123—174.)



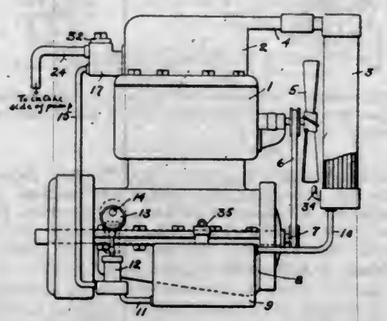
1. In an internal combustion engine vapor cooling system which is open continuously to the atmosphere and which operates at all times at atmospheric pressure, the combination with a cylinder jacket having a steam space above the same, of means providing a circuit whereby a cooling liquid may be continuously circulated without passing through said jacket, and means included in said circuit and connected with said jacket whereby a predetermined liquid level may be maintained in the jacket by supplying liquid thereto from the circuit in direct proportion to the amounts going off as steam in the jacket.

1,632,582. ENGINE-COOLING SYSTEM. LESTER P. BARLOW, Detroit, Mich. Filed Dec. 30, 1926. Serial No. 157,900. 8 Claims. (Cl. 123—174.)



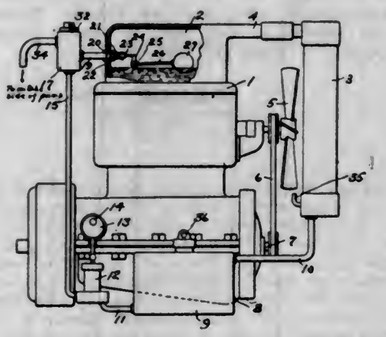
1. The method of supplying cooling liquids to a vapor cooling system of an internal combustion engine of the suction and compression type, which consists in utilizing a portion of the suction produced by the engine in its fuel intake conduit for transferring cooling liquids from an inactive part of the system to an active part thereof adjacent the water jackets of the engine, and for automatically maintaining the liquids at a substantially predetermined level in the jackets.

1,632,583. ENGINE-COOLING SYSTEM. LESTER P. BARLOW, Detroit, Mich. Filed Dec. 30, 1926. Serial No. 157,901. 11 Claims. (Cl. 123—174.)



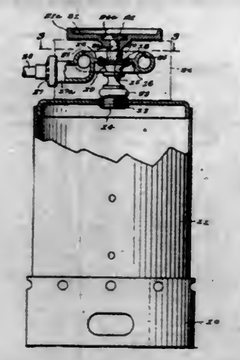
1. In a vapor cooling system for internal combustion engines, the combination with a cylinder jacket having a steam space above the same, of a liquid circuit connected with the jacket for feeding liquids thereto, said circuit including a chamber to regulate the liquid level in the jacket, a supply reservoir for the chamber, and an outlet connection between said chamber and the reservoir and formed to provide a permanent liquid seal between them so as to prevent steam flowing into the reservoir from said chamber.

1,632,584. ENGINE-COOLING SYSTEM. LESTER P. BARLOW, Detroit, Mich. Filed Jan. 3, 1927. Serial No. 158,514. 9 Claims. (Cl. 123—174.)



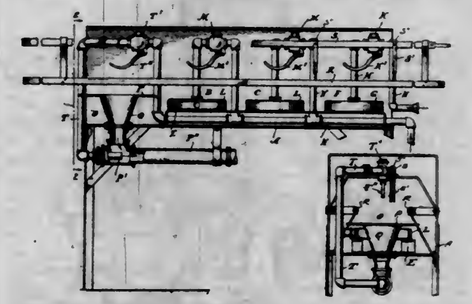
1. In a vapor cooling system for internal combustion engines, the combination with a cylinder jacket having a steam space above the same, of a condenser connected to said space to receive steam therefrom, a chamber to receive the condensate from said condenser and the overflow liquids from said jacket, a pump for forcing liquids from the chamber to said jacket, a reservoir disposed out of the path of hot liquids circulated by the pump and containing a supply of reserve cooling liquid for the system, a connection from the reservoir to the chamber for supplying reserve cooling liquids thereto, and a non-returnable means in said connection.

1,632,585. VAPOR-COOLING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. LESTER P. BARLOW, Stamford, Conn. Filed Jan. 20, 1927. Serial No. 162,358. 12 Claims. (Cl. 123—174.)



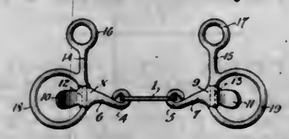
1. In a cooling system for internal combustion engines the combination with a cylinder jacket having a vapor space, of a condenser in communication with said vapor space, a make up reservoir for cooling liquid in communication with the condensers, a distributing box outside the cylinder jacket having an opening therein leading to the cylinder jacket, a pipe leading from the make up reservoir to said distributing box, a pump in circuit with said pipe leading from the make up reservoir to said distributing box and a return pipe leading from said distributing box to the inlet side of the pump.

1,632,586. VAPOR-COOLING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. LESTER P. BARLOW, Stamford, Conn. Filed Jan. 20, 1927. Serial No. 162,359. 8 Claims. (Cl. 123—174.)



1. In a cooling system for internal combustion engines the combination with a cylinder jacket of means for supplying cooling liquid to said jacket comprising means for circulating the cooling liquid without passing through said jacket and means for so controlling the admission of liquid from said circuit to the jacket as to maintain the cooling liquid in the jacket at a predetermined level comprising a float within the jacket and a valve controlled by said float.

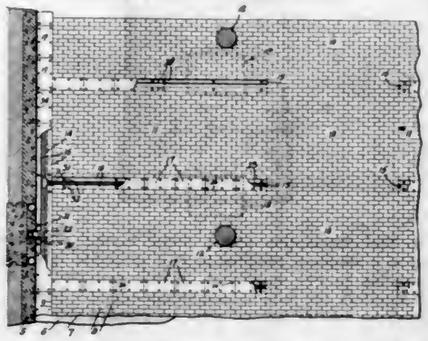
1,632,587. MOUNTED GAS HEATER. NICHOLAS BENENATI, New York, N. Y. Filed Nov. 15, 1926. Serial No. 148,587. 4 Claims. (Cl. 126—230.)



2. The combination with a boiler having an apertured top, of a standard mounted in said apertured top, a plate connected to the upper end of said standard, a flange intermediate the ends of said standard and a burner supported by said flange and disposed beneath said plate.

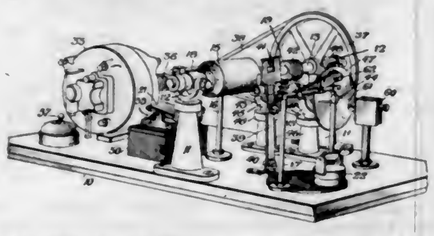
1,632,588. RECEPTACLE STERILIZER. CARL BRAUN, Canastota, N. Y. Filed May 12, 1923. Serial No. 638,547. 1 Claim. (Cl. 34—26.)

A device for drying milk can parts comprising a perforated horizontal plate adapted to receive the parts, a flared drain dependent from the perforated plate and connecting therewith, a waste pipe connected with the lower end of a drain, an aspirating nozzle of restricted diameter adapted to blow into the waste pipe and create a partial vacuum in the flared drain and the can part to dry the latter, and means cooperating with the milk can part to operate said nozzle when the can part is placed in position on the perforated plate.



1,632,589. DRIVING BIT. JOHN S. BRISTOL, Danbury, Conn. Filed Dec. 16, 1926. Serial No. 155,214. 2 Claims. (Cl. 54—7.)

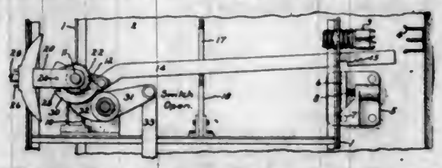
1. A bit used in driving race horses comprising a flat centrally positioned plate, a pair of bars loosely pivotally connected with the plate, a siding ear connected with



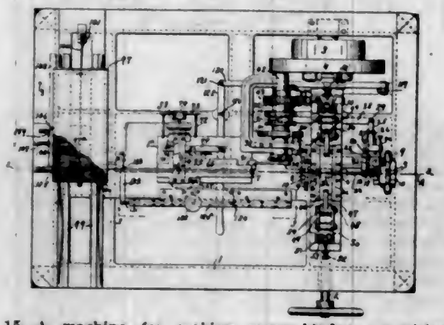
each of said bars, a ring pivotally mounted on each of said bars and adapted to be connected to the reins of the bridle, and means connected with each of the rings for securing the bridle to the overhead strap of the bridle.

1,632,590. BLOCK FLOORING. WILLIAM DALTON, Glenville, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 21, 1926. Serial No. 103,625. 8 Claims. (Cl. 94—4.)

1. The combination with a sub-floor, of a block covering therefor, and means forming a duct in the covering, said duct being open at the top, one dimension of which means is equal to a multiple of the transverse dimension of a block in said covering.



1,632,591. FABRIC-TESTING MACHINE. CALVIN L. DENNIS, Glen Ridge, N. J. Filed May 11, 1926. Serial No. 108,386. 8 Claims. (Cl. 70—51.)

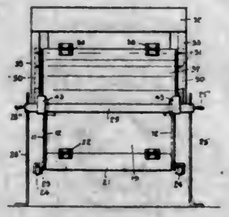


1. A fabric testing machine comprising wearing means, fabric supporting means for supporting a piece of fabric in place with respect to the wearing means, tensioning means for maintaining a portion of the piece of fabric in contact with the wearing means to be subjected to the wearing action thereof, means imparting movement to the portion of the piece of fabric being subjected to the wearing action, power mechanism for actuating the wearing means, indicating means responsive to the operation of a moving part of the power mechanism to indicate the extent of wearing action required for wearing through the portion of the piece of fabric subjected to the wearing action, and means operable when the piece of fabric is worn through for ceasing the operation of the power mechanism.

1,632,592. ELECTRIC SWITCH. HENRY G. FRENCH, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 23, 1925. Serial No. 58,173. 3 Claims. (Cl. 200—50.)

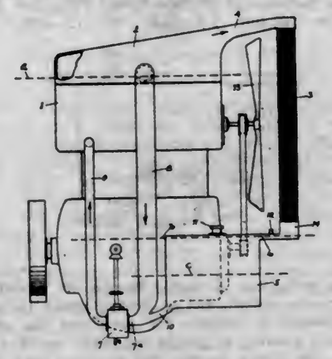
1. In combination, a truck panel, a housing therefor, cooperating contacts carried respectively by the truck panel and the housing an oscillatable member arranged at the face of the truck panel, an actuating member adapted to move the truck panel relative to the housing and selective means operable from the face of the truck panel for connecting the oscillatable member with the actuating member whereby oscillation of the oscillatable member moves the truck panel either in or out of the housing.

1,632,593. BLADE-BACKING MACHINE. HENRY J. GAISMAN, New York, and CONRAD SCHUMACHER, Lynbrook, N. Y., assignors to Autan Corporation, Dover, Del., a Corporation of Delaware. Filed Mar. 23, 1923, Serial No. 627,094. Renewed Nov. 16, 1926. 16 Claims. (Cl. 29—84.)



15. A machine for making razor blades comprising means for feeding a strip, means for securing backings one after another along an edge of the strip, and means for severing the strip between the backings to produce individual blades having a backing.

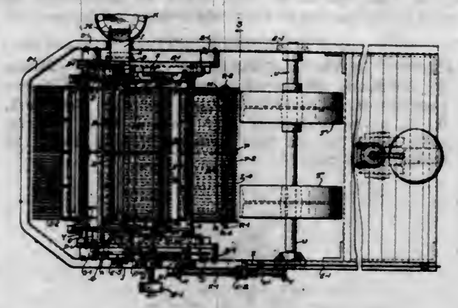
1,632,594. GREASE CAN OR CARTRIDGE. FREDERICK D. GATCHELL, New York, N. Y. Original application filed June 16, 1926, Serial No. 116,433. Divided and this application filed Sept. 21, 1926. Serial No. 136,815. 4 Claims. (Cl. 206—56.)



1. A grease container of the character stated, comprising a can having end closures whereof one is solid and designed to be ruptured and whereof the other is slidable under exerted pressure and is provided with a boss, and an annular flange on the can in frictional sealing relation with the boss.

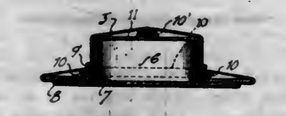
1,632,595. WEIGHER FOR COAL AND SIMILAR MATERIAL. MAX GORDON, Paterson, N. J. Filed July 31, 1926. Serial No. 126,259. 8 Claims. (Cl. 249—19.)

1. A weighing device for coal or the like arranged for continuously delivering weighed quantities of material comprising a rotatable plural partitioned member, a support therefor, resiliently disposed, nonrotatable means on said support cooperating with adjacent partitions adapted to form a receptacle to receive said coal or the like and means for retarding the rotative movement of said member within limits to control the quantity of material received within the receptacle in predetermined amounts by weight.



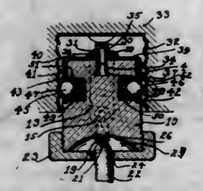
1,632,596. VAPOR-COOLING SYSTEM. LESLIE V. GRANTIER, Detroit, Mich., assignor to McCord Radiator & Mfg. Co., Detroit, Mich., a Corporation of Maine. Filed Apr. 10, 1926. Serial No. 101,034. 7 Claims. (Cl. 123—174.)

1. In a vapor cooling system for internal combustion engines, the combination with a cylinder jacket and a cooler, of two circuits, one to convey vapor from the jacket to the cooler and condensate from the latter, and the other permitting the circulation of cooling liquid through the jacket without passing through the cooler, a reservoir below the jacket and connected with both circuits in a manner permitting both the jacket and the cooler to empty into the reservoir when the system is idle, said reservoir being of a size to hold more liquids than actually required by the system so as to maintain a reserve supply therefor, and a circulating pump in the system.



1,632,597. BERRY HARVESTER. THOMAS F. HALL, Omaha, Nebr. Filed Dec. 2, 1925. Serial No. 72,827. 4 Claims. (Cl. 56—330.)

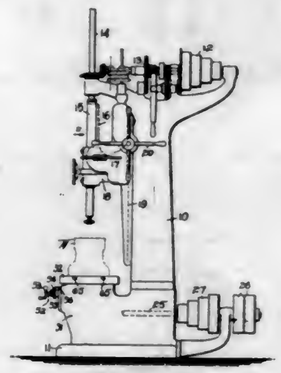
3. In a berry harvester the combination of, a frame mounted on wheels; walls suported by said frame carrying journal bearings; said bearings suporting a rotatable open ported cylinder; said cylinder enclosing a conveyor; berry pickers connected to said cylinder having pivoted jaws; means for rotating said cylinder; means for advancing and receding said pickers slidingly on the ground,



means for opening their jaws when in coincident communication with said ports and conveyor, for emptying their contents onto said conveyor; and means for advancing the harvester intermittently.

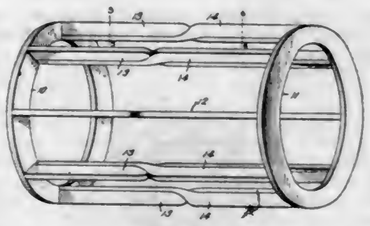
1,632,598. HAT PROTECTOR. DAVID M. HART, New York, N. Y. Filed June 22, 1925. Serial No. 38,633. 4 Claims. (Cl. 2—187.)

3. A rain proof covering for straw hats comprising a sheet covering member disposed over the upper surface of the brim and crown of said hat and folded inwardly adjacent the lower surface of the edge portions of said brim, padding secured to the under surface of said sheet covering material and disposed in the angle formed by the junction of the side of said crown and said brim for inclining the covering of said brim and a pad secured to the under surface of said sheet covering member and positioned substantially at the center of the top of said crown for retaining the central portion of the covering of the top of said crown elevated and the adjacent portions inclined to the plane of said top.



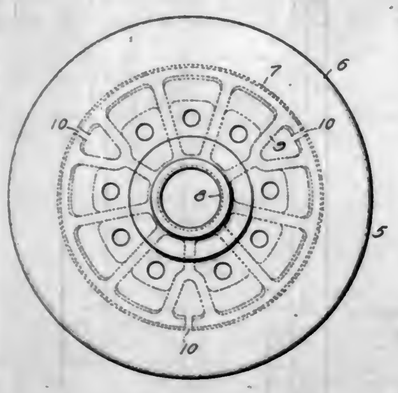
1,632,599. SNAP PLUG. GEORGE A. HAYWARD, Watertown, Conn. Filed Oct. 6, 1925. Serial No. 60,751. 6 Claims. (Cl. 173—360.)

1. In an electric socket plug for non-rotative insertion in an electric wall socket, an insulating body member, a pair of terminal members to be connected to a pair of conductors leading to a power-consuming unit, a pair of conducting strips located on opposite sides of said body member and being electrically connected to one of said terminal members, a pair of balls projecting



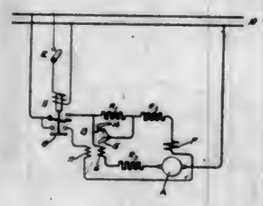
through said strips and adapted to engage the shell of said socket, a pair of springs pressing upon said balls, a pair of metallic bushings for receiving said balls and springs, said bushings being in electrical contact with said springs and said strips, and means for connecting the center contact of the socket to the other terminal member.

1,632,600. INTERNAL-GRINDING MACHINE. FRANK O. HOAGLAND, Bridgeport, Conn., assignor, by mesne assignments, to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 28, 1923. Serial No. 621,785. Renewed May 12, 1926. 23 Claims. (Cl. 21—26.)



1. In a grinding machine, the combination with a rotary grinding wheel spindle adapted to be adjusted in an axial direction, of a work supporting table capable of movement about an axis parallel to the axis of the spindle and having means for clamping the work thereon, a rotary shaft, a slide mounted thereon to move radially and adapted to engage the table to move the table with it, whereby the table can be actuated by the rotation of said shaft, and means for adjusting the position of said slide radially while the shaft and table are moving.

1,632,601. INDUCTION MOTOR. HENRY M. HOBART, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 4, 1924. Serial No. 741,743. 1 Claim. (Cl. 172—120.)

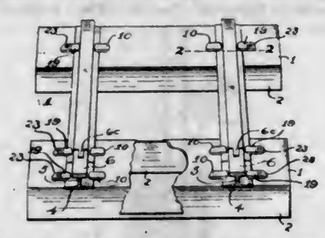


In an induction motor, a secondary member comprising a magnetic member having a plurality of relatively deep slots, two radially arranged conductor bars in each slot, each conductor bar being so constructed that through half its length it is a bottom bar of relatively small depth and through the remainder of its length it is a top bar of relatively large depth, the conductor bars in the same slot being connected at their ends to common end rings.

1,632,602. DREDGE TUMBLER. LEWIS D. HOFFIELD, Natoma, Calif., assignor to Taylor-Wharton Iron & Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed Nov. 29, 1926. Serial No. 151,577. 3 Claims. (Cl. 64—17.)

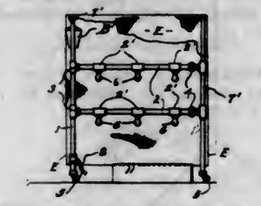
1. A tumbler comprising tumbler heads having integral tread and hub elements joined by spokes some of which are of Y form, the tread being interrupted in the region of the latter to provide pockets for absorbing peening and stretching.

1,632,603. MOTOR CONTROL. BENJAMIN W. JONES, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 3, 1926. Serial No. 152,490. 2 Claims. (Cl. 172—179.)



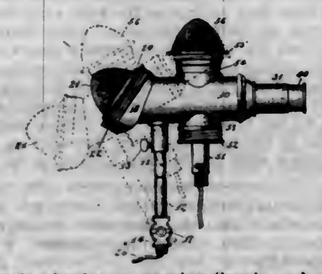
1. In combination, a motor having its armature included in one circuit and a field winding included in another circuit, a resistor for governing the energization of said winding to govern the motor speed, a switch biased to the closed position for shunting said resistor, and an electroresponsive device energized responsively to the motor armature current and provided with means for automatically effecting the opening of said switch and the insertion of said resistor in the circuit of said field winding when the motor armature current is in a predetermined direction and is less than a predetermined value, the said device being provided with windings for magnetically holding said switch in its biased position for all values of motor armature current above said predetermined value and for all values of motor armature current when said current is in the direction opposite to said predetermined direction.

1,632,604. BEARING METAL. PAUL KEMP and THEODOR KITTL, Vienna, Austria. Filed Aug. 10, 1925, Serial No. 49,450, and in Austria Aug. 23, 1924. 2 Claims. (Cl. 75—1.)



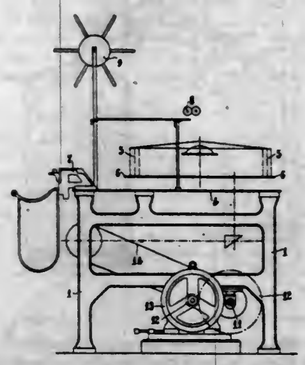
1. Bearing metals consisting of 65–77% lead, 3–14% tin, 10–27% antimony and 0.7 to 2.5% arsenic.

1,632,605. SECURING MEANS FOR RAILS. STANISLAUS KIEN, Rochester, N. Y. Filed July 15, 1926. Serial No. 122,595. 5 Claims. (Cl. 238—374.)



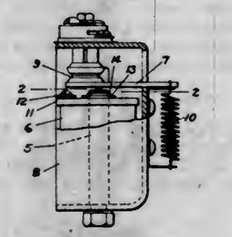
1. The combination with a railroad tie formed with a pocket having an extension to one side provided with a reduced upper portion, of a rail securing device having an anchoring portion with a reduced portion fitted in the reduced portion of the pocket extension and an enlarged portion received in said extension below said reduced portion, and means detachably secured in that portion of the pocket to one side of the extension for holding said rail securing device in the extension and in cooperation with the rail supported on the tie, said means embodying cooperating wedge members adjustably connected.

1,632,606. PHOTOGRAPHER'S LIGHT-DISTRIBUTING MEANS. ERNEST V. KING, Topeka, Kans. Filed Oct. 2, 1926. Serial No. 139,187. 3 Claims. (Cl. 240—1.)



1. In a photographer's light distributing means, the combination of a front end member, and a rear end member, the said members being arched, a plurality of laterally extending members connecting the first said members, all of said members functioning as conduits for electric wiring, a plurality of lamp sockets distributed along the last said members, and lamps engaging therein, lamp sockets in the arch of the front end member, lamps carried by the arch and slidably engaging thereon, a cable connecting the lamps with the last said sockets, a switch board, and a wiring for said lamps, the board being placed in operative position to a camera, all for the purpose described.

1,632,607. DISPLAY DEVICE. ARTHUR H. KOGGE, Jersey City, N. J. Filed Oct. 26, 1926. Serial No. 144,314. 5 Claims. (Cl. 88—24.)

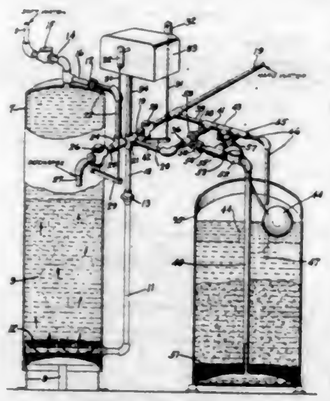


3. A casing having an opening therein, a lamp in the casing, an open ended tubular element secured in the opening, a telescope slidably adjustable in the tubular element, a license plate interposed between the telescope and lamp, a magnifying lens between the plate and lamp, said magnifying lens and plate being carried by oppositely facing cup-like members screwthreadedly connected together.

1,632,608. BRAIDING MACHINE. EMIL KRENZLER, Barmen, Germany. Filed Oct. 8, 1925, Serial No. 61,165, and in Germany Oct. 21, 1924. 5 Claims. (Cl. 96—8.)

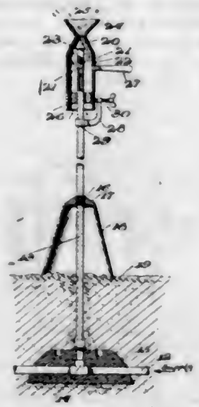
1. The combination, in a single-thread braiding machine, of a raceway plate, and a group of raceway carriers on the raceway plate, said carriers having a pitch less than 50 mm. from center to center of adjacent carriers throughout the group.

1,632,609. ELECTRICAL INSTRUMENT. THOMAS L. LEE, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 4, 1925. Serial No. 20,781. 3 Claims. (Cl. 175—336.)



1. In an electrical instrument, the combination, with a magnet, of a compensating magnetic shunt consisting of metal having a pronounced temperature coefficient of permeability; and means for adjusting the effect of said shunt, comprising a body of magnetic material, of different temperature coefficient, removably attached to said shunt and of less extent than the shunt.

1,632,610. CONTROL MECHANISM FOR WATER SOFTENERS. LYNN G. LINDSAY, Minneapolis, Minn. Filed July 6, 1925. Serial No. 41,657. 7 Claims. (Cl. 210—24.)

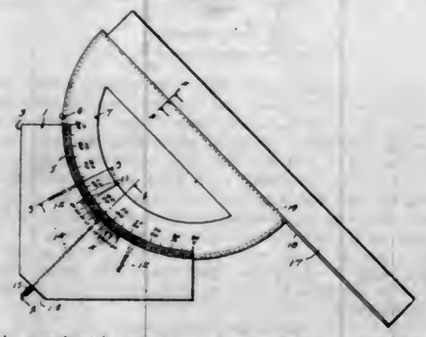


1. A device of the class described comprising a bed tank having a hard water supply pipe, a valve for said pipe, a brine tank, pipe connections between the hard water pipe and brine tank, including an injector arranged for

sucking brine from the brine tank when the hard water valve is closed, an auxiliary hard water pipe within the brine, a valve in the auxiliary line controllable by brine

level, and pipe connections between brine and auxiliary hard water pipes, including automatically operable valves adapted to open toward the injector.

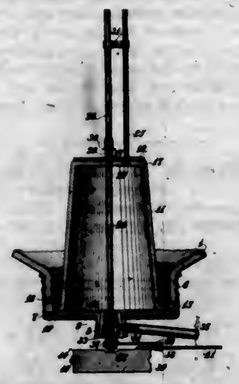
1,632,611. COMBINED FROST-PREVENTING AND IRRIGATING DEVICE. RICHARD HUGHES LLOYD, Hastings, W. Va. Filed Sept. 15, 1925. Serial No. 56,498. 1 Claim. (Cl. 299—58.)



In a combined irrigating and frost preventing device, the combination of a stand pipe provided with a conically shaped closed upper end and having a plurality of apertures for the discharge of water, a casing embracing the upper end of the stand pipe and having a frusto-conically shaped upper end adapted to be moved towards or away from the conically shaped end of the stand pipe for restricting the flow of water from the stand pipe, said upper end of the casing being provided with a discharge opening adjacent the conically shaped end of the stand pipe, the lower end of the casing being open to the atmosphere, means for adjusting the frusto-conically shaped end of the casing towards and away from the conically shaped end of the stand pipe, and means for locking the casing in its adjusted position.

1,632,612. GASTROSCOPE. GUNTHER LOECK, Berlin, Germany, assignor to Firm of Georg Wolf G. m. b. H., Berlin, Germany. Filed Dec. 18, 1925. Serial No. 76,344, and in Germany Dec. 19, 1924. 2 Claims. (Cl. 128—S.)

1. Outer tube of a gastroscope, adapted to receive an inner tube destined for observation, the outer tube having a curved beak and containing within this beak an illuminating device, and two windows disposed on the outer tube, the one of these windows lying laterally and the other lying in the axial direction of the outer tube, both in such a relative position as to afford a simultaneous lookout through both windows with a single sighting tube.

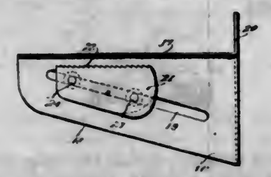


1,632,613. ENGINEER'S PROTRACTOR. DAVID CABRERA LOPEZ, Chicago, Ill. Filed Dec. 10, 1925. Serial No. 74,575. 1 Claim. (Cl. 33—75.)

An engineer's protractor comprising a base having angularly related straight edges and an arcuate seat, the lower outer corner of the base being cut away to provide an inclined surface and the base having an opening extending from said surface to the seat, a rib formed on the seat and provided in the lateral sides thereof with grooves, a limb provided with an arcuate groove receiving the rib and having projections on its side walls entering the grooves of the rib, a friction block movably carried by the rib and contacting with the projections, a rod connected to the friction block and slidably mounted in the opening of the base, and a nut threaded on the rod and contacting with the inclined surface of the base.

1,632,614. LIQUID-DISPENSING DEVICE. ERIC H. MICKELSON and ERIC K. SKONBERG, Brooklyn, N. Y. Filed Oct. 2, 1926. Serial No. 139,098. 7 Claims. (Cl. 221—112.)

1. In a liquid dispensing device, a thermally insulated liquid reservoir, a closure member therefor, means for supporting said reservoir in an inverted position, a liquid measuring device mounted on said closure member, valve means for filling said container from the reservoir, means to operate said valve means, comprising a tubular

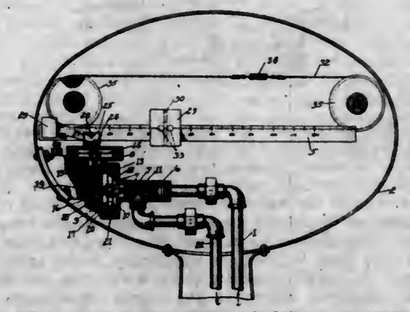


member extending from said valve means upwardly to a point above the liquid level and downwardly to a point below said closure to provide a vent for said reservoir.

1,632,615. VACUUM TUBE. LORIS E. MITCHELL and ARTHUR J. WHITE, East Cleveland, Ohio, assignors to General Electric Company, a Corporation of New York. Filed June 5, 1924. Serial No. 717,951. 8 Claims. (Cl. 250—27.5.)

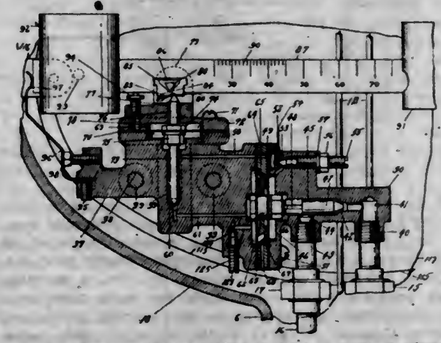
3. In a partially completed vacuum tube comprising an enclosing anode open at its upper end, the combination with said anode of a support in heat conductive relation therewith extending over said upper end, and a quantity of getter on the lower surface of said support.

1,632,616. CLOTHESLINE HOLDER. GEORGE J. A. MOLIQUE, Roxana, Ill. Filed Feb. 3, 1927. Serial No. 165,636. 1 Claim. (Cl. 24—136.)



A clamp comprising a housing having a top and a side wall provided with a slot located at an angle to the horizontal, a clamping block in the housing and a plurality of means secured to the block and received by the slot for guiding the clamping block towards the top of the housing, a rope adapted to have an end clamped between the upper edge of the clamping block and the top of the housing, the upper gripping face of the clamping block being provided with teeth, the teeth being curved to provide a longitudinal groove to receive the rope, said clamping block at the rear end thereof being provided with a groove to receive a portion of the rope which is disposed inwardly of the free end so that a pull on the rope will cause the rope to engage around the groove to exert a pressure on the block and force said block towards the main body of the rope so that the teeth of the block will clamp the free end of the rope against the top of the housing.

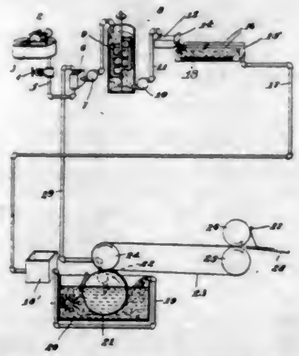
1,632,617. RUBBER VULCANIZATION AND PRODUCTS THEREOF. STUART B. MOLONY, Conshohocken, Pa., and YASUJURO NIKAIDO, Bay City, Mich., assignors, by mesne assignments, to Charles W. Brown, William L. Clause, and Edward Pitcairn, Pittsburgh, Pa. Filed Apr. 12, 1920, Serial No. 373,368. Renewed Dec. 18, 1926. 5 Claims. (Cl. 18—53.)



4. The process of vulcanizing rubber comprising combining with the same a vulcanizing agent and an accelerator comprising an aromatic substituted dithiocarbamate.

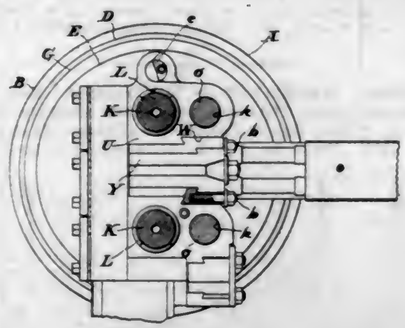
1,632,618. AIR-PRESSURE REGULATOR. EARL M. MORLEY, Delta, Ohio, assignor, by direct and mesne assignments, to The Air-Scale Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 8, 1924, Serial No. 691,419. Renewed Aug. 5, 1926. 24 Claims. (Cl. 50—11.)

3. A tire inflation apparatus embodying a pressure air supply line, a pressure air delivery line, and an air supply control device therebetween including a valve for opening and closing as to said supply line, and a controller for effecting intermittent operation of said valve, said controller embodying a diaphragm having a chamber, said diaphragm in its flexing having transmission for pulsating said valve in effecting intermittent air delivery into the pressure air delivery line, there being an exhaust from said chamber open during closing pulsation of said valve.



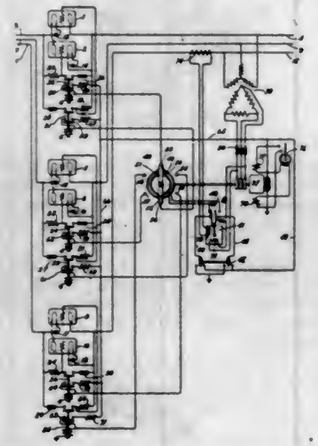
1,632,619. TIRE-INFLATION MECHANISM. EARL M. MORLEY, Delta, Ohio, assignor to The Air-Scale Company, Toledo, Ohio, a Corporation of Ohio. Filed May 2, 1925. Serial No. 27,414. 5 Claims. (Cl. 50—11.)

1. A primary valve housing having a port, a plunger movable in said housing for opening and closing said port, a diaphragm coacting with the plunger for actuating the



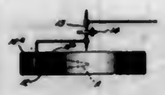
plunger, said diaphragm defining a port chamber on one side thereof and a second chamber on the other side thereof, there being a passage between said chambers, a secondary valve in said passage, and a muffled leakage for said second chamber.

1,632,620. PROCESS OF CLEANING ASBESTOS. ERNEST F. NANFELDT, New Haven, Conn. Filed Jan. 20, 1920. Serial No. 352,733. 4 Claims. (Cl. 209—2.)



1. The method of separating asbestos fibre from rock and associated impurities which comprises submerging the mineral in water, passing the mineral continuously and repeatedly through rubbing and crushing means by a circulation of the water of submergence in a closed cycle to break up the friable elements and separate the integral fibres, withdrawing the mineral fibre from said cycle at will from time to time and applying a gentle agitation thereto, to further separate the mineral from the fibre, then completely separating the lighter constituents by flotation and the heavier constituents by sedimentation.

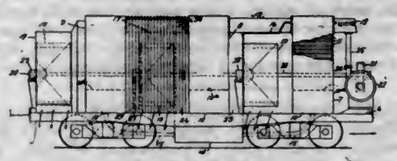
1,632,621. DRILL SHARPENER. ARTHUR E. PETERS, Littleton, Colo., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 17, 1925. Serial No. 76,007. 3 Claims. (Cl. 76—5.)



3. In a drill sharpener, the combination of a base having a flange, a raising cylinder integral with said base, an anvil block having a clamping cylinder supported on said flange, a piston in said clamping cylinder having a reduced extension in said raising cylinder, a movable cross head above said anvil block, two main posts having their lower ends secured to the clamping piston and passing through the anvil block, the upper ends being secured to the cross head, said posts being located on a diameter extending through the longitudinal axis of the machine, a dollying device mounted at right angles to the diametric line of the said main posts, two guiding columns for the cross head supported in the anvil block at that side of the anvil block adjacent the dollying device and located on lines substantially at right angles to the diametric lines passing through the axes of the main posts, and recesses in the anvil block and cross head located between the posts and guiding columns for holding dies, whereby the cross head is held in alignment with the anvil block and side thrust and tilting of the cross head under impact of the forging operations is prevented.

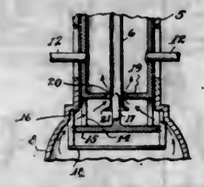
1,632,622. CONTROL SYSTEM. DAVID C. PRINCE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 27, 1925. Serial No. 33,273. 12 Claims. (Cl. 171—97.)

1. The combination of an alternating current circuit comprising a plurality of sections, electron discharge devices connected between said sections in reverse order for transmitting current therebetween, and means operated in synchronism with said circuit for causing each of said devices to be rendered non-conductive when the current transmitted therethrough is zero.



1,632,623. ELECTRIC MEASURING INSTRUMENT. THEODORE A. RICH, East Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 19, 1926. Serial No. 142,722. 5 Claims. (Cl. 171—95.)

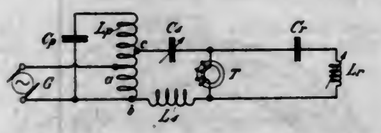
1. An electric measuring device of the magnetic vane type having a pair of substantially cylindrically shaped energizing coils placed one inside the other and connected to produce fluxes in opposite directions through their axes, and having relatively movable magnetic vanes mounted between said coils.



1,632,624. CONDENSER PLANT FOR LOCOMOTIVES. CARL ROGIVUE, Tegel, Germany, assignor to General Electric Company, a Corporation of New York. Filed Dec. 19, 1924. Serial No. 757,055, and in Germany Feb. 6, 1924. 9 Claims. (Cl. 257—25.)

1. The combination with a vehicle, of means carried thereby for condensing exhaust elastic fluid directly by air currents, said means comprising a surface condenser having a plurality of independent units spaced apart longitudinally of the vehicle, each of said units occupying substantially the full width and height of the vehicle whereby units of maximum permissible cross-section are provided, means for utilizing the windage air currents

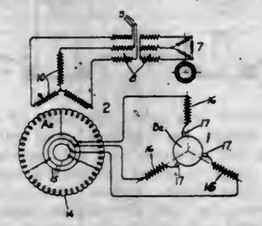
set up by the speed of travel of the vehicle in effecting cooling of the condenser units uniformly over the full cross-section thereof, and means connected with each condenser unit for accelerating the flow of the air currents so utilized and exhausting the same below the vehicle.



1,632,625. CARBONATED-WATER-CUT-OFF VALVE FOR SODA FOUNTAINS. OTIS SASSER, Clovis, N. Mex. Filed Dec. 2, 1926. Serial No. 152,200. 11 Claims. (Cl. 225—24.)

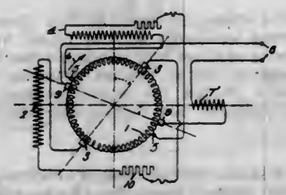
1. In a liquid dispensing device including inner and outer conduits, rigidly connected valve elements for controlling either or both of said conduits.

2. In a liquid dispensing device including inner and outer conduits, a disc valve for closing the outer conduit, and a plug disposed on said disc valve and adapted to close said inner conduit.



1,632,626. FREQUENCY-MULTIPLICATION SYSTEM. KARL SCHMIDT, Berlin-Sudende, Germany, assignor to C. Lorenz Aktiengesellschaft, Berlin-Tempelhof, Germany. Filed May 7, 1925, Serial No. 28,695, and in Germany May 31, 1924. 5 Claims. (Cl. 172—281.)

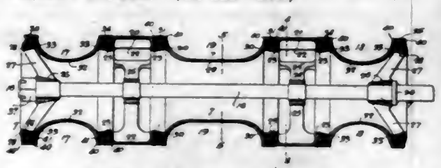
1. A frequency multiplication system comprising in combination an oscillating circuit including a self induction and a capacity, a high frequency generator and a frequency transformer, said self induction and said capacity being tuned to the fundamental frequency of said generator, and said generator and said transformer being connected respectively across portions of said self induction.



1,632,627. SPEED-CONTROL SYSTEM. LUCIEN SCHOMBOURGER, Paris, France, assignor to General Electric Company, a Corporation of New York. Filed Jan. 24, 1925, Serial No. 4,597, and in France Feb. 26, 1924. 3 Claims. (Cl. 172—274.)

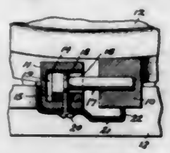
1. The method of controlling the speed and power factor of an induction motor cascaded with a series excited commutator regulating machine which consists in shifting the brushes of said regulating machine in accordance with the load on said motor in such manner that at light loads the position of the brushes of the regulating machine is such as to cause said machine to function as a generator to supply magnetizing current to the induction motor, and at heavy loads the position of the brushes of the regulating machine is such as to cause said machine to operate as a motor receiving energy from the secondary of said induction motor.

2. A speed control system comprising an induction motor and a commutator regulating machine having a main series field winding, said regulating machine being connected in cascade with the secondary of said induction motor, adjustable brushes on said commutator machine, means responsive to the load on said induction motor for shifting said brushes counter to the direction of rotation of said commutator machine in proportion to the load on said motor, and means for moving said brushes in the opposite direction when the load decreases, the angle of such brush shift extending both sides of a neutral position with respect to the series field windings with which the brushes are connected.



1,632,628. DYNAMO-ELECTRIC MACHINE. HIDDE K. SCHRAGE, Paris, France, assignor to General Electric Company, a Corporation of New York. Filed June 11, 1925, Serial No. 36,523, and in France July 1, 1924. 4 Claims. (Cl. 172—276.)

1. A dynamo electric machine comprising a poly-phase shunt field winding, a compounding winding, an armature winding movably related to said field windings, a commutator for said armature winding, shunt excitation brushes associated with said commutator for transmitting current from said armature winding to said poly-phase shunt field winding, load brushes independent of said shunt excitation brushes associated with said commutator, and circuits for connecting said load brushes in series with said compounding field, said shunt excitation and load brushes being independently adjustable.

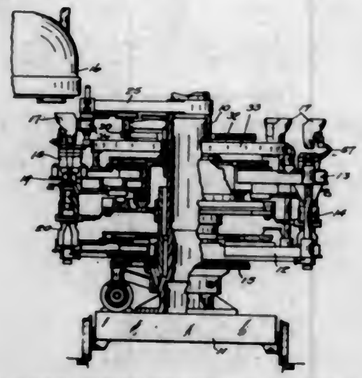


4. A dynamo electric machine comprising a stator member provided with a poly-phase shunt field winding having the phases independent, and a compounding winding, a rotatable armature winding provided with a commutator associated with said stator member, a pair of shunt excitation brushes on said commutator for each phase of said shunt field winding, said brushes being relatively adjustable with respect to each other and to said stator member, load brushes on said commutator independently adjustable with respect to said shunt field brushes, means for connecting said armature and compounding winding in series with said load brushes, and means for varying the shunt field excitation of said machine independently of the adjustment of said shunt field brushes.

1,632,629. CYLINDRICAL VALVE FOR LOCOMOTIVES. ELLWOOD M. SHANNON, Bala, Pa., assignor to The Baldwin Locomotive Works, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 5, 1924. Serial No. 724,464. 1 Claim. (Cl. 121—193.)

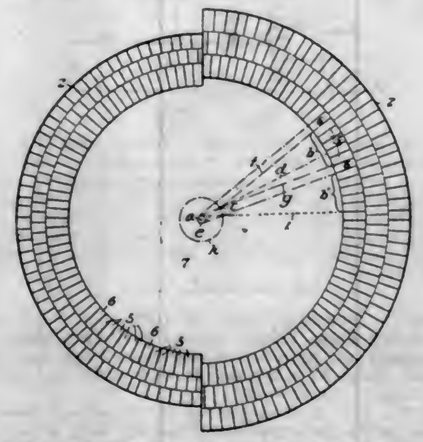
The combination in a cylindrical valve, of a valve rod, two pairs of spiders, the spiders of each pair comprising an outer ring and a central hub; packing rings mounted on the outer rings; a central cylindrical section located between the intermediate spiders; two cylindrical end sections between the said intermediate spiders and the end spiders, said cylindrical end sections being less in length than the central section; and means on the rod for clamping the series of parts together, said cylindrical sections and spiders forming a valve having a central passage therein extending from one end of the valve to the other.

1,632,630. WAFFLE IRON. ALBERT H. SIMMONS, Oak Park, Ill., assignor to Edison Electric Appliance Company, Incorporated, Chicago, Ill., a Corporation of New York. Filed Mar. 23, 1924. Serial No. 701,851. 10 Claims. (Cl. 53—10.)



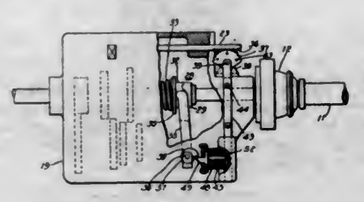
1. A pivotal connection for waffle iron plates and the like, comprising extensions on said plates, one of said extensions being provided with a recess, a bushing secured in said recess in spaced relation with the inner end thereof, and a pin on the other extension extending through said bushing and locking over the inner end thereof.

1,632,631. VALVE GUIDE FOR FLUSHING TANKS. CHARLES M. SMITH, Waco, Tex., assignor of fifty-one per cent to Francis M. Compton, Waco, Tex. Filed May 12, 1926. Serial No. 108,529. 1 Claim. (Cl. 4—56.)



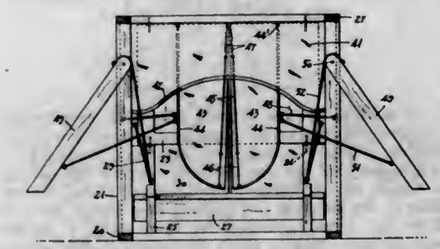
In combination with the discharge pipe and the valve and valve seat of a flushing tank, a plug in the valve having upper and lower threaded portions, an upper guide rod threaded into engagement with the upper threaded portion of the plug, a lower guide rod having upper and lower threaded ends, the upper of which ends is threaded into the lower threaded portion of the plug, a nut adjustably threaded onto the lower threaded end of the lower guide rod, a cage composed of a series of wires secured to the nut at their upper ends and having intermediate angular parts, the wires being secured together at their lower ends, the angles of the wires forming a series of guides which engage the discharge pipe throughout its inner circumference and a lock nut on the threaded part of the lower guide rod for holding the first named nut in its adjusted position.

1,632,632. GLASS-FORMING MACHINE. LEONARD D. SOUBIER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Aug. 20, 1921. Serial No. 493,784. 12 Claims. (Cl. 49—9.)



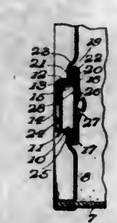
2. In a glass forming machine, the combination of a rotary mold carriage, molds thereon, a head adapted to cooperate with the molds in succession, automatic means to cause said head to advance with a mold and then return and advance with a succeeding mold, and means for moving said head toward and from the axis of the mold carriage into and out of position over the mold with which it is advancing.

1,632,633. LINING FOR BLAST FURNACES AND THE LIKE. WALLACE A. STUART, Cleveland, Ohio, assignor of one-half to Brooke L. Jarrett, Sewickley, Pa. Continuation of application Serial No. 758,483, filed Dec. 27, 1924. This application filed Jan. 26, 1926. Serial No. 83,847. 2 Claims. (Cl. 72—93.)



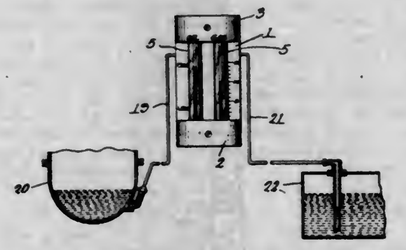
1. A circular furnace wall construction of non-uniform diameter made up of blocks laid in horizontal courses, each course having a plurality of concentric rows of blocks, each row containing a complete set of key blocks having radial sides and which are segments of a circle, said set of key blocks being capable of turning a complete circle when laid side by side, the key blocks in the respective rows being segments of concentric circles, each course whose diameter is greater than the diameter of the circles of which the key blocks are segments having one or more straight sided blocks in each of its rows, a number of key blocks in each of the rows of a course being equal and the number of straight sided blocks in each row of a course also being equal, the width of the inner ends of the blocks in each concentric row outwardly being the same as the outer width of the key blocks in the next adjacent inner row, the straight sided blocks all having the same width, the blocks of each row of the same course being laterally offset with respect to the blocks of the adjacent rows so as to break joints, the blocks in each row of a course being laterally offset with respect to the corresponding rows of adjacent courses so as to break vertical joints therewith, and the blocks of each row of a course being of a length different from that of the blocks in the corresponding rows of the next adjacent courses so that the vertical joints between the ends of the blocks are broken.

1,632,634. MOTOR-VEHICLE TRANSMISSION MECHANISM. JOHN A. STUMPENHORST, Wilkinsburg, Pa., assignor to Duplex Transmission Company, a Corporation of Delaware. Filed Apr. 25, 1923. Serial No. 634,458. 6 Claims. (Cl. 74—58.)



1. In a motor vehicle transmission mechanism, the combination with a motor driven change-speed gear set comprising a plurality of shifter rods, and an auxiliary clutch operatively connecting said gear set to a driven means, of a single means, actuated by either of said shifter rods when moving from a neutral to an operative position only, for actuating said auxiliary clutch.

1,632,635. FLYTRAP. RAOLO TAYLOR and JOHN W. COOPER, Sedalia, Mo. Filed June 28, 1926. Serial No. 119,138. 2 Claims. (Cl. 119—156.)

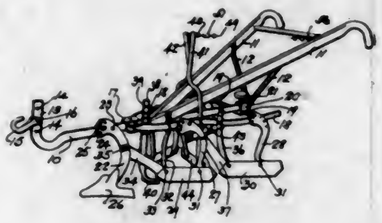


1. A device of the character described comprising a frame having a passageway for an animal, scrapers of flexible material to contact with the sides of the animal, rods suspended within the frame for transverse movement and having their lower terminals converging toward one another, the outer edge portions and lower ends of said scrapers being attached to said rods, and means operated by the animal when approaching said scrapers for swinging said rods away from one another.

1,632,636. CHECK VALVE. ALBERT P. TREADWELL and JOSIAH FLOURNOY, Columbus, Ga. Filed Feb. 25, 1926. Serial No. 90,594. 8 Claims. (Cl. 251—127.)

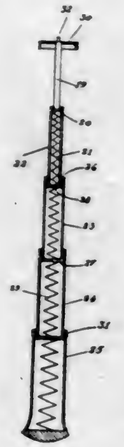
2. A check valve having a casing comprising a body formed with a head at one end and open at its opposite end, said head having an inlet opening formed therein said body having an out-turned flange at its open end, a second head having an outlet opening, and bendable means carried by said second head adapted to be bent over the edge of said flange and into engagement with an adjacent support for connecting the second head with the casing body and with said support.

1,632,637. GAUGE. VALENTINE WILLIAM TRIPP, Blue Hill, Nebr. Filed Sept. 17, 1924. Serial No. 738,253. 1 Claim. (Cl. 73—31.)



In a low-pressure gauge the combination with a block having a bore extending thereinto from its lower end, the lower end of the bore constituting a drain outlet, there being a pressure inlet at the upper end of the bore, of a removable plug normally closing the lower end of the bore, rounded extensions upon the upper and lower portions of the block, there being an opening extending through the upper extension and a recess within the lower extension, said opening and recess being in alinement, said block having a passage for maintaining communication between the lower portion of the bore and the recess within the lower extension, one end of said passage opening through the block, a removable closure for said end, a transparent tube insertable downwardly through the opening in the upper extension to seat the ends of the tube within the recess and the opening respectively, a screw plug removably mounted within the opening for holding the tube in position, said plug having a vent therein opening directly into the tube and a colored liquid within the tube and passage and the lower portion of the bore.

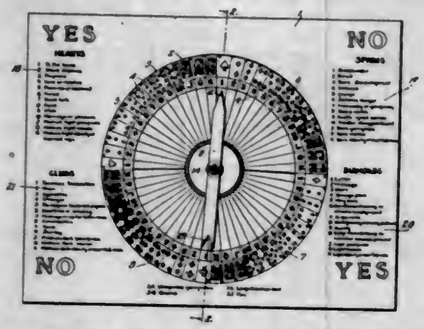
1,632,638. CULTIVATOR. JAMES W. WALKER, Memphis, Tenn. Filed Aug. 2, 1926. Serial No. 126,432. 9 Claims. (Cl. 97—172.)



1. In a cultivator having a central draft beam and side bars laterally adjustable, with reference thereto, a central standard depending from said draft beam, standards

depending from said side bars, a blade pivotally attached to each of said latter standards, adjustable supporting members depending from said side bars pivotally attached

to the forward end of each blade, and a draft member extending from each blade to the standard forward thereof.

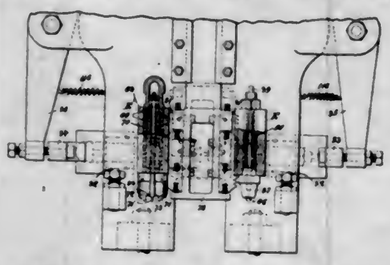


1,632,639. POCKET UMBRELLA. ALFRED WEISE, New York, N. Y. Filed Feb. 25, 1925. Serial No. 11,387. 1 Claim. (Cl. 135—46.)

An umbrella of the class described comprising a covering, articulated ribs supporting said covering, a ring retaining the ribs in radial positions around an axis, a handle comprising telescoping tubular sections, the upper section comprising a rod, said tubular sections having external flanges at their lower ends, and a floor at said lower ends, the lowermost tubular section having threads at its upper end, a cap on the upper end of said rod adapted to engage the threads of the lowermost tubular section to lock said tubular sections in telescoped position, one within the other, internal shoulders on the upper ends of the tubular sections, and springs mounted on the floors within the tubular sections adapted to extend the tubular section above the section in which the spring is mounted.

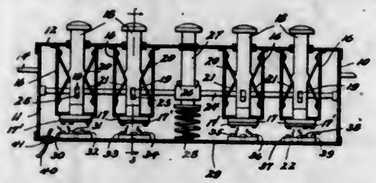
1,632,640. GAME. FRANCES RAE BAER, Kansas City, Mo. Filed Feb. 5, 1926. Serial No. 86,191. 6 Claims. (Cl. 273—141.)

1. In a game of the character described, a field bearing an annular series of card groups, each including representations of the cards of a suit, and bearing a separate schedule for each of the groups including identifying and oracle meaning designations of the several cards of the suit, and a pointer pivotally mounted concentrically of the series.



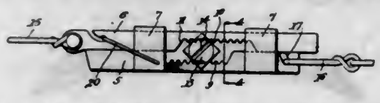
1,632,641. RIGID AIRCRAFT. FRANK BAUER, Williamsville, N. Y. Filed Jan. 2, 1926. Serial No. 78,852. 10 Claims. (Cl. 244—3.)

1. In a rigid aircraft, a framework consisting of upper and lower box beams and girders fastened to and connecting said box beams, part of said girders extending perpendicular to said box beams and others extending diagonally to said box beams.



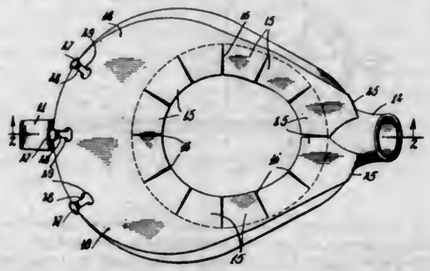
1,632,642. MACHINE FOR THE MANUFACTURING OF BUTTONS. JOHAN ALFRED BLADH, Askersund, Sweden, assignor to Aktiebolaget Knappfabriken, Askersund, Sweden. Filed July 26, 1923, Serial No. 654,027, and in Sweden Aug. 2, 1922. 8 Claims. (Cl. 79—4.)

1. A machine for an entirely automatic manufacture of buttons composed of one upper part and one lower part including a frame having two pathways leading to a common place of the machine and adapted for guiding two blanks, an embossing device arranged in each of the pathways for shaping and piercing the button parts in the blanks, a feeding device for each blank, a cutting device for each blank in which the button part is severed from the blank, a rotatable carrier associated with each cutting device for receiving the severed button parts from the cutting device, means for oscillating the carriers so that the members of the carriers which face the blanks and receive the button parts from the blanks move the button parts into a position in which they face each other and means associated with the carriers,



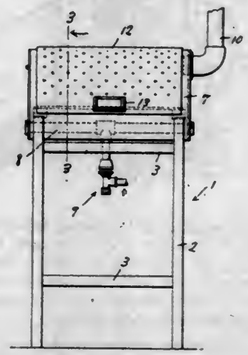
when the members thereof face each other, for uniting the button parts, said oscillating means turning each carrier in the opposite direction to its normal position in order to receive the next button part.

1,632,643. SPEED AND DIRECTION INDICATOR. CHRYSTAL COBB and CHARLES C. MARSHALL, Akron, Ohio. Filed Apr. 15, 1922. Serial No. 553,275. 3 Claims. (Cl. 200—16.)



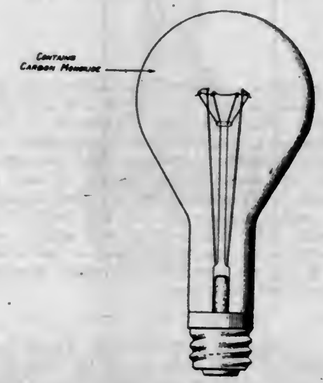
1. In a bank of control switches for a series of coacting electric circuits, an enclosing casing, a plurality of pairs of contacts supported upon the bottom of said casing, a plurality of frames depending from the top of said casing, a plurality of switches slidably mounted in said frames and adapted to bridge the pairs of contacts, means for yieldingly maintaining said switches in either circuit make or break position, and means for shifting all of said switches from circuit breaking position comprising a rod mounted in the sides of the casing and having lugs engaging the switches.

1,632,644. ANTISKID-CHAIN-TIGHTENING DEVICE. EMERSON CROWELL, Dalzell, S. Dak. Filed July 29, 1926. Serial No. 125,740. 7 Claims. (Cl. 24—68.)



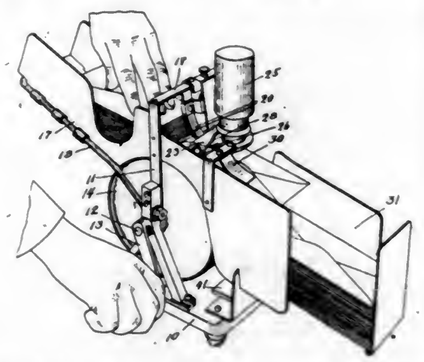
1. A strand tightener comprising in combination, a pair of relatively movable stretching members adapted to be connected respectively to the ends of a strand to tighten the same, one of said members having a recess for the reception of one end of said strand and adapted to be covered to prevent displacement of said end when said members are moved to operative stretching position and to be opened when said members are moved to inoperative non-stretching position, and means for moving said stretching members relatively.

1,632,645. SANITARY BEDPAN. ARTURO DE LUNA, Buffalo, N. Y. Filed Oct. 21, 1926. Serial No. 143,055. 2 Claims. (Cl. 4—112.)



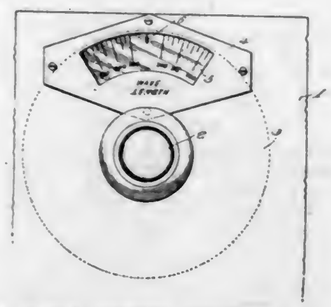
1. A sanitary cover for bed pans comprising a main element adapted to encircle the aperture of the said bed pan, and to cover the portion adjacent to the said aperture, and provided with flaps extending therefrom, so as to permit the said flaps to cover the edge of the said aperture in the said bed pan, said main element provided with extended portions, adapted to engage the spout of the said bed pan, and terminating in a tongue, elongated slots provided with enlarged portions formed in the said main element, adapted to be engaged by projecting fasteners attached to the said bed pan, as a means of attaching the said sanitary cover to the said bed pan.

1,632,646. MATRIX SCORCHER. JAMES WILLIAM FITZSIMMONS, Oakland, Calif. Filed Dec. 16, 1926. Serial No. 155,278. 1 Claim. (Cl. 34—16.)



A matrix scorcher comprising a frame, the top of which is dished, a drum seated in and supported by said dished frame top, said drum of circular cross section and having a conduit at its ends for the passage of products of combustion, a burner in the lower portion of the drum, a baffle plate of imperforate character disposed above the burner and having its opposite edges supported on brackets in the drum and spaced from the wall of the drum, and an apertured matrix clamping plate of curved form hinged to and adapted to cooperate with the curved surface of the drum.

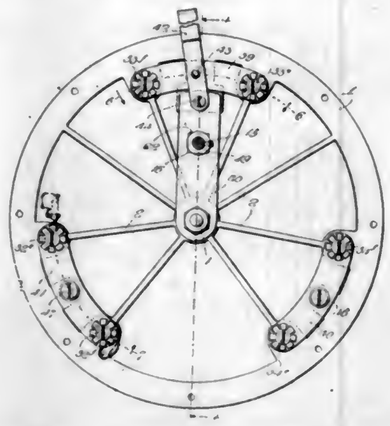
1,632,647. INCANDESCENT LAMP. GORTON R. FONDA, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 24, 1925. Serial No. 4,608. 5 Claims. (Cl. 176—16.)



3. An incandescent lamp containing a gas at a pressure of the order of magnitude of two-thirds of an atmosphere and comprising as a constituent a few hundredths of one per cent of carbon monoxide.

1,632,648. ENVELOPE-SEALING DEVICE. ELMER E. GRAY, Lynn, Mass., assignor, by mesne assignments, to The Elliott Addressing Machine Company, a Corporation of Massachusetts. Filed July 26, 1923. Serial No. 654,012. 16 Claims. (Cl. 120—6.)

1. An envelope sealing device having flap-moistening and sealing means, a rotatable drum arranged to move successive envelopes to said means, and a driving device arranged to engage and move successive envelopes from said means at a speed greater than the speed of movement of said envelopes to said means.

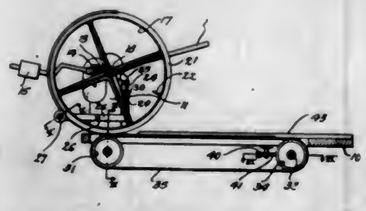


1,632,649. VARIABLE CONDENSER. FRANK O. HARTMAN, Mansfield, Ohio, assignor to Hartman Electrical Manufacturing Company, Mansfield, Ohio, a Corporation of Ohio. Filed Nov. 23, 1925. Serial No. 70,973. 12 Claims. (Cl. 175—41.5.)

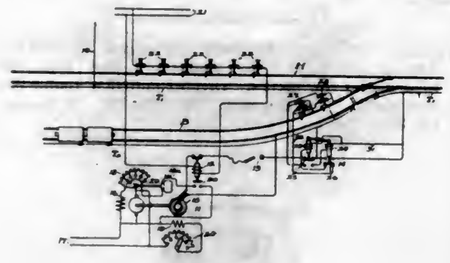
1. In a variable condenser construction, an auxiliary condenser mounted adjacent each of said sets of stator plates, said auxiliary condenser comprising an insulated tubular member, a conductive plate surrounding said tubular member, a connection between said conductive plate and one of the stator plates of each of said sets of stator plates, and a rod member extending through said insulated tubular member adjacent said conductive plate and connected with said sets of rotor plates, said rod member being adjustable with respect to said conductive plate for fixing the capacity relationship between said sets of stator and rotor plates.

1,632,650. VARIABLE CONDENSER. FRANK O. HARTMAN, Mansfield, Ohio, assignor to Hartman Electrical Manufacturing Company, Mansfield, Ohio, a Corporation of Ohio. Filed Dec. 8, 1925. Serial No. 74,156. 8 Claims. (Cl. 175—41.5.)

1. In a multiple variable condenser, the combination of a supporting plate, sets of rotor plates journaled for rotative movement on said supporting plate, independent sets of stator plates arranged to cooperate with each of said sets of rotor plates, said sets of stator plates being shiftable in position on said supporting plate around the journal of said rotor plates as a center whereby said sets of rotor plates enter said sets of stator plates in differing positions.

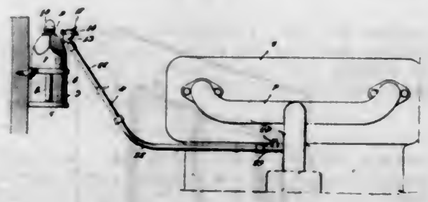


1,632,651. FLEXIBLE SPOTTER FOR REPAIRING TIRE CASINGS. ELMER A. HUBBARD, Flagstaff, Ariz. Filed July 20, 1926. Serial No. 123,732. 5 Claims. (Cl. 18—18.)



1. A spotter for use in tire casing repairs, consisting of a flexible body adapted to accommodate itself to various surface contours and including a series of layers of fire proof material, a flexible reinforcing layer, a flexible enclosing envelope, and a heating coil supported by and between certain of the fire proof layers.

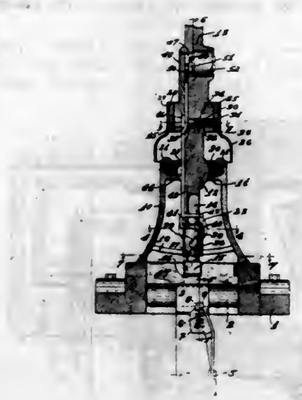
1,632,652. TIRE-TREAD-APPLYING MACHINE. HOWARD O. HUTCHENS and ARNOLD R. KRAUSE, Eau Claire, Wis., assignors to Gillette Rubber Company, Eau Claire, Wis., a Corporation of Wisconsin. Filed Jan. 31, 1925. Serial No. 5,952. 4 Claims. (Cl. 154—9.)



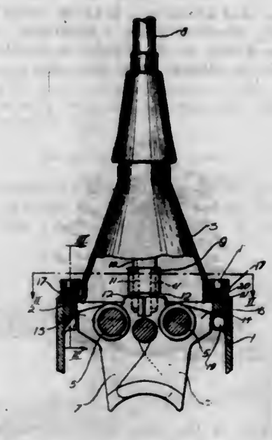
1. An apparatus of the character described comprising a table, a power driven belt running over the surface of the table and adapted to advance a tread strip, tread strip guides positioned over the belt, a stand on said table, an arm pivoted to said stand, and a wheel mounted on said arm adapted to carry a tire body, the tire body on said wheel being brought into contact with the tread strip by a movement of said arm.

1,632,653. ELECTRIC-RAILWAY SYSTEM. JAMES A. JACKSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 26, 1925. Serial No. 52,661. 10 Claims. (Cl. 246—31.)

1. The combination with an electric railway system having a normally deenergized branch track joining a normally energized main track, of means including a manually operable switch mechanism for energizing the branch track to feed electric motor driven cars therefrom to the main track, and car-operated interlocking devices located on the main track adjacent said branch track and operatively connected with said energizing means for the branch track for preventing energization of the branch track when cars are passing on the main track.



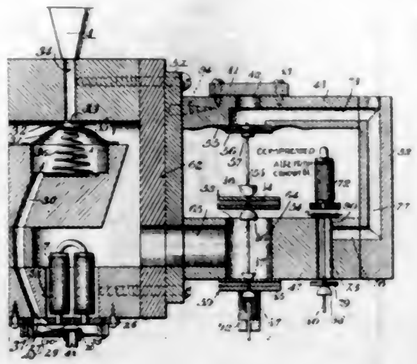
1,632,654. LUBRICATING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. JOHN N. JOERGER and JOHN E. CRAVER, Atlantic City, N. J., assignors to Craver-oiler Company of America, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 8, 1925. Serial No. 28,779. 2 Claims. (Cl. 123—196.)



1. The combination in a lubricating system for internal combustion engines, of an intake manifold; an oil receptacle; a feed line connecting the receptacle with the intake manifold; means for admitting air to the oil receptacle; means in the upper portion of the receptacle for holding the oil so that air passing therethrough would become saturated with oil; a control valve in the feed line connecting the receptacle with the intake manifold; and a check valve also in said feed line, said check valve being arranged to close against back pressure of the engine.

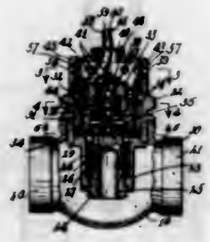
1,632,655. AUTOMOBILE LOCK. CELVIN L. JOHNSON, Chicago, Ill., assignor to Johnson Automobile Lock Co., a Corporation of Illinois. Filed Apr. 11, 1921. Serial No. 460,287. 19 Claims. (Cl. 70—128.)

1. A gear shift lever lock comprising a gear shift lever, a pivotal mount on said lever, locking means therein, a key in said locking means, a housing, locking webs therein, and means slidably and rotatably mounted on said lever and connected with said locking means to be moved downwardly by said key into locking engagement between said locking webs to hold the lever locked against movement about said pivotal mount.



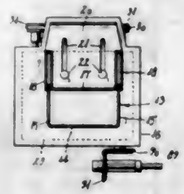
1,632,656. TRANSMISSION-HOUSING-COVER LOCKING MEANS. COLVIN L. JOHNSON, St. Louis, Mo., assignor to Johnson Automobile Lock Co., St. Louis, Mo., a Corporation of Illinois. Filed Sept. 5, 1925. Serial No. 54,727. 5 Claims. (Cl. 70—126.)

1. The combination with a casing of gears mounted therein, means for shifting said gears, removable means on the casing to permit access to the gears when removed, a spring pressed bolt member associated with said removable means and adapted to be actuated when in position to prevent the removal of said removable means, and means associated with said shifting means for



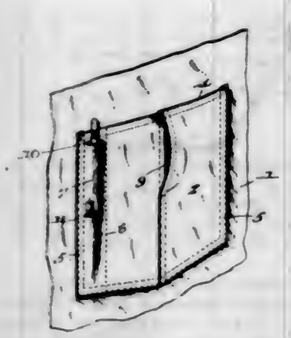
holding said bolt in actuated position for preventing the removal of said removable means except when the gears are shifted.

1,632,657. CIPHERLESS DEVICE FOR PIPE ORGANS. GUSTAV H. KLOEHS, Philadelphia, Pa. Filed Feb. 6, 1924. Serial No. 690,958. 15 Claims. (Cl. 84—338.)



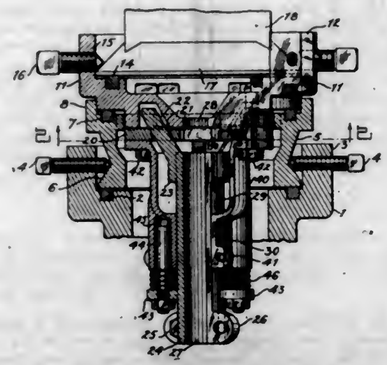
8. A device of the character described having a chamber provided with a communicating conduit and a duct which communicates with the chamber at both ends, means to supply the chamber with compressed air which is adapted to flow out of the conduit, a puff situated in the chamber over one outlet of the duct, a valve carried by the puff and held in a lifted position in respect to the conduit by the depression of said puff under the compression of air, and a valve controlling the other end of the duct to prevent access of air pressure to the other side of the duct.

1,632,658. ANTIFREEZING WATER HEATER FOR INTERNAL-COMBUSTION MOTORS. GIUSEPPE MANASSERO, Bronx, N. Y. Filed Jan. 2, 1926. Serial No. 78,759. 5 Claims. (Cl. 219—38.)



3. In a device of the class described, having a heating element, the combination of a body, a supporting member engaged in said body, a lower protruding portion depending from said supporting member, a plug removably attached to the said protruding portion, and supporting said heating element, a lower insulating block, and an upper insulating block suitably supported in said supporting member, a disc located in the lower insulating block, a pin having an axial aperture and a semicircular recess, attached to said disc, a second disc located in the said lower insulating block, and contactable with said disc, a contact adjustably attached to the upper extremity of said pin, another contact normally in contact with first mentioned contact, and a coil spring superimposed between the said upper insulating block and the said pin, normally holding said pin in a downward position.

1,632,659. POWDER FEEDER. WILHELM MAUCH, Los Angeles, Calif. Original application filed Sept. 28, 1925, Serial No. 59,178. Divided and this application filed June 7, 1926. Serial No. 114,357. 3 Claims. (Cl. 221—128.)

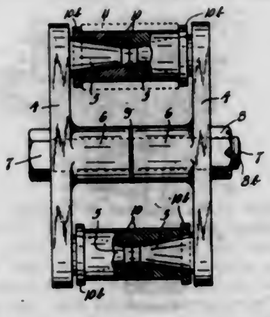


1. A powder feeder comprising a powder magazine and a belt mounted below the magazine with its upper run forming the bottom of the magazine to carry a film of the powder from said magazine, the magazine having means adjustable transversely of the belt for regulating the flow of powder to the belt.

1,632,660. COMBINATION SAFETY AND PENCIL POCKET. JOHN J. MCDONALD, St. Joseph, Mo. Filed Mar. 27, 1926. Serial No. 97,996. 1 Claim. (Cl. 2—253.)

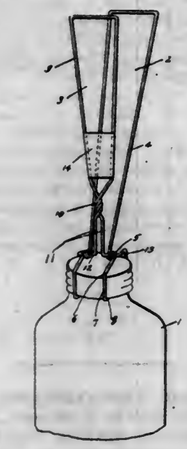
A combination pocket comprising a front, and a partition stitched together around their edges and also stitched to the garment thereat except at the top, said partion being left free at its top to constitute a mouth between the partition and the garment, the front and partition being provided therebetween with a supplemental safety pocket having a mouth arranged in a general upright position, the front and partition being connected together by upright lines of stitching to provide a scabbard pocket, said scabbard pocket being located in front of the main pocket and provided with entrance openings at different heights thereof in the aforesaid front.

1,632,661. SAFETY CAP FOR OIL WELLS. FIDELIS M. MECHLING, Wichita, Kans. Filed Dec. 1, 1924. Serial No. 753,232. 4 Claims. (Cl. 166—14.)



1. A device of the character described, comprising, a split box having a cable channel and adapted for assembly around the cable and for mounting on the casing head, a seat on said box, a casing cap seated thereon, and means for securing said box on the casing head adapted for automatic release by a part on the cable.

1,632,662. RAIL SUPPORT. GEORGE MICHALEK, Monarch, Wyo. Filed May 24, 1926. Serial No. 111,085 5 Claims. (Cl. 238—279.)



1. A rail support comprising a base, rail engaging members pivotally attached to the said base provided with jaws adapted to engage a rail, clips pivotally attached to the said base, as a means of securely holding the said rail in engagement.

1,632,663. SHACKLE BOLT. JOSEPH MIDGLEY, Brainerd, Minn., assignor of one-third to John L. Chesebrough, Duluth, Minn., and one-third to T. L. Rosser Chesebrough, Chicago, Ill. Filed Jan. 23, 1926. Serial No. 83,234. 8 Claims. (Cl. 267—54.)

1. A shackle of the character described having in combination a pair of spaced frame members, oppositely alined tapered trunnions on the inner sides of said frame members, means interposed between said trunnions adapted to space said frame members apart and provided with tapered seats surrounding said trunnions, said frame members being resilient, and means for forcing the medial portions of said frame members together to flex the same and automatically compensate for wear on said trunnions and seats.

1,632,664. FRUIT-JAR LIFTER. JONAS M. MILLER, Plain City, Ohio. Filed June 1, 1926. Serial No. 113,050. 2 Claims. (Cl. 294—28.)

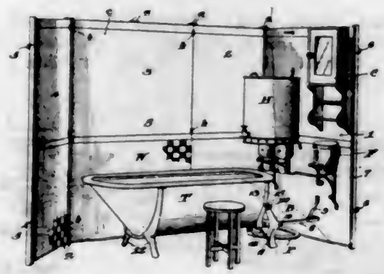
1. A fruit jar lifter comprising two loop-shaped handle members, one of the said members having dependent side arms and coils at the lower ends of said arms, and also having at the opposite ends of the coils angular jaws terminating in toes adapted to engage the flange near the upper end of a fruit jar, and the other handle member having pendent side arms twisted together at an intermediate point in the length of the member and also having below the twisted portions spaced portions and having at the lower ends of said spaced portions oppositely extending arms journaled in the before mentioned coils of the first-named member, and the said arms being provided outwardly beyond said coils with angular jaws having toes at their ends.

1,632,665. SHORT-TURN DEVICE FOR MOTOR VEHICLES. WALTER E. MITCHELL, Seattle, Wash. Filed Nov. 1, 1923. Serial No. 672,093. 1 Claim. (Cl. 280—98.)

The combination with a motor vehicle having the usual driven rear wheels and having the usual front wheels pivoted for steering, said rear wheels having the usual brakes, of means for applying the brake to one of said rear wheels independently of the other rear wheel, and steering devices for said front wheels, said steering devices embodying a steering arm extending forwardly

from the pivot of one front wheel, a steering arm extending rearwardly from the pivot of the other front wheel, a steering lever medially fulcrumed between said front wheels, links connecting the respective forward and rear ends of said steering lever with the forwardly projecting steering arm and the rearwardly projecting steering arm and means for turning said steering lever to steer said front wheels and to turn said front wheels substantially crosswise of the vehicle in one direction.

1,632,666. RUBBER VULCANIZATION AND PRODUCT THEREOF. STUART B. MOLONY, Wellesley Hills, Mass., and YASUJURO NIKAIDO, Bay City, Mich., assignors, by mesne assignments, to Charles W. Brown, William L. Clause, and Edward Pitcairn, Pittsburgh, Pa. Original application filed Apr. 12, 1920, Serial No. 373,368. Divided and this application filed Sept. 25, 1926. Serial No. 137,811. 7 Claims. (Cl. 18—53.)

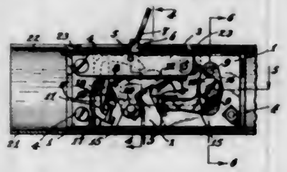


6. The process of vulcanizing rubber comprising combining the same with a vulcanizing agent and an accelerator comprising a dithiocarbamic compound having the radicals R and R' attached to the nitrogen and sulfur atoms respectively, the radical R containing an acid forming inorganic constituent and the radical R' an organic constituent or a metal, said dithiocarbamic compound being typified by the formula

1,632,667. RUBBER VULCANIZATION AND PRODUCT THEREOF. STUART B. MOLONY, Wellesley Hills, Mass., and YASUJURO NIKAIDO, Bay City, Mich., assignors, by mesne assignments, to Charles W. Brown, William L. Clause, and Edward Pitcairn, Pittsburgh, Pa. Original application filed Apr. 12, 1920, Serial No. 373,368. Divided and this application filed Sept. 25, 1926. Serial No. 137,812. 5 Claims. (Cl. 18—53.)

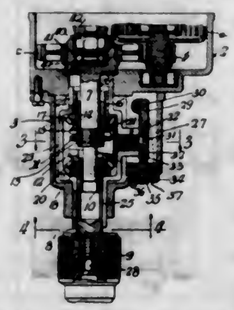
1. The process of vulcanizing rubber comprising combining the same with a vulcanizing agent and a dithiocarbamic compound containing aromatic and alkayl constituents.

1,632,668. PORTABLE BATHROOM. JOHN F. MURPHY, Louisville, Ky., assignor to James M. Robinson, Louisville, Ky. Filed Nov. 6, 1924. Serial No. 748,153. 6 Claims. (Cl. 4—176.)



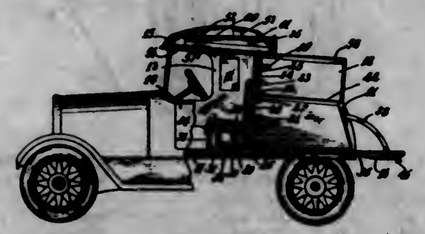
1. A portable bathroom structure comprising a housing inclosure including a main supporting back wall adapted to carry bathroom fixtures, a bracket structure secured to said supporting back wall and extending forwardly thereof, and a folding bathtub having two points of support on said bracket structure respectively at different distances from the said supporting wall.

1,632,669. ENVELOPE AND METHOD OF MAKING SAME. ALBERT E. NAUGLE, Pitman, N. J. Filed Jan. 5, 1926. Serial No. 79,322. 6 Claims. (Cl. 229—76.)



1. An envelope with an edge opening and a barrier positioned in said opening to obstruct egress of the contents of the envelope through said opening, said barrier comprising a pair of abutments of elliptical cross-section arranged one below the other in parallel contacting relation, said abutments secured to opposite sides of the envelope.

1,632,670. ELECTRIC SWITCH. ARVID H. NERO, New Britain, Conn., assignor to The Arrow Electric Company, Hartford, Conn., a Corporation of Connecticut. Filed Aug. 12, 1921. Serial No. 491,727. 4 Claims. (Cl. 200—67.)

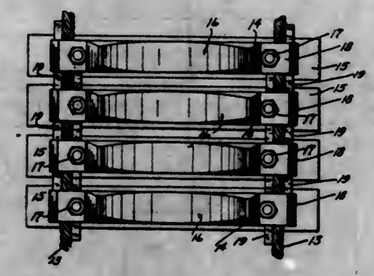


1. In a switch mechanism an insulated toggle contact member consisting of two L-shaped contact plates joined at their elbows in combination with an insulating frame, a separate pivot pin on the frame for one end of each contact plate and an operating spring fastened to the joint between the plates.

1,632,671. REVERSING MECHANISM FOR ELECTRIC DRILLS. REINHOLD A. NORLING, Aurora, Ill., assignor to Independent Pneumatic Tool Company, Chicago, Ill., a Corporation of Delaware. Filed Sept. 2, 1922. Serial No. 585,854. 6 Claims. (Cl. 10—137.)

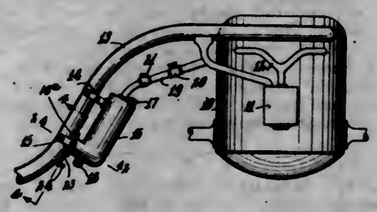
2. In a portable power driven drill, the combination of aligned drill and chuck spindles, the latter being movable endwise toward and from the former, bevel gear pinions, one loose on the drill spindle and the other fixed on the chuck spindle, a bevel gear wheel meshing with both pinions for driving the chuck spindle by the drill spindle, a clutch member fixed on said drill spindle, movable clutch members on opposite sides of said fixed clutch and carried by said loose pinion and chuck spindle, respectively, said movable clutch members being moved into and out of clutched engagement with said fixed clutch member in the movement of said chuck spindle toward and from said drill spindle for changing the direction of rotation of said chuck spindle, and locking means manually operable from the outside of the drill for positively holding either of said movable clutch members in engagement with the fixed one.

1,632,672. CONVERTIBLE AUTOMOBILE BODY. GUSTAV OBERGFELL and ERICH PATZWAHL, Bronx, N. Y. Filed Oct. 14, 1925. Serial No. 62,351. 4 Claims. (Cl. 296—26.)



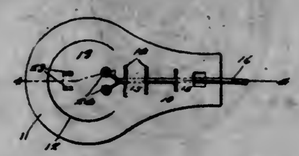
1. In a convertible automobile body, a driver's seat comprising a removable horizontal seat portion, a hinged seat back member disposed in a substantially vertical position adjacent the rear edge of said horizontal seat portion, a closure for said driver's seat including a telescoping top member, a rear cabinet disposed in back of said closure having the forward end provided by the rear of said seat back member, hinged panel doors comprising the top of said cabinet adapted to be rotated upwardly into a substantially vertical position in alignment with the sides of said rear cabinet to extend the heights of the sides thereof and to permit rotation of said hinged seat member into a substantially horizontal position for providing a bed, said telescoping top being adapted to be extended the entire length of said side members for covering the space therebetween.

1,632,673. ARTICLE OF MERCHANDISE. RUDOLPH PAULUS and PETER THIRK, New York, N. Y. Filed Aug. 21, 1925. Serial No. 51,704. 2 Claims. (Cl. 273—135.)



1. In an article of merchandise, a box having a cover, a dial provided on said cover, indicia radially arranged about said dial, said cover having an opening formed centrally of said dial, a spinner including a disk and a stem extending therethrough on opposite sides thereof, one end of said stem passing through said opening for engagement with a support beneath said cover for rotatably supporting said disk above said cover, and radially arranged indicating marks provided on said disk for register with certain of the indicia on said dial.

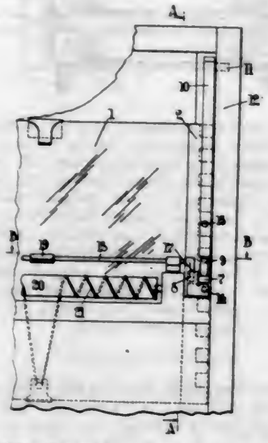
1,632,674. TREAD-BELT TRACTOR. ERICK PEARSON, Minneapolis, Minn. Filed Dec. 19, 1924. Serial No. 756,929. 4 Claims. (Cl. 305—10.)



4. In a tread belt for tractors, a pair of laterally spaced endless wire cables, saddle bars having concave surfaces adapted to engage a traction wheel tire and having reduced ends, notches in the reduced ends of said saddle bars in which said cables are seated, flanged traction bars aligned with the respective saddle bars, clamping strips interposed between said bars and directly engaging said cables and holding said bars slightly spaced, and nut-equipped bolts passed through the reduced ends of said saddle bars and through the webs of said traction bars and serving to rigidly connect cooperating bars together and to anchor the same to said cables.

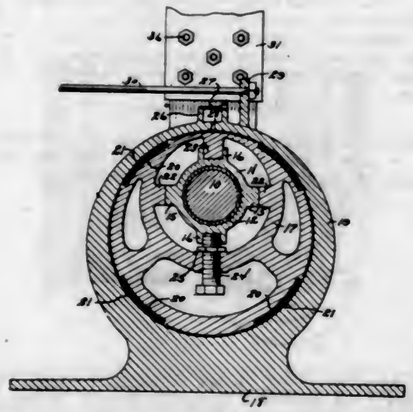
1,632,675. EVAPORATOR FOR CARBURETORS. VINCENZO PELLEGRINO, Rye, N. Y. Filed May 5, 1925. Serial No. 28,278. 2 Claims. (Cl. 123—25.)

1. In a vapor supply device for carburetors, having a water tank attached to the exhaust pipe of an engine, the combination of a flange depending from said tank, a collar formed with a plurality of fingers, attached to said flange, said collar abutting against said exhaust pipe, and a slide formed with longitudinal slots engaged by said fingers.



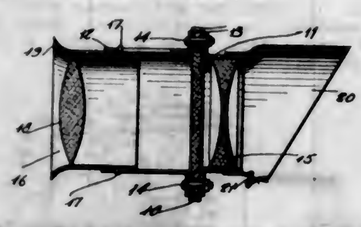
1,632,676. CIRCUIT CLOSER. EPHRAIM G. PEYTON, U. S. Army, Washington, D. C. Filed Sept. 30, 1925. Serial No. 59,630. 2 Claims. (Cl. 200—86.)

1. A circuit closer of the character described comprising a flat member of insulating material having one end portion formed with a partially circular cut to define a flexible tongue, a flat supporting member of insulating material secured beneath said member, a stationary metal contact strip mounted on said flat supporting member, a spring contact member secured upon said flat supporting



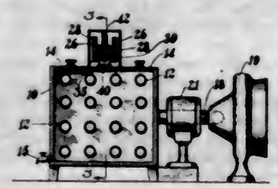
member and normally arranged in spaced relation to said stationary contact, said spring contact having a head portion formed with penetrating elements engaged through said resilient tongue.

1,632,677. LATCHING AND BRAKING DEVICE FOR ADJUSTABLE WINDOWS. ERNEST JOHN RAWLINGS, London, England, assignor to Rawlings Manufacturing Company Limited, London, England. Filed Dec. 26, 1924, Serial No. 758,279, and in France Oct. 4, 1924. 2 Claims. (Cl. 292—165.)



1. A latching device for adjustable windows comprising a spring controlled sliding latch, a movable window frame formed with a row of recesses to accommodate the latch, the latch comprising a sliding body portion formed with a recess, a spring accommodated in said recess for projecting the latch into one of the said recesses, a lug on said body portion, and means for withdrawing the latch co-operating with said lug.

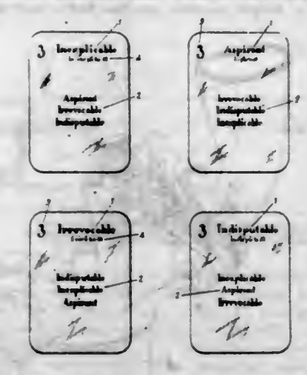
1,632,678. SAND-REEL BEARING. FRANK REDICK, Parkerton, Wyo. Filed Jan. 4, 1926. Serial No. 79,254. 1 Claim. (Cl. 308—62.)



The combination with a shaft, of a bearing therefor, lugs projecting from the opposite sides of said bearing, hollow lugs projecting from the top and bottom of said bearing, an eccentric bearing adapted to receive said shaft bearing, lugs projecting inwardly from the opposed sides of the eccentric bearing and engaging the ends of the first mentioned lugs of said shaft bearing, an additional lug depending from the top of the eccentric bearing and received by the adjacent hollow lug of the shaft bearing, an adjusting screw supported by the eccentric bearing diametrically opposite the last mentioned lug thereof, and adapted to be received by the adjacent hollow lug of the shaft bearing, said eccentric bearing having spaced recesses in the periphery thereof, antifriction rollers arranged in said recesses, and a housing for said bearing.

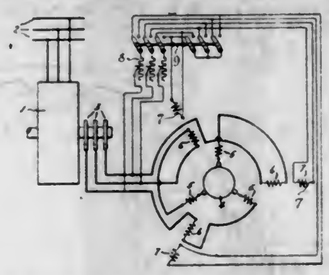
1,632,679. WINDSHIELD ATTACHMENT. FAY R. RHODES, Iola, Kans. Filed Aug. 27, 1926. Serial No. 131,962. 4 Claims. (Cl. 88—1.)

1. In combination with a windshield, a telescope having front and rear tubes provided with flanges on their adjacent ends resting against the front and rear surfaces of the windshield, means to secure the flanges to the windshield, an object glass carried by the front tube, and an eye piece carried by the rear tube.



1,632,680. COLD-AIR-SUPPLYING APPARATUS. ROBERTO RODRIGUEZ, Detroit, Mich. Filed Oct. 8, 1924. Serial No. 742,289. 1 Claim. (Cl. 62—131.)

In a cold air supplying apparatus, having an ice box housing air tubes provided with sliding shutter arrangements, the combination of a cord connected to the top of each of said sliding shutters, pulleys mounted on the top of said ice box, said cords being guided over said pulleys, a bearing bracket mounted on the top of said ice box, a shaft rotatable in said bearing bracket, pulleys fixed on said shaft, said cords being attached to said last mentioned pulleys, a disc also mounted on said shaft, the periphery of said disc being formed with a notch, another bracket mounted on the top of said ice box, a pawl pivotally mounted on said last mentioned bracket, the front of said pawl being engageable with said notch to retain the last mentioned pulleys in position with the shutter arrangement open, an armature fixed to the rear of said pawl, and an electromagnet on said last mentioned bracket, said electromagnet when energized being capable of moving said pawl to release the pawl from the said notch.

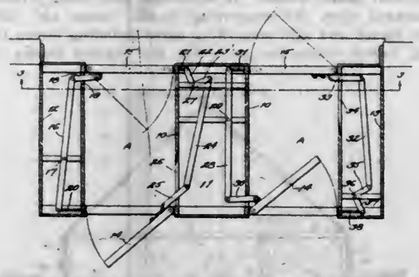


1,632,681. CARD GAME. HARRY H. ROSS, Toledo, Ohio. Filed Jan. 20, 1926. Serial No. 82,566. 2 Claims. (Cl. 273—152.)

1. In a game, a plurality of cards divided into groups, each card of a group having a word characteristic of the card printed thereon, and characteristic words of the other cards of the group printed thereon in distinctive relation to the characteristic word of the card and pro-

nunciation symbols of the characteristic word of the card only, of all the words on the card, printed in indicative relation to the characteristic word of the card.

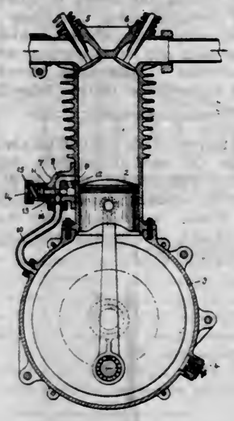
1,632,682. SPEED-CONTROL SYSTEM. WALTER SEIZ, Baden, Switzerland, assignor to General Electric Company, a Corporation of New York. Filed Jan. 12, 1924, Serial No. 685,781, and in Germany Jan. 18, 1923. 5 Claims. (Cl. 172—274.)



1. A speed control system wherein an induction motor is concatenated with a commutator machine for regulating its speed, characterized by the fact that said commutator machine is provided with regulated and unregulated exciting field windings as distinguished from compensating windings for producing opposed fluxes.

2. A speed control system comprising an induction motor, and a regulating machine concatenated with said induction motor for regulating its speed, said regulating machine being provided with an unregulated field winding arranged to produce flux in one direction and with a regulated field winding connected to the slip rings of said induction motor for producing a flux in the opposite direction.

3. A speed control system comprising an induction motor, a commutator machine provided with regulated and unregulated field windings for producing opposed fluxes and concatenated with said induction motor for controlling its speed, means for regulating the flow of electricity in said regulated winding, and means connecting said regulated winding with the secondary circuit of said induction motor.

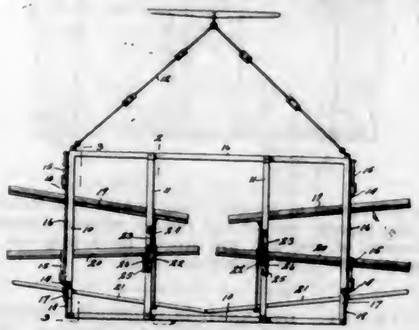


1,632,683. AUTOMATIC ENTRANCE PROTECTOR. GEORGE L. TRACY, St. Louis, Mo. Filed Feb. 18, 1925, Serial No. 10,131. Renewed Feb. 18, 1927. 1 Claim. (Cl. 20—1.01.)

A device of the character described including swinging doors arranged at opposite ends and hingedly connected to opposite sides of a passage way, said doors mounted for swinging movement in the same general direction and normally maintained in an unlocked position, slidably mounted locking bolts upon opposite sides and at opposite ends of the passage, means connecting

the locking bolt at one end of the passage with the door at the opposite end of the passage whereby swinging movement of said door will actuate the locking bolt to lock the other door against movement.

1,632,684. INTERNAL-COMBUSTION ENGINE. CHARLES TUCKFIELD, East Molesey, England. Filed Jan. 13, 1927, Serial No. 160,957, and in Great Britain Oct. 5, 1925. 4 Claims. (Cl. 123—75.)



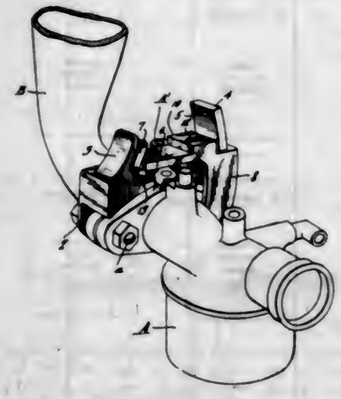
1. An internal combustion supercharging engine comprising a cylinder having a port in its wall, a piston working in said cylinder and operable on its outer stroke to open said port, an air compression chamber connected to the outer end of said cylinder, a transfer passage between said compression chamber and said port, a valve controlling said transfer passage, and yieldable means tending to maintain said valve in open position to establish communication between said pressure chamber and said port, said valve having a portion subject to the pressure in said transfer passage for causing said valve to move into closed position when the pressure in the transfer passage is sufficient to overcome said yieldable means.

1,632,685. ROAD MAINTAINER AND GRADER. JAMES H. WELSH, Monmouth, Ill. Filed May 8, 1926. Serial No. 107,663. 1 Claim. (Cl. 37—143.)

A road maintainer of the character described including an approximately rectangular frame, a pair of forwardly and downwardly curved grader blades pivotally mounted upon the frame and extending inward and rearward in angular relation to each other, a second pair of forwardly and downwardly curved grader blades disposed

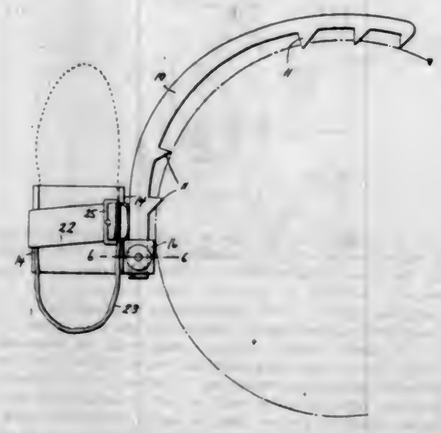
rearward of the first pair and extending inward and forward and pivotally connected to the frame, a pair of smoothing bars being flat and each being disposed at an angle to the line of draft and approximately parallel to the first named blades, the smoothing bars being pivotally mounted upon the supporting frame, means for tilting the blades and said smoothing bars, including levers having linked connection with the first named blades and

the smoothing bars, and separate, independently operable levers connected to the second named blades to tilt them, and means for holding the levers in adjusted positions, arms pivotally mounted upon the frame adjacent the corners thereof, supporting wheels mounted upon said arms, levers for each pair of supporting wheels and having linked connection to said arms whereby the wheels may be shifted nearer to or further from the frame.



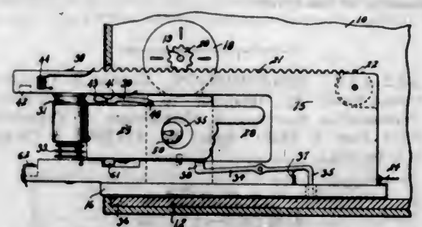
1,632,686. MEANS FOR WITHDRAWING SMALL QUANTITIES OF MEDICAMENTS FROM RECEPTACLES OR CONTAINERS AND APPLYING THEM TO THE BODY. ROBERT MORSE WITHYCOMBE, Sydney, New South Wales, Australia. Filed Sept. 28, 1926, Serial No. 138,224, and in Australia Oct. 1, 1925. 2 Claims. (Cl. 128—267.)

2. A device for withdrawing a small quantity of medicament from a receptacle and applying it to the body, comprising a stem and a resilient substantially tubular member removably sprung over said stem at one end of the latter and projecting beyond said end.



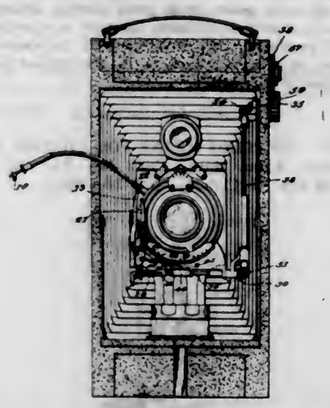
1,632,687. CARBURETOR LOCK. SAMUEL CHARLES YOUNG, St. Joseph, La. Filed June 5, 1926. Serial No. 114,039. 2 Claims. (Cl. 70—90.)

1. A device for preventing a motor vehicle being driven beyond a certain speed, comprising a body adapted to be held in place by the bolts which connect the carburetor with the inlet manifold, an arm hingedly connected with the body, a keeper member on the body, lock means on



the arm for engaging the keeper member and a projection on the arm which is engaged by the throttle arm of the carburetor when the device is in closed position.

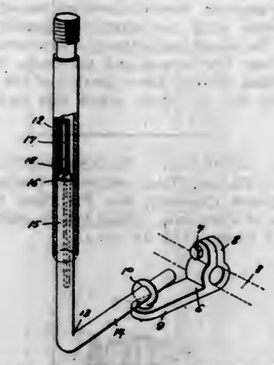
1,632,688. LINEMAN'S CLIMBING IRON. WAGNA ALLICHERDIAN, Utica, N. Y. Filed May 8, 1926. Serial No. 107,783. 1 Claim. (Cl. 36—60.)



In a climbing iron of the character described, an arcuate bar provided at its concaved side with penetrating prongs, and attaching means for said bar comprising a foot piece of plate-like form provided at one end with an upstanding ear and provided in spaced relation to its other end with a similar upstanding ear, said ears being provided with elongated slots, a foot engaging strap structure engaged with the slotted ears, one end of said plate member being prolonged beyond the second named ear and formed to provide a housing slidably receiving one end of said arcuate bar, said end of the bar being formed with a recess and with an inclined notch leading from the end toward said recess, an enlarged guide portion on said housing, a spring located within said enlarged guide portion, and a pin slidably mounted within said enlarged guide portion and normally urged by said spring downwardly for engagement within the recess in said bar, the notch in said bar acting to effect retraction of the pin when the bar is inserted within the housing.

1,632,689. VEHICLE SIGNAL. EDGAR ANDERSON, Wakefield, Nebr. Filed May 25, 1925. Serial No. 32,791. 6 Claims. (Cl. 177—329.)

1. In a signal device of the character described, a casing, an arm member slidably mounted within the casing and adapted to be moved into projected position, motor operated means for moving said arm member, a second member hingedly mounted upon said first named member and swingable horizontally into extended position, and means operated at the completion of the projecting movement of the first named member for swinging the second named member.

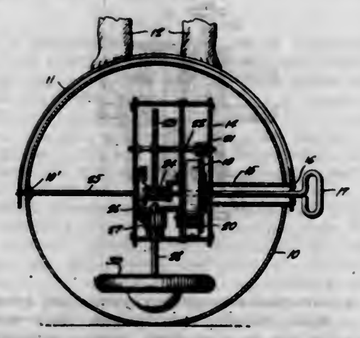


1,632,690. CAMERA ATTACHMENT. ARLO GRANT ATCHISON, Santa Barbara, Calif. Filed Oct. 4, 1926. Serial No. 139,467. 6 Claims. (Cl. 95—32.)

1. In a device of the class described, a shutter arm, a pivoted finger movable under said arm to prevent operation of the latter, a slidable bar operated by the arm when the finger is in release position, film shifting means, a shaft rotated by said means, a second shaft and means thereon for releasing the finger, clutch elements for operating the second shaft from that first named, means retaining one element of the clutch out of engagement with the other, an arm operated by the slidable bar and throwing out the clutch retaining means, finger engaging means controlled by the bar, and means for moving the finger when free to operate, into the path of the shutter arm for locking the latter.

1,632,691. MOVABLE HEADLIGHT. CHARLES EDWARD BEAULAC, Bartletville, Alberta, Canada. Filed Aug. 14, 1924. Serial No. 732,059. 1 Claim. (Cl. 240—62.)

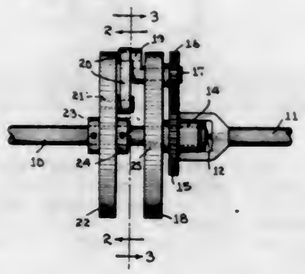
A headlight control for automobiles comprising a bracket secured to the connecting rod of the steering mechanism of the automobile and having an eye swivelled to the forward end of the bracket, an L-shaped lever having the end of its horizontal portion engaging the eye of the bracket for slidable movement therein and the vertical portion thereof being provided for the greater portion of its length with a slot, a slotted lamp standard receiving the vertical portion of the arm and the slot of said arm being aligned with the slot of the lamp standard,



and a key detachably engaging the aligned slots whereby the standard will be moved in unison with the L-shaped lever.

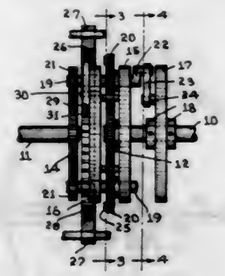
1,632,692. ROUNDABOUT AND LIKE AMUSEMENT APPARATUS. ROBERT BLACKBURN, Chorley, England, assignor to Parent Caterpillar Company, Limited, London, England. Filed Sept. 24, 1925, Serial No. 58,404, and in Great Britain Sept. 25, 1924. 2 Claims. (Cl. 272—28.)

1. An amusement apparatus comprising a circular track, a rotary platform on wheels engaging said track and a series of cars carried by said rotary platform, seats in said cars, a vertical shaft projecting through each car with means operated by the travel of said car for rotating said shaft, a collapsible canvas cover carried by said shaft and turning therewith, and means for moving said cover vertically on said shaft while said shaft is being rotated, substantially as shown and described.



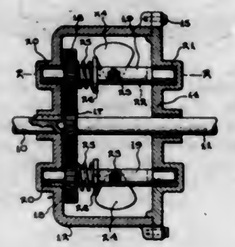
1,632,693. SPRING MOTOR. JOHN BUTTIGIEG, Elgin, Ill. Filed Sept. 8, 1926. Serial No. 134,260. 1 Claim. (Cl. 46—48.)

In a device of the class described, a frame for supporting an element to be displayed, a rotatable element within the frame, a motor within the rotatable element, a frame



for the motor, means extending thru the rotatable element for connecting the frame and forming therewith a stationary structure with reference to which the rotary element is movable, means connecting one of the elements of the motor with the rotatable element, a fly-wheel driven by the motor, maintaining a fixed center of gravity for the frame first named and the frame for the motor, and extending into the lower portion of the rotatable element below the axis about which this element revolves.

1,632,694. AUTOMATIC TRANSMISSION. GEORGE B. COLEMAN, Dayton, Ohio, assignor to Coleman Automatic Transmission Company, San Francisco, Calif., a Corporation of California. Filed Feb. 2, 1925. Serial No. 6,394. 1 Claim. (Cl. 74—34.)



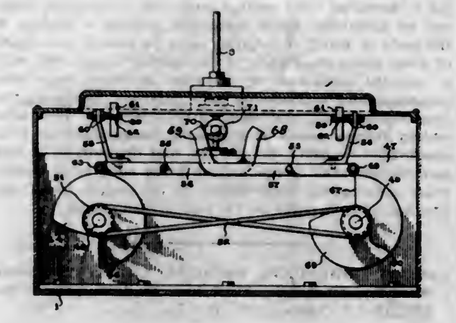
A transmission comprising axially aligned driving and driven shafts loosely coupled at their adjacent ends, a cross-head mounted upon and secured to the driving shaft, a bevel gear secured to the driven shaft, a transversely disposed shaft journaled in said cross-head and provided with terminal cranks disposed at opposite ends of the latter, a bevel gear couple operatively connecting the transverse shaft and driven shaft, an inert member mounted upon and movable axially of one of the aligned shafts, and link connections between said cranks and said inert member.

1,632,695. AUTOMATIC TRANSMISSION. GEORGE B. COLEMAN, Dayton, Ohio, assignor to Coleman Automatic Transmission Company, San Francisco, Calif., a Corporation of California. Filed Feb. 21, 1925. Serial No. 10,821. 4 Claims. (Cl. 74—34.)

1. A transmission comprising driving and driven members, a speed reducing epicyclic gear train operatively connecting the two, a rotary carrier supporting the planetary elements of said speed reducing gearing, an oscillatory member operatively connected with and actuated by a planetary element of the gearing, and an automatic control having a stationary element and a speed actuated element carried by the carrier and cooperating with the stationary element for preventing retrograde movement of the carrier.

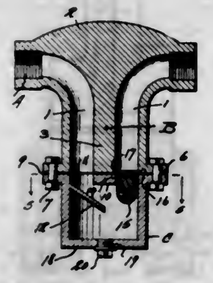
1,632,696. TRANSMISSION. GEORGE B. COLEMAN, Philadelphia, Pa., assignor to Coleman Automatic Transmission Company, a Corporation of California. Filed June 3, 1926. Serial No. 113,539. 6 Claims. (Cl. 74—34.)

1. A transmission comprising driving and driven members and operative connections between the two comprising epicyclic gears, said gears having weights movable synchronously with them through substantially half an axial revolution and then movable independently of the gears and instantaneously to the diametrically opposite sides of the latter.



1,632,697. COUPLING MEANS FOR CHAINS. ORLO G. CHANNELL, Lynn, Mass. Filed Jan. 15, 1927. Serial No. 161,422. 7 Claims. (Cl. 24—238.)

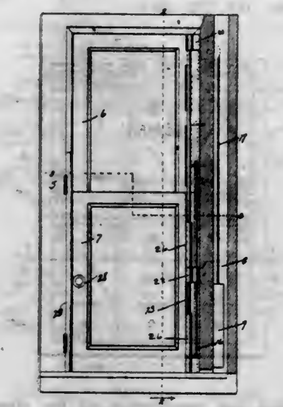
1. A chain coupling means comprising in combination with separable chains, a hook link separably engaging a link of one chain, and having the other chain also connected thereto, and a keeper having a terminal portion connected to one chain and through which the hook link with a portion of the chain connected thereto is freely slidable to disconnect the hook link and the two chains.



1,632,698. AUTOMATIC TRAFFIC SIGNAL FOR STREET CROSSINGS. MARQUIS LAFAYETTE CRAWFORD, Osceola, Ark. Filed Aug. 1, 1924. Serial No. 729,569. 5 Claims. (Cl. 116—63.)

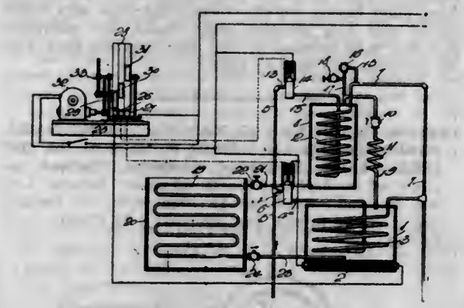
5. A traffic signal for street crossings embodying a turnable staff provided with signal blades bearing signal indicia, a lever having an operative connection with said staff for turning it first in one direction and then in the other upon rocking movement being imparted to the lever, and a plurality of gravity actuated levers operatively connected with the first said lever for rocking the latter in opposite directions, and elevating means for said gravity actuated levers, said gravity actuated levers having their fulcrums disposed in planes on opposite sides of the first said lever and the elevating means comprising rotatable disks with which the remote extremities of said gravity actuated levers have peripheral contact, said disks having sectors removed to permit the

remote extremities of the gravity actuated levers to drop, the disks being operatively connected for synchronous movement in opposite directions and the cut-away portion of the one having a lead, in its angular movement, over the cut-away portion of the other.



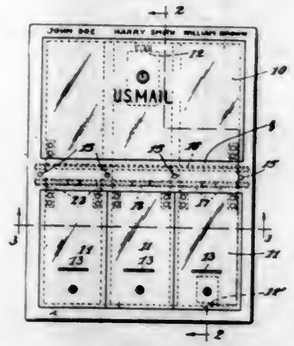
1,632,699. STRAINER AND DIRT COLLECTOR. MILO DENNEY, Tipton, Mich. Filed Dec. 30, 1926. Serial No. 158,010. 4 Claims. (Cl. 210—165.)

1. A combined strainer and dirt collector comprising a body member having disposed therethrough an inlet bore and an outlet bore, a cup member, means for securing the body and cup member one to the other, the bores of the body member being in communication with the interior of the cup member, a plate carried by a wall of the cup member and extending inwardly thereof and across the point of communication between the cup member and the inlet bore, a plate partially closing the end of the cup member immediately adjacent to the body member, said last named plate having an opening communicating with the outlet bore of the body member, and a straining element extending within the cup member through the opening in the last plate.



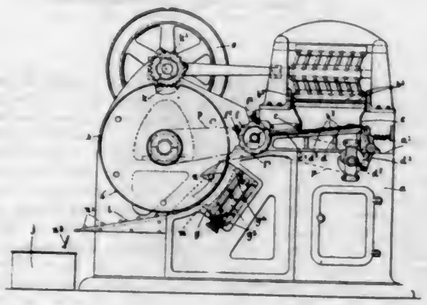
1,632,700. WINDOW CONSTRUCTION. WILLIAM FAIRLEY, Oakland, Calif. Filed Sept. 24, 1926. Serial No. 137,575. 3 Claims. (Cl. 20—44.)

1. In a device of the character described, the combination with a window frame having a pair of sliding sashes positioned therein, a rod positioned adjacent each of said sashes, hinge connections extending between each of said rods and their respective sashes, an auxiliary



rod mounted parallel with each of said rods, a slider connecting said rods and their respective auxiliary rods, for the purpose specified.

1,632,701. INTERMITTENT-ABSORPTION REFRIGERATING SYSTEM. HENRY F. GELLENBECK, EDWARD J. GELLENBECK, and BENJAMIN G. GELLENBECK, Tacoma, Wash. Filed Jan. 8, 1925. Serial No. 1,228. 3 Claims. (Cl. 62—5.)

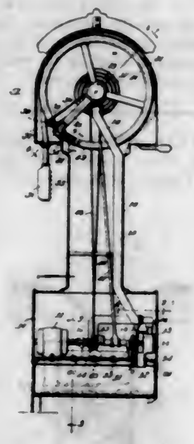


3. In a refrigerating system, a pair of combined generating and absorbing tanks, a combined gas condensing and liquid collecting tank, gas conducting means leading from the first tanks to the second tank, a liquid outlet from the condensing and collecting tank for connection with an expansion coil, return piping for the coil leading to the generating and absorbing tanks, individual electric heaters for said generating and absorbing tanks, individual liquid-cooled members for these tanks, a third liquid-cooled member for the condensing and collecting tank, individual self-closing valves for the three liquid-cooled members, individual electromagnetic opening devices for the three valves, individual circuits for the aforesaid heaters and the magnetic valve-opening devices, a group of self-opening switches for said circuits, and drum means directly and constantly driven by a synchronous electric motor, said drum means having cams for closing the switches in predetermined sequence, said cams being of lengths to hold their co-acting switches closed for predetermined intervals.

1,632,702. METAL RECEPTACLE. SAMUEL HAMMER, Brooklyn, N. Y., assignor to United Metal Box Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed May 13, 1924. Serial No. 712,945. 19 Claims. (Cl. 232—25.)

18. A mail box construction of the class described comprising a mail box having a unitary body structure divided by vertical partition walls into a plurality of compartments opening through the front side of the box, a front plate having its marginal portions secured to the top, bottom and side walls of the box structure and projecting beyond the same, independently operable door members of uniform width controlling admission to the lower end portions of the respective compartments, hinge arms on the inner face of each of said door members, a common hinge rod with which said hinge arms are connected fixed within the box structure, and a one-piece master door member controlling admission to the upper end portions of all of said compartments and hingedly supported near its lower end within the box, and said front plate having suitably formed openings with which all of said door members when closed, are positioned with the front surfaces of said door members flush with the front surface of said plate.

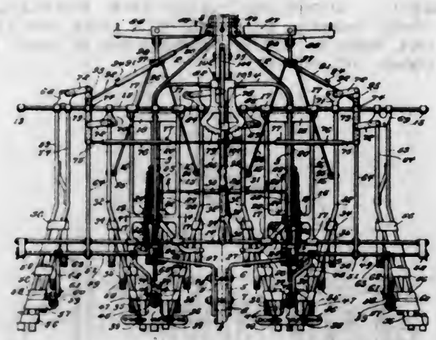
1,632,703. MACHINE FOR MANUFACTURING NAILS, BRADS, OR THE LIKE FROM WIRE, ROD, OR THE LIKE. FRANK HUMPHRIS, Parkstone, England, assignor of one-half to Kenneth Alexander Roberts, London, England. Filed Dec. 12, 1922, Serial No. 606,497, and in Great Britain Dec. 22, 1921. 33 Claims. (Cl. 10—43.)



1. A machine for making nails from wire, comprising a rotary drum, a pressure block associated with said drum and a heading plate cooperating with said drum and pressure block to enlarge one end of each blank fed between the drum and pressure block.

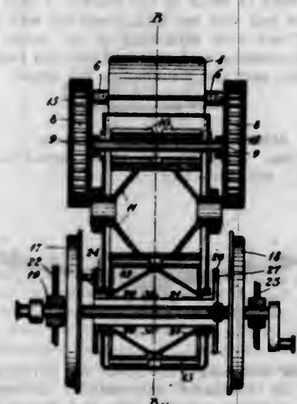
1,632,704. CASTING HAVING CHROMIUM ALLOY SURFACE. CHARLES B. JACOBS, Wilmington, Del., assignor, by mesne assignments, to Electro Metallurgical Company, a Corporation of West Virginia. Filed Apr. 22, 1921. Serial No. 463,565. 9 Claims. (Cl. 22—215.)

1. The method of making a ferrous metal casting having a chromium alloy surface layer that is strongly resistant to oxidation, which comprises coating a surface in the mold in which the casting is to be formed to a depth of from about one-eighth to one-quarter of an inch with a mixture composed of metallic particles comprising chromium and a binder for said particles, hardening the resulting coating, and then introducing into said mold molten ferrous metal at a pouring temperature of from about 2650 to 2900° F., the size and disposition of said metallic particles in the coating being such as to permit ready penetration therebetween by the molten metal and solution of said particles by said molten metal.



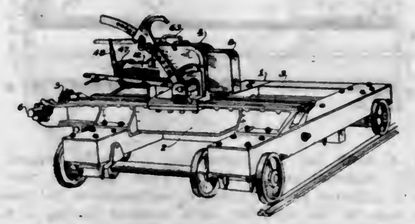
1,632,705. BRUSHING MACHINE. HENRY M. KEITH, West Frankfort, Ill. Filed July 28, 1922. Serial No. 578,213. 3 Claims. (Cl. 15—7.)

2. In a machine of the class described, a reel, a hose wound on the reel, means for producing suction through an element of the reel and the hose, a suction nozzle connected with the hose, a flexible shaft and a rotary brush connected therewith and means mounted on the reel for driving the flexible shaft.



1,632,706. CULTIVATOR. NOAH D. KERN, New Albany, Ohio. Filed Aug. 3, 1925. Serial No. 47,941. 2 Claims. (Cl. 97—156.)

1. In an agricultural device, a frame, front and rear rods secured to and extending laterally from the frame, auxiliary frames supported on the rods, wheel mounts journaled in bearings in the auxiliary frames, adjustable means connecting the mounts, a foot pedal associated with each of the mounts, plow carrying beams hung from the front rod, and arranged in series between and to the opposite sides of the main frame, oppositely directed brackets on the adjacent pairs of outer beams, links connected to said brackets, lever members pivoted to the front rod, adjustable means connecting the levers, oppositely directed brackets on the inner pair of beams, links pivoted thereto, a pivotally supported lever to which the last mentioned links are connected, links connecting said lever and the first mentioned levers, a segmental rack fixed on the frame, a spring influenced handle operated dog on the last mentioned lever engageable with the teeth of the rack, whereby the series of beams may be adjusted toward or away from each other, clevises adjustably connecting the rear ends of the respective pairs of beams, spring influenced rods slidable through



the clevises rotatable shafts, and arms fixed on the shafts in which the ends of said rods are pivoted, levers fixed on the said shafts, each of said levers having a spring influenced hand operated dog and toothed segments supported from the rear bar on which said segments are secured, all as and for the purpose set forth.

1,632,707. TURBINE-DRIVEN LOCOMOTIVE AND SIMILAR VEHICLE. FREDRIK LJUNGSTRÖM, Lidingo-Brevik, Sweden, assignor to Aktiebolaget Ljungströms Ångturbin, Stockholm, Sweden, a Corporation. Filed Apr. 13, 1922, Serial No. 552,424, and in Sweden Feb. 17, 1922. 11 Claims. (Cl. 105—38.)

1. In a steam-turbine driven vehicle, a transmission gearing, comprising spur gears operatively connected with the turbine, a pair of driving wheels, a shaft for said driving wheels, a sleeve surrounding said driving wheel shaft, a movable coupling comprising two members, the one of which is connected with the slowest running and last gear of said gearing, counted from the turbine, and the other with the sleeve, another coupling comprising two members the one of which is connected with the sleeve and the other with one of the driving wheels, said sleeve extending through said last gear wheel.

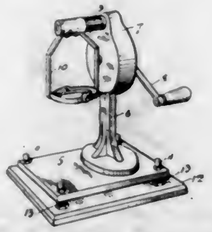
1,632,708. SAWMILL CARRIAGE. PAUL FREDRICK LUETH, Everett, Wash., assignor to Sumner Iron Works, Everett, Wash., a Corporation of Washington. Filed June 14, 1924. Serial No. 720,053. 17 Claims. (Cl. 143—122.)

1. In a saw mill carriage, the combination of an adjustable hollow knee, a ram adapted to be housed therein, means operable by fluid pressure for projecting or retracting said ram, and means for securing the ram in various positions of adjustment.

1,632,709. CONTACT DEVICE. SAMUEL L. MILLER, Chicago, Ill. Filed June 7, 1922. Serial No. 566,663. 1 Claim. (Cl. 173—324.)

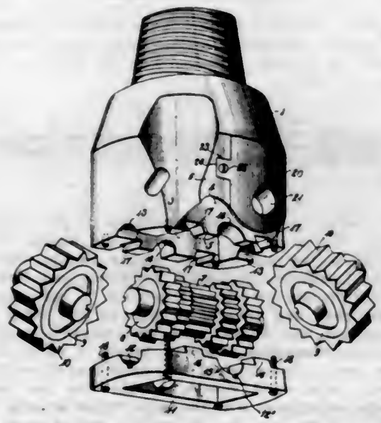
The combination with a stud shaft having an enlarged portion formed thereon intermediate the opposite ends thereof, a collar formed as a part of the stud shaft and disposed in spaced relation with respect to the enlarged portion, a conductor plate through which an end portion of the stud shaft projects, of a contact washer disposed between the collar and the enlarged portion and formed substantially convex concave in shape and having a plurality of radially disposed slots formed in the peripheral edge thereof defining yieldable tongues providing cutting edges adapted for cutting relation with respect to the conductor plate, substantially as described.

1,632,710. FOUNTAIN PEN AND PENCIL. PERCIVAL S. MORRIS, Brooklyn, N. Y. Filed Aug. 12, 1922, Serial No. 581,446. Renewed Nov. 20, 1926. 1 Claim. (Cl. 120—47.)



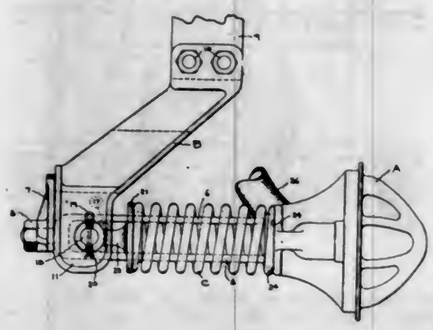
A fountain pen comprising a barrel, a pen receiving element carried by one end thereof and having an ink receiving pocket, also a valve seat, a tubular stem extending longitudinally through the barrel and rotatably mounted therein for manual rotation, a valve carried by the stem and adapted to seat on the valve seat, longitudinal ribs formed upon the inner face of the barrel at diametrically opposite points, a spiral thread on the stem, a disk provided with notches at diametrically opposite points and slidable on the ribs and having threaded engagement with the spiral thread whereby upon rotation of the stem the disk will be moved away from the ink receiving pocket to create a vacuum in the barrel to fill the pen, such rotation of the stem simultaneously moving the valve away from the valve seat.

1,632,711. LINE-CHALKING DEVICE. WILLIAM S. MYERS, St. Petersburg, Fla. Filed June 14, 1926. Serial No. 115,946. 3 Claims. (Cl. 33—87.)



1. A chalk line reel comprising a cylinder formed of flexible material and having its ends looped so that it can be adjusted as to its length, end members for closing the ends of the cylinder, each member having a hole therein for the passage of the chalk line and means for connecting the end members with the cylinder.

1,632,712. CASTING OF DENTURES IN METAL. FREDERICK WILLIAM NUNN, Melbourne, Victoria, Australia, assignor to Nunnday Proprietary Limited, Melbourne, Australia, a Corporation of Victoria. Filed July 30, 1926, Serial No. 126,066, and in Great Britain Aug. 19, 1925. 5 Claims. (Cl. 22—65.)



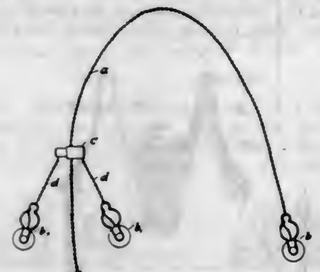
2. In machines for casting dentures in metal, an unstable baseplate, a pedestal thereon, a gear box on the pedestal, a rotatable spindle extending laterally from the box and an investment basket having no counterweight secured to and suspended from the rotatable spindle.

1,632,713. ROTARY WELL-DRILLING APPARATUS. EARL A. REED, Okemah, Okla. Filed Feb. 27, 1925. Serial No. 12,071. 2 Claims. (Cl. 255—71.)

1. In a drill, the combination with a bit head having an open interior, a cross carrier disposed within the open interior of said head, cross cutters mounted on said carrier, a removable cap having in its upper edge a series of semi-circular openings corresponding to the openings in the lower edge of the drill head to form with such openings journals for the carrier, and fastening devices for securing said cap to the bottom of the drill head.

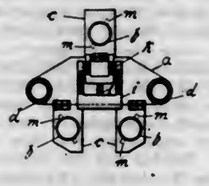
1,632,714. AUTOMATIC TRAIN-PIPE COUPLING. JOSEPH ROBINSON, Morristown, N. J. Filed June 15, 1921, Serial No. 477,759. Renewed Nov. 6, 1926. 4 Claims. (Cl. 285—58.)

1. In an automatic train pipe coupling, a bracket forked at its lower end, each prong of the fork being provided with a perforation, a tubular member positioned between the prongs of said bracket, a bar spanning the opening between said prongs and extending through said tubular member into said perforations and fixed against rotation therein, said member being adapted to rock upon the front face of said bar, a seat for a spring seated upon said member and adapted under certain conditions to rock with the member and under other conditions to rock on the member, a stop at the rear of said bracket, a coupling head in front of the bracket, a part spanning said member and said bar and connected with said stop at one end and with said head at the other end, and a spring surrounding said part and confined between said head and said seat and mounted on the latter.



1,632,715. SHOCK ABSORBER. DANIEL C. RODGERS, Canton, Ohio. Filed May 26, 1926. Serial No. 111,832. 4 Claims. (Cl. 267—25.)

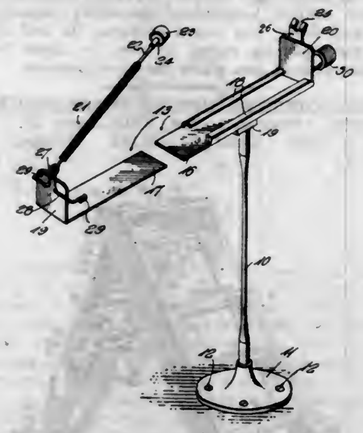
1. A shock absorbing attachment for a vehicle spring, comprising an elongated substantially rectangular resilient spring member having one end disposed beneath and its other end disposed above the spring, and means engaging said spring member at the sides thereof for effecting flexure thereof.



1,632,716. SHOULDER STRAP FOR LADIES' UNDERWEAR. OTTO SCHWEIGERT, Pforzheim, Germany. Filed Dec. 26, 1924, Serial No. 758,140, and in Germany Aug. 6, 1924. 1 Claim. (Cl. 241—12.)

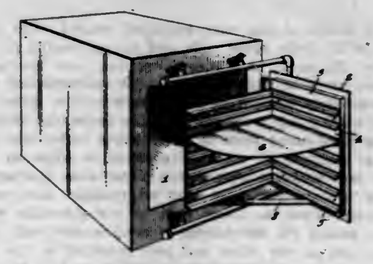
In a garment supporting shoulder strap consisting of an ornamental chain, a holder at the rear end of said chain and two holders at the front end of said chain, a clamping device to the two ends of which the two front holders are attached by short chains, said clamping device consisting of an outer transverse sleeve and of an inner transverse sleeve telescoped in said outer sleeve each sleeve being closed at the outer end and having two

opposite apertures through which said ornamental chain passes, a vertical partition in the inner end of said inner sleeve, a spiral spring in said outer sleeve between the closed end of the same and said partition of said inner sleeve to shift said inner sleeve to clamp said ornamental chain.



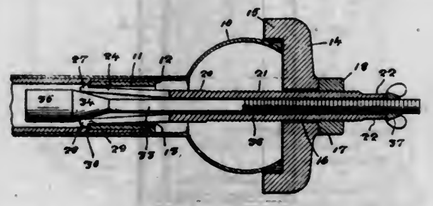
1,632,717. POCKET STAND. OTTO STUMPF, Mannheim, Germany. Filed June 21, 1926, Serial No. 117,520, and in Germany May 20, 1926. 3 Claims. (Cl. 248—43.)

1. A folding pocket stand comprising in combination three legs composed each of several telescoped elements, a support for the camera consisting of a base plate, of extensible tubular supports and of a supporting plate for the camera fixed on the top ends of said tubular supports, flaps hingedly fixed on said base plate, one for each leg, the top ends of said legs being mounted in said flaps, two shiftable spring-controlled locking elements on said base plate, and an oval element pivotally mounted on said base plate between said locking elements to push the same over the raised flaps or to liberate said flaps according to its position.



1,632,718. VIBRATORY MIXER. FRANK W. WALLACE, Chattanooga, Tenn., assignor of one-half to William G. Oehmig, Chattanooga, Tenn. Filed Aug. 30, 1926. Serial No. 132,517. 6 Claims. (Cl. 259—75.)

3. In a vibratory mixer, a container clamp comprising two slidably connected plates extending longitudinally along one side of the container and having laterally projecting jaws at their outer ends to engage the ends of the container, and spring means for inwardly



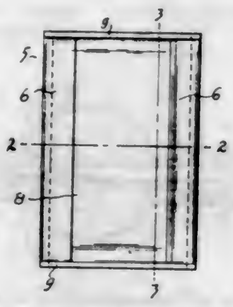
sliding said plates upon each other to hold the jaws engaged with the container, said means extending longitudinally along the opposite side of the container.

1,632,719. OVEN DOOR. HAROLD M. WHITE, Detroit, Mich. Filed July 19, 1926. Serial No. 123,306. 3 Claims. (Cl. 126—340.)

1. The combination with an oven having a door, ledges supported from the door, a support hingedly connected to the inner side of the door and adapted to be swung in parallelism therewith, and ledges on said support adapted to cooperate with the door ledges in supporting shelves, grids or the like.

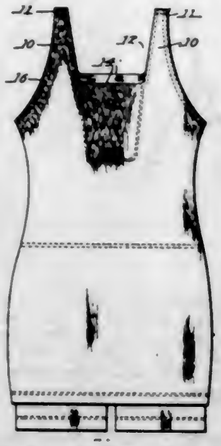
1,632,720. BUSHING TOOL. HAROLD B. WORSTER, Keokuk, Iowa. Filed Dec. 19, 1925. Serial No. 76,524. 1 Claim. (Cl. 29—88.2.)

In a device of the class described, a tapered shank including a threaded portion, a sleeve including longitudinally projecting fingers, and the walls thereof cooperating with the tapered shank, engaging devices on the fingers and projecting outwardly therefrom, means



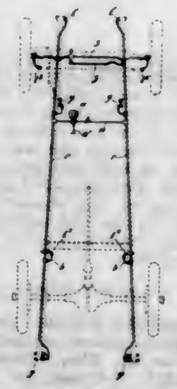
for producing relatively longitudinal movement between the shank and sleeve, the engaging devices being beveled to provide sharp edges movable outwardly incident to the aforesaid relative longitudinal movement between the shank and sleeve, and means engaging the end of the sleeve for producing thrust between the sleeve and a stationary element into which the sleeve projects.

1,632,721. COMBINED IRONING BOARD AND STEP-LADDER. CHARLES DANIEL WOLF, Paris, Ill. Filed Feb. 3, 1926. Serial No. 85,734. 1 Claim. (Cl. 228—4.)



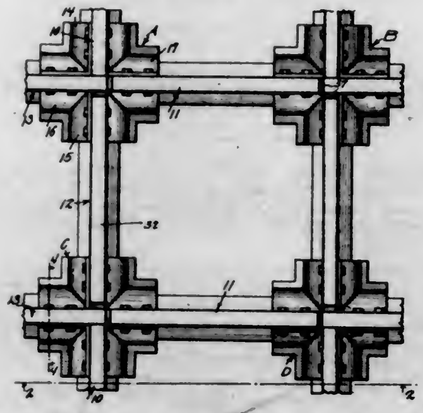
In a device of the class described, spaced stiles joined together at their upper ends and having means for supporting the same in ladder form, and also having one or more steps at their lower ends, a supplemental frame intermediately pivoted to swing between the stiles, said frame having side bars and coacting steps, the side bars having open-ended slots in their lower ends, said stiles having longitudinal slots in position to align at their upper ends with the slots of the frame when the latter is swung between the stiles, said longitudinal slots extending down below the lower ends of the side bars of the frame, and a tie rod having a bend at one end and a thumb nut at the other end and mounted in the longitudinal slots and adapted to be pushed up into the open-ended slots and the nut tightened to bind the supplemental frame in between the stiles.

1,632,722. PAD FOR FRUIT CONTAINERS. JOHN H. WOODALL, Woodland, Ga. Filed May 13, 1926. Serial No. 108,905. 1 Claim. (Cl. 154—54.)



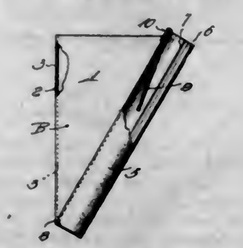
A pad for fruit containers comprising a bat of resilient fibrous material and a casing for the bat consisting of a face part formed of waterproof paper, a back part formed of a longitudinal reinforcing strip of tough paper with its marginal sides overlapped by and adhering to the marginal sides of the waterproof face part, and transverse reinforcing strips of tough paper folded over the ends of the casing with the folds of the transverse strips overlapping and adhering to the marginal ends of the face and back parts of the casing.

1,632,723. BUTTONLESS BATHING SUIT. ARTHUR J. BARNETT, New York, N. Y., assignor to The Worcester Knitting Co., Worcester, Mass., a Corporation of Massachusetts. Filed July 12, 1926. Serial No. 121,766. 3 Claims. (Cl. 2—67.)



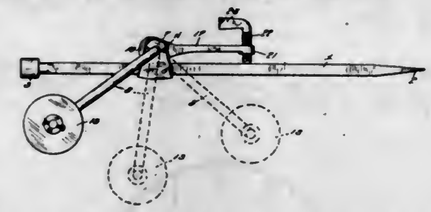
1. As an article of manufacture, a bathing suit formed of elastic material and having shoulder straps, each consisting of a front and back part sewed together across the top, said suit having a double thickness across the front and back extending to the bottoms of the shoulder straps, and capable of stretching laterally at the neck portion when the shoulder straps are pulled in opposite directions, said double thickness comprising integral portions of the body of the suit each folded upon itself.

1,632,724. TERMINAL CONSTRUCTION FOR CENTRAL LUBRICATING INSTALLATIONS. EDGAR J. BLOOM, Tiffin, Ohio, assignor, by mesne assignments, to Auto Research Corporation, a Corporation of Delaware. Original application filed May 19, 1922, Serial No. 562,090. Divided and this application filed Aug. 6, 1926. Serial No. 127,493. 2 Claims. (Cl. 184—7.)



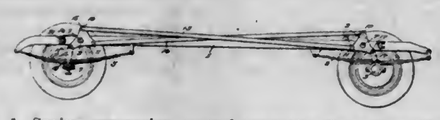
1. A lubricator terminal comprising a unitary pipe fitting having a longitudinal bore therethrough, one end of said fitting being externally threaded for application into a bearing, the other end being conformed for application of a pipe end in fluid-tight relation with respect thereto, and a rigid flow obstructing filler member disposed within said fitting and determining a minute passage therethrough, whereby with the use of a pipe fitting of uniform construction, a terminal of desired selected metered flow rate may be provided by the use of a filler of corresponding rating, determining substantially the exact size of the minute passage desired and means constituting part of the assembled uninstalled terminal for retaining said filler in said fitting.

1,632,725. RAILWAY CROSSING. JACKSON W. BROWN, De Quincy, La., assignor of forty-five per cent to Farris E. Farris, De Quincy, La. Filed Nov. 4, 1926. Serial No. 146,256. 6 Claims. (Cl. 246—463.)



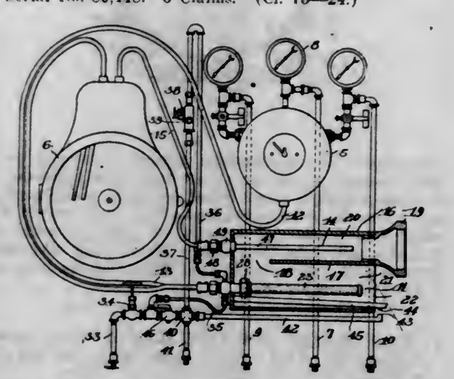
2. The combination with a railway crossing coupling provided with two pairs of alined recesses disposed at an angle to one another, of a plurality of rails received within said recesses, each rail including a base section consisting of a base portion and an upstanding flange and a rail section consisting of a rail engaging portion and a depending web adapted to rest upon the said base portion and abut the upstanding flange, the meeting ends of said rails being beveled and snugly engaging one another.

1,632,726. FLAGSTAFF. ROSCOE G. CONKLIN, Omaha, Nebr. Filed Feb. 24, 1925, Serial No. 11,320. Renewed Mar. 18, 1927. 1 Claim. (Cl. 248—37.)



In a flagstaff holder, the combination of a tubular body portion open at its ends an inwardly projecting portion at one end, said body portion comprising a tubular body member in the form of a coil in cross-section the interior edge of said coiled portion projecting radially inwardly to form a continuous interior longitudinal rib, a spring clip extending into the tubular body portion, a web formed integral on the body portion and terminating in a base portion whereby the holder is formed of a single piece of material.

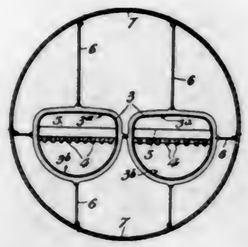
1,632,727. UNDERCUTTING-SAW SUPPORT. ALFRED DAHLMAN, Ripple, Oreg. Filed June 30, 1926. Serial No. 119,614. 2 Claims. (Cl. 143—163.)



1. An undercutting saw support, consisting in a bar adapted to be driven into a log, a block slidable upon said bar, a cam-clamp mounted in said block provided with a lever extending longitudinally of said bar having a screw at its outer end bearing upon said bar, and a swingable arm having a rotatable saw-supporting element at one end and pivotally mounted at its other end in said block, said arm-end extending through an eccentric aperture in said cam-clamp whereby the arm is retained in adjusted radial positions.

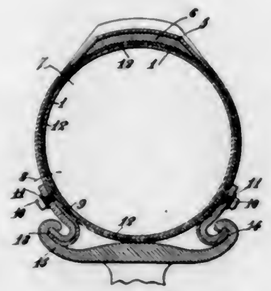
1,632,728. AUTOMOBILE BODY-SPRING CONTROL APPARATUS. JAMES B. DRENNAN, Portland, Oreg. Filed Dec. 7, 1925. Serial No. 73,665. 5 Claims. (Cl. 280—104.)

1. Spring suspension control apparatus for automobiles, consisting in the combination with a body-frame of an automobile, and the springs for supporting the same, of a transverse rod mounted for rotation in said frame adjacent the axles at each end of the car, a plate keyed at each end of said rod, bars extending longitudinally of the car and pivotally connected at opposite ends to said plates upon each side of the car, respectively, and a link connecting each said plate with the adjacent axle.



1,632,729. HYGROMETRIC APPARATUS. EDWARD B. FOOTE and FREDERICK W. STALKER, Rochester, N. Y., assignors to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Jan. 11, 1926. Serial No. 80,448. 6 Claims. (Cl. 73—24.)

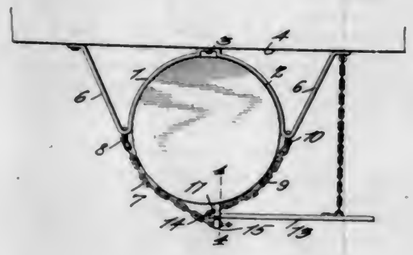
1. In a hygrometric apparatus, the combination of a temperature sensitive element, a water-pervious envelope defining a closed chamber about said element, means for



supplying water under pressure to the interior of said envelope, and an upwardly extending discharge conduit connected with said envelope to provide for the escape of air from said envelope and maintain the same filled with water.

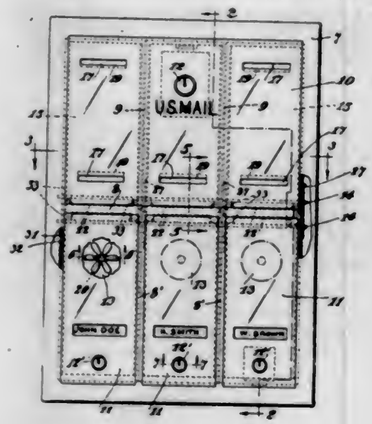
1,632,730. FURNACE. JOHN WILLIAM FREMAN, South Carlton, Australia. Filed Oct. 10, 1924. Serial No. 742,910. 1 Claim. (Cl. 110—86.)

In furnaces, a furnace tube of uniform cross section wherein the upper portion above the fire bar has straight vertical sides merging into a flat arch and the lower portion of the tube is semicylindrical and a fire bar in said tube so located that its upper surface coincides with the plane passing through the horizontal diameter of the semicylinder forming the lower half of the tube so that a restricted area is provided above said bar and a correspondingly enlarged area is provided below said bar.



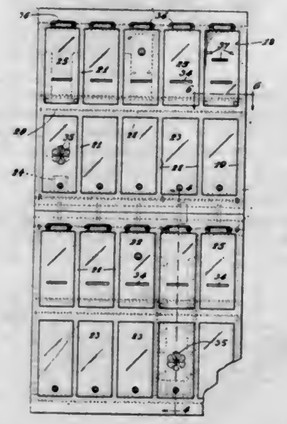
1,632,731. WHEEL TIRE. NICOLAS GHERASSIMOFF, Le Vesinet, France. Filed Mar. 5, 1926, Serial No. 92,524, and in France Feb. 12, 1926. 1 Claim. (Cl. 152—8.)

A wheel tire comprising a plurality of metal outer strips adapted to enclose an air tube, each extremity of each strip being bent for engagement into a rim-flange, a pair of bands each having one of its edges curved and adapted to be inserted between one series of strip extremities and a rim-flange, and a single screw connection between each extremity of each strip and the band associated therewith.



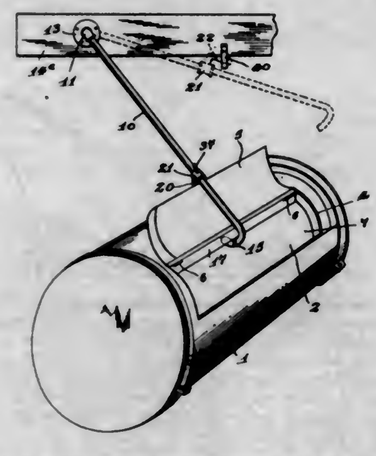
1,632,732. CLAMP FOR CONTAINERS. JACK GREEN, Norfolk, Va. Filed Dec. 3, 1926. Serial No. 152,444. 8 Claims. (Cl. 24—19.)

1. A clamp comprising clamping arms, a chain connected to each of said arms, and a locking lever carried by one of said chains, said lever being formed to receive and cooperate with two adjacent links of the other of said chains and hold one of said links transverse the other for



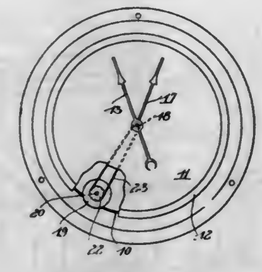
locking purposes and being further formed to cooperate with a link of the chain with which it is connected to maintain the alignment of the lever.

1,632,733. METAL RECEPTACLE. SAMUEL HAMMER, Brooklyn, N. Y., assignor to United Metal Box Co. Inc., Long Island City, N. Y., a Corporation of New York. Filed Feb. 15, 1926. Serial No. 88,294. 15 Claims. (Cl. 232—25.)



1. A mail box construction of the class described comprising a mail box divided by partition walls into a plurality of receptacles opening through one wall only of the box, independently operable door members controlling admission to the lower end portions of the respective receptacles and hingedly mounted near their upper ends within the box, a one piece master door controlling admission to the upper ends of all of the receptacles, a hinge rod extending across the box adjacent its open side and mounted in the partition walls and side walls of the box, means on the inner side of the master door for hingedly connecting said door with said rod in spaced relation to the lower edge of the door, and said partition walls below the hinge rod being provided in their edges with recesses to accommodate the lower edge portion of the master door in the opening and closing movements thereof.

1,632,734. METAL RECEPTACLE. SAMUEL HAMMER, Brooklyn, N. Y., assignor to United Metal Box Co. Inc., New York, N. Y., a Corporation of New York. Original application filed Jan. 13, 1925, Serial No. 2,152. Divided and this application filed June 23, 1926. Serial No. 117,936. 5 Claims. (Cl. 232—24.)

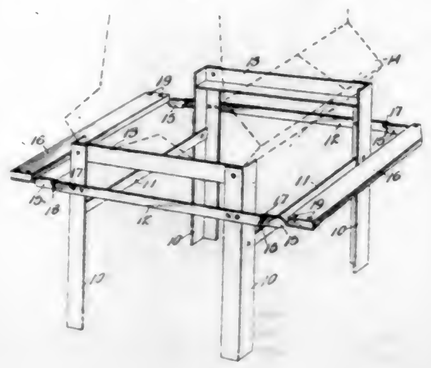


2. In metal collection receptacles of the character described, each having a front plate and adapted to be mounted in the face of a wall, means carried by each receptacle for interlocking engagement with the complementary means on an adjacent receptacle when the receptacles are assembled in the wall structure whereby said front plates are positioned and held in a common plane with their outer faces flush with the wall.

1,632,735. HOLDER FOR WASHING MACHINES. FRED A. HOFFER, Frankfort, N. Y. Filed Mar. 31, 1926. Serial No. 98,874. 6 Claims. (Cl. 68—18.)

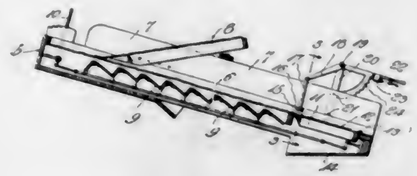
1. In a holder for washing machines having a rotary casing with a door thereon, a swing rod adapted to engage said casing, means for supporting said rod and means adapted to be manually operated on said rod to engage said door to aid in holding said door and rotary casing stationary.

1,632,736. BAROMETER-SETTING MEANS. PERCY R. JAMESON, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Dec. 3, 1925. Serial No. 72,902. 2 Claims. (Cl. 73—4.)



2. In a barometer, the combination of a casing having an opening in its wall and a scale plate carried by the casing, a spindle rotatable within the casing and having an index rotatable adjacent the scale plate, a pulley upon the spindle, an index carried by the pulley between the first mentioned index and scale plate, a disk-like member rotatable within the casing and adapted to project through said opening in the wall thereof, a pulley connected with the disk-like member and a belt connecting said pulleys.

1,632,737. DISAPPEARING HEADREST. CHARLES LANE, Jefferson, Wis. Filed Nov. 22, 1926. Serial No. 150,019. 1 Claim. (Cl. 155—177.)

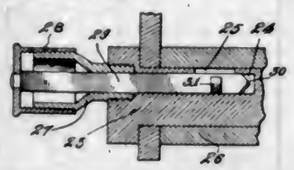


In a device of the character described, the combination with a head rest, of a supporting bar having an angular upper end extending inwardly into the head rest, and pivoted at its inner extremity to the head rest for the same to rock thereupon; an inclined rigid stop carried by the head rest and arranged to come into abutting engagement with the angular upper end of the supporting bar to limit the rocking movement of the head rest thereon in one direction; rigid means also carried by the head rest for contacting with the supporting bar below its angular upper end to limit its movement in the oposite direcion; a spring for normally pressing the head rest in one direction; and a container for carrying the supporting bar and for receiving the head rest thereinto and housing the same when not in use.

1,632,738. POULTRY FEEDER. FRED W. LORD, Tipton, Ind., assignor to The Oakes Manufacturing Company, Tipton, Ind., a Corporation of Indiana. Filed Apr. 22, 1926. Serial No. 103,920. 3 Claims. (Cl. 119—52.)

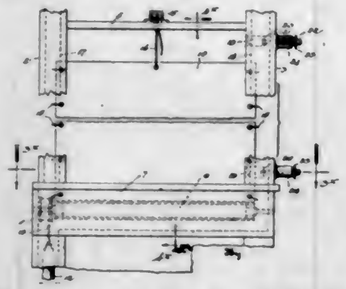
1. A poultry feeder comprising a frame, a perch support pivoted to said frame and having laterally disposed lugs for engagement with the frame when the perch support is in substantially horizontal position and a perch mounted on said support, substantially as set forth.

1,632,739. COAL SCREEN AND WASHER. WILLIAM F. MARTIN, Harrisburg, Pa. Filed Aug. 16, 1926. Serial No. 129,532. 2 Claims. (Cl. 209—258.)



1. A screen comprising a main inclined frame, a main screen secured in said frame and terminating short of its lower end, an auxiliary screen extending from said main screen to the lower end of said main frame, an auxiliary frame upon which said auxiliary screen is secured, said auxiliary frame being hinged at its lower end to the lower end of said main frame, a metal bar extending transversely across the upper end of said auxiliary frame, resting upon the upper end of said auxiliary screen and secured to said upper end of said auxiliary frame, said bar having upturned ends, and means connected to said upturned ends for swinging the auxiliary frame and screen upwardly when desired, said bar serving to protect the upper end of the auxiliary screen against tearing loose and also affording means to which to connect said means for swinging the auxiliary frame and screen.

1,632,740. METHOD OF MAKING PHOTOGRAPHIC COPIES BY REVERSAL. ALFRED MILLER, Dessau in Anhalt, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Sept. 23, 1925, Serial No. 58,191, and in Germany Mar. 21, 1925. 7 Claims. (Cl. 95—88.)



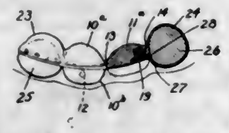
1. In a method of making photographic reproductions, the step which consists in treating a freshly developed silver negative with an aqueous solution containing ferric chloride and potassium ferri-cyanide.

1,632,741. OILING DEVICE. TURNER MILLER, Fayetteville, Ark. Filed Apr. 7, 1926. Serial No. 100,380. 2 Claims. (Cl. 308—105.)

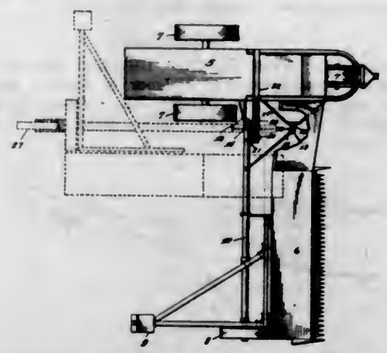
1. The combination with a bearing having an oil well therein, provided with a passage to communicate with an element journaled on the bearing, of a means for feeding oil into the well and for scraping oil therefrom, comprising an auger received in the well and contacting with the walls thereof.

1,632,742. SHADE GUIDE. ERNEST E. MINARD, Detroit, Mich. Filed May 13, 1925. Serial No. 29,905. 6 Claims. (Cl. 156—26.)

1. Means for the screening of an opening, comprising slotted tubular posts at opposite sides of said opening, an extensible screen wider than and adjustably mounted at one end of said opening, the margins of said screen being adapted to traverse the slots of said posts in the adjustment of said screen, and resiliently yieldable means exerting tension transversely of said screen.



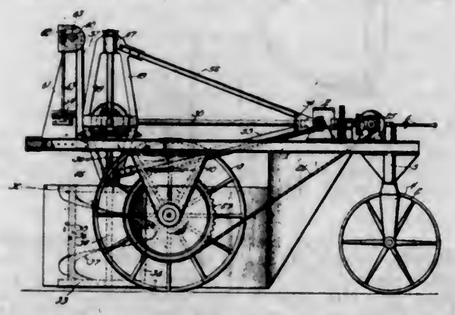
1,632,743. HAYSTACKER. MINER E. FENNER, Sumner, Nebr., assignor of one-half to H. S. Clouse, Sumner, Nebr. Filed Aug. 13, 1925. Serial No. 49,951. Renewed Dec. 23, 1926. 6 Claims. (Cl. 214—108.)



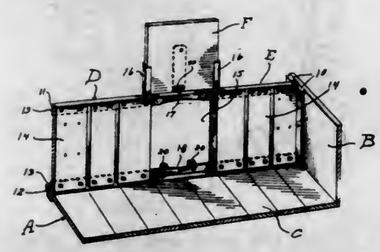
1. In a stacker, a carrier frame including a pair of connected, parallel, inclined side-plates each having a downwardly inclined, terminal extension, a fork movable on the carrier-frame, and a pair of pivotally mounted control-bars arranged to be moved by the fork for disposing it approximately in line with the downwardly inclined terminal extensions of the side-plates in engagement with said stop-members.

1,632,744. BRIDGE WORK. LAWRENCE A. KLANDER, New York, N. Y.; Anna Mathilda Klander executrix of said Lawrence A. Klander, deceased. Filed June 8, 1925. Serial No. 35,522. 9 Claims. (Cl. 32—12.)

1. A bridge construction comprising an artificial tooth structure, tooth engaging means at the opposite sides of said artificial tooth structure and integral therewith, said means involving adjustable clamping bands for fixedly securing and supporting the artificial tooth structure in connection with teeth disposed at the opposite sides thereof, said artificial tooth structure including a backing member, and means mounted in and constituting part of said member for retaining the clamping bands in connection therewith.

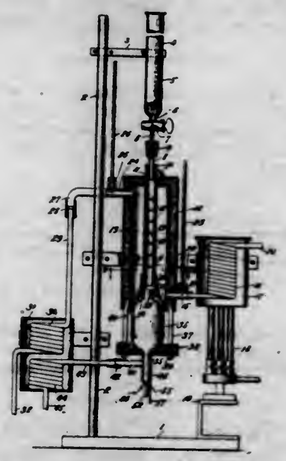


1,632,745. COMBINATION HARVESTER THRASHER. WALLACE F. MACGREGOR, Racine, Wis., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation. Filed Feb. 17, 1925. Serial No. 9,894. 7 Claims. (Cl. 56—20.)



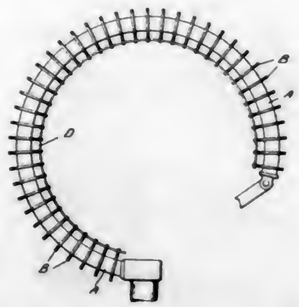
2. In a combination harvester-thrasher, a coupling for said elements comprising a brace pivotally mounted at one end of said harvester and at its opposite end pivotally connected to said thrasher, a removable hinge connecting said elements, and yielding means supported by said thrasher and connected to said harvester for sustaining the latter, when said hinge is disconnected from said thrasher.

1,632,746. APPARATUS FOR CUTTING AND MIXING SAND. VERNE E. MINICH, New York, N. Y., assignor to The American Foundry Equipment Company, New York, N. Y., a Corporation of Ohio. Filed Feb. 4, 1920. Serial No. 356,307. 9 Claims. (Cl. 259—144.)



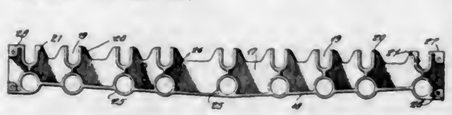
1. The combination of a vertically adjustable frame provided with two sets of bearings, one bearing in each set being above the other, rotary shafts mounted in said bearings, and rotary members carried by said shafts and located below the lower bearings, said rotary members being provided with sand mixing and cutting devices, said mixing and cutting devices comprising helical cutters and straight cutting blades arranged outside of said helical cutters lengthwise of the axis thereof.

1,632,747. END GATE. RONALD E. NASH and HARRY VON SPREECKEN, Montgomery, Iowa; said Nash assignor to said Von Spreecken. Filed Feb. 15, 1926. Serial No. 88,447. 3 Claims. (Cl. 296—52.)



1. An end gate comprising upper and lower rails having forwardly inclined portions arranged one above the other, end boards carried by the rails to each side of the inclined portions and providing a doorway, guides arranged vertically to each side of the doorway, a door slidable vertically in said guides, and a yieldable pin carried by said door, said yieldable pin being guided by said inclined portions of the rails into position for retaining the door in either a raised or lowered position with respect to the doorway.

1,632,748. METHOD AND APPARATUS FOR DETERMINING EQUILIBRIUM VAPORIZATION END POINT. CHARLES E. PARSONS, Englewood, N. J., and RESTON STEVENSON, New York, N. Y., assignors to William P. Deppe, New York, N. Y. Filed Oct. 6, 1926. Serial No. 139,951. 20 Claims. (Cl. 73—51.)



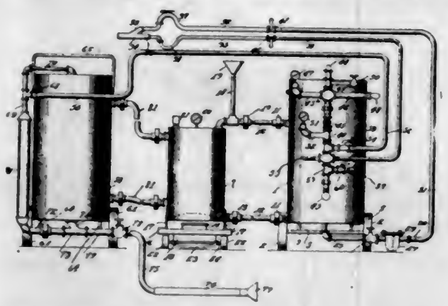
1. The method of determining the equilibrium vaporization end-point of liquids, which comprises completely vaporizing the liquid, superheating the vapors thus formed, then cooling a minute portion of said vapors and to condensation ascertaining the temperature of condensation.

1,632,749. BOURDON-TUBE SPRING. JOHN C. SHAW, Brooklyn, N. Y., assignor to Keller Mechanical Engineering Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 20, 1925. Serial No. 24,670. 4 Claims. (Cl. 73—109.)

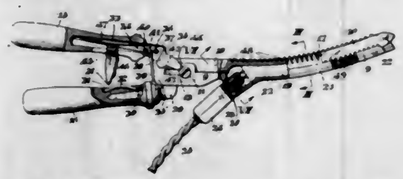
1. A Bourdon tube spring reinforcement, comprising a Bourdon tube with a plurality of loosely fitting reinforcing ribs surrounding the same and means for uniformly spacing said ribs apart throughout the length thereof for limiting the expansion of the tube under pressure.

1,632,750. DRIER FOR SHEET MATERIAL. ARTHUR J. VANCE, Painesville, Ohio, assignor to The Coe Manufacturing Company, Painesville, Ohio, a Corporation of Ohio. Filed Aug. 1, 1924. Serial No. 729,617. 3 Claims. (Cl. 34—12.)

2. A roll bearing bar having transverse journal receiving openings spaced longitudinally of the bar, the distances between centers of adjacent openings being unequal.



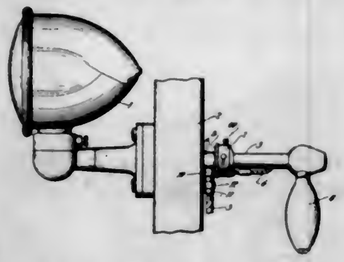
1,632,751. MUSICAL BAR. HERMAN E. WINTERHOFF, Indianapolis, Ind., assignor to Leedy Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed Jan. 22, 1923. Serial No. 614,134. 4 Claims. (Cl. 84—403.)



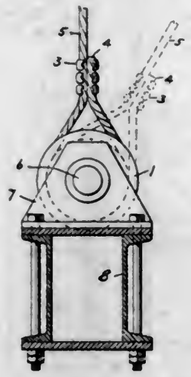
2. A musical bar so thinned at the antinodes of the fundamental tone and first overtone that the first overtone will be octavely spaced from the fundamental tone.

1,632,752. PROCESS FOR COATING STRUCTURAL SURFACES. JOSEPH H. WOOTTON, Washington, D. C., assignor to The Ply-Rite Contracting Company, Baltimore, Md. Filed Feb. 19, 1926. Serial No. 89,358. 2 Claims. (Cl. 91—68.)

1. A method of coating structural surfaces consisting of spraying upon the same by compressed air a liquid material composed of a mixture of asphaltum and petroleum products, controlling the temperature of the said material while it is being sprayed upon the surface to maintain a constant uniform fluid density of the material and a uniform application of the same to the surface irrespective of atmospheric temperature changes and air blasting upon said coating a layer of sand substantially the same temperature as the sprayed material.

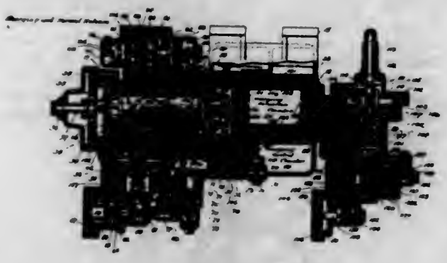


1,632,753. HAIR-WAVING DEVICE. OLIVER S. WRIGHT, Masontown, Pa., assignor to Neptune Manufacturing Company, Masontown, Pa., a Corporation of Delaware. Filed Nov. 21, 1925. Serial No. 70,476. 20 Claims. (Cl. 132—32.)



1. In a hair waving device comprising longitudinally curved and transversely notched opposing grip members each with handles, the combination of a cam-actuated shifter member mechanism operable by additional movement applied to one of the handles to pianaly shog said members relatively to one another.

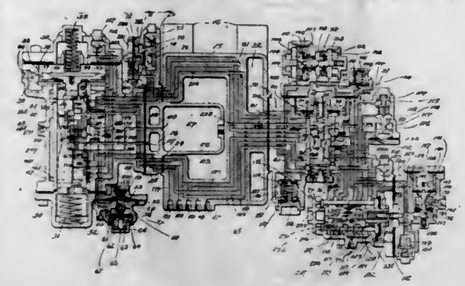
1,632,754. CONTROLLING SWITCH FOR SPOTLIGHTS AND THE LIKE. ERNST G. K. ANDERSON, Chicago, Ill., assignor to Appleton Electric Company, a Corporation of Illinois. Filed Feb. 10, 1926. Serial No. 87,285. 11 Claims. (Cl. 200—52.)



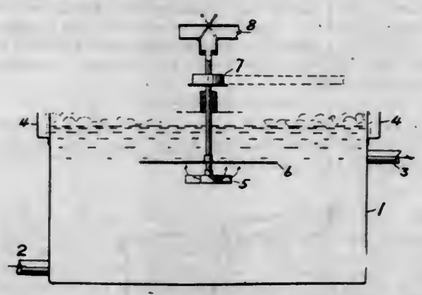
1. A switch device comprising two members, rotatable relatively to each other, and each provided with a terminal, contact pieces in said members adapted to be engaged with each other in any relative angular position of said members to connect said terminals together, and an element movable with one of said members and also capable of movement independently thereof to control the engagement of said contact pieces with each other.

1,632,755. MEANS FOR FASTENING HOISTING ROPE TO SKIP BUCKETS AND COUNTERWEIGHTS. HERBERT E. BIRCH, Philadelphia, Pa., assignor to R. H. Beaumont Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 20, 1926. Serial No. 89,544. 2 Claims. (Cl. 24—123.)

1. Means for fastening hoisting rope to skip buckets and the like which comprise a circular spool wheel around which the end part of the rope is wrapped at least substantially 1¾ turns, devices for securing the end of the rope to the reach thereof, and a frame in which the spool wheel is turnably mounted and which is adapted for attachment to the skip bucket and the like.



1,632,756. TRIPLE VALVE. CHARLES A. CAMPBELL, Watertown, N. Y., assignor to The New York Air Brake Company, a Corporation of New Jersey. Filed May 27, 1926. Serial No. 112,109. 37 Claims. (Cl. 303—38.)

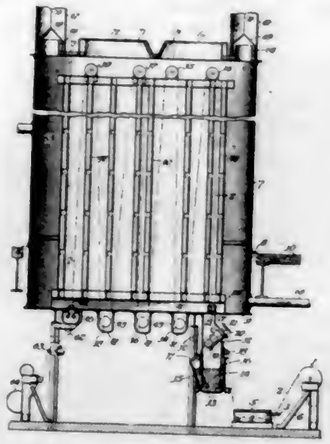


3. An air brake triple valve comprising in combination a service mechanism controlling the flow of auxiliary reservoir air to the brake cylinder and exhaust from the brake cylinder; an emergency portion controlling the discharge of brake pipe air from the brake pipe; and means subject to brake cylinder pressure arranged to dirct brake pipe air in emergency applications, to the brake cylinder while brake cylinder pressure is below a chosen value and to the atmosphere at other times.

1,632,757. TRIPLE VALVE. CHARLES A. CAMPBELL, Watertown, N. Y., assignor to The New York Air Brake Company, a Corporation of New Jersey. Filed Feb. 5, 1927. Serial No. 166,202. 28 Claims. (Cl. 303—38.)

2. The combination with a triple valve characterized by normal recharge upon normal releasing pressure and by restricted recharge upon higher releasing pressure in the brake pipe, of a pressure-actuated valve controlling a service vent from the brake pipe and comprising a sharp annular seat and a combined diaphragm and valve coacting with said seat and subject to brake pipe pressure acting in an opening direction; an equalizing chamber arranged to be charged in normal recharge position; a reduction chamber arranged to be vented to atmosphere in normal recharge position and charged in restricted recharge position, the triple valve structure having ports controlled by the triple valve and opened thereby in quick service position to connect said chambers and cause their equalized pressures to act on said diaphragm in a closing direction; a check valve normally closing against outflow through said service vent; and a diaphragm motor rendered active by the triple valve in quick service position to unseat said check valve.

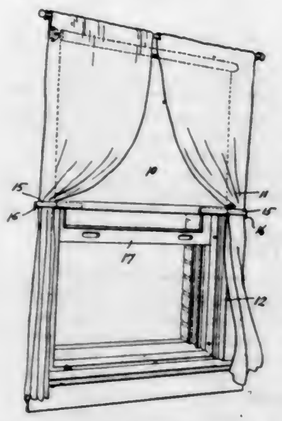
1,632,758. PROCESS OF PURIFYING GAS. WALTER H. FULWEILER, Wallingford, and CLAUDE W. JORDAN, Norwood, Pa., assignors to The U. G. I. Contracting Company, Philadelphia, Pa., a Corporation of Delaware. Filed June 24, 1926. Serial No. 118,384. 2 Claims. (Cl. 23—225.)



1. In the process of purifying gas the improvement in revivifying the foul solution of alkali sulphydrate which consists in stirring the solution with a rapidly moving immersed paddle, passing finely divided air through the solution by introducing air under the paddle, and selectively controlling the sub-division of the air by the speed of the paddle and the depth of its immersion and the supply of air.

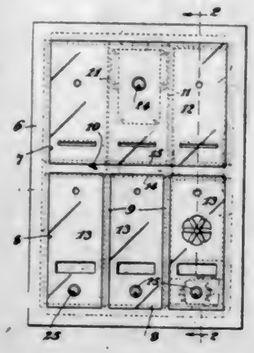
1,632,759. PROCESS FOR TREATING RUBBER LATEX. ERNEST HOPKINSON, New York, and WILLIS A. GIBBONS, Little Neck, N. Y.; said Gibbons assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed June 9, 1925. Serial No. 36,041. 9 Claims. (Cl. 18—50.)

1. Method of rapidly separating the aqueous portion from a rubber latex which comprises treating the latex to increase its filterability, disposing the treated latex in contact with a water permeable material and withdrawing said aqueous portion from the latex through said material.



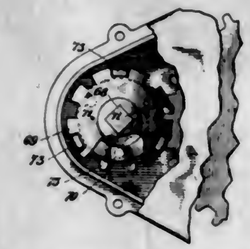
1,632,760. APPARATUS FOR COATING AND DRYING FABRIC OR THE LIKE. ROBERT R. JONES, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 2, 1921. Serial No. 489,348. 13 Claims. (Cl. 91—55.)

2. An apparatus for coating and drying fabric, or the like, comprising a drying chamber, a coating tank outside said drying chamber, a passageway being provided from the tank to the chamber, walls about said passageway extending within the liquid in the tank to form a seal and a second seal in the passageway above the tank, and means to operate the second seal to close the passageway.



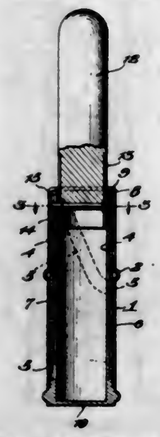
12. In a drying apparatus, having means for supporting and guiding fabric and a passageway through which the fabric leaves the apparatus, and a seal at the passageway, said seal comprising wipers which bear against the fabric and fluid expansible means for pressing the wipers against the fabric.

1,632,761. RETAINER. WILLIAM E. CLARK, Mount Hood, Oreg. Filed Feb. 12, 1926. Serial No. 87,877. 2 Claims. (Cl. 156—33.)



1. A retainer comprising an elongated member slidably mounted within the outer end of a pocket formed upon the lower edge of a shade adapted for engagement with a stick carried therein, and a laterally offset portion carried upon the outer end of the member to provide a finger engaging portion to facilitate withdrawing the member an appreciable distance to retain draperies to one side of the shade.

1,632,762. METAL RECEPTACLE. SAMUEL HAMMER, Brooklyn, N. Y., assignor to United Metal Box Co., Inc., Long Island City, N. Y., a Corporation of New York. Filed June 23, 1926. Serial No. 117,935. 13 Claims. (Cl. 232—25.)

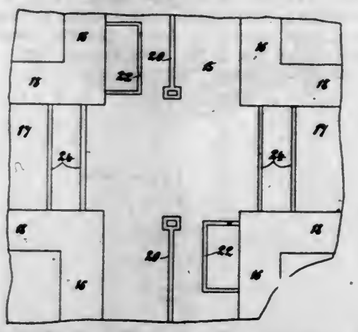


6. A mail box or receptacle having a wall thereof provided with an upper opening for the insertion of the mail and a lower opening for the withdrawal thereof from the receptacle, doors for said openings, and guard members having convex surfaces mounted in the receptacle structure respectively above the lower edge of the upper opening and below the upper edge of the lower opening in parallel relation therewith to prevent contact of the mail matter with said edges as it is inserted or withdrawn from the receptacle.

1,632,763. CLUTCH. PETER JOHN KUERSCHEIDT, Woodhaven, and HARRY E. NORWOOD, Brooklyn, N. Y., assignors, by mesne assignments, to Perfect Window Regulator Corporation, Long Island City, N. Y., a Corporation of Delaware. Original application filed Apr. 29, 1922, Serial No. 557,470. Divided and this application filed Apr. 28, 1926. Serial No. 105,062. 10 Claims. (Cl. 192—8.)

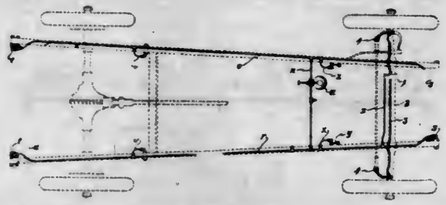
1. In a clutch mechanism, a rotatable operated member, a rotatable operating member rotatable with or relatively to said operated member, a fixed member, a longitudinally movable clutch member keyed for rotation with said operated member and having means formed thereon for engagement with said fixed member, spring means tending to move said clutch member into engagement with said fixed member, and means carried by said operating member for moving said clutch member out of engagement with said fixed member upon rotation of said operating member.

1,632,764. LIP-STICK HOLDER. ARTHUR H. NOBLE, Pawtucket, R. I., assignor to Theodore W. Foster & Brother Company, Providence, R. I. Filed Nov. 4, 1926. Serial No. 146,165. 1 Claim. (Cl. 206—56.)



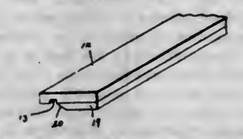
In a lip stick holder, a sleeve having an open upper end and a head on its bottom end and being formed with an axial slot extending through said open end, a second sleeve surrounding the first sleeve and having a spiral slot extending through its upper end, the upper end of the first sleeve having an outwardly extending flange which overlies the upper end of the second sleeve and which is provided with a slot registering with the upper end of the axial slot, a casing surrounding and fixed to the second sleeve and having an inturned flange at its upper end which overlies the first named flange and which is formed with a slot registering with the axial slot, and a lip stick carrier having a projection engaging in the axial and spiral slots, the spiral slot being formed to register with the slots of the flanges so as to automatically eject the carrier from the holder when the carrier projection enters the slots of the flanges during rotation of the head and thereby the first sleeve.

1,632,765. LIP-STICK HOLDER. ARTHUR H. NOBLE, Pawtucket, R. I., assignor to Theodore W. Foster & Brother Company, Providence, R. I. Filed Nov. 4, 1926. Serial No. 146,166. 4 Claims. (Cl. 206—56.)



1. In a lip stick holder, a casing having an inturned top edge, a fixed sleeve in the casing having a spiral slot extending through its bottom end, a rotary sleeve in the fixed sleeve having an axial slot extending through its bottom end, said rotary sleeve having its lower end offset outwardly and slotted, a lip stick having a ferrule thereon, a projection on the ferrule, receivable in the sleeve slots, the lip stick being insertable into the rotary sleeve from the bottom thereof, and a head on the offset part of the rotary sleeve having an instruck part received in the slot of the offset part.

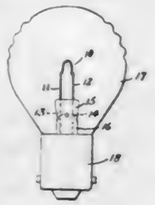
1,632,766. LUMINOUS PHOSPHORESCENT AND WATERPROOF COMPOSITION. HERMAN VON UFFEL, Philadelphia, Pa. Filed Aug. 2, 1924. Serial No. 729,765. 1 Claim. (Cl. 134—47.)



A luminous composition of the character described comprising calcium sulfide, calcium oxide, potassium sulphate, thallium nitrate, sulphur, lithium carbonate, rubidium nitrate, barium hydroxide, silicate of soda and China wood oil.

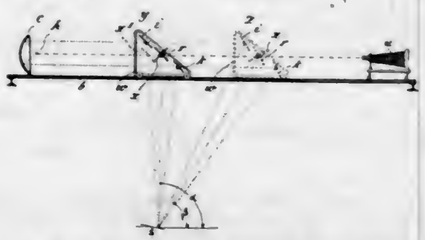
1,632,767. CHASSIS LUBRICATION. EDGAR J. BLOOM, Tiffin, Ohio, assignor, by mesne assignments, to Auto Research Corporation, a Corporation of Delaware. Filed May 19, 1922. Serial No. 562,090. 15 Claims. (Cl. 184—7.)

10. A chassis lubricating system comprising piping having an elevated inlet and including outlets leading to the bearings and restricting the free flow of fluid therethrough in either direction, and normally maintaining a quantity of oil in the piping, a supply installation at said inlet including a force pump operable at will to introduce small charges of lubricant into the piping and including an oil-sealed inlet valve closed during the intervals between pump operations, said outlets adapted to emit lubricant therethrough consequent upon forcing small charges of oil into the head of the pipe line until equilibrium in the system is restored.



1,632,768. WELTED SHOE AND WELT THEREFOR. ABRAHAM DVILNSKY, Brockton, Mass. Filed May 5, 1926. Serial No. 106,801. 2 Claims. (Cl. 36—78.)

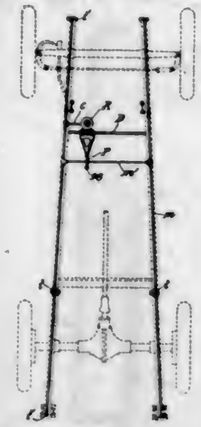
1. A shoe welt having an inseam stitch-engaging inner edge portion, an outseam stitch-engaging outer edge portion, and a thickening strip secured to the inner face of



the welt flush with the outer edge of the latter, the thickening strip being narrower than the welt, so that the strip is wholly outside the inseam stitch-engaging portion of the welt, said strip having an outseam stitch-engaging portion bearing on the outseam stitch-engaging portion of the welt, and an inner edge formed to clear the path of a curved needle.

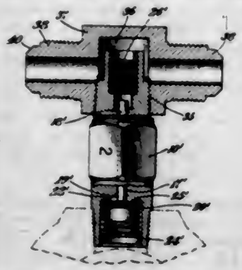
1,632,769. FILAMENT FOR INCANDESCENT LAMPS OR SIMILAR ARTICLES. CARL SEVERIN, Cleveland Heights, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Dec. 4, 1926. Serial No. 152,699. 3 Claims. (Cl. 176—40.)

1. In an electric incandescent lamp or similar device, a coiled filament comprising two leg portions connected by an intermediate or bend portion and having its coils substantially uniformly spaced from each other along the inside the filament.



1,632,770. DEVICE FOR TAKING PHOTOGRAPHS. ERICH VON SCHUBERT, Berlin, Germany, assignor to Askania-Werke Aktiengesellschaft vormals Centralwerkstatt Dessau und Carl Bamberg-Friedenau, Berlin-Friedenau, Germany. Filed Oct. 28, 1924, Serial No. 746,430, and in Germany Oct. 30, 1923. 5 Claims. (Cl. 95—82.)

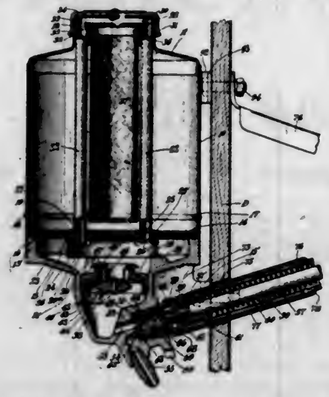
1. A device for focusing a camera on an object comprising rotatable means for projecting a beam of light toward said object, and a reflector rotatable with said light projecting means for directing rays of light proceeding from the object into the camera.



1,632,771. LUBRICATING INSTALLATION. JOSEPH BIJUR, New York, N. Y., assignor to Auto Research Corporation, a Corporation of Delaware. Filed July 24, 1926. Serial No. 124,566. 43 Claims. (Cl. 184—7.)

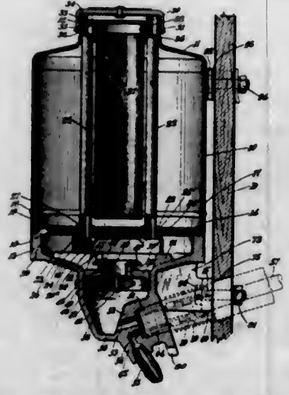
1. An installation for lubricating a plurality of widely distributed bearings including self-contained flow controlling fittings of fixed invariant flow resistance, mounted at the fixed elements of the several bearings, a source of lubricant and of pressure, a common pipe line of bore so small as to preclude the flow of oil about any air therein, leading from said source to all of said fittings, and connecting the latter in pressure transmitting communication with each other throughout emission from the fittings, there being substantial diversities in the resistance of pipe line interposed between the inlet and the various outlets, the resistance of each of said fittings being greater than that of the pipe line and that of the bearings, to thereby determine the flow to the bearings regardless of the tightness or looseness of the latter, said fittings having resistance so correlated with the pressure

at the source as to substantially control the rate of admission through the inlet under the applied pressure, and substantially closed to prevent emission during the intervals between pressure applications.



1,632,772. FLOW-CONTROL FITTING. JOSEPH BIJUR, New York, N. Y., assignor to Auto Research Corporation, a Corporation of Delaware. Filed July 31, 1926. Serial No. 126,115. 29 Claims. (Cl. 184—7.)

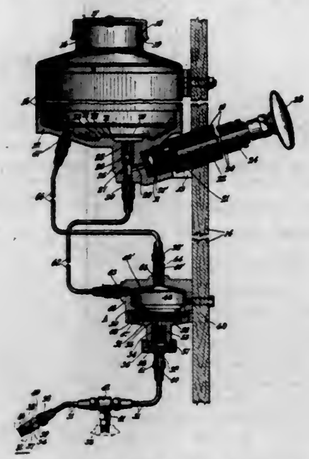
1. A drip plug for a pressure lubricating installation having a flow resistance so restricted as to permit seepage but prevent free flow from the fitting under working pressure, said fitting having a sealing part permitting the emission of lubricant when a predetermined pressure is exceeded and preventing reverse flow of air through the resistance, the cavity within said drip plug being so small in cross-section at all parts of the length thereof and so directly in the path of lubricant flow that any air will automatically be expelled as lubricant is forced into the fitting, and a strainer in the inlet end of said fitting having minute interstices capable of intercepting solid particles that might clog the resistance, the strainer presenting a substantial resistance to flow materially less than that incurred in said resistance.



1,632,773. SUPPLY INSTALLATION FOR CENTRAL CHASSIS LUBRICATION. JOSEPH BIJUR, New York, N. Y., assignor to Auto Research Corporation, a Corporation of Delaware. Filed Aug. 26, 1926. Serial No. 131,640. 51 Claims. (Cl. 184—28.)

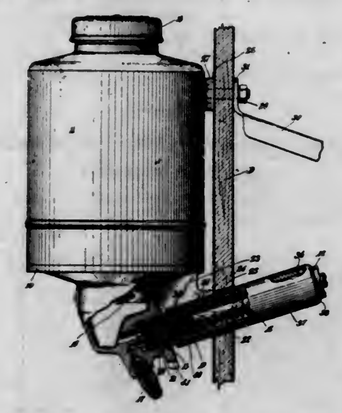
1. Apparatus of the character described comprising a reservoir, a pressure pump supplied therefrom, said pump having an ejector, said ejector having a part self-accommodating with respect to the pump outlet and adapted to close said outlet during the intervals between pump operations, one of the coacting elements of said closed outlet being of soft material, said reservoir connected with respect to said pump, to normally maintain said soft ele-

ment wet with oil, and an ejector return spring to exert pressure against said soft element while maintaining the pump outlet closed.



1,632,774. ELEMENT OF LUBRICANT SUPPLY INSTALLATIONS. JOSEPH BIJUR, New York, N. Y., assignor to Auto Research Corporation, a Corporation of Delaware. Filed Aug. 28, 1926. Serial No. 132,141. 48 Claims. (Cl. 184—28.)

1. A supply installation for a chassis lubricating system including a reservoir, a filling closure on said reservoir, a strainer therebelow, a filter disk below said strainer and above the reservoir bottom, and means venting said reservoir, said means including an air venting passage through said filter and having a lubricant-tight connection with respect thereto.



1,632,775. LUBRICATING INSTALLATION. JOSEPH BIJUR, New York, N. Y., assignor to Auto Research Corporation, a Corporation of Delaware. Filed Aug. 31, 1926. Serial No. 132,691. 19 Claims. (Cl. 184—7.)

1. A central lubricating installation comprising a pressure pump adapted to intermittently feed small charges of oil, a pipe line supplied therefrom and having a plurality of outlet branches leading to the various bearings, metering fittings at said various branches, each of said fittings including a relief valve normally seated to maintain the pipe system filled with oil, and an automatic selective device in the course of flow from the pump to the bearings and affording normally a relatively free passage for venting any air from the part of the system subjected to pump pressure, and reacting to lubricant, by virtue of the viscosity thereof, to sustain pressure transmitted through the lubricant,

whereby any air entering the part of the system subjected to pump pressure will be afforded a ready escape from near the pump, and the pressure from the pump will in all operations be transmitted through an incompressible column of lubricant to the various metering fittings.

1,632,776. SUPPLY INSTALLATION FOR CENTRAL CHASSIS LUBRICATION. JOSEPH BIJUR, New York, N. Y., assignor to Auto Research Corporation, a Corporation of Delaware. Original application filed Aug. 26, 1926, Serial No. 131,640. Divided and this application filed Apr. 9, 1927. Serial No. 182,362. 7 Claims. (Cl. 184—28.)

1. A supply installation for a chassis lubricating system, comprising a reservoir, a pump associated in a unitary structure therewith and deriving its charge therefrom, a common support for said reservoir and pump, affixed directly to said dashboard said pump having a cylinder structure protruding through and with the major part of the length thereof extending rearward from the dashboard, and a bracket supporting the outboard part of said structure.

Serial Nos. 1,632,777 to 1,633,561.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 359—No. 3. TUESDAY, JUNE 21, 1927. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Disclaimers.

Reis. 16,016.—*Joseph Seyer*, Hawthorne, N. J. Washable Dyed Silk Piece Goods and Process of Dyeing Them. Patent dated March 3, 1925. Disclaimer filed June 2, 1927, by the assignee, *Standard Silk Dyeing Company*.

Hereby enters this disclaimer to the following:

To the silk piece goods specified in claims 1, 6, 10, 11, 13, 14, 16, 21, 24, 25, 41, and 46, in so far as they include black piece dyed goods.

To the silk goods specified in claims 2 and 12, except when evenly dyed with blended dyes in colors.

To the silk goods specified in claims 15 and 17, except when dyed with blended dyes in colors.

To the process specified in claim 47, except when blending dyes to make colored silk piece goods, and

To the process specified in claim 50, except when working the piece goods in a boiling soap liquor and when blending dyes to make colored silk piece goods.

1,458,955.—*Jacob I. Russakov*, Chicago, Ill. Receptacle Cover. Patent dated June 19, 1923. Disclaimer filed June 6, 1927, by the patentee.

Hereby enters the following disclaimer with respect to said claim 1 and the particular part thereof herein specified, said disclaimer being as follows:

The words in claim 1, "the spring member being mounted at one side of the lid for swinging movements away from and toward the plate," appearing in lines 9, 10, 11 and 12 of the claim, mean that said spring member is permanently attached and held by a hingelike connection at one of its ends so that when its other end is released the mounted end still remains hingedly secured to the lid for the swinging movements described.

Any broader meaning or interpretation of said words "mounted * * * for swinging movements away from and toward the plate" in said claim 1 is hereby disclaimed.

1,511,420.—*Jacob I. Russakov*, Chicago, Ill. Receptacle Cover. Patent dated October 14, 1924. Disclaimer filed June 6, 1927, by the patentee.

Hereby enters the following disclaimer with respect to said claim and the particular part thereof herein specified, said disclaimer being as follows:

The words in claim 2 of said patent "spring member * * * mounted at one of its ends upon the frame for swinging movements" appearing in lines 4 to 7 of the claim mean that said spring member is permanently attached and held by a hingelike connection at one of its ends so that when its other end is released the mounted end still remains hingedly secured to the lid for the swinging movements described.

Any broader meaning or interpretation of said words "spring member * * * mounted * * * for swinging movements" in said claim 2 is hereby disclaimed.

Amendment to Rules of the Court of Appeals of the District of Columbia.

Paragraph 2 of Rule VIII of the Court of Appeals of the District of Columbia, as amended October 2, 1926, reads as follows:

"2. Only one hour, and in ex parte and trade-mark cases from the Patent Office a half hour, on each side shall be allowed in the argument, unless by special leave the time is extended by the court before the argument is commenced; but counsel in order to avail themselves of the opportunity to apply for additional time must make request therefor to the court accompanied by a copy of their printed brief, at least five days before the case is liable to be called for argument. The time may be apportioned between counsel on the same side at their discretion. In all cases, however, a full and fair opening must be made."

Suggestion for Use of Coupons.

The execution of orders for printed copies of U. S. patents, trade-marks, etc., will be considerably expedited if coupons are used. Such coupons may be purchased at the Patent Office in lots of 20 at $2.00 and 100 at $10.00.

Coupon orders do not have to be accompanied by letters of transmittal. They require nothing but the filling in of the patent number, the name of the inventor, the date of issue, and the name and address of the party desiring the service.

Condition of Applications Under Examination at Close of Business June 10, 1927.

(Total number of applications awaiting action, exeluding Trade-Mark Division, 62,639; Trade-Mark Division, 1,719. Oldest new case, Oct. 28, 1926; oldest amended, Oct. 22, 1926. The dates given are 1927 except where † indicates 1926.)

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

BLUE JAY MANUFACTURING CO. *v.* MILLER.

Decided July 19, 1926.

1. TRADE-MARKS—ABANDONMENT OF APPLICATION—EFFECT OF.

While the abandonment of an application does not establish or even tend to establish abandonment of the use of the mark by the applicant, yet the fact of the application being abandoned can not be overlooked and the filing of the application cannot be regarded as sufficient to establish prima facie use of the mark by the applicant continuously since the application was abandoned.

2. SAME—CONTESTED CASE—MATTERS NOT OF RECORD OR ADMITTED MUST BE PROVED.

In a contested case matters not of record or admitted on a stipulation must be proved by evidence taken under the safeguard of cross examination.

APPEAL from Examiner of Interferences.

Trade-mark intererence No. 708 between the application of Blue Jay Manufacturing Co., filed June 4, 1924, Serial No. 198,052, and registration of Philip Miller, granted June 23, 1925, No. 200,021, on application filed January 29, 1925, Serial No. 208,817. Trade-mark for overalls, unionalls, and jackets.

Mr. William C. Linton for the Blue Jay Manufacturing Co.

Mr. Henry Orth, jr., for Miller.

KINNAN, *First Assistant Commissioner:*

This case comes on for review on appeal of the Blue Jay Manufacturing Company, applicant, of the decision of the Examiner of Trade-Marks dissolving the interference between appellant and Philip Miller, doing business as The Miller Overall Mfg. Co., registrant, on the ground that the date of adoption and use set forth by the appellant applicant is subsequent to the date of adoption and use by the registrant.

The record discloses that the appellant, Blue Jay Manufacturing Co., filed June 4, 1924, its application for registration of the mark "Big Six," arranged in a somewhat fanciful manner within a circle, used on overalls, unionalls, and jackets, and that registration was finally denied the applicant December 4, 1924. The party Philip Miller, doing business as The Miller Overall Mfg. Co., filed an application January 29, 1925, for the registration of the mark "Big Six," arranged somewhat differently, for use on overalls, jackets, and overall union suits, play suits, and rompers, and registration was issued June 23, 1925. Thereafter the applicant became aware of the registration issued the party Miller and requested an interference with such registrant. The declaration of the interference followed. A motion to dissolve was presented by the party Miller before any testimony was taken based upon the ground that priority of adoption and use of the mark by the party Miller was established by reason of an application having been filed January 3, 1916, for the registration of the same mark by the Miller Overall Mfg. Co., a firm comprising Philip Miller and Louis Sachs, the application being signed by Louis Sachs as a member of the firm, the party Miller alleging that he is the successor to the business of the firm which made the application. This application filed in 1916 became abandoned in 1918 after final rejection February 19, 1917.

The Examiner of Trade-Marks, notwithstanding the fact that the application for registration filed January 3, 1916, became abandoned nearly seven years before the party Miller filed his present application and notwithstanding also the application of 1916 was filed by a firm and signed by a member of the firm other than Miller and finally in the absence of any proof establishing that the party Miller is the successor to the business of the company making the application in 1916, held prior use by the party Miller of the mark was established. It is believed the Examiner was in error in reaching such a conclusion.

[1, 2] While the abandonment of the application filed in 1916 does not establish or even tend to establish abandonment of the use of the mark by the firm, yet the fact of the application being abandoned can not be overlooked and the filing of the application can not be regarded as sufficient to establish prima facie use of the mark by the party Miller continuously since such application was abandoned. There is nothing in the holding of the case of *The Rosenberg Company* v. *Phillips-Jones Company, Inc.*, 289 O. G. 411, which has any bearing upon a situation of the character here under consideration since in that decided case there was one application which was still a pending application when it was given its filing date for a prima facie date of adoption and use. In a contested case matters not of record or admitted on a stipulation must be proved by evidence taken under the safeguard of cross examination. The earlier application filed by the firm does not prove continuous use since such application became abandoned, does not prove any use by the party Miller, and there is no evidence at all that the party Miller is the successor of the business of the firm which filed the 1916 application.

The decision of the Examiner is vacated, the interference is reinstated, and the Examiner of Trade-Mark Interferences will proceed to set times for taking testimony to the end that the rights of the parties may be properly determined.

Court of Appeals of the District of Columbia.

IN RE FOLTZ.

No. 1,905. Decided February 7, 1927.

PATENTABILITY—CLAIMS—NEW COMBINATION PATENTABLE.

Where applicant evolved a system automatic in operation and containing a heating drum in which a flow of air is obtained without the use of means outside the heating plant, and the drum in the patent to F. is not located exterior to the furnace, while the flow of air in the patents to B. and E. is contrary to gravity, and induced in B. by movement of the engine and in E. by a fan and a steam-jet blower, *Held* that applicant has evolved a new combination productive of a substantially new result and is entitled to a patent.

APPEAL from the Patent Office. Reversed.

Mr. Charles J. O'Neill for Foltz.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.:*

Appeal from a decision of the Patent Office refusing to allow any of the claims of an application for patent.

The invention relates to an air-heating appliance for stoves and furnaces and is designed to deliver a secondary supply of air to or above the body of the fuel. It comprises an air drum surrounding the outlet flue of the furnace and a supply conduit connecting the drum with the ashpit, while the delivery conduit of the air-heating drum enters the furnace and terminates in a plurality of branch conduits having outlets near or slightly above the fuel level. There are three claims, but claim 1 is sufficiently illustrative of the invention and reads as follows:

1. The combination with a furnace structure providing a firebox, an ashpit having an air inlet and an outlet, a grate, an outlet flue exterior to said furnace for carrying therefrom the products of combustion, of an air-heating drum surrounding said outlet flue exterior to said furnace, an air-supply conduit connecting said air-heating drum with the said air outlet in said ashpit for conveying air from said ashpit to said air-heating drum, and an air delivery conduit for conveying air from said air-heating drum to said firebox, which said air-supply conduit, together with said air-heating drum and said air-delivery conduit, form one continuous air conduit exterior to said furnace having an inlet in the ashpit and having an outlet in the firebox.

The principal references upon which these claims were rejected are the prior patent to Foltz (applicant here), No. 1,322,183, Nov. 18, 1919, to Babbitt, No. 172,368, Jan. 18, 1876, and to Eynon, No. 569,329, Oct. 13, 1896.

It is conceded that applicant's prior patent does not show a drum "exterior to the furnace," for the purpose of heating the air conduits. In other words, the means in the prior patent for preheating the air are not positioned outside the furnace and therefore do not utilize the waste products of combustion, but on the contrary, to some extent at least, diminish the heat of the furnace. The present application, we think, discloses a new and patentable combination, unless anticipated by the patents to Eynon and Babbitt.

The Babbitt patent, granted more than half a century ago, is an improvement in a locomotive engine. The flow of air is forced by the motion of the engine and contrary to gravity. This structure bears little or no resemblance to the device of the application. In the Eynon patent, granted some twenty years later than and notwithstanding the Babbitt patent, the air is forced in the inlet pipe by a fan and induced to flow into and downward through the heating unit by a steam-jet blower. This steam jet is an element in all the claims of the patent and indicates that it then was considered as invention to substitute a steam jet with associated parts to induce the downward flow of air through the heating drum. Thus in the Babbitt structure the volume and velocity of the air flowing downwardly through the heating drum is controlled by the forward movement of the engine. In the Eynon structure the downward flow of air in the heating drum is controlled by the fan and a steam-jet blower, either or both. The flow of air in applicant's drum, it will be observed, is in a direction opposite to that of the prior art and is not contrary to but controlled by gravity. Applicant, therefore, has done more than merely substitute a heating drum of the type of Babbitt and Eynon. He has evolved a system automatic in operation and containing a heating drum in which a flow of air is obtained without the use of means outside the heating plant. It is not contended by the Patent Office that the heating units disclosed by Babbitt and Eynon could be substituted by the applicant, but that the heating drum in the references could be so substituted.

Considering the age of these references, the very material differences in structure to which we have referred, and the apparent fact that the applicant has evolved a new combination productive of a substantially new and useful result, we think applicant is entitled to a patent. The decision therefore is reversed.

Reversed.

PATENT SUITS.

ADJUDICATED PATENTS.

(C. C. A. Md.) The Wolf patent, No. 787,814, for mineral-separation process involving flotation of mineral particles by buoyancy of oil, *Held* not infringed. *Wolf Mineral Process Corporation* v. *Minerals Separation North American Corporation*, 18 F. (2d) 483, affirming decree (D. C.) 7 F. (2d) 903.

(C. C. A. Ohio.) The Altmann patent, No. 882,136, for latch for vehicle doors, claims 1 and 2 *Held* void for anticipation. *Cincinnati Cadillac Co.* v. *English & Mersick Co.*, 18 F. (2d) 542.

(C. C. A. Pa.) The Speer and Forster patent, No. 1,071,364, for alloy of iron, *Held* valid, but not infringed. *American Adamite Co.* v. *Mesta Mach. Co.*, 18 F. (2d) 538, affirming decree (D. C.) 17 F. (2d) 945.

(C. C. A. Ohio.) The Blackburn patents, Nos. 1,144,318, 1,240,169, and 1,308,979, for cable hangers, *Held* not infringed. *Blackburn* v. *National Telephone Supply Co.*, 18 F. (2d) 544.

(C. C. A. Wyo.) The Barnickel patent, No. 1,223,659, for covering process for separating oil content of roily oils by water-softening agents. *Held* not void for double patenting or uncertainty. *Producers' & Refiners' Corporation* v. *Lehmann*, 18 F. (2d) 492.

(C. C. A. Ill.) The Cramer patent, No. 1,431,907, for apparatus for player piano, claim 55 *Held* not infringed. *Cramer* v. *Motor Player Corporation*, 18 F. (2d) 450.

(D. C. N. Y.) The Hazeltine patent, No. 1,450,080, for electric circuit for neutralizing capacity coupling in radioreceivers, *Held* valid as to claims 1 and 5 and infringed as to claim 1. *Hazeltine Corporation* v. *Electric Service Engineering Corporation*, 18 F. (2d) 662.

(D. C. N. Y.) The Hazeltine patent, No. 1,489,228, for means for neutralizing capacity coupling in radioaudions, claims 1 and 2 *Held* not infringed. *Hazeltine Corporation* v. *Electric Service Engineering Corporation*, 18 F. (2d) 662.

(D. C. N. Y.) The Judelson patent, No. 1,513,594, for laundry drier, *Held* valid and infringed. *Judelson* v. *Hill Laundry Equipment Co.*, 18 F. (2d) 594.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,599,744, J. V. Chapmon, Well cleaners and developers, decided May 14, 1927, claims 1 and 2.

Pat. 1,598,811, J. L. Ferrin, Cleaning tools, decided May 14, 1927, claim 1.

Pat. 1,567,273, J. Karitzki, Nail expansion and method, decided June 2, 1927, claims 3, 4, 5, 6, and 7.

Pat. 1,541,388, L. Polinkowsky, Automatic telephone-exchange system, decided May 3, 1927, claims 1, 2, 3, 4, 10, 11, 12, and 15.

Pat. 1,472,018, F. O. Heltzel, Hold-tight rail connection, decided May 10, 1927, claims 5, 9, and 22.

Pat. 1,383,770, P. J. Simmen, Automatic speed control for railways, decided May 9, 1927, claims 4, 22, 23, 6, 7, 1, 2, 3, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 24, and 25.

Pat. 1,355,184, J. C. Taliaferro, D. P. Robinson, and J. Coyle, Conveying and timing apparatus for timing and delivering articles, decided May 14, 1927, claims 1, 4, and 6.

Final decision in interference has been rendered against the following trade-mark:

T. M. 116,701, Poultry and poultry products of all kinds, Sunshine Poultry Farm, Shelby, Wis. Registered May 15, 1917. Decided May 12, 1927.

TRADE-MARKS

OFFICIAL GAZETTE, JUNE 21, 1927.

[VOL. 359. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 199,887. (CLASS 45. BEVERAGES, NONALCOHOLIC.) HARRISON & EICHENLAUB; said Eichenlaub assignor to said Harrison, Chicago, Ill. Filed July 11, 1924.

HEART O' ORANGE

No claim is made for the word "Orange" apart from the mark as shown.

Particular description of goods.—Nonalcoholic, Maltless Beverage Sold as a Soft Drink.

Claims use since June 14, 1924.

Ser. No. 203,815. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HAUCK MILLING COMPANY, St. Joseph, Mo. Filed Oct. 13, 1924.

SNOW FLAKE

Particular description of goods.—Wheat Flour.

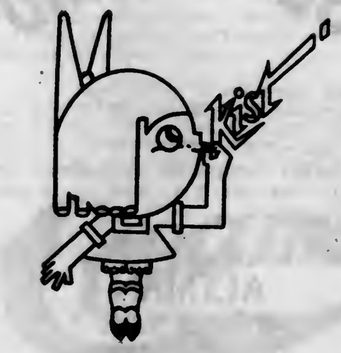
Claims use since prior to Aug. 7, 1866.

Ser. No. 205,334. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) S. A. HARAM & CO. INC., New York, N. Y. Filed Nov. 15, 1924.

The outline of the container of the goods and all the reading matter shown on the drawing except the words "King Harald" are disclaimed apart from the other features of the mark.

Particular description of goods.—Canned Fish—Namely, Brisling Sardines Canned in Olive Oil, Small Fat Herrings Canned in Tomato Sauce, and Small Mackerel Canned in Tomato Sauce.

Claims use since Sept. 30, 1924.



Ser. No. 211,437. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) B. HAUPT, INC., Brooklyn, N. Y. Filed Mar. 21, 1925.

Claims use since Sept. 19, 1922.

Ser. No. 212,173. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CITRUS PRODUCTS COMPANY, Chicago, Ill. Filed Apr. 4, 1925.

Particular description of goods.—Flavors for Frozen Confections or Other Foods.

Claims use since Dec. 1, 1924.

Ser. No. 212,984. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WEINSTEIN & SMITH, doing business as Littel Candy Co., Washington, D. C. Filed Apr. 18, 1925.

"They Speak for Themselves"

Particular description of goods.—Candy.

Claims use since Feb. 10, 1923.

Ser. No. 213,279. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) CONTINENTAL MOTORS CORPORATION, Detroit, Mich. Filed Apr. 25, 1925.

Continental Motors

No claim is made herein to the word "Motors" apart from the mark as shown.

Particular description of goods.—Internal-Combustion Engines for General Power Application; Complete Industrial Power Units for General Power Application, Each Unit Including an Internal-Combustion Engine Mounted in a Frame with Cooling Fluid and Fuel Tanks; Replacement and Spare Parts for Such Engines and Power Units; and Accessories for Such Engines and Power Units Including Carburetors, Fuel Economizers, Fuel Heaters, Supercharging Devices, Governors and Controlling Devices, Gearing and Transmission Devices Including Clutches, Lubricating Devices and Lubricant-Purifying Devices, Air Cleaners and Regulators, Fuel Feeding and Purifying Devices, and Engine Vibration Dampers.
Claims use since Jan. 15, 1917.

Ser. No. 216,294. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) J. D. AND A. B. SPRECKELS SECURITIES COMPANY, San Francisco, Calif. Filed June 23, 1925.

SEA-ISLAND

Particular description of goods.—Sugar.
Claims use since about May 15, 1918.

Ser. No. 221,687. (CLASS 39. CLOTHING.) B. ALTMAN & CO., New York, N. Y. Filed Oct. 14, 1925.

ALTMAN
QUALITY SERVICE
VALUE

Applicant owns registration #226,701. No claim is made to the exclusive right to the use of the words "Quality," "Service," and "Value" apart from the mark shown.

Particular description of goods.—Women's Dresses and Wraps.
Claims use since Sept. 30, 1925.

Ser. No. 226,698. (CLASS 2. RECEPTACLES.) UNION TANK & PIPE CO., Los Angeles, Calif. Filed Jan. 30, 1926.

UNION

The representation of the goods is hereby disclaimed apart from the mark as shown in the drawing.

Particular description of goods.—Storage Tanks and Metal Shipping Drums.
Claims use since 1918.

Ser. No. 229,994. (CLASS 37. PAPER AND STATIONERY.) WEBER COSTELLO CO., Chicago Heights, Ill. Filed Apr. 10, 1926.

ALPHA

Particular description of goods.—Dustless Crayons.
Claims use since 1895.

Ser. No. 230,059. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DR. HEINR. TRAUN & SÖHNE, VORMALS HARBURGER GUMMI KAMM-COMPAGNIE, Hamburg, Germany. Filed Apr. 12, 1926.

SEMPER SURSUM.

Particular description of goods.—Synthetic and Other Artificial Resins Sold in Block Form, Sheet Form, and in Partly-Prepared Molded Forms, Useful for Purposes Similar to Those for Which Amber is Used; Also Useful as an Insulating Material.
Claims use since about 1875.

Ser. No. 230,815. (CLASS 32. FURNITURE AND UPHOLSTERY.) AMERICAN PARLOR FURNITURE COMPANY, Chicago, Ill. Filed Apr. 28, 1926.

AMERICAN GUEST

Particular description of goods.—Beds.
Claims use since Dec. 1, 1924.

Ser. No. 231,095. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) S. DE TESSAN, Paris, France. Filed May 4, 1926.

IDRISS

Particular description of goods.—A Product for Blackening the Eyes and Known Under the Name of Kohl.
Claims use since Jan. 13, 1926.

Ser. No. 231,631. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PREMIER COLOR WORKS, New York, N. Y. Filed May 14, 1926.

LUNA BRAND

No claim is made to the word "Brand" apart from the mark shown in the drawing.

Particular description of goods.—Food-Flavoring Extracts.
Claims use since November, 1922.

Ser. No. 231,777. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MAUD H. WELLS, doing business as Mrs. Stanley Wells, Saskatoon, Saskatchewan, Canada. Filed May 17, 1926.

HEPATOLA

Particular description of goods.—Medicines for Cleaning the System, Removing Gall Stones, and for the Relief of Appendicitis.
Claims use since Mar. 19, 1926.

Ser. No. 232,024. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MENTHO JELL COMPANY, INC., Albert Lea, Minn. Filed May 21, 1926.

MENTHORUB

Particular description of goods.—Medicine for External Use in the Treatment of the Bronchial and Nasal Passages, Bronchitis, Catarrh, Colds, Hay Fever, Asthma, Whooping Cough, Pneumonia, and Kindred Disorders.
Claims use since 1906.

Ser. No. 232,723. (CLASS 38. PRINTS AND PUBLICATIONS.) THE EL PASO TIMES COMPANY, El Paso, Tex. Filed June 4, 1926.

The El Paso Times

Particular description of goods.—Newspapers.
Claims use since 1880.

Ser. No. 232,933. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NOVELTY CANDY CO., Seattle, Wash. Filed June 9, 1926.

Goofy Face

Particular description of goods.—Candy
Claims use since Dec. 14, 1925.

Ser. No. 233,103. (CLASS 39. CLOTHING.) CENTRAL SHOE COMPANY, St. Louis, Mo. Filed June 12, 1926.

Robin Hood

Ortho-Arch Health Aid Last

Applicant owns registration No. 202,630. No claim is made to the words "Ortho-Arch Health-Aid Last" apart from the mark as shown.

Particular description of goods.—Shoes Made of Leather, Cloth, Canvas, or Combinations Thereof.
Claims use since June 2, 1926.

Ser. No. 233,500. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MULLER BAKERIES, INC., doing business as Battle Creek Wafer & Specialty Company, Grand Rapids, Mich. Filed June 10, 1926.

Creamo

Particular description of goods.—Bread.
Claims use since June 1, 1911.

Ser. No. 233,815. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ROSA B. ELLIOTT, Berwyn, Okla. Filed June 28, 1926.

Perrol Hair Grower

No claim is made for the words "Hair Grower" apart from the mark shown in the drawing.

Particular description of goods.—Hair Grower.
Claims use since Jan. 1, 1923.

Ser. No. 233,986. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ANGELO GLORIOSO, New Orleans, La. Filed July 1, 1926.

KITTY

Particular description of goods.—Tomato Paste.
Claims use since 1914.

Ser. No. 234,630. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PENNSYLVANIA SUGAR COMPANY, Philadelphia, Pa. Filed July 16, 1926.

QUAKER

Particular description of goods.—Denatured Alcohol.
Claims use since about July 7, 1926.

Ser. No. 235,441. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) THE VITAPHONE CORPORATION, New York, N. Y. Filed July 31, 1926.

Vitaphone

Particular description of goods—Synchronized Apparatus for Simultaneously Reproducing Co-Ordinated Light and Sound Effects, and the Component Parts of Such Apparatus.
Claims use since June, 1926.

Ser. No. 235,482. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) KOLN-ROTTWEIL AKTIENGESELLSCHAFT, Berlin, Germany. Filed Aug. 2, 1926.

Vistra

Particular description of goods.—Silk and Other Fibers Made From Cellulose.
Claims use since Apr. 13, 1921.

Ser. No. 236,821. (CLASS 12. CONSTRUCTION MATERIALS.) UNIVERSAL GYPSUM & LIME CO., Chicago, Ill. Filed Sept. 2, 1926.

UNIVERSAL GYPSUM

No claim is made to the exclusive use of the word "Gypsum" apart from the mark shown in the drawing.
Particular description of goods.—Composition Construction Blocks and Partition Tile.
Claims use since on or about Feb. 5, 1926.

Ser. No. 237,414. (CLASS 37. PAPER AND STATIONERY.) PETER C. HOFMANN, doing business as Century Printing Co., St. Louis, Mo. Filed Sept. 18, 1926.

Who's your printer?

Particular description of goods.—Printed Mailing Envelopes, Letterheads, Billheads, Stock-Certificate Forms, Shipping Tags, Loose-Leaf Binders, Bound Ledgers, Check Books, Sheets for Loose-Leaf Binders, Legal Forms, Statement Forms, Order Blanks, Vouchers, Proxy Forms, Report Forms, Post-Card Forms, Subscription Cards, Bank-Statement Forms, Coupon Books with Blank Forms to be Filled in, and Ruled and Unruled Blank Books.

Surprize

Particular description of goods.—Cherries in Sirup Artificially Colored in Bottles, Cans, or Other Containers.
Claims use since Jan. 15, 1926.

Ser. No. 238,561. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) STUART KNOX THOMAS, Hanford, Calif. Filed Oct. 13, 1926.

TREASURE

Particular description of goods.—Fresh Deciduous Fruits, Fresh Grapes, Fresh Vegetables, Fresh Citrous Fruits, and Fresh Melons.
Claims use since May 20, 1926.

Ser. No. 239,166. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE DAYTON AIR COMPRESSOR COMPANY, Dayton, Ohio. Filed Oct. 25, 1926.

No claim is made to the word "Dayton" apart from the mark shown in the drawing.
Particular description of goods.—Air Compressors.
Claims use since on or about Jan. 1, 1920.

Ser. No. 239,448. (CLASS 5. ADHESIVES.) WELDSIT MFG. CO., Philadelphia, Pa. Filed Oct. 29, 1926.

WELDS-IT

Particular description of goods.—Adhesive Compound for Repairing Rubber Goods.
Claims use since June 30, 1926.

Ser. No. 239,510. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) THE CRYSTALITE PRODUCTS COMPANY, Detroit, Mich. Filed Nov. 1, 1926.

CRYSTALITE

The shading in the drawing is used to indicate the colors green and purple.

Particular description of goods.—Washing Compound in Liquid Form.

Claims use since Sept. 1, 1926.

Ser. No. 240,127. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) ROSS C. CAMPBELL, Springfield, Ill. Filed Nov. 16, 1926.

Vent-A-Shade
TRADE-MARK

Words appearing in the drawing with the exception of the designed word "Vent-A-Shade" are descriptive only and are not claimed as part of the mark. Applicant disclaims the word "Shade" except as used in the mark.

Particular description of goods.—Window Awnings.

Claims use since about Mar. 15, 1926.

Ser. No. 240,255. (CLASS 8. SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.) GROS, GRENIER, OSTORERO & CIE, Saint-Claude (Jura), France. Filed Nov. 18, 1926.

VÉGÉ

Particular description of goods.—Pipes, Cigar and Cigarette Holders, and Tobacco Pouches.

Claims use since July 15, 1926.

Ser. No. 240,636. (CLASS 7. CORDAGE.) WHITLOCK CORDAGE COMPANY, New York, N. Y. Filed Nov. 26, 1926.

No claim is made to the representation of the rope apart from the mark shown. A multi-ply yarn made up of several yarns twisted together, is arbitrarily used in contrast with the single-ply yarns forming the strand cover yarns in twisted rope structure in such manner that at each emergence of the multi-ply yarn to the exterior of the rope it produces the appearance of a longitudinal series of substantially parallelogram-shaped figures as illustrated in the accompanying drawing, thereby distinguishing applicant's rope from the product of all other manufacturers.

Particular description of goods.—Rope.

Claims use since on or about Apr. 1, 1923.

Ser. No. 240,768. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FREDERICK EDWARD COE, London, England. Filed Nov. 30, 1926.

HERVEA

Particular description of goods.—Medicinal Tonics for Nervous and Rheumatic Affections.

Claims use since Dec. 28, 1921.

Ser. No. 240,814. (CLASS 39. CLOTHING.) FRANKLIN SIMON & CO. INC., New York, N. Y. Filed Dec. 1, 1926.

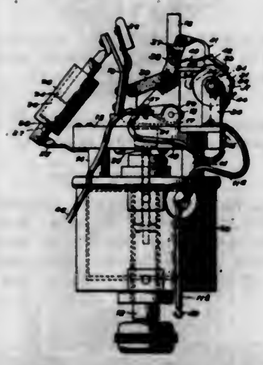
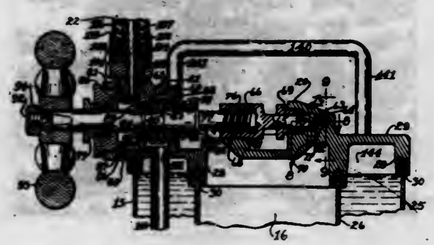
REISSUES



JUNE 21, 1927.

16,660. FASTENING DEVICE. DANIEL I. REITER, New York, N. Y. Filed Apr. 29, 1927. Serial No. 187,693. Original No. 1,619,764, dated Mar. 1, 1927, Serial No. 129,535, filed Aug. 16, 1926. 8 Claims. (Cl. 24—152.)



5. A fastening device of the class described including a spear portion adapted to penetrate and lie behind a piece of fabric to which the fastener is to be attached, a plate portion connected to the unpointed end of the spear, and a separable fastener element carried by the plate portion, said plate portion adapted to overlie the outer face of the fabric, and a spur element associated with the plate portion for penetrating the fabric and coacting with the spear to prevent twisting or slipping of the plate, said spear serving as an anvil to guide the bending of the spur.

16,661. CIRCUIT-RESTORING RELAY. CHARLES W. KAUTZ, Jr., Lancaster, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 30, 1923. Serial No. 615,956. Original No. 1,375,518, dated Apr. 19, 1921, Serial No. 273,346, filed Jan. 27, 1919. 16 Claims. (Cl. 175—294.)

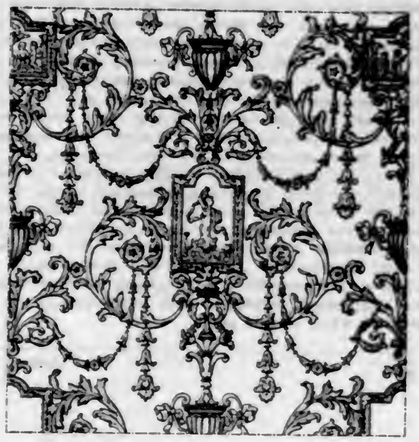
1. A circuit restoring device having switch contacts, a coil adapted when energized to close the contacts, and means in series with the coil and actuated by one of the contacts for permitting a predetermined number of actuations of the device.

16,662. CHEMICAL FIRE EXTINGUISHER. ALBERT B. PHISTER, Fort Thomas, Ky., assignor to The Phister Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 7, 1927. Serial No. 166,578. Original No. 1,606,443, dated Nov. 9, 1926, Serial No. 502,704, filed Sept. 28, 1921. 28 Claims. (Cl. 299—96.)

1. In a fire-extinguisher, a liquid-chamber adapted to be supplied with liquid, an air-chamber, means for charging said air-chamber with compressed gas, a needle-valve for controlling the passage of compressed gas from said air-chamber into said liquid-chamber whereby said liquid is forced therefrom, and means operatively connected with said needle-valve to control the discharge of liquid from said liquid-chamber, common operating means for said needle-valve and said liquid control means, the operative connection between said needle-valve and said liquid control means being so constructed that upon actuation of said common operating means said needle-valve and liquid control means are moved in opposite directions.

28. In a fire-extinguisher, a liquid-chamber, a pressure-chamber, a common head for said chambers having therein a service air-duct from pressure-chamber to liquid-chamber and a service liquid-duct serving as an outlet from said liquid-chamber, a valve-shaft journalled in said head, co-axial service-valves guarding said service ducts and having connections with said valve-shaft for effecting relative longitudinal shifting of said service-valves, and an operating wheel on said shaft.

DESIGNS



JUNE 21, 1927.

72,878. WALL PAPER OR SIMILAR ARTICLE. HARRY T. ABOLIN, Woodridge, N. J., assignor to Lincrusta-Walton Company, Inc., Hackensack, N. J., a Corporation of New Jersey. Filed Apr. 7, 1926. Serial No. 17,207. Term of patent 3½ years.

The ornamental design for a wall paper or similar article as shown.

72,879. WALL PAPER OR SIMILAR ARTICLE. HARRY T. ABOLIN, Woodridge, N. J., assignor to Lincrusta-Walton Company, Inc., Hackensack, N. J., a Corporation of New Jersey. Filed Apr. 7, 1926. Serial No. 17,208. Term of patent 3½ years.

The ornamental design for a wall paper or similar article as shown.

72,880. ROAD SIGN. DON M. ALEXANDER, Denver, Colo. Filed Dec. 31, 1926. Serial No. 20,253. Term of patent 7 years.

The ornamental design for a road sign as shown.

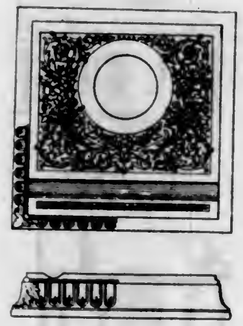
72,881. SIDE PANEL FOR METAL DISHES OR SIMILAR ARTICLES. ERNEST T. BECK, Meriden, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed Mar. 23, 1927. Serial No. 21,265. Term of patent 7 years.

The ornamental design for a side panel for metal dishes or similar articles, substantially as shown.

72,882. SIDE PANEL FOR METAL DISHES OR SIMILAR ARTICLES. ERNEST T. BECK, Meriden, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed Mar. 23, 1927. Serial No. 21,266. Term of patent 7 years.

The ornamental design for a side panel for metal dishes or similar articles, substantially as shown.

72,883. BASE FOR METAL BOWLS OR SIMILAR ARTICLES. ERNEST T. BECK, Meriden, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed Mar. 23, 1927. Serial No. 21,267. Term of patent 7 years.



The ornamental design for a base for metal bowls or similar articles, substantially as shown.

72,884. BORDER PANEL FOR METAL DISHES OR SIMILAR ARTICLES. ERNEST T. BECK, Meriden, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed Mar. 23, 1927. Serial No. 21,268. Term of patent 7 years.

The ornamental design for a border panel for metal dishes or similar articles, substantially as shown.

72,885. BASE FOR A FOUNTAIN-PEN HOLDER. ERNEST T. BECK, Meriden, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed Apr. 7, 1927. Serial No. 21,499. Term of patent 14 years.

The ornamental design for a base for a fountain pen holder as shown.

72,886. BASE FOR A FOUNTAIN-PEN HOLDER. ERNEST T. BECK, Meriden, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed Apr. 7, 1927. Serial No. 21,498. Term of patent 14 years.

The ornamental design for a base for a fountain pen holder as shown.

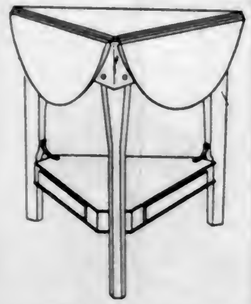
72,887. ATOMIZER. RUBY T. BREWSTER, New York, N. Y. Filed Apr. 22, 1927. Serial No. 21,681. Term of patent 3½ years.

The ornamental design for an atomizer, as shown.

72,888. ATOMIZER. RUBY T. BREWSTER, New York, N. Y. Filed Apr. 22, 1927. Serial No. 21,682. Term of patent 3½ years.

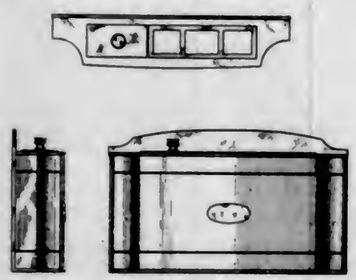
The ornamental design for an atomizer, as shown.

72,889. BOTTLE OR SIMILAR CONTAINER. RUBY T. BREWSTER, New York, N. Y. Filed Apr. 6, 1927. Serial No. 21,488. Term of patent 3½ years.



The ornamental design for a bottle or similar container, as shown.

72,890. JEWELRY CLASP. ARTHUR C. BROWN, Newark, N. J. Filed Mar. 22, 1927. Serial No. 21,250. Term of patent 3½ years.



The ornamental design for a jewelry clasp, as shown.

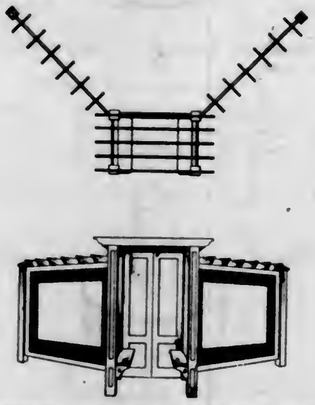
72,891. TABLE. DANIEL CRANE, Saginaw, Mich., assignor of one-half to James Gibson Crane, Kendaia, N. Y. Filed Mar. 29, 1926. Serial No. 17,108. Term of patent 7 years.

The ornamental design for a table as shown.

72,892. WALL POCKET OR SIMILAR ARTICLE. RUDOLPH DE BOEF, Grand Rapids, Mich., assignor to Grand Rapids Metalcraft Corporation, Grand Rapids, Mich., a Corporation of Michigan. Filed Dec. 2, 1926. Serial No. 19,907. Term of patent 7 years.

The ornamental design for a wall pocket or similar article substantially as shown.

72,893. GRAND PIANO CASE. CYRIL FARNY, De Kalb, Ill., assignor to Wurlitzer Grand Piano Company, De Kalb, Ill., a Corporation of Illinois. Filed Mar. 7, 1927. Serial No. 20,996. Term of patent 14 years.

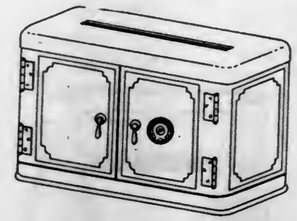


The ornamental design for a grand piano case substantially as shown.

72,894. GRAND-PIANO CASE. CYRIL FARNY, De Kalb, Ill., assignor to Wurlitzer Grand Piano Company, De Kalb, Ill., a Corporation of Illinois. Filed Mar. 7, 1927. Serial No. 20,997. Term of patent 14 years.

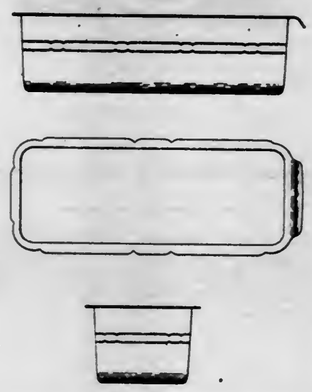
The ornamental design for a grand-piano case substantially as shown.

72,895. ADVERTISING BILLBOARD. HARRY R. GOTTLOB, Maplewood, Mo. Filed Mar. 21, 1927. Serial No. 21,240. Term of patent 7 years.



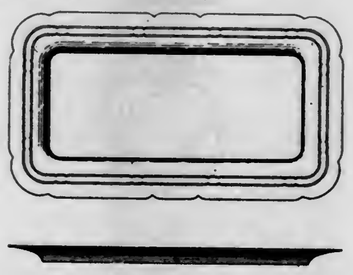
The ornamental design for an advertising billboard, as shown.

72,896. FINGER RING OR ARTICLE OF SIMILAR NATURE. BENJAMIN GROSS, New York, N. Y., assignor to Benjamin & Edward J. Gross Co. Inc., New York, N. Y., a Corporation of New York. Filed May 28, 1926. Serial No. 17,877. Term of patent 3½ years.



The ornamental design for a finger ring, or article of similar nature, as shown.

72,897. RECEPTACLE FOR USED RAZOR BLADES. JOSEPH KAUFMAN, Brooklyn, N. Y., assignor to American Safety Razor Corporation, Brooklyn, N. Y., a Corporation of Virginia. Filed Mar. 25, 1927. Serial No. 21,328. Term of patent 3½ years.

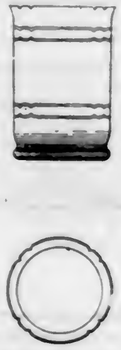


The ornamental design for a receptacle for used razor blades, as shown.

72,898. DISH OR SIMILAR ARTICLE. ROBERT R. KINTZ, Meriden, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed Mar. 29, 1927. Serial No. 21,383. Term of patent 3½ years.

The ornamental design for a dish or similar article as shown.

72,899. TRAY OR SIMILAR ARTICLE. ROBERT R. KINTZ, Meriden, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed Mar. 29, 1927. Serial No. 21,384. Term of patent 3½ years.

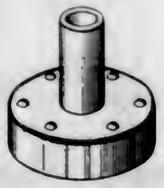


The ornamental design for a tray or similar article as shown.

72,900. BOWL OR SIMILAR ARTICLE. ROBERT R. KINTZ, Meriden, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed Mar. 29, 1927. Serial No. 21,385. Term of patent 3½ years.

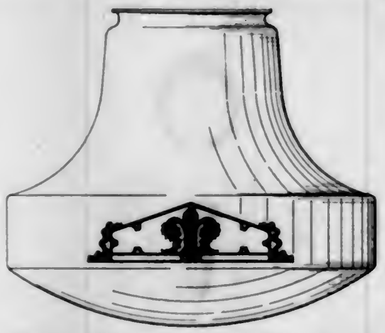
The ornamental design for a bowl or similar article as shown.

72,901. CUP OR SIMILAR ARTICLE. ROBERT R. KINTZ, Meriden, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed Mar. 29, 1927. Serial No. 21,386. Term of patent 3½ years.



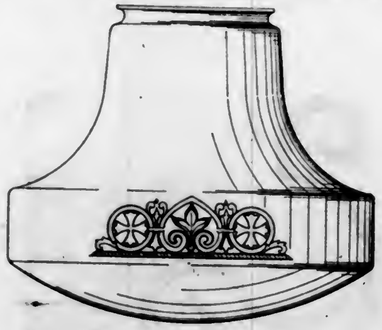
The ornamental design for a cup or similar article as shown.

72,902. SMOKER'S STAND OR THE LIKE. CHARLES P. KNAPP, New York, N. Y., assignor of one-half to William H. Mack, Johnson City, N. Y. Filed Feb. 17, 1927. Serial No. 20,794. Term of patent 7 years.



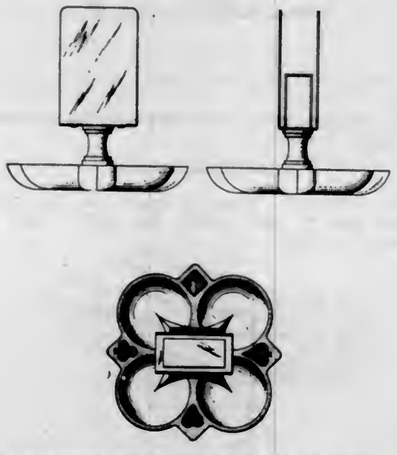
The ornamental design for a smoker's stand or the like, as shown.

72,903. FOUNTAIN-PEN HOLDER. WILLIAM GREY LEWIS, Chicago, Ill. Filed Feb. 26, 1927. Serial No. 20,904. Term of patent 14 years.



The ornamental design for a fountain pen holder substantially as shown.

72,904. LAMP SHADE. FREDERICK K. MAERZ, Cleveland, Ohio, assignor to Benjamin F. Klein, doing business as The Kayline Co., Cleveland, Ohio. Filed Feb. 25, 1927. Serial No. 20,889. Term of patent 7 years.



The ornamental design for a lamp shade, as shown.

72,905. LAMP SHADE. FREDERICK K. MAERZ, Cleveland, Ohio, assignor to Benjamin F. Klein, doing business as The Kayline Co., Cleveland, Ohio. Filed Feb. 25, 1927. Serial No. 20,891. Term of patent 7 years.

The ornamental design for a lamp shade, as shown.

72,906. ASH TRAY. EDWARD J. MCGUIRK, Newark, N. J., assignor to Greene, Tweed & Co., a Corporation of New York. Filed Mar. 16, 1927. Serial No. 21,156. Term of patent 14 years.

The ornamental design for an ash tray, as shown.

72,907. FINGER RING. MILTON MEIER, Newark, N. J., assignor to Meyer & Gross, a Corporation of New Jersey. Filed Feb. 15, 1927. Serial No. 20,766. Term of patent 3½ years.

The ornamental design for a finger ring, as shown.

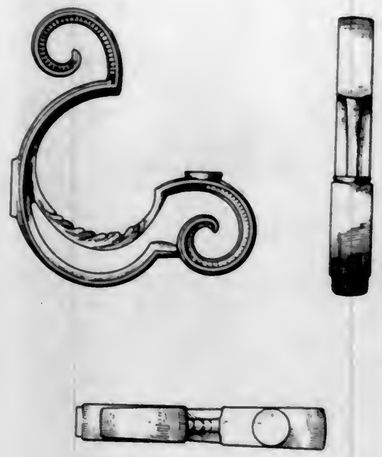
72,908. BOTTLE. FRANK R. MILLER, Evansville, Ind., assignor to The Graham Glass Company, Evansville, Ind., a Corporation of Indiana. Filed Mar. 2, 1927. Serial No. 20,939. Term of patent 14 years.

The ornamental design for a bottle substantially as shown.

72,909. LIGHTING FIXTURE. JAMES S. MOORE, St. Louis, Mo., assignor to The Edwin F. Guth Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 15, 1927. Serial No. 20,769. Term of patent 3½ years.

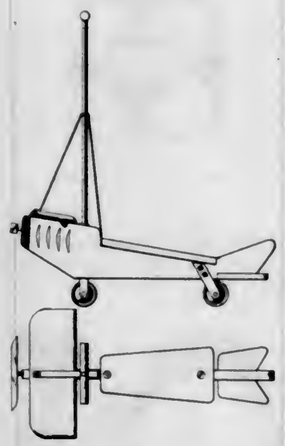
The ornamental design for a lighting fixture, as shown.

72,910. PEDESTAL OR THE LIKE. EMIL THEODORE PALMENBERG, New York, N. Y., assignor to J. R. Palmenberg's Sons, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 14, 1927. Serial No. 21,140. Term of patent 7 years.



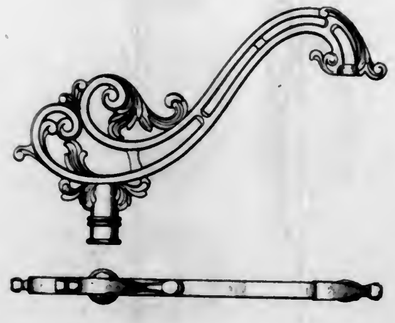
The ornamental design for a pedestal or the like, as shown.

72,911. BACKPLATE FOR A LIGHTING FIXTURE OR THE LIKE. MAX PEINLICH, White Plains, N. Y., assignor to Columbia Lighting Fixture Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 12, 1927. Serial No. 21,117. Term of patent 3½ years.



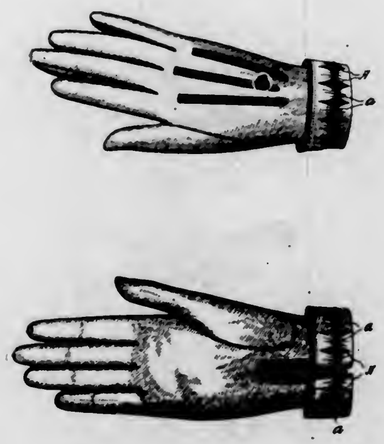
The ornamental design for a backplate for a lighting fixture or the like, as shown.

72,912. ARM FOR A LIGHTING FIXTURE OR THE LIKE. MAX PEINLICH, White Plains, N. Y., assignor to Columbia Lighting Fixture Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 12, 1927. Serial No. 21,119. Term of patent 3½ years.



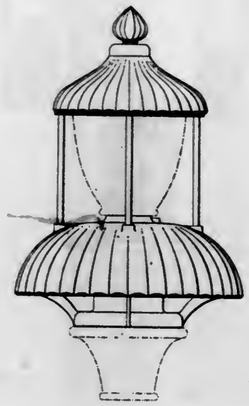
The ornamental design for an arm for a lighting fixture or the like, as shown.

72,913. SCOOTER. HARRY H. PERRY, San Jose, Calif. Filed Aug. 26, 1926. Serial No. 18,877. Term of patent 3½ years.



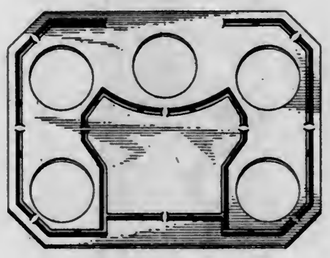
The ornamental design for a scooter as shown.

72,914. LAMP BRACKET. MAX ROTHBART, Chicago, Ill., assignor to Rembrandt Lamp Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 26, 1927. Serial No. 21,358. Term of patent 3½ years.



The ornamental design for a lamp bracket, substantially as shown.

72,915. GLOVE. IRWIN EMANUEL STEINBERGER, New York, N. Y. Filed Feb. 5, 1927. Serial No. 20,634. Term of patent 3½ years.

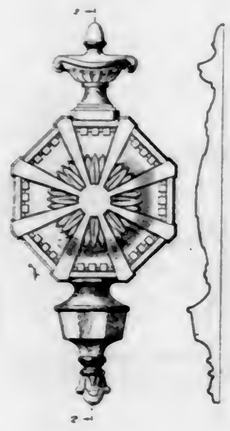


The ornamental design for a glove, substantially as shown and described.

72,916. BEACON-LIGHT CASING. JOHN R. TOWNSEND, South Bend, Ind., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 20, 1926. Serial No. 16,602. Term of patent 14 years.

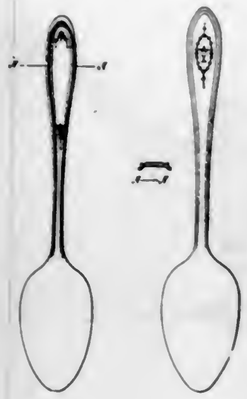
The ornamental design for a beacon-light casing, as shown.

72,917. ICE-CREAM-CONE SERVER. GEORGE W. TRAVER, Chicago, Ill. Filed Mar. 28, 1927. Serial No. 21,375. Term of patent 14 years.



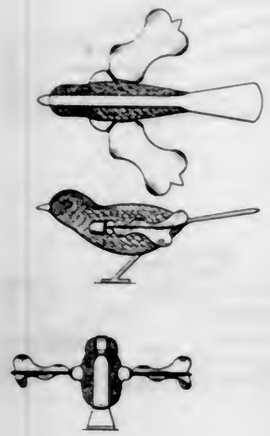
The ornamental design for an ice cream cone server substantially as shown.

72,918. GOBLET OR SIMILAR ARTICLE. JULES H. VENON, New York, N. Y. Filed Oct. 26, 1926. Serial No. 19,488. Term of patent 14 years.



The ornamental design for a goblet or similar article, as shown and described.

72,919. BRACKET BACK FOR LIGHTING FIXTURES. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Mar. 31, 1927. Serial No. 21,414. Term of patent 7 years.



The ornamental design for a bracket back for lighting fixtures, as shown.

72,920. SPOON OR SIMILAR ARTICLE. WILLIAM S. WARREN, Meriden, Conn., assignor to R. Wallace & Sons Mfg. Co., Wallingford, Conn., a Corporation. Filed Nov. 15, 1926. Serial No. 19,725. Term of patent 14 years.

The ornamental design for a spoon or similar article as shown.

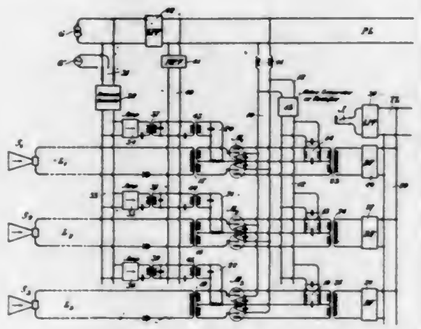
72,921. RADIATOR CAP ORNAMENT FOR AUTOMOBILES. FRANK J. WILHELM, Cincinnati, Ohio. Filed Feb. 14, 1927. Serial No. 20,762. Term of patent 3½ years.

The ornamental design for a radiator cap ornament for automobiles, substantially as shown.

72,922. LIGHT SHADE OR SIMILAR ARTICLE. STANTON D. WILSON, St. Louis, Mo. Filed Apr. 19, 1926. Serial No. 17,341. Term of patent 14 years.

The ornamental design for a light shade or similar article, as shown.

72,923. DRESS. JEAN CHARLES WORTH, Paris, France, assignor to David Crystal, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 8, 1927. Serial No. 21,511. Term of patent 3½ years.

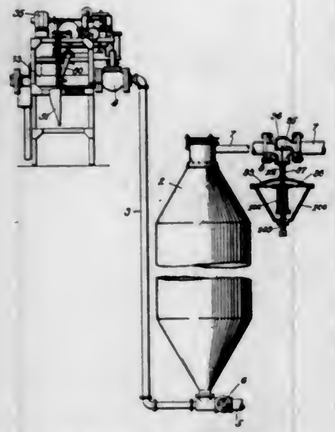


The ornamental design for a dress, substantially as shown.

PATENTS

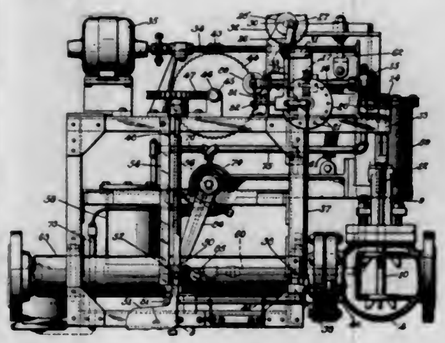
GRANTED JUNE 21, 1927.

1,632,777. DISTRIBUTION OF INTELLIGENCE. HERMAN A. AFFEL, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 25, 1922, Serial No. 539,255. Renewed Feb. 9, 1925. 23 Claims. (Cl. 179—2.)



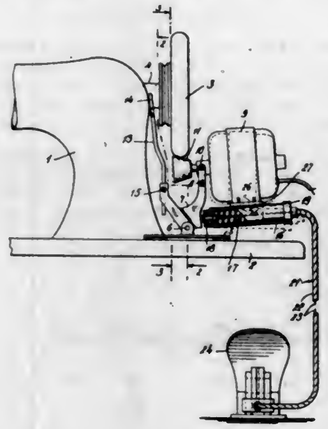
1. In a system for transmitting amusement, news and the like, a plurality of sources of intelligence, means to modulate a plurality of carrier frequencies in accordance with intelligence from said sources to produce modulated side bands, means to impress the unmodulated carrier frequencies upon one circuit for transmission to a subscriber's station and means to impress the modulated side bands without the carriers upon another circuit for transmission to the subscriber's station to beat with the unmodulated carrier frequencies transmitted over said first circuit.

1,632,778. RAZOR. NOAH D. ANDERSON, Brainerd, Minn. Filed Dec. 29, 1925. Serial No. 78,236. 6 Claims. (Cl. 30—12.)



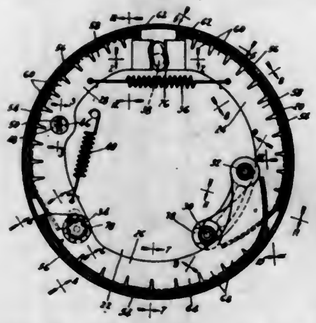
1. A razor comprising, in combination, a tubular handle, a guard plate formed adjacent the upper end of the handle extending laterally therefrom, a sleeve adapted to be mounted in the tubular handle, retaining means mounted adjacent the upper end of the sleeve, a blade having a projection formed on the rear edge thereof, means for securely fastening the blade body in position upon the guard plate, the projection being inserted in the sleeve and engaged by the retaining member, and means whereby the sleeve may be withdrawn from the handle to permit stropping of the blade.

1,632,779. APPARATUS FOR COOKING PULP. CARLTON H. ALLEN, Glens Falls, N. Y., assignor of one-half to Great Northern Paper Company, Millinocket, Me., a Corporation of Maine. Filed Jan. 18, 1922. Serial No. 530,140. 7 Claims. (Cl. 92—7.)



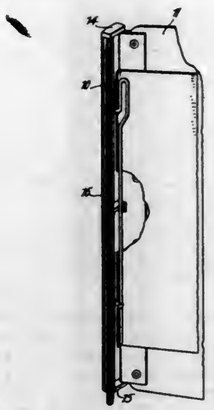
1. A pulp cooking apparatus comprising, in combination, a digester, a steam supply line leading to said digester, and means for controlling the flow of steam to said digester and operative automatically to deliver a substantially predetermined quantity of steam thereto at a predetermined rate and in a substantially predetermined time.

1,632,780. FLOW-CONTROLLING APPARATUS. CARLTON H. ALLEN, Dayton, Ohio, assignor of one-half to Great Northern Paper Company, Millinocket, Me., a Corporation of Maine. Original application filed Jan. 18, 1922, Serial No. 530,140. Divided and this application filed July 17, 1925. Serial No. 44,258. 14 Claims. (Cl. 137—78.)



1. An apparatus for controlling the flow of steam, comprising, in combination, a valve, means for operating said valve, a constantly operating mechanism, additional mechanism responsive automatically to the rate of steam flow, and means for mechanically correlating the operations of said mechanisms in the control of said valve operating means to enable the apparatus to deliver steam at a predetermined rate for a predetermined period of time.

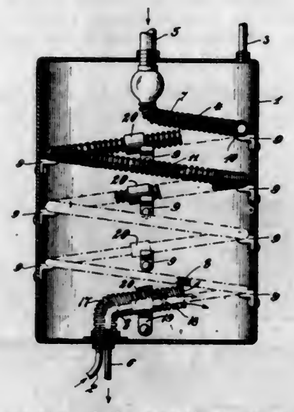
1,632,781. MOUNTING FOR SEWING-MACHINE MOTORS. WILLIAM BANGSER, New York, N. Y., assignor to Maimin Speed Control Corporation, a Corporation of New York. Filed Dec. 10, 1925. Serial No. 74,493. 9 Claims. (Cl. 74—26.)



1. In a sewing machine having a frame and a table, the combination of motor-supporting base resting on the table adjacent the frame, a bracket pivotally mounted on the base, a motor mounted on the bracket with its center of gravity beyond the pivot on the far side of the frame, and means extending from the bracket and bearing against the frame for clamping the base between the frame and the table.

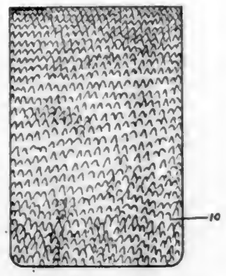
1,632,782. BRAKE SHOE. VINCENT BENDIX, Chicago, Ill., and LUDGER E. LA BRIE, South Bend, Ind., assignors to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 27, 1926. Serial No. 157,104. 11 Claims. (Cl. 188—250.)

5. A brake shoe comprising an outer arcuate lining-carrying band, and a curved stiffening web member secured along its outer edge to the inner face of the band and at one end of the shoe continued as a pivot arm offset substantially within the curve of said band, the band being narrowed in width and integrally continued along said offset arm to stiffen it.



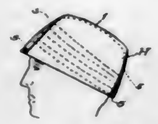
1,632,783. MENU HOLDER. WALTER JUDSON BIRD, Flushing, N. Y. Filed Oct. 21, 1925. Serial No. 63,852. 6 Claims. (Cl. 129—23.)

3. A device of the type described which comprises, a supporting back strip, a pair of spaced pintles extending lengthwise of the said edges of said back strip and mounted at their ends on said back strip, a pair of cover plates, one hinged on each of said pintles, means for resiliently holding said plates in partly opened position, and means for securing a menu card between said cover plates.



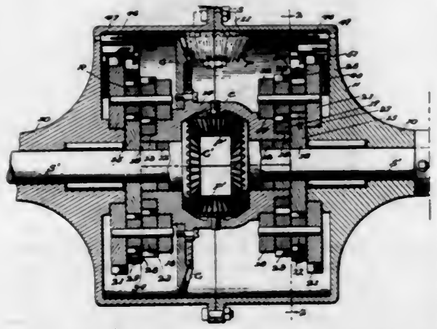
6. A device of the type described which comprises, a pair of plates, a hinge element connecting said plates, and a means for securing a menu card between said plates comprising a pin having an S-shaped end secured to said hinge element and a projecting portion extending lengthwise of and spaced from said hinge element, and a hook on said hinge element for retaining said free end of said pin.

1,632,784. HEAT-CONDUCTING APPARATUS. ROBERT S. BLAIR, Sound Beach, Conn. Filed Mar. 24, 1919. Serial No. 284,621. 7 Claims. (Cl. 257—229.)



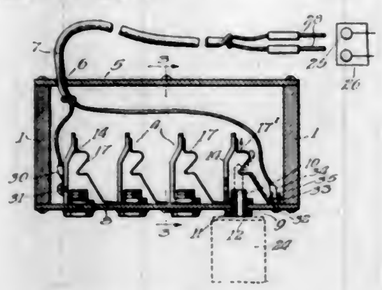
1. In apparatus of the general nature of that herein described, in combination, a flexible metallic conduit, a second flexible metallic conduit into which said first conduit is fitted, means interposed between said conduits intermediate their ends adapted to hold them in spaced relation one from the other, and means adapted to lead a current of fluid thru one of said conduits, and another current of fluid thru the space between said conduits in the opposite directions.

1,632,785. POCKET ARTICLE AND THE LIKE. ROBERT S. BLAIR, Sound Beach, Conn. Filed Jan. 5, 1921. Serial No. 435,081. 6 Claims. (Cl. 150—47.)



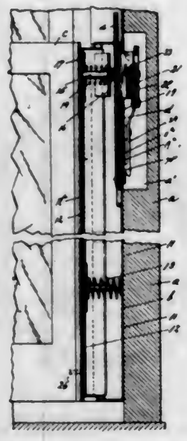
1. In holding means for pocket articles, an outer member extending about and forming a casing or cover entirely enclosing the article to be held and provided on both of its outer surfaces as a constituent part thereof and with a multitude of minute projecting parts inclined with respect to the length of the article and adapted to engage the lining of the pocket and act as a surface tending to resist relative movement in a predetermined direction.

1,632,786. HAT COVER. ERSYL F. CHAMBLESS, Chicago, Ill. Filed Sept. 20, 1926. Serial No. 136,427. 1 Claim. (Cl. 2—187.)



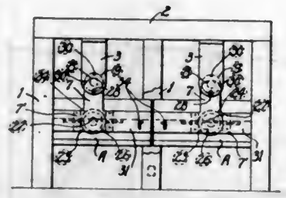
In a hat protector, a flat sheet of material of generally oblong shape provided with two V-shaped cuts disposed opposite to each other with their vertexes on the medial line of the sheet, said cuts separating the sheet into two wing members, fastening means along the lateral edges of the V-shaped cuts and adapted to adjustably secure the ends of the winged members together when the said members are disposed in lapped relation.

1,632,787. DIFFERENTIAL. FRANK ELMER CRAWFORD, York, Nebr. Filed Jan. 3, 1923. Serial No. 610,506. 24 Claims. (Cl. 74—99.)



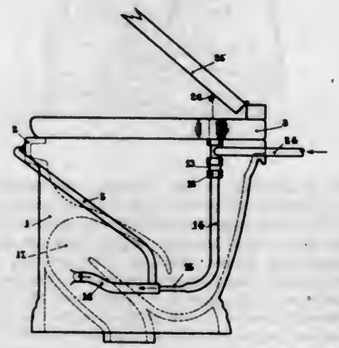
1. A differential unit including a rotative differential gear casing and a pair of spindles driven thereby in combination, connecting means comprising a rotative reducing gear carrier and reducing gears rotatively mounted in said carriers between each spindle and said rotative differential gear casing whereby the rotative movement of either spindle in one direction may be maintained within a predetermined degree with respect to the rotational speed of said differential gear casing, means to lock said carriers against reverse rotation, and means operable from a remote point to permit rotation of said carrier in said reverse direction and to lock it against other rotation, whereby the connecting means between each spindle and differential gear casing may be caused to operate for maintaining the rotative relation between said gear casing and spindles when said spendles are rotated in the opposite direction.

1,632,788. JACK BOX. RILEY M. DIENER, Elkhart, Ind., assignor, by mesne assignments, to Chicago Telephone Supply Company, Elkhart, Ind., a Corporation of Delaware. Filed Dec. 1, 1924. Serial No. 753,062. 9 Claims. (Cl. 179—91.)



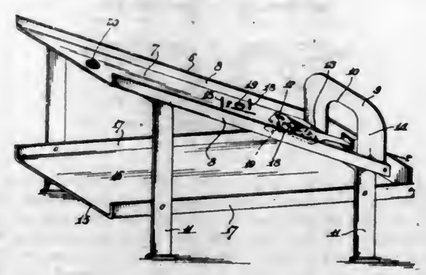
1. In a jack box, a housing, a panel for the front of the same, a plurality of threaded sleeves extending through the panel, jack frame brackets held by said sleeves and jack springs for each jack frame bracket held under the foot of the next adjacent jack frame bracket, said brackets and springs being connected in series.

1,632,789. WINDOW. FREDERICK E. DOMSCHEIT, Brooklyn, N. Y. Filed Mar. 30, 1926. Serial No. 98,522. 10 Claims. (Cl. 292—138.)



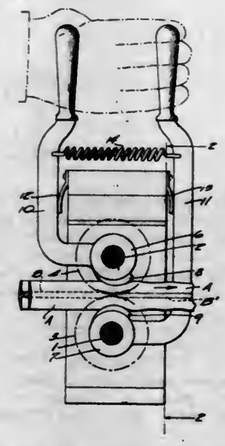
2. In a window the combination with a sash, of a transversely expansible housing for one side of said sash, means for expanding said housing to tighten said sash and means for automatically operating said first named means.

1,632,790. COMBINATION FURNITURE. JOHN WALTER FRYER, St. Louis, Mo. Filed Apr. 15, 1926. Serial No. 102,221. 2 Claims. (Cl. 5—3.)



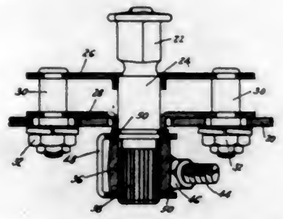
1. A combination bed and table comprising supporting frames in spaced relation, a pair of brackets secured to the supporting frame, the lower end of each bracket terminating in a bearing, a pair of hangers pivotally mounted in the bearings of the brackets, said hangers each terminating at its outer end in a trunnion, a supporting member suspended from the hangers, said supporting member having bearings at each end, said bearings receiving the trunnions and being rotatable thereon, said supporting member being adapted to form a bed in its lowermost position, and being movable to a plane in line with the top of the supporting frames to form a table, and means for locking the supporting member in each of said positions.

1,632,791. VENTILATION OF WATER-CLOSET PANS. SYLVAIN RENÉ HABAULT, Neuilly-Sur-Seine, France, assignor to Societe D'Hygiene Pratique, Paris, France, a Corporation of France. Filed July 17, 1924, Serial No. 726,490, and in Belgium July 27, 1923. 4 Claims. (Cl. 4—72.)



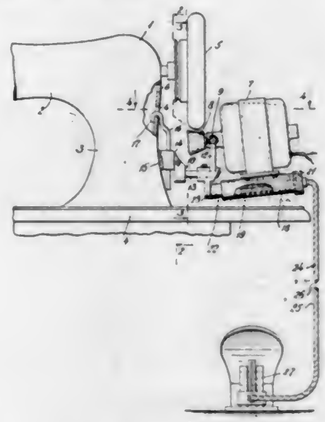
1. In a device for effecting the automatic internal ventilation of a closet pan, the combination with a pan having a siphon in the bottom thereof; of an apertured boss integral with the top of said pan, the inner walls of said boss being arranged tangentially to the inner surface of the pan, an outlet pipe connected to said boss and siphon, a valve casing, a normally closed valve therein, means to open said valve when the seat of the pan is lowered, water supply means for supplying water to said casing when said valve is opened, and a discharge tube connected to said casing and to said outlet pipe and through which the water flows from said casing to create a suction in said outlet pipe.

1,632,792. GAME APPARATUS. GRANVILLE A. HEIMER, Nazareth, Pa. Filed Jan. 5, 1927. Serial No. 159,127. 7 Claims. (Cl. 273—120.)



1. In a game apparatus, the combination of means forming an inclined travel surface, having openings and obstacles in spaced relationship with each other, a substantially vertical wall at the lower end of said travel surface provided with an opening extending above said travel surface, a counterbalanced element partly within said upwardly extending opening having its upper surface normally in the plane of said inclined travel surface, and a tumbler for travelling on the inclined travel surface comprising an elongated hollow body provided with a loosely housed spherical weight adapted to roll from one end to the other of the hollow body.

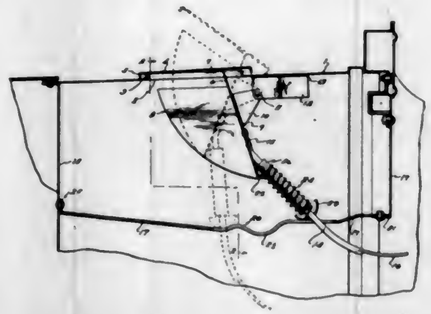
1,632,793. CAME MACHINE. WILLIAM HENDERSON, New York, N. Y. Original application filed Nov. 10, 1924, Serial No. 748,878. Divided and this application filed June 16, 1926. Serial No. 116,313. 6 Claims. (Cl. 80—24.)



1. A came mill having cooperating rolls to drive and reform a came blank, associated hand-manipulated means adapted to instant and irregular manipulation controlling leaf edge engaging members whereby constantly varying formation of the leaves can be made during the driving of the came through the mill at the will of the operator.

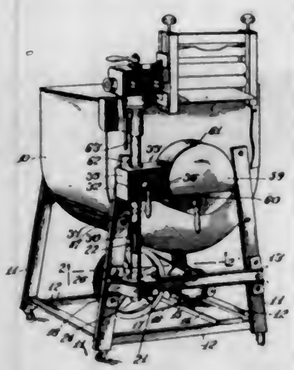
1,632,794. OPERATING DEVICE. LUDGER E. LA BRIE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 23, 1926. Serial No. 156,610. 5 Claims. (Cl. 188—194.)

1. An operating device comprising, in combination, a shaft, an arm fixed on the shaft, a channel-shaped arm having side flanges loosely mounted on the shaft on opposite sides of the fixed arm and partially enclosing the fixed arm, and a thrust device adjustably engaging the fixed arm and the part of the channel-shaped arm between the side flanges.



1,632,795. MOUNTING FOR SEWING-MACHINE MOTORS. HYMAN MAIMIN, New York, N. Y., assignor to Maimin Speed Control Corporation, a Corporation of New York. Filed Dec. 10, 1925. Serial No. 74,494. 7 Claims. (Cl. 74—26.)

1. In a sewing machine having a frame with an opening therein, the combination of a motor support having an arcuate thrust member bearing against the frame, and a vertical arm secured to the support, and having a hook entering the opening in the frame above the thrust member for holding the support suspended upon the frame.



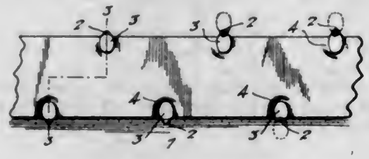
1,632,796. COWL VENTILATOR. HERMAN C. MAISE, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 29, 1923. Serial No. 671,608. 7 Claims. (Cl. 98—2.)

1. In a vehicle body, the combination with an instrument board, a dash board, and a cowl extending between said boards having an air inlet opening, of a forwardly opening closure for the opening having a part pivotally mounted beneath the cowl, an operating handle rigidly secured to said part so as to be concealed thereby when the closure is moved to open position, a bar extending between the instrument board and dash board in spaced relation to said closure and cowl having a longitudinally extending slot receiving the handle, and means sleeved

upon said handle between the bar and closure engageable with the bar for holding the handle and closure in adjusted position.

1,632,797. LAUNDRY MACHINE. LAWRENCE W. MAMMEN, Chicago, Ill. Filed June 28, 1923. Serial No. 648,185. 12 Claims. (Cl. 74—56.)

1. In a machine of the character described, provided with a vertically disposed drive shaft, a housing disposed about the lower end of said shaft and socketed to receive anti-friction thrust bearing and provide an oil well for the lower end of the shaft, a cover portion removably secured to said housing and provided with an upwardly disposed apertured boss for passage of the drive shaft therethrough, and a sleeve portion mounted on the cover portion and disposed about the drive shaft, with the relation between the sleeve and casing adapted to provide a continuous oil passage.

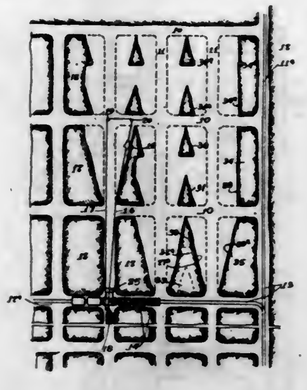


1,632,798. TEXTILE SPINDLE. ARTHUR MEDER, Carlstadt, N. J., assignor to Norma-Hoffmann Bearings Corporation, New York, N. Y., a Corporation of New York. Filed June 20, 1919, Serial No. 305,651. Renewed Aug. 18, 1923. 5 Claims. (Cl. 308—228.)

1. A textile spindle comprising a tubular member having internal reduced portions at its upper and lower ends forming shoulders, bearing rings within the tubular member and resting against the shoulders, a base section removably secured in the lower end of the tubular member and holding the lower bearing ring against the shoulder, and having an oil receptacle in its upper face, a supporting shank carried by the lower end of the base section, and a spindle shaft extending down through the tubular member and carrying bearing rings arranged op-

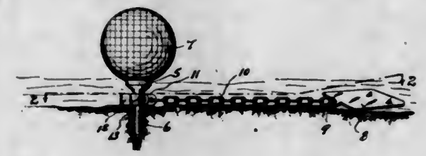
posite the bearing rings of the tubular member, and having its lower end extending within the oil receptacle of the base section, and having a passage extending longitudinally therethrough for supplying oil to the upper bearing.

1,632,799. MARKING TAPE FOR TENNIS COURTS. ROBERT MOORE, Montclair, N. J. Filed Nov. 27, 1926. Serial No. 151,092. 1 Claim. (Cl. 273—29.)



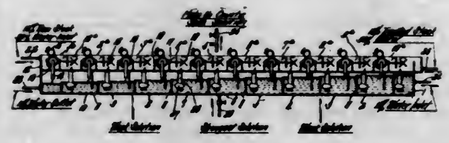
The combination with a tennis court having a dirt foundation, of marking tapes consisting of thin strips of ductile, malleable and non-elastic metal, and a plurality of fastening members arranged in spaced relation along the edges of said strips, and said fastening members each having a shank driven into the ground and a laterally projecting head overlying and clamping the corresponding edge of said strip between it and the ground, said head being indented into the strip below the plane of the top surface thereof.

1,632,800. SYSTEM FOR MINING. JAMES W. PEARCE, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 6, 1924. Serial No. 754,261. 4 Claims. (Cl. 262—1.)



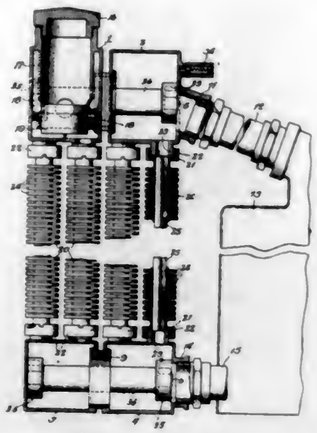
1. The method of mining which consists in initially driving a plurality of substantially parallel and intersecting cross entries to form rectangular blocks, removing the material from the blocks by scraper loading devices extending along working faces formed in adjacent parallel working entries and loading in transportation

entries intersecting said working entries, removing the material along predetermined staggered working faces on opposite sides of each working entry and connecting the



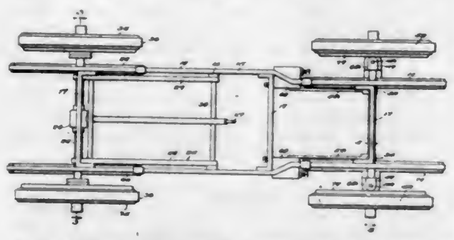
working operations in adjacent working entries to leave pillars of pyramidal or inverted V shaped form along the central portions of each of the blocks.

1,632,801. GOLF-TEE ANCHOR. JOSEPH E. PAYOR, Summit, N. J. Filed Dec. 13, 1926. Serial No. 154,460. 2 Claims. (Cl. 273—33.)



1. An anchoring device for ready-made golf-tees, comprising an anchor element, a flexible tie to extend from said anchor element, and a coupling member connected with the free end of said tie, said coupling member comprising a metallic body doubled longitudinally upon itself to provide a backplate and an overlying clamp-plate tensionally related to said back-plate to cooperate therewith in frictionally gripping the shank of a golf-tee thrust therebetween.

1,632,802. PROCESS OF AND APPARATUS FOR TREATING FIBER. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Aug. 10, 1926. Serial No. 128,398. 9 Claims. (Cl. 92—20.)

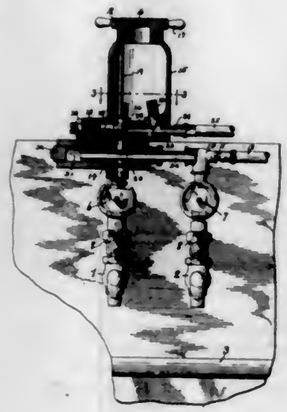


1. A process of treating fiber with a chemical solution and washing the same, which comprises maintaining a series of treating baths, introducing fiber into an end bath and passing said fiber from bath to bath toward the other end bath, introducing water into the other end bath and the chemical solution into an intermediate bath, and producing a flow of water from bath to bath in countercurrent flow to that of the fiber.

1,632,803. • INTERNAL-COMBUSTION-ENGINE RADIATOR. WILLIAM H. RAY, Monroe, Mich. Filed Feb. 4, 1922. Serial No. 534,022. 8 Claims. (Cl. 257—129.)

1. In a radiator, a plurality of intercommunicating headers forming a sectional upper header, a plurality of intercommunicating headers forming a sectional lower header, means rigidly connecting the upper header to the lower header and detachable therefrom whereby the upper header is detachable from the lower header, radiating tubes held stiffly upright for connecting the upper header to the lower header, the intercommunicator between the sections of each header being formed by passage means providing an unobstructed path of flow directly from one section into another, so that free communication is formed between sections, and fastening means on each header and entirely separate from said passage means to detachably connect the sections of each header together, and each tube being removable laterally without disconnecting other tubes, and without disconnecting the upper header from the lower header.

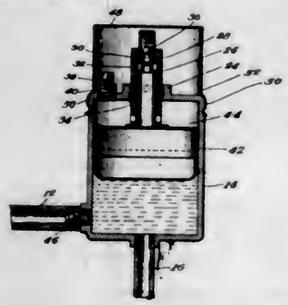
1,632,804. VEHICLE. JAMES T. SHOUP, Chicago, Ill., assignor to Mettie R. Shoup, Chicago, Ill. Filed Dec. 11, 1925. Serial No. 74,782. 11 Claims. (Cl. 180—1.)



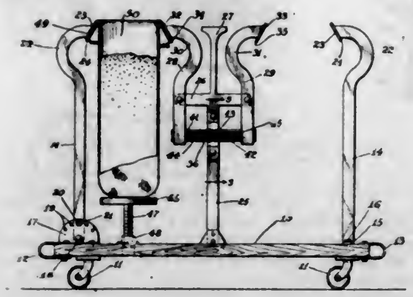
1. A self-propelled vehicle comprising a frame, an auxiliary frame movably mounted on said first-mentioned frame, ground-engaging wheels movable with said auxiliary frame, means for driving said wheels, and wheels mounted on said first-mentioned frame and supported by said ground-engaging wheels.

1,632,805. STITCHLESS EYE TAPE. DAVID SILBERMAN, New York, N. Y. Filed Feb. 23, 1927. Serial No. 170,245. 2 Claims. (Cl. 2—265.)

1. Stitchless hook or eye tape comprising a strip of fabric folded on itself to form a face ply and a bottom ply and intermediate inner folds between the two, a fastening member provided with base loops passing through the face ply and certain of the inner plies with the base loops lying between inner plies, other plies extending over and concealing the base loops, said fastening member being the sole means for securing the various plies together.



1,632,806. DEVICE FOR SUPPLYING SOAPY WATER. HENRY COLLIER SMITH, St. Marys, Ohio. Filed May 27, 1922. Serial No. 564,256. 3 Claims. (Cl. 299—84.)



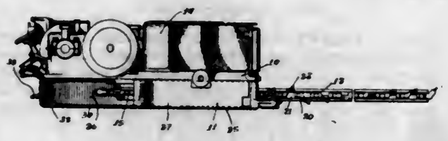
1. In a device of the character described, the combination of a body, a container connected thereto and having a filling opening, a water inlet and an outlet, said body having a supply passage leading to the water inlet of the container and an auxiliary discharge passage extending from the supply passage and connecting to the container outlet, means to conduct water to said supply passage, a flexible tube connected to the discharge passage to carry water therefrom, said body having a second discharge passage connecting to the supply passage, a flexible tube connected to the second discharge passage to carry water therefrom, and means to supply additional water to the second discharge passage.

1,632,807. LUBRICATING SYSTEM. DONALD H. SWEET, Evanston, Ill. Filed Jan. 29, 1926. Serial No. 84,726. 4 Claims. (Cl. 184—7.)

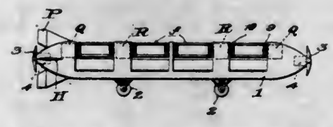
1. The combination with a pressure lubricating system of a chamber communicating therewith, means for admitting air into said chamber at a predetermined vacuum to limit the suction in the system, means for letting air out of the system at a predetermined pressure to limit the pressure in the system, and automatic float means actuated in accordance with the amount of lubricant in said chamber, for rendering said pressure limiting means inoperative when said chamber is full.

1,632,808. BAG HOLDER. JOHN SZTOGRYN, Jersey City, N. J. Filed Oct. 16, 1926. Serial No. 141,938. 10 Claims. (Cl. 83—26.)

1. A device for holding bags, comprising a platform, a bag supporting post mounted intermediate the ends of the platform, standards on the platform and spaced from the post, bag engaging devices pivotally mounted on the post, one for each of the standards, and means for constantly urging said devices to swing with their bag engaging ends toward the post thereby to distend and retain bags engaged by each of said devices and by the standards.



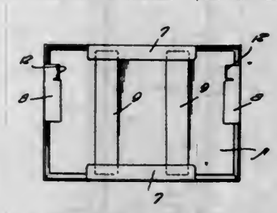
1,632,809. RESILIENT WHEEL. FRANK A. TURNER, New York, N. Y. Filed Apr. 1, 1925. Serial No. 19,862. 9 Claims. (Cl. 152—37.)



7. A resilient wheel comprising a felly member and a rim member spaced from each other, and an annular spring between them, said two members having rolling abutments bearing alternately on the inner and outer surfaces of said spring, means being provided adjacent each abutment to bear on the surface of the spring opposite the abutment when the action of load tends to pull such abutment away from the spring.

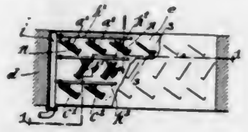
1,632,810. MINING MACHINE. FREDERICK W. VODOZ, Wilmette, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 24, 1924. Serial No. 757,897. 4 Claims. (Cl. 262—30.)

1. In a mining machine having a frame, a cutter arm projecting forwardly from the front end of said frame, a cutter chain driving sprocket adjacent the rear end of the frame, a cutter chain passing about said arm and sprocket, and cuttings passage forming frame members connected with said frame and disposed outwardly of respective stretches of said chain and extending therealong, the frame member on the advancing side of the machine extending rearwardly farther than that on the following side and extending at the rear of said sprocket partially about the same to and terminating at a point between the vertical planes of said stretches of the chain.



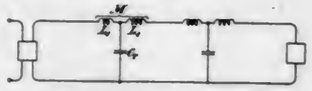
1,632,811. APPARATUS FOR FLYING. MICHAEL WATER, New York, N. Y., assignor of one-fourth to Maurice Baskin and one-fourth to Max Rhoade, Washington, D. C. Refile for abandoned application Serial No. 557,161, filed Apr. 25, 1922. This application filed June 23, 1926. Serial No. 118,130. 9 Claims. (Cl. 244—13.)

1. In a flying machine, a combination of a frame, a motor mounted thereon, a shaft directly connected to said motor and running longitudinally of said frame, sprocket wheels mounted on said shaft, endless chains operated by said wheels, said chains carrying a series of wings, a pair of closed loop rails, the side loop having a gradually diminishing radius of curvature paralleling said chains, the said wings being moved by the said chains in a linear direction and held at a fixed angle for the purpose of imparting a vertical lifting motion to the said machine, and a screw propeller located in front of said frame, for providing forward motion to said machine.



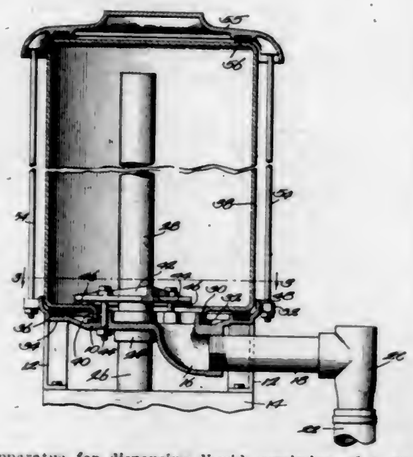
1,632,812. AUTOMOBILE LICENSE-CARD HOLDER. ROY E. WILLIAMS, Ringtown, Pa. Filed Dec. 14, 1926. Serial No. 154,708. 1 Claim. (Cl. 40—10.)

In a card holder of the class described, a substantially rectangular shaped frame for receiving the card and having an opening in its center through which the card is visible, inwardly extending tongues formed at the intermediate portions of the upper and lower edges of the frame, similar tongues extending inwardly from the side edges of the frame, the upper ends of the side tongues being bent inwardly to provide abutments, a pair of strips removably disposed across the rear face of the card, the ends of said strips engaging a free edge of the upper and lower inwardly directed tongues for retaining the card within the frame, and an elongated supporting bar adapted to be rigidly secured to a support, said bar extending longitudinally of the frame across the outer faces of the vertically disposed card securing strips, the respective ends of the supporting bar being bent to form a pair of offset lugs, said lugs adapted for disposition be-



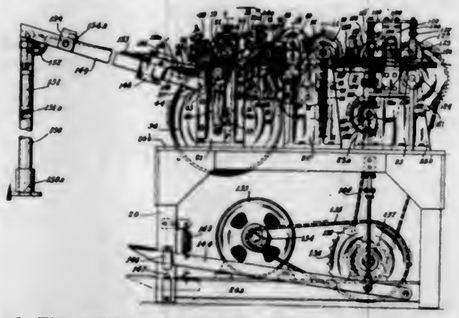
hind the vertical tongues, the upper edges of said lugs engaging the aforementioned abutments to limit the downward sliding movement of the frame and the card carried thereby.

1,632,813. FILTER FOR PURIFYING THE AIR. HANS WITTEMEIER, Berlin, Germany. Original application filed Jan. 5, 1921, Serial No. 435,288, and in Great Britain July 28, 1915. Divided and this application filed Mar. 15, 1924. Serial No. 699,600. 7 Claims. (Cl. 261—112.)



1. A filter comprising a filter bar and means for scraping the same.

1,632,814. FILTER FOR PERIODIC ELECTRIC CURRENTS. MANVEL K. ZINN, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 15, 1922. Serial No. 607,182. 6 Claims. (Cl. 178—44.)

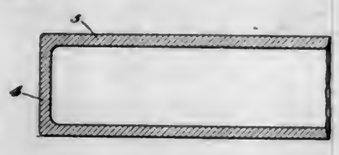


1. A filter having successive shunt impedance elements and series elements in alternation therewith, adjacent series elements having mutual impedance in pairs.

1,632,815. DISPENSING APPARATUS FOR LIQUID HYDROCARBONS. JOSEPH H. ALLEN, Chicago, Ill., assignor to Inland Glass Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 19, 1925. Serial No. 69,986. 1 Claim. (Cl. 221—100.)

Apparatus for dispensing liquid consisting of a glass container approximately in the form of a cylinder having glass extending inward at the top and having a constricted opening at the bottom, a support for the container having a plurality of openings for the passage of liquid, a spider located within the container and adapted to bear upon the constricted portion thereof, and means for clamping the support and spider toward each other to prevent leakage from between them.

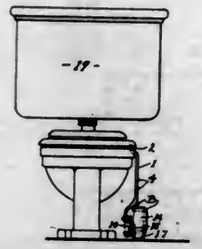
1,632,816. METHOD AND MACHINE FOR COVERING FLEXIBLE STRIPS. ROBERT R. AMBLER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 26, 1923. Serial No. 653,919. 7 Claims. (Cl. 154—41.)



1. The method of applying a covering strip to a length of flexible strip material which comprises attaching the leading end portions of the two together and feeding forward the said end portions to draw the two progressively together while guiding them into progressive contact with each other and tensioning the covering strip by fixed engagement with its last-applied end portion.

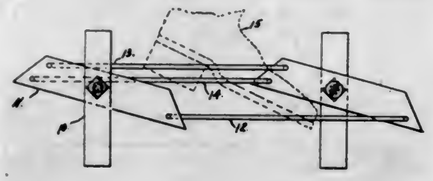
1,632,817. TRANSMISSION SYSTEM. HENRY M. BASCOM, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 8, 1924. Serial No. 711,899. 1 Claim. (Cl. 178—44.)

A transmission line comprising a source of high frequency oscillations above the ordinary telephonic range, a circuit associated with said source and tuned to the resonant at the frequency of said oscillations, a condenser transmitter associated with said circuit whereby the resonance of said circuit may be varied as the electrostatic capacity of said transmitter varies, an amplifier associated with said circuit and adjusted to efficiently amplify said high frequency oscillations, a filter associated with the output of said amplifier and adapted to readily transmit said high frequency oscillations and to attenuate frequencies within said telephonic range, and demodulating apparatus associated with said filter in said line.



1,632,818. RING GEAR AND METHOD OF MAKING THE SAME. FRANK J. BLACK, Crafton, Pa. Filed June 27, 1922. Serial No. 571,259. 6 Claims. (Cl. 29—159.)

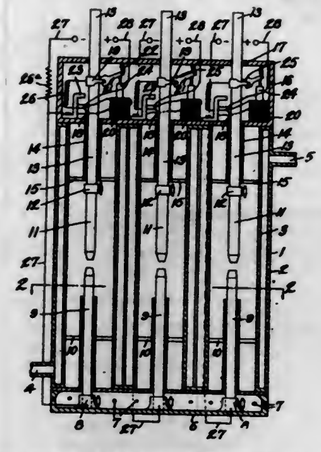
1. In the manufacture of ring gears the steps comprising forming a tubular blank by piercing and drawing, cutting rings from said blank, and forming teeth on at least one side face of said rings.



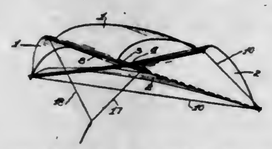
4. A ring gear formed from a drawn steel blank and in which the flow lines or grain of the metal runs substantially perpendicular to the cut of all the teeth.

1,632,819. SEAT-ACTUATING MEANS FOR SANITARY CLOSETS. WILLIAM E. CHASTAIN, Wichita, Kans. Filed Sept. 3, 1926. Serial No. 133,464. 2 Claims. (Cl. 4—251.)

1. In a seat actuating means for sanitary closets, in combination with a seat of a sanitary closet, an arm pivotally connected to the closet near the hinged point thereof, the opposite end pivotally connected to the arm of a bell crank, a bell crank pivotally attached to the floor by the side of the closet, a pedal engaging with the opposite end of the bell crank, so that the end thereof will reciprocate on each side of the fulcrum of the crank, a slotted tube attached to the pivotal bearing so that one arm of the bell crank will engage in the slot, a recoil spring positioned in the tube to function as a cushion for the bell crank, adjustable supporting means for the spring longitudinally in the tube, all as, and for the purpose described.



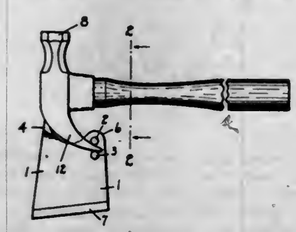
1,632,820. DISPLAY STAND. LEMEL COFAR, Milwaukee, Wis. Filed Sept. 4, 1924. Serial No. 735,859. 3 Claims. (Cl. 211—14.)



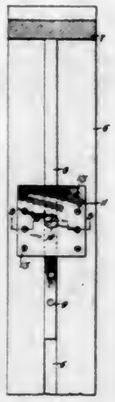
1. A display rack comprising a support, parallel arms attached to the support and axially adjustable about horizontal pivots, a pair of rods attached to the rear ends of the arms and being disposed one above the other and in offset relation, and a rod attached to the forward ends of the arms, the rods being adapted to engage the heel and toe of a shoe to hold the same in position for display, the arms being arranged to be adjusted to dispose of the pair of rods to the front and the other rod to the rear to permit a rectangular object to repose thereon in lieu of the shoe.

1,632,821. ELECTRIC WATER HEATER. ALFRED COTE, Montreal, Quebec, Canada. Filed Apr. 30, 1923, Serial No. 635,472. Renewed June 21, 1926. 4 Claims. (Cl. 219—38.)

1. An electric water heater comprising a transverse casing provided with sockets; a plurality of water casings mounted on said transverse casing having inner and outer walls; a control casing mounted on the upper ends of said water casings and having a plurality of sliding rods therein; a negative carbon for each water casing mounted within said inner wall in the socket of said transverse casing; a positive carbon for each water casing mounted within said inner wall in the sliding rod, said carbons being in alignment with each other; and means in said control casing for operating each of said sliding rods in order to maintain an arc across the ends of the carbons.



1,632,822. SELF-BALANCING KITE. CONRAD DAHL, Springfield, Ohio, assignor to Robert N. Burton, Chicago, Ill. Filed July 17, 1926. Serial No. 123,118. 14 Claims. (Cl. 244—22.)

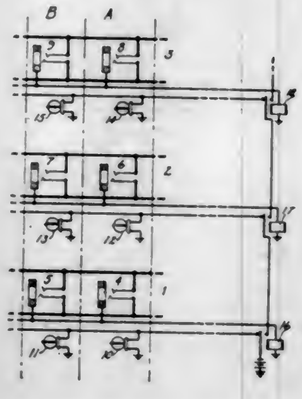


1. A kite comprising a mid-rib and a cross arm unconnected at their adjacent portions, a head sail attached to the mid-rib, a main sail attached to the cross arm, ties connecting the opposite sides of the head sail to the opposite ends of the cross arm, guys extending from the ends of the cross arm to one end of the mid-rib and means connecting the main sail to said end of the mid-rib.

1,632,823. CUTTING-BLADE ATTACHMENT. JAMES G. DARLING, Norwood, Ohio. Filed Aug. 19, 1925. Serial No. 51,208. 4 Claims. (Cl. 7—8.)

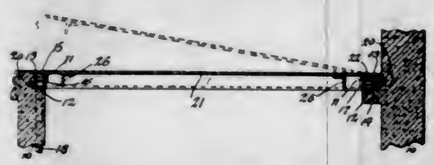
1. A cutting blade attachment having spaced-apart pins adapted to receive the claws of a hammer therebetween and a bearing against which the convex surface of said claws is adapted to abut, whereby said cutting blade is adapted to be securely and detachably held in position upon said hammer.

1,632,824. SASH-PULLEY MARKER. DANIEL W. DAVIDSON, Big Spring, Tex. Filed Mar. 2, 1925. Serial No. 12,650. 3 Claims. (Cl. 33—197.)



1. A window sash marker including a guide strip having a plurality of openings therein, a plate having an opening mounted on the guide strip, a retaining member engageable with the openings formed in the plate and guide strip for adjustable connection thereof, and marking members carried by the plate.

1,632,825. WHISTLING BALL. CHARLES J. DIEBOLD, Winnipeg, Manitoba, Canada. Filed July 3, 1926. Serial No. 120,406. 2 Claims. (Cl. 46—46.)



1. In combination, a hollow ball having opposing end openings therein, an annular disc surrounding one of the openings and secured to the ball, a whistle carried by the disc and covering said latter opening, an upper disc, a flexible bellows forming material connecting the discs, a spring within the bellows and having the lower end secured to the whistle and the upper end attached to the upper disc and a string attached centrally to the upper disc and passing out through the other end hole in the ball, the said spring maintaining the bellows in a collapsed position upon the ball being suspended by the string.

1,632,826. TRUNK SIGNALING SYSTEM. LLOYD L. EAGON, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 30, 1925. Serial No. 65,876. 2 Claims. (Cl. 179—48.)

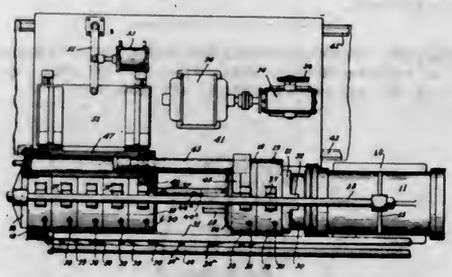
1. In a telephone system, a plurality of outgoing trunks arranged in a certain series relation, a signal for each trunk, means for maintaining the signal of one of said trunks actuated in response to the seizure of all of the preceding trunks in the series and means responsive to the release of any one of the preceding trunks for disabling said signal and actuating the signal of the released preceding trunk.

1,632,827. CLOSURE FOR AREA WAYS. CHARLES K. ERNST, Buffalo, N. Y. Filed Feb. 17, 1926. Serial No. 88,744. 5 Claims. (Cl. 94—36.)

1. A frame for the closure at the upper end of a concrete area-wall, comprising angle bars each having a vertical inner flange and a lower horizontal flange projecting outwardly from the lower edge of said vertical flange, and upright bars arranged above said horizontal flanges and separated from the same and said vertical flanges to form upwardly opening channels between said upright bars and vertical flanges and passage between the lower edges on said upright bars and said horizontal flanges.

1,632,828. WATCH-CHAIN SWIVEL. THOMAS J. FAGAN, Arlington, Mass. Filed Feb. 24, 1926. Serial No. 90,284. 4 Claims. (Cl. 24—240.)

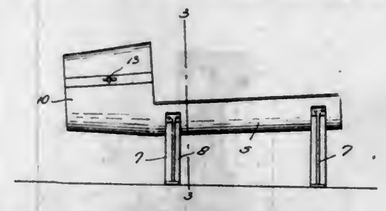
1. A clasp of the type described comprising a substantially cylindrical body portion, a hook member pivoted for swinging movement at one end of the body portion, a recess in the body portion for receiving the free end of the hook, and a locking member surrounding the body portion and movable longitudinally thereof, movement of the locking member in one direction fastening the free end of the hook within said recess, and in the other direction releasing said free end whereby the hook may be swung away from the body portion, and means between



the locking member and the body portion for holding the locking member in position to fasten the free end of the hook within the recess.

1,632,829. METHOD OF DRYING COAL AND THE LIKE. HANS FLEISSNER, Leoben, Austria. Filed Jan. 11, 1926. Serial No. 80,665, and in Austria Aug. 14, 1924. 2 Claims. (Cl. 34—24.)

1. Method of drying coal and the like consisting in first heating the coal for about one hour in the presence of steam of a pressure ranging from 3 atmospheres corresponding to a temperature of about 130° centigrade to 25 atmospheres corresponding to a temperature of about 235° centigrade thus preventing the escape of water from the coal, thereafter progressively reducing the pressure of the steam in order to start the drying, and continuing this reduction until the coal is dry.



1,632,830. MOLDING AND VULCANIZING APPARATUS. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Aug. 12, 1925. Serial No. 49,740. 3 Claims. (Cl. 18—17.)

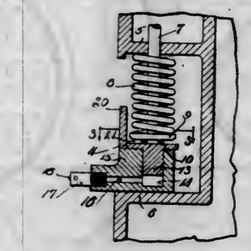
1. Apparatus for molding annular articles, said apparatus comprising a set of mold members for concurrently molding a plurality of the articles, guiding means, on mold members of the set, outside the mold cavity circle, guiding means adapted to coact with the first said guiding means to guide the mold members into abutted relation, yielding means engaging a terminal member of the set for impelling the mold members, and means engaging mold members of the set outside the mold cavity circle for separating them against the force of the said yielding means, the separating means comprising a carriage movable along the set of mold members and mold-opening means on said carriage.

1,632,831. OPERATING TABLE FOR ANIMALS. JOHN W. GIEST, Ely, Mo. Filed Jan. 7, 1926. Serial No. 79,804. 1 Claim. (Cl. 119—103.)

In an operating table for animals of the class described, a semi-cylindrical trough shaped table, the longitudinal edges thereof terminating in laterally disposed flanges, supporting legs at the front and rear ends of the table, the rear legs being of a greater height than the forward legs in order that the table will be supported in an inclined position, a funnel shaped extension at the forward end of the table, the upper portion thereof being open, and a curved door for said opening, one longitudinal

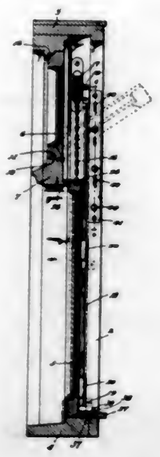
edge portion of the door being hingedly secured to one edge portion of the opening, the other edge of the door overlapping the other edge of the opening, and securing means for the free edge portion of the door.

1,632,832. SPRING SURFACE BOLT. SAMUEL GOLD, Los Angeles, Calif. Filed July 6, 1926. Serial No. 120,725. 3 Claims. (Cl. 292—152.)



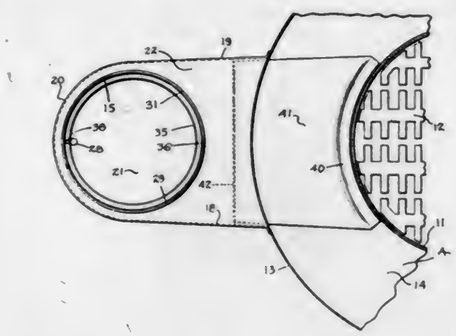
1. A surface bolt including a back plate, a bolt bar slidable endwise on the plate, and a bow spring compressed between the plate and the bar and having a central, outturned horn means to prevent total withdrawal of the bar from the plate; said spring interlocking with the plate against side and end displacement.

1,632,833. METAL PICKLING. JAMES H. GRAVELL, Elkins Park, Pa. Filed Apr. 15, 1926. Serial No. 102,311. 5 Claims. (Cl. 148—8.)



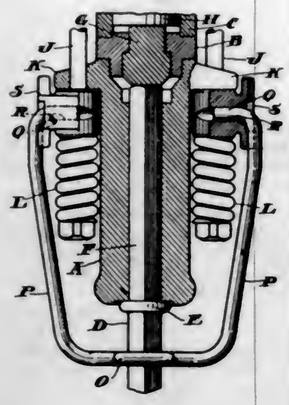
5. Means for confining the etching action of a metal to oxidized portions of metal surfaces which comprise a pickle regulator being an acid soluble water insoluble distillate from animal bodies.

1,632,834. VALVE-LIFTING DEVICE. WHITNEY E. GREENE and ALTON E. MORONG, Brookline, Mass. Filed June 17, 1926. Serial No. 116,644. 2 Claims. (Cl. 29—86.3.)



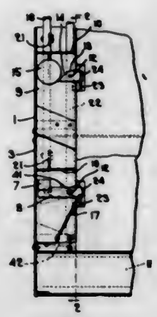
1. A device for simultaneously compressing a plurality of valve springs comprising a lifting plate adapted to engage the under sides of a plurality of valve spring seats, said plate having openings to receive the valve stems, a base member normally supporting said plate, said base member having a chamber and said plate carrying a depending piston movable in said chamber, and means associated with the base member to admit hydraulic pressure to said chamber, thereby to elevate the plate and compress the valve springs.

1,632,835. WINDOW. MICHAEL HÄBERLE, Richmond Hill, N. Y. Filed Dec. 9, 1925. Serial No. 74,338. 1 Claim. (Cl. 20—50.)



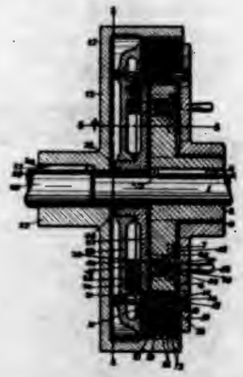
The combination with a window frame having a fixed transom and a sash disposed above the transom and hinged thereto to swing inwardly and downwardly, of a plurality of vertically disposed stops located in a recess formed in a stile of the frame, a plate closing the recess of the stile, vertically arranged levers pivoted intermediate their ends to the plate and having the said stops at one end thereof, and buttons at the opposite end of the levers for projecting the stops into operative position.

1,632,836. AIR-MOISTENING APPARATUS FOR HOT-AIR FURNACES. DANIEL HANDELAN, Minneapolis, Minn. Filed Sept. 1, 1926. Serial No. 132,955. 9 Claims. (Cl. 126—113.)



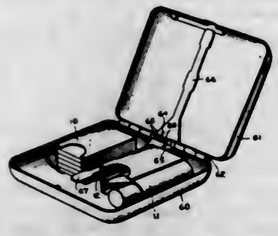
1. In combination with the casing of a furnace, a shoe connected therewith and having an opening along the top thereof, a sleeve attached to said opening and extending inwardly to said shoe, and a peripheral gutter attached to the lower end of said sleeve and leading to one side of said shoe, a duct forming the cold air return of said furnace mounted in said sleeve, and a spray nozzle situated in said duct.

1,632,837. STEEL RETAINER. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 7, 1926. Serial No. 127,953. 7 Claims. (Cl. 121—32.)



1. In a rock drill, the combination of a cylinder, a front head for the cylinder, a drill steel extending into the front head, side bolts for securing the front head to the cylinder, a yoke for preventing ejection of the drill steel from the front head, side arms on the yoke, hooks on the side arms, and bearings slidable on the side rods to rotatably receive the hooks for supporting the side arms in a plane offset from the longitudinal axis of the front head, said bearings being reversible with respect to the side bolts.

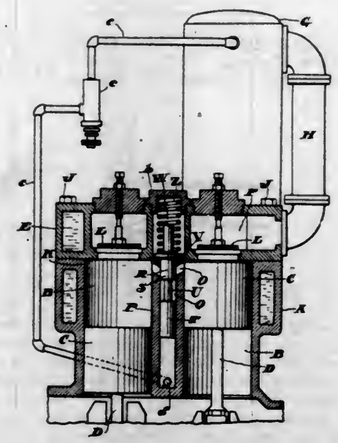
1,632,838. COIN-CONTROLLED APPARATUS. GEORGE F. HIGGINS, Melrose, Mass. Filed Nov. 23, 1921. Serial No. 517,499. 4 Claims. (Cl. 194—59.)



1. In a coin-controlled apparatus, the combination with a plurality of compartments each having an opening, of a closure for each opening, a coin chute, coin slots, one for each closure opening into said chute, a pivoted U-shaped member for each opening, one arm of each member constituting a locking latch for the corresponding closure and the other arm extending into the coin chute, each closure having a latch-engaging part with which the latch engages, a single actuating member constructed to act against any coin deposited in a slot and resting against one arm of one of said U-shaped members thereby to operate through said coin to release the corresponding latch.

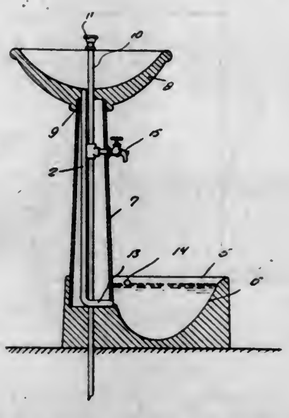
1,632,839. AUTOMATIC RELEASING CLUTCH. WILLIAM D. INSKEEP and EDWARD B. PARSONS, San Francisco, Calif. Filed Nov. 19, 1925. Serial No. 70,088. 9 Claims. (Cl. 192—56.)

1. An automatic releasing clutch comprising a member attachable to a driving shaft, a plate revolvably mounted on the said member, a plurality of discs having projections thereon contacting with each other and with the said plate, an end member having slots therein adapted to mesh with the projections on some of the discs, a shaft secured to the end member, an idling plate rotatably mounted on the first named shaft, a disc member revolvably mounted on the idling plate and contacting with one of said discs, means securing the idling plate, the disc member and the first mentioned plate together, and means for disconnecting the disc member from the discs, whereby the rotary movement of the second mentioned shaft may be stopped.



1,632,840. COMBINED CASE AND RAZOR HOLDER. JOSEPH KAUFMAN, New York, N. Y., assignor to American Safety Razor Corporation, New York, N. Y., a Corporation of Virginia. Filed July 17, 1924. Serial No. 726,485. 6 Claims. (Cl. 206—38.)

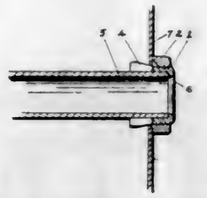
1. A receptacle for containing razor parts and accessories and adapted to be received and contained within a conventional cigarette case of a type which is provided with a holding means extending across the interior thereof, said receptacle having a space exteriorly thereof and intermediate its ends within which is adapted to be positioned said holding means whereby the receptacle will be held in predetermined position by said holding means.



1,632,841. UNLOADING VALVE. JOHN LE VALLEY, Painted Post, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 24, 1926. Serial No. 150,473. 2 Claims. (Cl. 230—22.)

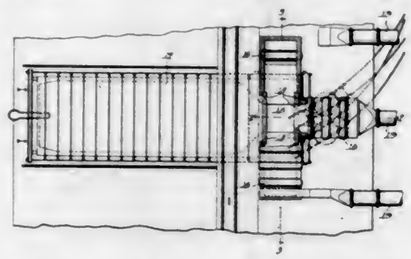
1. In a compressor having a plurality of cylinder chambers, a common wall between the chambers having a passage to establish communication between the chambers, said wall having a longitudinal bore intersecting the passage, and a valve in the bore exposed at one end to

storage pressure whereby it is actuated for establishing communication between the chambers whenever the storage pressure reaches a certain predetermined value.



1,632,842. COMBINED DRINKING FOUNTAIN AND ANIMAL TROUGH. HENRY A. LIENING, Detroit, Mich. Filed Nov. 30, 1925. Serial No. 72,271. 1 Claim. (Cl. 299—8.)

A combined drinking fountain and animal trough of the class described, comprising a base having a trough formed in its top side, a vertically extending tube having its lower end set within the base at the rear side of the trough, a fountain bowl, a socket formed on the bottom of said bowl, the upper end of said vertically extending tube being fitted in said socket for supporting the fountain bowl on the upper end of the tube, a water supply pipe extending vertically through the base, the tube, and the bowl, a drinking nozzle on the upper end of the pipe, an additional pipe arranged vertically within the tube, the upper end thereof communicating with the bottom of the bowl, the lower end of the pipe being disposed laterally for communication with the trough whereby the trough may be filled by the overflow from the nozzle which is discharged into the bowl, and a faucet asso-

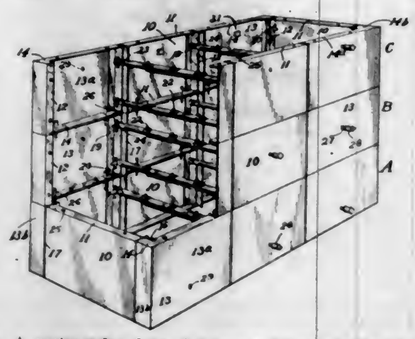


ciated with the water supply pipe and arranged on the outside of the vertical tube above the trough whereby the trough may be initially filled independently of the overflow from the aforementioned nozzle.

1,632,843. CONDUIT BUSHING ADAPTER. THOMAS H. LUDLOW, Rochester, N. Y. Filed May 22, 1925. Serial No. 32,231. 2 Claims. (Cl. 247—25.)

2. An adapter for fastening the cylindrical end of a conduit into the thin wall of a conduit box, comprising a sleeve adapted to extend through the wall of a conduit box and embrace and clamp the conduit therein, a thread on the outside of said sleeve on one end thereof, a compressible hollow cone on the outside of said sleeve beginning at said thread and tapering outward to the other end thereof, the small diameter of said compressible hollow cone being adapted to enter the opening in the wall of the conduit box and a lock nut threaded on the outside of said sleeve to draw said compressible hollow cone into the opening in the wall of the conduit box thereby compressing said hollow cone to grip the end of a conduit located therein, the cone having such a degree of taper that the thin wall of a standard outlet box will be substantially clamped between the nut and the cone at the same time forcing the cone to clasp the conduit.

1,632,844. REVERBERATORY-FURNACE WASTE-HEAT BOILER. ALEXANDER GRANT MCGREGOR, Warren, Ariz. Filed May 21, 1923. Serial No. 640,409. 5 Claims. (Cl. 122—7.)



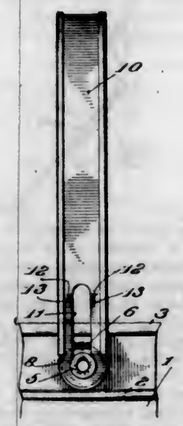
1. The combination with a reverberatory furnace, of an uptake opening at its bottom directly into the chamber of said furnace, said uptake having a plurality of side openings, a plurality of boiler chambers grouped about and closely adjacent to the sides of said uptake and each communicating directly with the chamber of said uptake through one of said openings, and waste heat boilers in said boiler chambers.

1,632,845. CARBONACEOUS MATERIAL AND PROCESS OF MAKING THE SAME. ALFRED OBERLE, Oak Park, Ill. Filed July 31, 1924. Serial No. 729,343. 6 Claims. (Cl. 204—65.)

2. A process for producing carbonaceous material, consisting in heating a carbon resulting from the destructive conversion of hydrocarbons under temperature and pressure conditions in the presence of moisture to drive off the volatile material, subsequently imposing a vacuum action while maintaining the carbon in a highly heated state and treating the resultant carbonaceous material with an acid to remove remaining impurities.

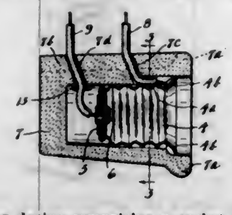
1,632,846. SECTIONAL FORM. AUGUSTUS J. PENOTE, Cleveland, Ohio. Filed Nov. 7, 1924. Serial No. 748,377. 8 Claims. (Cl. 25—131.)

1. A rectangular form for concrete construction work comprising four counterpart corner sections and four counterpart intermediate sections, each intermediate section comprising a flat plate, upper and lower members and end members which are at an angle to said flat plate, each corner section comprising a relatively long plate, a relatively short plate making a right angle with the first named, top and bottom members and two end members which are inclined with respect to the long and the short plates of the corner section, the said end members of adjacent intermediate and corner sections being slightly out of parallel with each other, the inner edges of the respective end members being spaced slightly more than the edges of the respective flat plates and flat divider plates separating the said end members of the intermediate and corner sections and engaging them contiguously.



1,632,847. RAIL ANCHOR. GEORGES PICARD, Montreal, Quebec, Canada, assignor to B. J. Coghlin Company Limited, Montreal, Canada, a Corporation. Filed Nov. 11, 1926. Serial No. 147,822. 13 Claims. (Cl. 238—330.)

1. A one-piece rail anchor consisting of a metal bar hooked at one end to engage one edge of the rail base, and looped across its side at the other edge of the rail base to present a vertical end surface to bear against the side of the tire and to provide a spring grip on the other edge of the rail base.

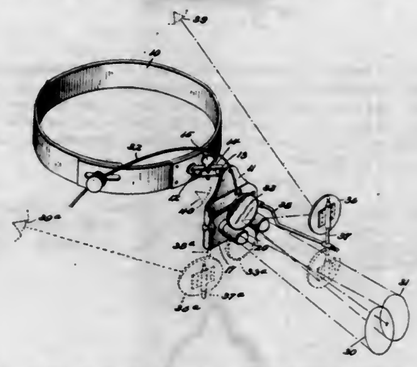


1,632,848. SHEET-METAL CONTAINER. FREDERICK A. PRAHL, Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 15, 1926. Serial No. 135,598. 1 Claim. (Cl. 220—94.)

A sheet metal container including a body portion having flat headed pivot studs secured thereto at diametrically opposite points, a flat sheet metal ball having elongated slots at each end thereof, each of said studs having a neck portion of slightly less diameter than the width of the slot and having its head portion of greater diameter than the width of the slot, the metal portion of said ball adjacent the inner end of the elongated slot being cut at angles to the edge of the slot at both sides thereof, the portions of the ball along the slot terminating at the angular cuts therein, being normally deflected

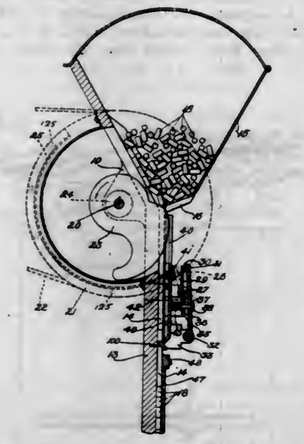
out of the plane of the body portion of the ball to permit the respective heads of the pivot studs to pass along the deflected portions of the ball and the neck portion of the stud to pass into its respective slot.

1,632,849. LAMP SOCKET WITH LEADS ON SIDE. LAMBERT L. RAYMOND, Minneapolis, Minn., assignor to Broderick-Son-Raymond Co., Minneapolis, Minn., a Corporation of Minnesota. Filed Oct. 26, 1925. Serial No. 64,838. 3 Claims. (Cl. 173—358.)



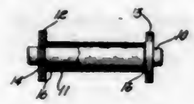
1. A lighting device comprising a socket for an electric lamp having a shell and a tip contact, a one-piece casting for said shell and a conductor for said shell extending into the side of said casing intermediate its ends transversely of the axis of said shell and inclined toward the open end thereof, and a conductor for said tip extending through said casing, both of said conductors lying in a plane extending from the axis of said casing radially toward one side thereof.

1,632,850. CHRISTMAS-TREE REFLECTOR AND LAMP. LAMBERT L. RAYMOND, Minneapolis, Minn., assignor to Broderick-Son-Raymond Co., Minneapolis, Minn., a Corporation of Minnesota. Filed Jan. 25, 1926. Serial No. 83,606. 4 Claims. (Cl. 240—103.)



3. The combination of a Christmas tree reflector of symmetrical form having circumferentially spaced reflecting zones, and a lamp bulb disposed centrally of said reflector and having portions thereon adapted to emit light of different kinds, said portions being alined with said zones of the reflector whereby said zones have different reflecting effects produced thereon.

1,632,851. OPERATING HEADLIGHT. WILLIAM PERRY REAVES, Greensboro, N. C. Filed June 7, 1921. Serial No. 475,713. 19 Claims. (Cl. 128—22.)

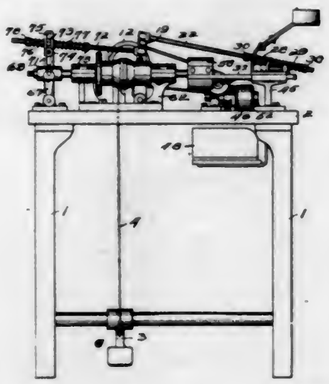


1. In an operating headlight for surgeons, a supporting plate having a central aperture through which the surgeon may view the parts being operated on, and a plurality of electric lamps mounted on said plate in substantially parallel relation.

1,632,852. FEEDING DEVICE. JOHN WILLIAM RICHTER, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 9, 1924. Serial No. 691,862. 6 Claims. (Cl. 90—11.)

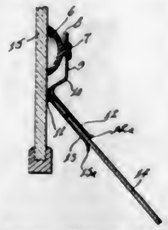
1. An article feeding mechanism comprising a receptacle having a feed groove therein for receiving properly positioned articles contained in said receptacle, a feedway communicating with said feed groove, an agitator including a rotating cam blade passing in and out of said feed groove for removing improperly positioned articles therefrom and engaging properly positioned articles in said feed groove to thereby facilitate the passage of properly positioned articles into said feedway, and means actuating in response to the position of the uppermost article in said feedway for controlling the passage of additional articles therein.

1,632,853. METHOD OF INSULATING CORES. GEORGE LYNDEN ROCK, Cicero, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 30, 1926. Serial No. 138,720. 6 Claims. (Cl. 175—21.)



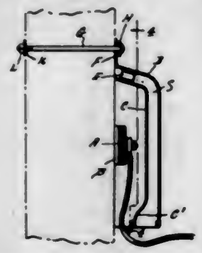
1. A method of insulating cores of electromagnetic coils, consisting in applying insulating material to the core, and then assembling a spool head upon the core in such manner that a portion of the insulating material is spread outwardly to bridge the junction between the core and the spool head.

1,632,854. NURSING NIPPLE. ALMERIN E. ROGERS, Placentia, Calif. Filed Mar. 14, 1923, Serial No. 625,039. Renewed Nov. 10, 1926. 3 Claims. (Cl. 128—252.)



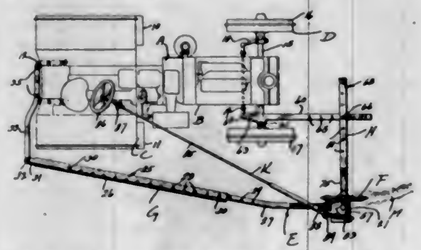
1. A nursing nipple formed in one piece having soft flexible rubber at one end and hard rubber on the opposite end to provide screw threads.

1,632,855. NUT-TAPPING MACHINE. CHARLES E. ROSS, Amsterdam, N. Y., assignor to The Collette Manufacturing Company, Amsterdam, N. Y., a Corporation of New York. Filed May 29, 1922. Serial No. 564,421. 4 Claims. (Cl. 10—139.)



1. In a nut tapping machine, a clutch, a pair of rotative members, means for rotating the members in opposite directions, a slide for receiving blanks, a tap, a member connected to the clutch and to the slide for moving the clutch and the slide in the same direction and to connect one or the other of the rotative members to the tap, a yielding member interconnecting the slide and the first named member.

1,632,856. MAP HOLDER. ALBERT O. RUNNING, Dallas, Wis. Filed Oct. 19, 1925. Serial No. 63,471. 1 Claim. (Cl. 248—39.)

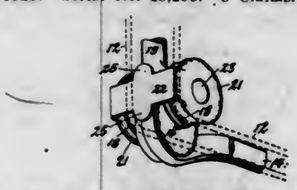


A card holding device comprising a resilient vacuum cup adapted to be secured to a windshield having a knob, a metal holding member consisting of a single piece of sheet metal having an opening adapted to be forced over the knob to secure the holding member to the knob, said holding member being bent toward said windshield to engage the latter, and having integral opposed spring fingers bent downwardly and outwardly in substantially parallel relation, the ends of the opposing spring fingers being bent away from each other, and said fingers being arranged to receive and retain a card in an inclined position with respect to the windshield.

1,632,857. HEATING ELEMENT FOR MOTOR RADIATORS. JOSEPH E. SCHELL, Cleveland Heights, Ohio. Filed Feb. 20, 1926. Serial No. 89,620. 5 Claims. (Cl. 219—38.)

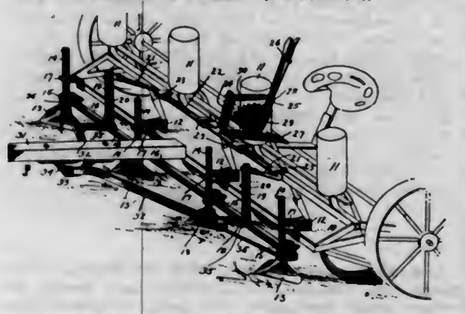
1. A heating device for motor radiators comprising an electrical heating element adapted to be attached to a radiator, a reflector secured to said heating element to reflect radiated heat against the radiator, a casing secured to said reflector and spaced therefrom whereby to provide a passageway for air between said reflector and casing.

1,632,858. TRACTOR GUIDE. JOSEPH R. SMID, Fowler, Kans. Filed Jan. 8, 1926. Serial No. 80,125. 15 Claims. (Cl. 97—49.)



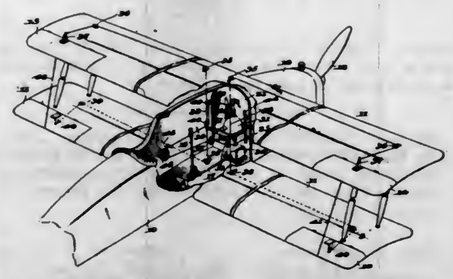
1. In a vehicle steering guide attachment the combination with a vehicle including supporting wheels and steering gear therefor, a steering rod connected with the steering gear for movement therewith and projecting forwardly of the tractor, a furrow wheel, means dirigibly connecting the furrow wheel in adjustable relation with the forward end of said steering rod, means adjustably connecting said furrow wheel in pivoted relation with said vehicle rearwardly of the steering gear, and means for manually operating said furrow wheel.

1,632,859. TOOTHBRUSH. ROYDEN EDWARD STRAEHLY, Chicago, Ill. Filed May 25, 1925. Serial No. 32,676. 1 Claim. (Cl. 15—172.)



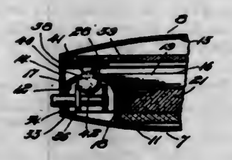
A tooth brush comprising a body provided with brush elements and also having a transverse recess in its under face that extends substantially across the body, an angularly adjustable handle extending from the body, a pivot pin projecting through the handle and body and projecting into the recess, a head on the outer end of the pin and contacting with the outer face of the handle, and a bowed resilient element accommodated in the recess and attached to the inner end of the pivot pin, the resilient element acting to draw the head of the pin into frictional contact with the handle whereby to cause the latter to frictionally engage the body and also serving to lock the body against axial movement on the pivot pin.

1,632,860. DENTAL HANDPIECE WRIST-JOINT GUARD. GEORGE A. TERRY, Buffalo, N. Y. Filed Aug. 5, 1925. Serial No. 48,295. 5 Claims. (Cl. 32—21.)



1. A guard for a dental hand piece wrist joint having a pintle and belt guide pulleys mounted on said pintle, said guard comprising guard disks adapted to be arranged along the outer sides of said pulleys and to resiliently engage the opposite ends of the pintle, and a cross piece connecting the disks.

1,632,861. ATTACHMENT FOR SEED PLANTERS. FRANK THIETTEN, Twin Falls, Idaho, assignor of one-third to Clifton I. Davis and one-third to William S. Thietten, Twin Falls, Idaho. Filed Dec. 17, 1923. Serial No. 681,129. 3 Claims. (Cl. 97—194.)



1. An attachment constituting an auxiliary for planters' using, furrow openers comprising shovels, a cross bar to which the shovels are attached, the shovels having vertical shanks, guides for the shanks for attachment to the planter frame in advance of the furrow openers thereof, hand operated means adapted to be mounted on said frame acting on said bar to move the same and the shovels vertically, draft bars extending between said shovel supporting bar and means for attachment to the draft tongue of the planter.

1,632,862. AIRPLANE. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 21, 1921. Serial No. 471,309. 9 Claims. (Cl. 244—29.)

2. In an airplane having wings, ailerons pivoted to said wings at opposite sides of the center of the airplane, a control stick, a control unit, operative connections between said stick and said unit and a connection between said unit and said ailerons whereby the movement of said stick will tilt the ailerons at the opposite ends of the wings in opposite directions, a second control member independent of said first control member and operative connections between said second control member and the aileron control unit whereby movement of said second control means will cause all of the ailerons to tilt simultaneously in the same direction to provide a braking effect for the airplane while said stick remains stationary.

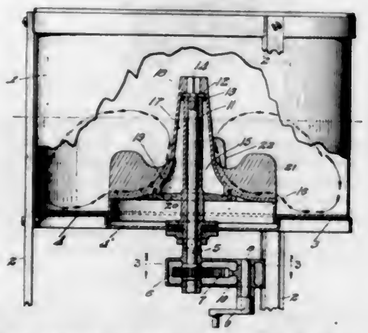
1,632,863. FASTENING MEMBER FOR VANITY CASES. ALBERT WEBER, Providence, R. I. Filed Oct. 15, 1926. Serial No. 141,747. 4 Claims. (Cl. 292—80.)

1. In a fastening member for a vanity case, two sections hingedly connected, an entrant member carried by one section, a housing flange carried by the other section and provided with a hole in the path of the entrant member and of less breadth than the entrant member, said flange being provided also with slots extending from the sides of the hole and with slots communicating with the first slots and disposed transversely thereto.

1,632,864. VANITY CASE. ALBERT WEBER, Providence, R. I. Filed Oct. 15, 1926. Serial No. 141,748. 5 Claims. (Cl. 132—83.)

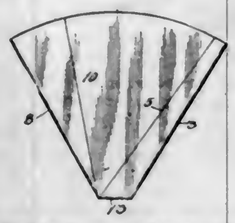
5. In a vanity case, two sections comprising bodies and peripheral side flanges, hinge sleeves integral with the bodies, one of said sleeves being provided adjacent one of

the flanges with an oblong notch, a hollow pintle within the sleeves, a tubular holder slidably mounted in the pintle provided with a bayonet slot near its end, a cup



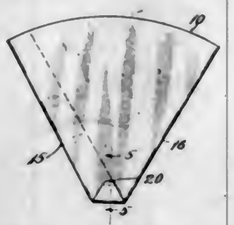
slidably mounted in the holder, a lip stick in the cup, and a knob fast to the cup extending through the slot and notch and enclosed by the flanges.

1,632,865. CLUTCH-OPERATING MECHANISM. JAMES F. WAIGHT, Cleveland, Ohio, assignor to The McMyler Interstate Company, Bedford, Ohio, a Corporation of Ohio. Filed Dec. 9, 1922. Serial No. 605,829. 3 Claims. (Cl. 192—96.)



1. In a clutch controlled mechanism, the combination with a hollow shaft, cooperating clutch members on said shaft and a longitudinally movable clutch operating push pin within the shaft and rotatable therewith, of means for shifting the push pin in either direction comprising a bracket sleeved upon an end of said shaft and held against rotation with the shaft, said bracket having arms on opposite sides of the shaft which project past the end of the shaft, a collar loose upon said push pin beyond the end of said shaft, said collar being held against longitudinal movement with respect to the push pin, and a lever having a forked end straddling the push pin and pivoted on said arms, said lever having a part engaging said collar to shift said push pin.

1,632,866. WASHING MACHINE. ALPHEUS W. ALTORFER, Peoria, Ill. Filed July 2, 1925. Serial No. 41,147. 2 Claims. (Cl. 259—101.)

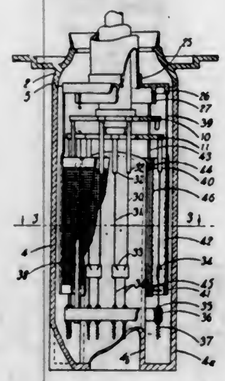


1. In a washing machine, a tub having a substantially flat bottom wall provided with a centrally disposed depressed annular seat forming a shroud for a dolly, a shaft passing up through the depressed portion of said bottom wall, a dolly removably and operatively connected with the upper end of said shaft and having its washing surface above the flat bottom portion of said bottom wall and provided with a depending and peripheral annular apron operative within said shroud, and a plurality of radially arranged baffles upstanding from the washing surface of said dolly.

1,632,867. FOLDING PAPER CUP. CESARE BARBIERI, New York, N. Y., assignor to The Vortex Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed July 3, 1922. Serial No. 572,522. 4 Claims. (Cl. 229—1.5.)

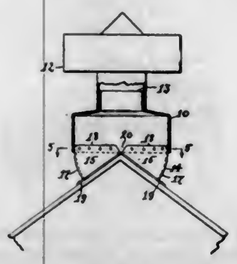
4. A flat folded cup, comprising two registering sides each the shape of a truncated sector, said sides having creases extending from points in the curved edge of the cup to opposite ends of said truncated edge.

1,632,868. PAPER CUP AND BLANK FOR MAKING THE SAME. CESARE BARBIERI, New York, N. Y., assignor to The Vortex Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 8, 1923. Serial No. 617,672. 4 Claims. (Cl. 229—1.5.)



1. A sector-shaped cup, embodying a turned-up end at the point of the cup comprising a plurality of superimposed layers of material of substantially equal area, and an exterior layer slightly longer than the others so as to project beyond the underlying layers.

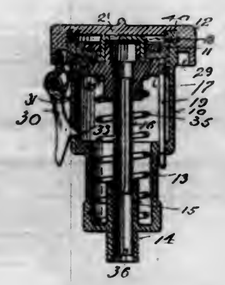
1,632,869. PAPER CUP. CESARE BARBIERI, New York, N. Y., assignor to The Vortex Mfg. Co., a Corporation of Illinois. Continuation of applications filed July 3, 1922, Serial Nos. 572,518 and 572,519. This application filed Oct. 2, 1925. Serial No. 60,121. 9 Claims. (Cl. 229—15.)



1. A blank adapted to be folded for forming folded paper cups, embodying a sectorlike body having its straight edges terminating in a point, one edge being adapted to be folded into a flap, said body having a notch in its other edge at the meeting point of the folds.

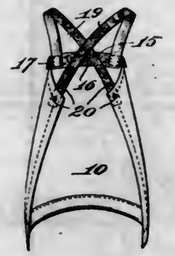
1,632,870. THERMIONIC VALVE. ALBERT CHARLES BARTLETT, Watford, and ROBERT LE ROSSIGNOL, Harrow, England, assignors to The General Electric Company Limited, London, England. Filed Nov. 17, 1926, Serial No. 148,936, and in Great Britain June 9, 1925. 3 Claims. (Cl. 250—27.5.)

1. A thermionic valve having an envelope consisting in part of a metal anode, said anode being formed with a re-entrant portion producing an annular internal vacuous space.



1,632,871. VENTILATOR. EDWARD F. BEACH, Pittsburgh, Pa., assignor to H. H. Robertson Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 16, 1923. Serial No. 612,976. 1 Claim. (Cl. 98—60.)

A ventilator base comprising a hollow upper member having provision for connection with a ventilator, and a lower member composed of two parts or halves, each having curved outer end walls and upright side walls separated at their inner ends by a substantially V-shaped notch and connected together at their bottom portions by outwardly extended side flanges capable of being bent to move the two halves into different positions with relation to each other.

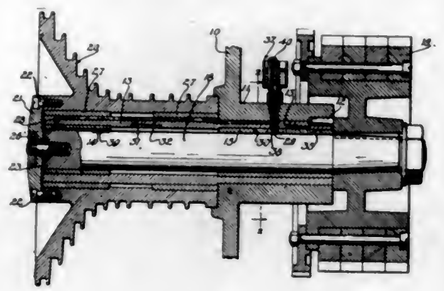


1,632,872. AUTOMATIC GREASE CUP. CHRISTOPHER H. BERRY, Newark, N. J. Filed Aug. 4, 1925. Serial No. 48,059. 5 Claims. (Cl. 184—48.)

1. A grease cup comprising a cup body open at the top and having a stem with a restricted passage therethrough a piston in said cup, said piston having a hollow stem and a lubricant regulating device for controlling the flow of the lubricant through said stems, means on said cup body for engaging said piston to hold the same

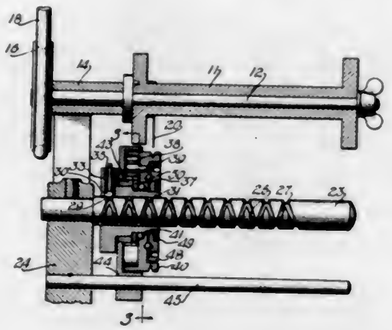
in depressed position while the cup is being filled, and a cover for said cup, said cover having a cam surface for releasing the piston engaging means.

1,632,873. APRON. ANNA M. H. BLISS, Long Beach, Calif. Filed Sept. 25, 1924. Serial No. 739,841. 2 Claims. (Cl. 2—48.)



1. In an apron, the combination with an apron body formed of a one-piece section of plain smooth flexible material, provided adjacent to its upper edge with a series of buttonholes, of a one piece yoke folded on a centrally disposed longitudinally extending line to form front and rear portions, buttons secured on the inner face of the rear portion of said yoke, which buttons are adapted to engage through certain of the buttonholes in the apron body, the front portion of said yoke depending and overlying the front upper edge of the apron body so as to cover the button and button hole connections between said yoke and apron body and straps secured to the ends of the rear portion of said yoke and adapted to be detachably connected to the upper portions of the sides of said apron body.

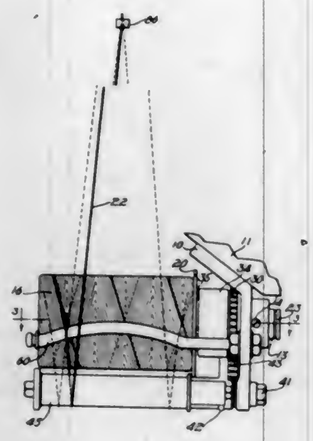
1,632,874. MEANS FOR LUBRICATING BEARING SURFACES. HARRY BLOUNT, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 4, 1924. Serial No. 747,771. 2 Claims. (Cl. 308—125.)



1. The combination with a frame, a sleeve carried thereby provided with a plurality of separated bearing surfaces, a driving shaft mounted within the sleeve, a driven member rotatably mounted upon the periphery of the sleeve and operatively connected to said shaft, of a lubricant container carried by said frame, said sleeve

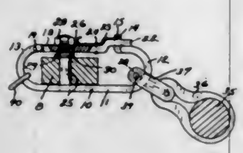
provided with a duct extending longitudinally thereof and communicating at each end with an angularly disposed duct, the duct at one end communicating with said lubri-

cant container, and a wick lying in said duct and its angularly disposed branches and engaging with all the bearing surfaces.



1,632,875. STRAND-HANDLING APPARATUS. GEORGE ALFRED BOUVIER, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 22, 1924. Serial No. 745,095. 8 Claims. (Cl. 242—158.)

1. A mechanism for distributing a strand on a spool as it is wound thereon comprising a member rotated by the strand and having an axis in the same plane as the axis of the spool, means rotated at a different speed by the member, and means for causing displacement of the last mentioned means along its axis when it is so rotated.

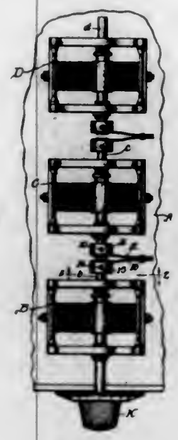


1,632,876. STRAND-TENSIONING DEVICE. GEORGE ALFRED BOUVIER, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 30, 1925. Serial No. 59,468. 5 Claims. (Cl. 242—156.)

1. In a mechanism for regulating the tension of a strand as it is withdrawn from a package thereof, a stationary member, a spindle for holding a strand package and rotatably mounted in the stationary member, a disc member rotatable with the spindle, a friction member coaxial therewith, resilient means associated with the friction member, a member associated with the resilient means for maintaining the friction member in engagement with the disc member, said member associated with the resilient means being threaded on the stationary member and having a gear toothed section associated therewith, a bell crank having a gear segment on one arm thereof engaging the toothed section of the member associated with the resilient means, a strand guiding member associated with the other arm thereof over which

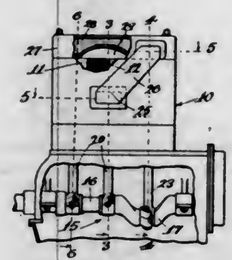
the strand is withdrawn, the bell crank actuating in response to changes in the tension of the strand as it passes over the guiding member, thereby rotating the member associated with the resilient means to vary the effectiveness of said resilient means.

1,632,877. CLEVIS. KARL BRZECINSKI, Mauston, Wis. Filed July 15, 1925. Serial No. 43,878. 1 Claim. (Cl. 278—96.)



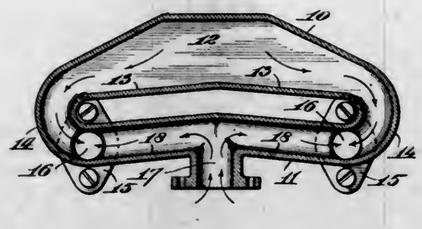
A clevis for an evener bar, said clevis comprising side and end members forming a substantially four-sided link, one of said side members being movable to open and close the link, means for securing said member in closed position, a post fixed to one of said side members intermediate the ends of the latter and extending across the link into an aperture in the other member when the link is closed, said post being adapted to extend through the evener bar to permit relative pivotal movements of the bar and clevis about it, and an abutment member disposable adjacent the free end of said post within the bounds of the closed link, said abutment member serving to retain the clevis and bar in operative relation when the link is open, the end members of said link being engageable with draft and drag chains respectively.

1,632,878. RADIO CONDENSER COUPLING. HARRY A. BREMER, Chicago, Ill. Filed May 24, 1926. Serial No. 111,146. 2 Claims. (Cl. 175—41.5.)



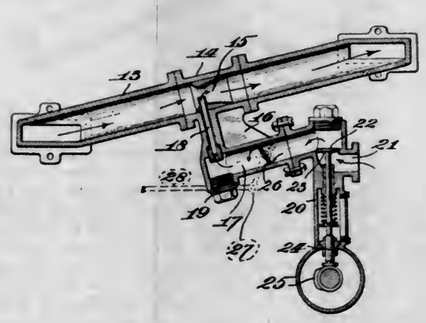
1. In radio receiving apparatus, a plurality of condensers arranged with their shafts end to end, opposed

arms fast on adjacent ends of adjacent shafts, one of said arms having a radial slot, and a projection on the



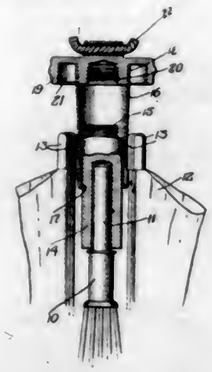
other arm having tapered sides engaged with the longitudinal edges of said slot, said projection being capable of play lengthwise of said slot.

1,632,879. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Co., Los Angeles, Calif., a Voluntary Trust. Filed Feb. 4, 1924. Serial No. 690,648. 3 Claims. (Cl. 123—53.)



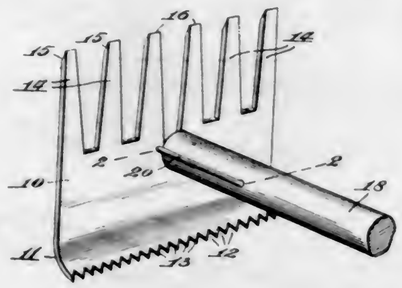
3. In an internal combustion engine, a two stroke cycle function unit, two combustion cylinders, each having ports formed in their respective walls and each of the cylindrical chambers formed within the two cylinders being joined with the other at the head end by a connecting chamber, a piston arranged for operation within each of the said two combustion cylinders, a crank shaft, the said two pistons of the combustion cylinders being separately connected to said crank shaft, a third cylinder the axes of the three cylinders being arranged parallel with each other and in the same plane, a sleeve arranged for operation within said third cylinder, a third piston separately connected to the crankshaft and arranged for operation within said sleeve, the crank to which the two combustion pistons are connected being disposed substantially 225° in advance of the other crank, in the direction of crank rotation, there being ports formed in the wall of the third cylinder for the admission of gaseous fuel mixture, the sleeve within the third cylinder arranged so as to function as a valve for opening and closing said admission ports of the third cylinder, a cylinder head common to each of the three cylinders, an arrangement of the cranks of the crank shaft, whereby the piston of the third cylinder pumps a charge of fresh gas into the two cylinder chambers joined by the common clearance chamber, once each revolution of the crank shaft and means for operating the sleeve, whereby the ports of the third cylinder are opened for the full duration of each suction stroke of the piston within the sleeve and the third cylinder successively.

1,632,880. INLET MANIFOLD FOR INTERNAL-COMBUSTION ENGINES. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Co., Los Angeles, Calif., a Voluntary Trust. Filed July 31, 1924. Serial No. 729,299. 2 Claims. (Cl. 123—52.)



1. A gaseous fuel inlet manifold comprising a housing having upper and lower chambers, one of which is arranged directly above the other, the ends of which are connected by short vertically disposed curved ducts, the upper chamber being substantially larger in area than the lower chamber, the connected ends of the two chambers being provided with outlet openings, the intermediate portion of the lower chamber being provided with an inlet opening and the bottom surfaces of both chambers being formed so as to provide gravity drainage from their intermediate portions toward both of said outlet openings.

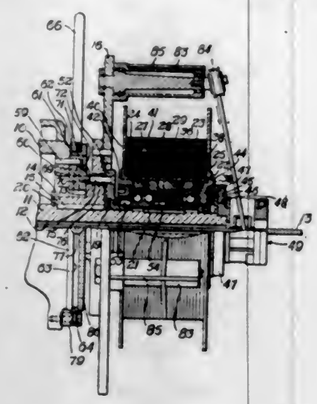
1,632,881. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Co., Los Angeles, Calif., a Voluntary Trust. Filed May 21, 1925. Serial No. 31,804. 2 Claims. (Cl. 123—59.)



2. In combination with an internal combustion engine having a pumping chamber and a combustion chamber, a duct leading from said pumping chamber to said combustion chamber, said duct having a Venturi restriction therein, means for admitting a dilutent volume to said duct adjacent to said Venturi restriction and valvular means associated with said admission means for controlling the passage of dilutent volume therethrough.

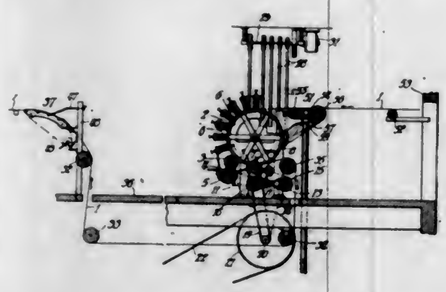
1,632,882. PARASOL. LOUIS A. CAPALDO, New York, N. Y. Filed June 12, 1926. Serial No. 115,504. 4 Claims. (Cl. 135—44.)

1. In a parasol or umbrella, an umbrella stick, said umbrella stick having a tapered member attached thereto, a tapered sleeve fitting over said member and slidable with respect thereto, said tapered sleeve being attached to the handle head, and cooperating threads on the handle head and on the tapered member so as to detachably secure same to each other, and rib-tip confining means associated with said handle head.



1,632,883. COMBINED WEED CUTTER AND CULTIVATOR. GEORGE M. CARKEY, Los Angeles, Calif. Filed Sept. 16, 1926. Serial No. 135,766. 1 Claim. (Cl. 97—62.)

In a combined weed cutter and cultivator, a plate having a portion of its body near one edge curved slightly to the side of the plane occupied by the main body portion of the plate, the edge of said plate adjacent to said curved portion being provided with a row of relatively small V-shaped teeth having beveled cutting edges, a series of straight prongs projecting from the opposite edge of said plate, a prong formed integral with and projecting at right angles from the center of said plate and a handle secured to said prong.

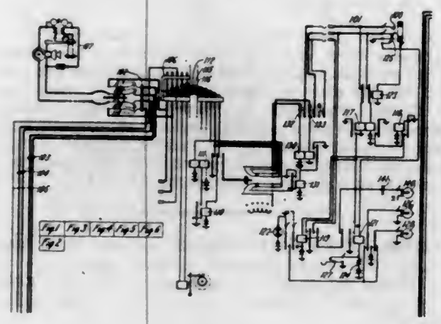


1,632,884. SERVING MACHINE. HERBERT FRED CARTER, Cicero, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 16, 1925. Serial No. 69,472. 12 Claims. (Cl. 117—41.)

1. In a serving machine, a rotatable element having an aperture through which a core passes, a material supply reel associated with said element, means positioned centrally of the supply reel through which power is communicated to said supply reel from said element, and

adjustable means operable during the rotation of the supply reel for controlling said means to alter the amount of power communicated to said reel.

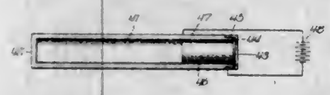
1,632,885. WEB-COATING APPARATUS. CHARLES C. COLBERT and GEORGE E. PRESTON, Elkhart, Ind., assignors to American Coating Mills, Elkhart, Ind., a Corporation of Indiana. Filed Feb. 6, 1924. Serial No. 690,995. 6 Claims. (Cl. 91—17.)



1. An apparatus of the class described comprising, in combination, a web coating machine having a rotating cylinder around which the web is drawn and means for coating the web on the side thereof exposed on said cylinder; preceding equipment in engagement with which the web is drawn against a frictional resistance; said preceding equipment arranged substantially remote from said machine, with an intervening clear floor space in front of said machine; and a set of rollers engaged by the web between said preceding equipment and machine, said rollers arranged to cause the web to travel from said equipment downwardly through the floor and thence along under the floor and up therethrough to a point below said machine and thence reversely around said cylinder on the side thereof confronting said preceding equipment; whereby the web is drawn through said machine under tension and in such manner as to expose on said cylinder the top side of the incoming web and to discharge the web coated side up from the top side of said cylinder in the same direction away from the apparatus that the web is drawn toward the apparatus.

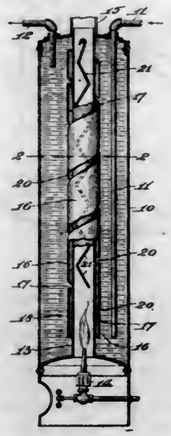
6. An apparatus of the class described comprising, in combination, a coating appliance; a preceding web guide

comprising parallel guide members between which the web is drawn from its source of supply; means for simultaneously adjusting said guide members to suit the width of the web; and means interposed between said coating appliance and guide for guiding the web.



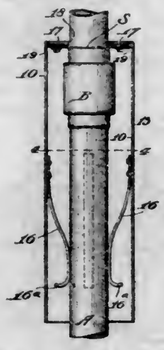
1,632,886. TESTING SYSTEM. LOUIS T. COX, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1924. Serial No. 758,558. 12 Claims. (Cl. 179—175.)

1. In an automatic telephone exchange system, subscribers' lines adapted to be connected by means of a line switch to a selector switch, an operator's desk, an indicating device at said desk, means for inserting said indicating device between one of said subscribers' lines and said line switch, means in said indicating device operated in one manner during the normal progress of a call and operated in a different manner to indicate failure of the line switch to operate.



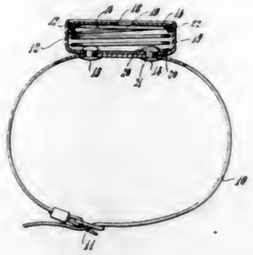
3. In a wire chief's testing system, a test circuit comprising a plurality of keys and associated apparatus for testing subscribers' lines and terminating in a plug, a jack ended trunk circuit, a series of automatic switches controllable from said test circuit with said plug inserted in said jack to connect said test circuit with a subscriber's line and means in said trunk circuit automatically responsive to the removal of said plug from said jack for preventing the release of said switches when said plug is removed from said jack.

1,632,887. BLASTING CARTRIDGE. JOHN H. CRAWFORD, ARTHUR W. HELMHOLTZ, and DENT FERRELL, Harrisburg, Ill., assignors to Safety Pressure Mining & Equipment Company, Harrisburg, Ill., a Corporation of Illinois. Filed May 3, 1924, Serial No. 710,724. Renewed Dec. 19, 1925. 2 Claims. (Cl. 102—5.)



1. A blasting cartridge comprising a rigid casing, one end of the casing being adapted to be ruptured to release the contents in an inward direction only by a predetermined pressure in the casing, the remainder of the casing being of greater strength than said portion, a charge of carbon dioxide in the non-gaseous state in the casing and means for raising the temperature of the carbon dioxide to and above the critical temperature of the non-gaseous carbon dioxide.

1,632,888. WATER HEATER. LEWIS F. DAVIS and LOUIS W. SCHNEPP, Huntington Beach, Calif. Filed Aug. 28, 1923. Serial No. 659,735. 4 Claims. (Cl. 122—159.)

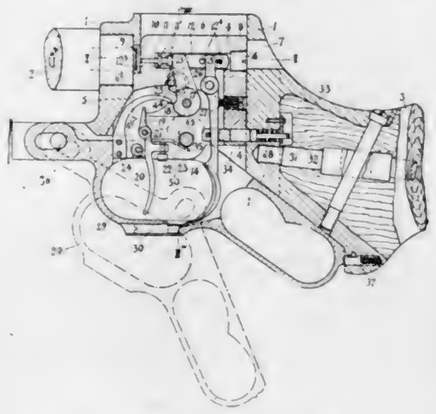


1. In a device of the character described having a water containing tank and a heating flue extending vertically therethrough, the combination with said heating flue of a restricted duct spirally disposed around said flue, said duct having a restricted opening extending along its lower edge and through which restricted opening the duct has exclusive communication with the tank contained water.

1,632,889. OIL SAVER AND ANTISPLASHER. LEWIS F. DAVIS, Huntington Beach, Calif. Filed July 3, 1924. Serial No. 723,937. 2 Claims. (Cl. 166—16.)

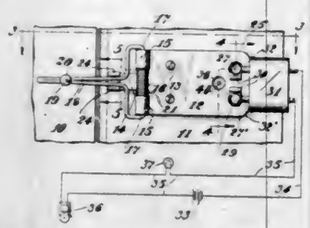
1. In an oil saver and anti-splasher, a substantially cylindrical housing formed in two parts that are hinged to each other whereby the device may be detachably applied to well tubing so as to enclose one of the joints thereof, the hinged edges of the parts of which housing overlap each other when the housing is closed so as to form a substantially oil-tight joint, handles projecting from the front portions of the two parts of the housing whereby the latter may be manually manipulated when applied to or removed from well tubing, means at the top of said housing for producing a leak-proof joint between said housing and the tubing to which it is applied and flat springs having their upper ends secured to the parts of the housing on the interior thereof, which springs extend downwardly and inwardly and are adapted to frictionally engage the well tubing to which the housing is applied.

1,632,890. WRIST PASTE CONTAINER AND DISTRIBUTOR. GENNARO DE PAMPHILIS, New York, N. Y. Filed May 29, 1926. Serial No. 112,680. 1 Claim. (Cl. 220—93.)



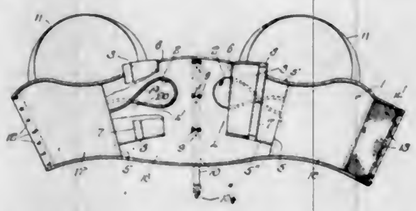
A combined container and dispenser for paste comprising a cylindrical box struck from a single sheet metal blank open at the top and having a flat bottom, a cover having an inturned beaded edge close fitting said box, a helical spring secured at one end to the bottom of the box and having its opposite end coil fixedly embedded in the cover bead, and a single central vent in said cover to permit passage of the paste.

1,632,891. METHOD OF PREPARING SATIN WHITE. JOHN F. FREDRIKSSON, Brooklyn, N. Y., assignor to The Kalbfleisch Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 5, 1925. Serial No. 7,154. 9 Claims. (Cl. 134—18.)



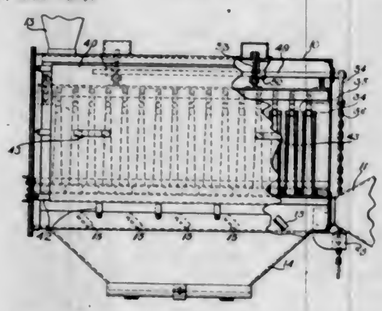
1. The herein described method of producing satin white, which consists in mixing hydrate of lime and basic sulphate of alumina liquor and a relatively small quantity of water, and permitting the mixture to react at ordinary room temperature without further operations thereon.

1,632,892. FIREARM. KARL JOHAN GLANS and JÖNS EMANUEL GLANS, Stockholm, Sweden. Filed Feb. 26, 1926. Serial No. 90,716. 2 Claims. (Cl. 42—23.)



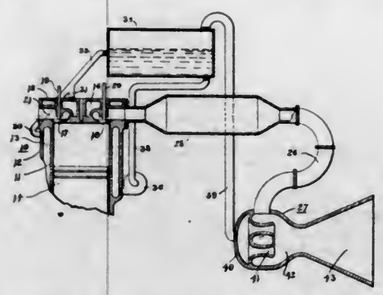
1. In a breech-loading firearm, the combination of a firing-pin, a firing mechanism co-acting with said firing-pin, and a setting device adapted to act upon said firing-pin so that the firing-pin is held under pressure against a cartridge carried by the firearm when the firing mechanism is in its firing position.

1,632,893. DOOR ALARM. MARIE GLAUS, Union City, N. J. Filed Mar. 18, 1926. Serial No. 95,558. 1 Claim. (Cl. 116—87.)



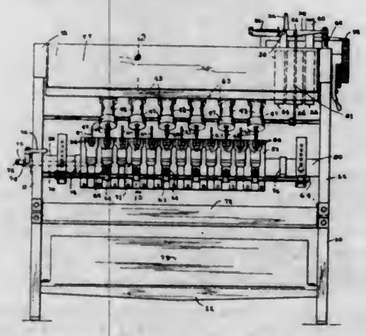
An alarm device comprising in combination with a stationary object and a movable object, of a plate fixed on the stationary object, a spring actuated lever arm pivoted on said plate to swing in a horizontal plane outwardly into the path of said movable object, spring keepers on said plate to engage opposite edges of said arm when extended outwardly in spaced parallel relation therewith, a hammer carried by said arms, and a cartridge accessible through said plate by the hammer.

1,632,894. NURSING BRASSIÈRE. JESSIE M. HABERKAMP, Chicago, Ill., assignor to The Charles H. Scott Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 10, 1923. Serial No. 667,671. 1 Claim. (Cl. 2—42.)



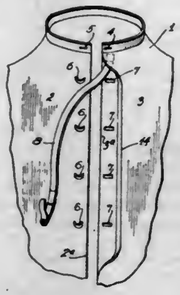
A nursing bandeaux the bosom part of which includes a breast receiving member formed from a single flat piece of fabric, the ends of which are deeply notched in horizontal alinement, and the arms formed thereby being mutually overlapped at their outer ends, whereby said member is form-fitted to the breasts.

1,632,895. CLEANER. THOMAS HAGELTHORN, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 6, 1923. Serial No. 623,151. 2 Claims. (Cl. 183—58.)



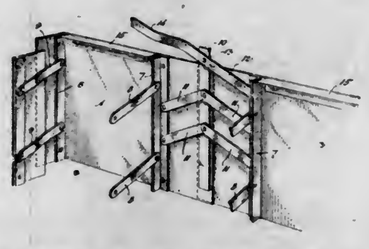
1. A cleaner comprising an enclosure, a plurality of screens dividing said enclosure into two compartments, one above and the other below the screens, an exhaust duct connected with said upper compartment, said lower compartment terminating in a storage receptacle, an intake passage connected with said lower compartment, and a plurality of upwardly inclined spaced baffles arranged between the screens and the storage receptacle and in line with said intake passage whereby the incoming medium is distributed at a plurality of points to said screens and is directed away from said storage receptacle.

1,632,896. EXHAUST DEVICE FOR ENGINES. HERBERT T. HERR, Merion, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 31, 1920. Serial No. 434,368. 2 Claims. (Cl. 60—32.)



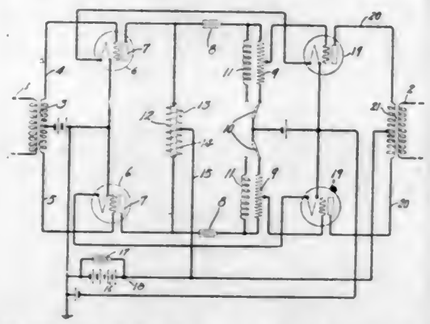
1. A means for utilizing heat energy transmitted by the walls of an internal combustion engine having a cylinder with a fuel admission valve and an exhaust valve communicating with one end thereof, comprising water jackets for the walls of the cylinder, a steam separating chamber, means for producing a positive circulation of water through the water jackets and steam separating chamber for generating a continuous supply of steam, a chamber, means for delivering exhaust gases through the exhaust valves to the chamber, an ejector arranged to maintain a sub-atmospheric pressure in the chamber and the exhaust means, and a conduit for delivering a continuous supply of steam from the separating chamber to the ejector, whereby a sub-atmospheric pressure is maintained within the cylinder during the exhaust stroke of the engine for the purpose of producing a secondary power stroke upon the exhaust stroke of the engine.

1,632,897. THREAD-CUTTING MACHINE. ARTHUR S. HOLMES, Oshkosh, Wis. Filed Sept. 11, 1922. Serial No. 587,452. 5 Claims. (Cl. 10—139.)



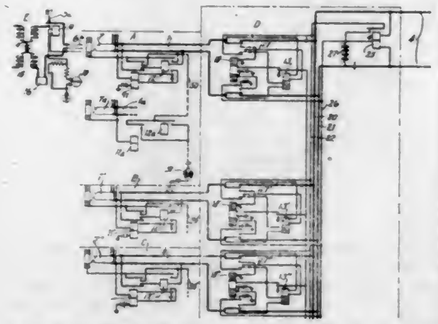
3. In a machine of the class described, a frame; a power shaft rotatably mounted in said frame; a plurality of rotatable spindles driven by said shaft, each of said spindles being provided with means for rigidly holding a threading tool; tools carried by said holding means; a transverse slide bar rigid with said frame; a jig carriage slidably mounted on said bar; a plurality of sets of jigs slidably mounted on said carriage for movement axially of said tools; means for moving said carriage transversely of said tools to bring different sets of jigs into approximate alignment therewith; means for moving said sets of jigs axially of said tools, means for reversing the motion of said shaft; and means carried by said jigs for actuating said reversing means.

1,632,898. FASTENER FOR SHIRTS, COATS, AND THE LIKE. JOHN A. HUGHSON, New York, N. Y. Filed Jan. 24, 1927. Serial No. 162,954. 4 Claims. (Cl. 2—128.)



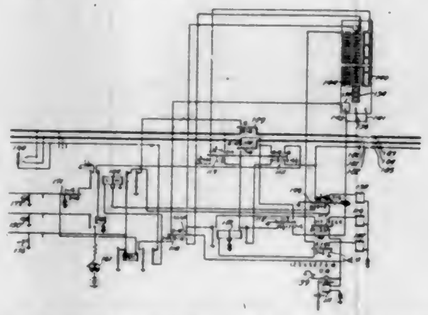
1. A garment provided with an opening extending downwardly thereof, a series of loops secured to one side of the opening in vertical spaced apart relation to one another, and adapted to extend through correspondingly positioned holes formed in the garment adjacent the opposite side of the opening, when said latter side of the opening is in overlapped relation with respect to the former side, a tongue permanently secured at its upper end to the overlapping side of the opening above the uppermost hole therein and which tongue is adapted to be threaded downwardly through the several loops in succession after said loops have been passed through the holes, and a flap sewed to the overlapping side of the opening and adapted to normally overlie the holes, loops and tongue for the purpose of covering and concealing the same.

1,632,899. COLLAPSIBLE MOLD CORE. COLIN HUTCHINS, Leamington, Ontario, Canada. Filed Nov. 1, 1924, Serial No. 747,207, and in Canada Nov. 22, 1923. 3 Claims. (Cl. 25—128.)



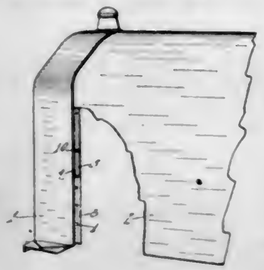
1. A collapsible core comprising front and rear wall sections, each comprising a pair of relatively extensible angle plates, toggle means for extending said plates, a lever for the operation of said toggle means, links connecting the front wall sections to the rear wall sections, and means whereby one of said sections may be lifted relatively to the other to facilitate removal of said core from a mold after use.

1,632,900. REPEATER CIRCUITS FOR MULTIPLEX SYSTEMS. JACOB S. JAMMER, Cumberland, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 6, 1921. Serial No. 482,708. 1 Claim. (Cl. 179—171.)



An amplifier circuit for preventing modulation during repeating and comprising a pair of space discharge devices, each having a cathode, an anode and a grid element, an incoming circuit, an outgoing circuit, means connecting said incoming circuit differentially to the grid and cathode elements of said two devices, means connecting the cathode and anode elements of said devices equally and oppositely to said outgoing circuit, said last mentioned means including a coupling impedance with its mid-point connected to the cathodes of said devices and having its outer terminals connected through respective wave transmission paths to the anodes of said devices, and means supplying space current between the cathodes and anodes of said devices comprising a source of current and a pair of windings on a unitary core, said windings having a common terminal connected through said source of current to said cathodes and the outer terminals connected to said anodes, the direction of said windings being such that the windings offer low impedance to current components of the same sign flowing simultaneously between their common terminal and the outer terminals but offering high impedance to components tending to flow from one anode terminal to the other whereby said winding and core structure discriminates against the transmission to the outgoing circuit of the undesired components with respect to the desired components.

1,632,901. TRUNKING SYSTEM. HERBERT B. JOHNSON, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 30, 1925. Serial No. 65,744. 5 Claims. (Cl. 179—48.)

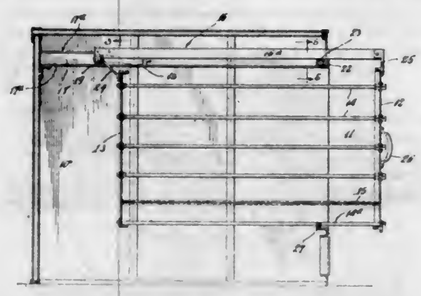


1. In a telephone system, a junction office, a common trunk comprising tip and ring conductor outgoing therefrom, a plurality of branch trunks each comprising tip, ring and sleeve conductors incoming thereto and normally having their tip and ring conductors connected in multiple to said common trunk, and means responsive to the seizing of any one of said branch trunks for disconnecting the tip and ring conductors of all of the said branch trunks from the tip and ring conductors of the common trunk except those of the seized branch trunk and for establishing a busy condition on the sleeve conductor of said disconnected branch trunks.

1,632,902. TESTING SYSTEM. LEWIS H. JOHNSON, Madison, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1922. Serial No. 609,640. 14 Claims. (Cl. 179—175.)

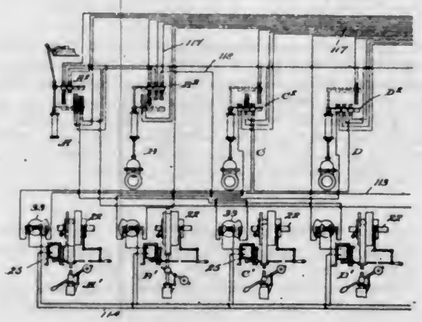
1. In a testing system for testing a plurality of subscribers' lines, a cord circuit, means including an automatic switch for extending said cord circuit to any of said lines, a plurality of testing devices, means for associating any of said devices with said cord circuit for testing the selected line, and means for automatically connecting said cord circuit in operative relationship with the selected line responsive to the setting of the automatic switch upon the selected line.

1,632,903. ANTIRATTLE JOINT STRIP. HANS G. JORGENSEN, Erie, Pa. Filed May 25, 1923. Serial No. 641,374. 3 Claims. (Cl. 180—69.)

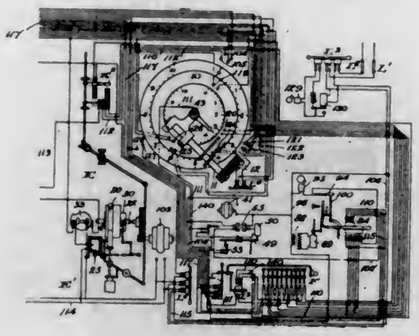


1. An anti-rattle joint strip of yielding material with projections formed on one face adapted to enter perforations on a joint member to secure the strip in place, the yielding material permitting a variation in the distance between the projections.

1,632,904. LOAD SUPPORTING AND CARRYING DEVICE. JULIUS JUDELSON, New York, N. Y. Filed June 20, 1924. Serial No. 721,179. 6 Claims. (Cl. 211—7.)



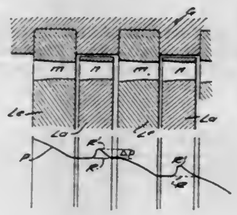
1. A device of the character described including a supporting structure, a pair of parallel tracks arranged



wholly within said structure and fixed to the same adjacent the top thereof, a carrier bar, rollers on the bar mounted to run on said tracks, a roller having a fixed

axis mounted in the supporting structure for said bar to ride on, and a load support carried by said bar, said carrier bar being supported entirely by said rollers.

1,632,905. SYSTEM FOR AUTOMATIC VALVE CONTROL. JAMES S. KENNEDY, Yonkers, N. Y., assignor to The Bartlett Hayward Company, a Corporation of Maryland. Original application filed Dec. 21, 1921, Serial No. 524,038. Divided and this application filed Jan. 4, 1923. Serial No. 610,729. 17 Claims. (Cl. 137—144.)



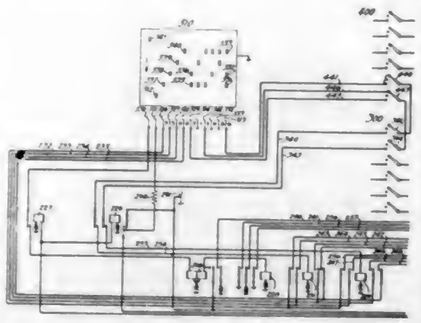
1. In apparatus of the class described, an intermittent actuator therefor and a more rapid continuous acuator therefor, electromagnetic means for shifting from the intermittent to the continuous actuator, a circuit for said means including a special contact member in the controller switch, and automatic means for opening said circuit when the controller switch reaches the normal or zero point.

1,632,906. LENS-CLAMPING BRACKET FOR USE WITH PINCE-NEZ GLASSES AND SPECTACLES. JULES LEFÈVRE, Paris, France. Filed June 25, 1924, Serial No. 722,230, and in France May 21, 1924. 3 Claims. (Cl. 88—42.)

1. An improved non-deformable lens clamping bracket for pince-nez glasses and spectacles having spaced bracket arms between which a lens may be disposed and clamped and also having a base portion extending from the bracket arms arcuately in a direction along the edge face of the clamped lens, said base portion having a reinforcing rib extending lengthwise of the same between the ends and projecting from the base portion in a plane substantially parallel to the plane of the lens, whereby said base portion will closely fit and furnish an unyielding abutment for the clamped end of the lens.

1,632,907. HIGH-PRESSURE STEAM TURBINE AND METHOD OF UTILIZING HIGH-PRESSURE STEAM THEREIN. FRANZ LÜSEL, Brunn, Czechoslovakia. Continuation of application Serial No. 731,722, filed Aug. 13, 1924, and in Denmark Mar. 3, 1924. This application filed May 19, 1925. Serial No. 31,463. 11 Claims. (Cl. 253—69.)

1. A high pressure multistage steam turbine of the disc wheel low velocity type having its guide channels constructed and proportioned with reference to each other and the steam pressure in each turbine part for fluid velocities according to the formula



$$V=114-\frac{48p}{100}$$

where V is the relative steam velocity in meters per second and p is the steam pressure in atmospheres.

1,632,908. REGISTER-CONTROLLING SYSTEM. ALBEN E. LUNDELL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 21, 1923. Serial No. 663,976. 4 Claims. (Cl. 177—353.)

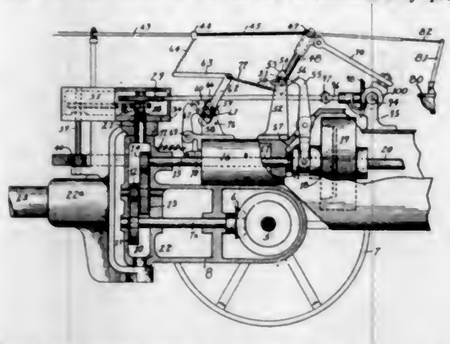
2. In a telephone exchange system, an impulse sending device, a registering device comprising a plurality of groups of relays, there being an equal number of relays in each of said groups, energizing circuits for said relays,

means to simultaneously prepare said energizing circuits of a set of corresponding relays in all groups, and means

to simultaneously and selectively complete circuits for desired ones of said corresponding relays under the control of said impulse sending device.

1,632,909. BUFFING AND CLEANING OF METAL PARTS. SUMNER REDWAY MASON, Wilmette, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 28, 1921. Serial No. 456,479. 11 Claims. (Cl. 51—280.)

1. A buffing compound comprising an abrasive, a suitable binder of fat and wax, and a small percentage of a metal capable of free reaction with an alkaline solution to cause a generation of hydrogen gas to remove the compound from a buffed surface.

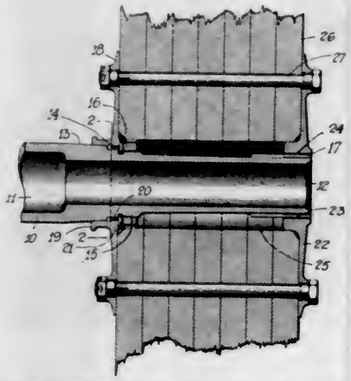


1,632,910. SAFETY-RAZOR-BLADE HOLDER. EDWARD T. MIDDLECOFF, St. Louis, Mo. Filed Mar. 14, 1925. Serial No. 15,452. 2 Claims. (Cl. 30—25.)

1. A device of the character described comprising a handle member having an opening in one side thereof, a flange extending nearly radially from one side of said opening in a position engageable by the hand when said handle member is engaged as a handle, a number of ears extending from near one end of said flange on the side toward said opening, and a shoulder at the outer end of said flange.

1,632,911. LINE CONTROL TRACTOR. JAMES W. MOWBRAY, Windsor, Ontario, Canada, assignor, by mesne assignments, to The Automotive Corporation, Fort Wayne, Ind., a Corporation of Delaware. Filed Sept. 13, 1918. Serial No. 253,857. 12 Claims. (Cl. 180—77.)

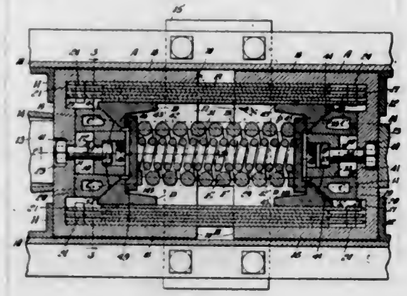
1. In a tractor, a power plant and driving mechanism therefor, a clutch interposed between the power plant and driving mechanism for connecting or disconnecting the same, control mechanism for operating the clutch comprising a line or cable for operating the mechanism from a distance, a lever for actuating the clutch to which the line is connected, a spring adapted to cause engagement of the clutch, a dash pot restricting movement of the lever by the spring whereby gradual engagement of the clutch by the spring is automatically pro-



duced, and means whereby succeeding pulls on the line alternately move, the lever to disengage the clutch and release, it to action by the spring.

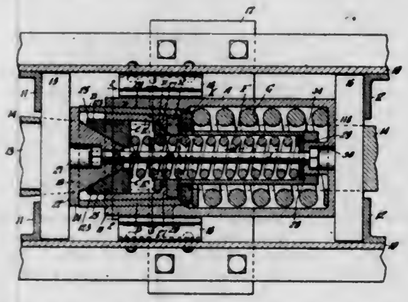
1,632,912. WEFT-FEEDING DEVICE FOR WEAVING LOOMS. ALVARO MULLOR, Sceaux, France, and LOUIS CARRIOL, Ghent, Belgium. Filed Mar. 23, 1926. Serial No. 96,673, and in France Mar. 23, 1925. 10 Claims. (Cl. 139—125.)

1. In a loom, the combination of a lay, a weft supply, a shuttle on said lay, a fork-shaped thread-carrier on said shuttle having its tines in a plane extending transversely of the shuttle, thread-presenting means on said lay, a downwardly extending thread-gripping member on said lay for picking up the weft thread from said thread-carrier, and means for causing said thread-gripping member to drop the weft thread at the selvedge.



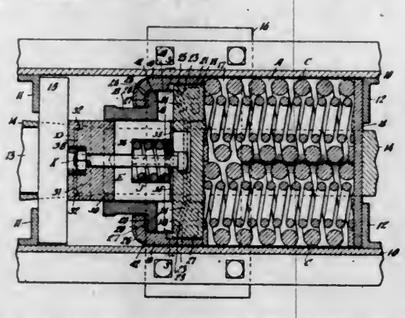
1,632,913. PROPELLER MOUNTING. ARTHUR NUTT, Buffalo, N. Y., assignor to Curtiss Aeroplane and Motor Company, Inc., Garden City, Long Island, N. Y., a Corporation of New York. Filed Feb. 18, 1924, Serial No. 693,472. Renewed Feb. 14, 1927. 2 Claims. (Cl. 170—173.)

1. In a propeller mounting, a propeller shaft, a propeller having a center bore formed therein thru which one end of the propeller shaft is adapted to extend, an



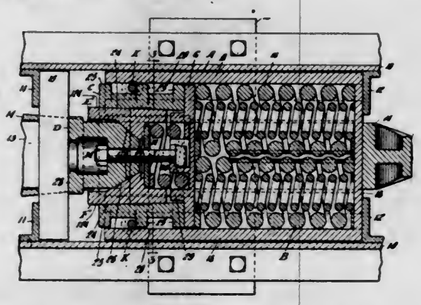
inner and an outer face plate mounted on said shaft and between which the propeller is clamped, means enclosed within the center bore of the propeller to fasten the inner plate on said shaft, and bolts carried thru the propeller from one to the other of said face plates to secure the outer face plates on said shaft, said bolts constituting the sole means of holding said outer face plate in place.

1,632,914. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Aug. 31, 1922, Serial No. 585,448. Renewed Feb. 17, 1927. 7 Claims. (Cl. 213—33.)



1. In a friction shock absorbing mechanism; the combination with a plurality of groups of intercalated relatively longitudinally movable friction plates; of front and rear followers co-acting with said plates to produce relative movement of the same; means for limiting lateral movement of said plates; a spring resistance between said sets of plates; and wedge-acting means at opposite ends of said spring resistance interposed between the same and the adjacent follower and co-acting with the friction plates, each of said wedge-acting means including a plurality of wedge blocks associated with each follower, and a plurality of co-acting wedge shoes associated with the end of the spring resistance, whereby pressure is set up between said intercalated plates during the compressive action of the mechanism.

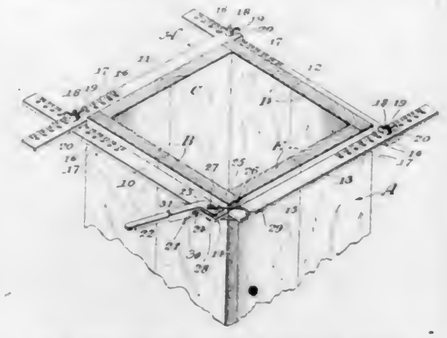
1,632,915. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Apr. 30, 1925, Serial No. 26,899. Renewed Apr. 18, 1927. 10 Claims. (Cl. 213—22.)



1. In a friction shock absorbing mechanism, the combination with a column-load-sustaining member; of a plurality of friction elements disposed at one end of said member, all of said elements being movable as a unit during the compression stroke; means having limited movement with reference to said member co-operating with the other end thereof for arresting movement of certain of said elements after a predetermined compression of the mechanism and permitting the remaining friction elements to be moved relatively thereto; a follower, said follower and member being movable relatively toward and from each other; combined restoring and cushioning spring means; and lateral pressure creating means co-operating with said friction elements for pressing the same into intimate frictional contact upon relative approach of said follower and member.

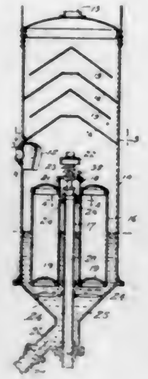
1,632,916. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed May 27, 1925. Serial No. 33,162. 11 Claims. (Cl. 213—24.)

1. In a friction shock absorbing mechanism, the combination with a column element; of a friction shell, said shell and element having limited relative movement; a main spring resistance; a plurality of intercalated friction plates within the shell, said plates and column element being relatively movable; lateral pressure-creating means co-operating with said plates; pressure-transmitting means adapted to engage certain of said plates to force the same rearwardly of the mechanism; and means for arresting movement of the remaining plates after a predetermined compression of the mechanism.



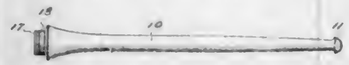
1,632,917. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Aug. 10, 1925. Serial No. 51,106. 7 Claims. (Cl. 213—24.)

1. In a friction shock absorbing mechanism, the combination with a spring cage open at one end; of a friction shell having interior friction surfaces, said shell and cage having limited relative movement; means restricting the opening of said cage and engaging the shell for detachably connecting the shell to the cage; a friction wedge system co-operating with the friction shell; twin arranged



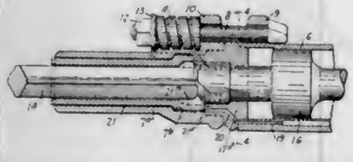
springs within the cage; and a spring follower co-operating with the friction system, said means for detachably connecting the shell to the cage being removable to permit free insertion of the spring and spring follower through the open end of the cage.

1,632,918. CEMENT-FORM HOLDER. GEORGE H. OLSON, Bridgeport, Conn. Filed Oct. 1, 1925. Serial No. 59,828. 3 Claims. (Cl. 144—291.)



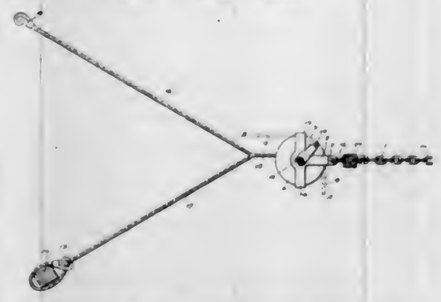
1. In a holder of the character described, a bifurcated clamping lever and a holder bar upon which the lever is pivoted, said bar being arranged between legs of said lever, and a hook link adapted to engage a different holder bar and having its ends, respectively, pivoted upon said lever legs, the link and lever providing a toggle adapted to be swung beyond a dead center position to lock said bars to each other, and the end portion of said lever between its legs being adapted to arrest the movement of said toggle when it has passed said dead center position.

1,632,919. GAS AND OIL SEPARATOR. GUSTAVE A. OVERSTROM, Los Angeles, and GEORGE OVERSTROM, Taft, Calif. Filed July 5, 1923. Serial No. 649,396. 19 Claims. (Cl. 183—2.7.)



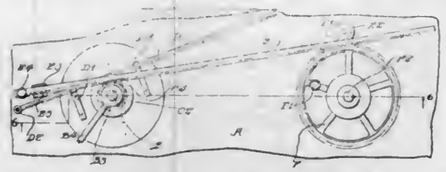
1. In a separating apparatus for treating oil and gas, a tank having a supply connection thereto and a gas outlet in its top, a delivery pipe connection extending into the tank through the bottom thereof, a float arranged in the tank and carrying a valve to control the upper open end of said delivery pipe, said float arranged to encompass said delivery pipe and to provide a space therebetween and float guides in said space.

1,632,920. TOILET NOVELTY. WILLIAM F. PATTEN, Washington, D. C. Filed Feb. 1, 1926. Serial No. 85,274. 9 Claims. (Cl. 128—260.)



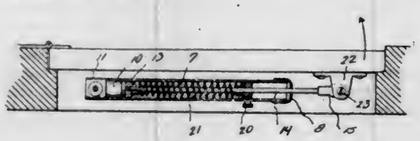
1. In a breath deodorizer, a mouthpiece for insertion in the mouth of the user, a deodorant reservoir, and means for feeding deodorant from the reservoir to the mouthpiece by capillary action.

1,632,921. FRONT HEAD FOR PERCUSSIVE DRILLS. ERNEST PENBERTHY, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 30, 1924. Serial No. 740,755. 8 Claims. (Cl. 121—10.)



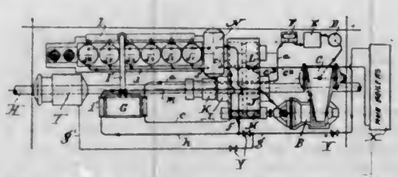
6. The combination with a drilling machine of the percussive type, of a front head therefor, a cylindrical bushing within said head serving as a chuck for the drill steel, means independent of said head for keying said bushing to said machine for rotation therewith, and means for continuously admitting fluid pressure in limited amount to the interior of said head and to the bore of said bushing to keep out detritus thereby to prevent excessive wear.

1,632,922. TOWING AND HAULING DEVICE. CHARLES SAGAR, Seattle, Wash. Filed Dec. 15, 1926. Serial No. 154,971. 4 Claims. (Cl. 280—33.14.)



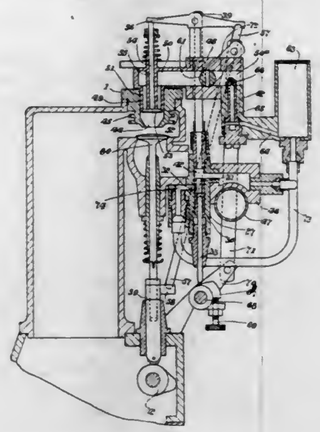
1. A combination towing and hauling device for drawing automobiles upon a roadway from one side thereof, and for towing automobiles along the roadway from power applied in one direction; with a hollow sheave block with a hub rotatably mounted across the center of the block, with a yoke rotatably mounted over the ends of the hub and extending outward to a point beyond the rim of the block, with a chain extending from the yoke for attachment to a moving power, with resilient means mounted over the chain and connected thereto at one end and the other end connected with the yoke, with a handle for turning the hub, and a towing cable adjustably attached at one end through the hub whereby the cable may be wound about the hub for transportation inside the block, or may be extended outward from the hub, with the outer end of the cable terminating in two points with attachment hooks thereon for connection with an automobile to be towed.

1,632,923. MECHANISM FOR CONVERTING MOTION. ALFRED F. SANFORD, Knoxville, Tenn. Filed Mar. 11, 1925. Serial No. 14,791. 12 Claims. (Cl. 74—27.)



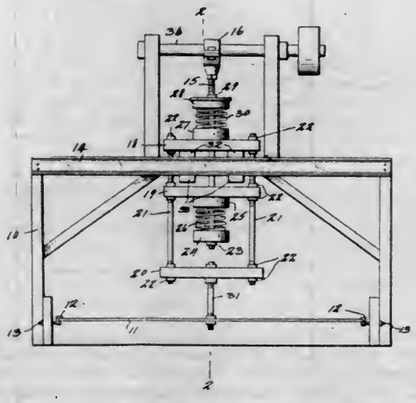
1. In a mechanism of the kind described, the combination of a rotatable shaft, a turntable fixed on said shaft, a member loosely surrounding said shaft and having radial gear teeth, and a rack bar supported on the turntable in engagement with said gear teeth and confined for endwise movement on the turntable, substantially as described.

1,632,924. DOOR CLOSER. HENRY SCHMIDT, Detroit, Mich. Filed Aug. 6, 1926. Serial No. 127,555. 2 Claims. (Cl. 16—76.)



1. In a door closure of the character described, a relatively elongated cylinder, a pivotal connection between one end of the cylinder and the door frame, a piston rectilinearly slidable within the cylinder and attached at one end to a piston rod extending outwardly through the unpivoted end of said cylinder, an abutment slidably arranged upon the piston rod within the cylinder, spring tension means between the piston and said abutment, complementary construction between the abutment and the cylinder whereby the same may be secured in predetermined adjusted relation with respect to the cylinder, and a pivotal connection between the outer end of the piston rod and the door.

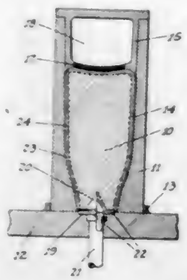
1,632,925. POWER PLANT FOR WARSHIPS. WILHELM SCHMIDT, Cassel-Wilhelmshohe, Germany, assignor to Schmidt'sche Heissdampf-Gesellschaft m. b. H., Cassel-Wilhelmshohe, Germany, a German Corporation. Filed Mar. 30, 1921. Serial No. 457,143, and in Germany Nov. 9, 1917. 2 Claims. (Cl. 60—11.)



1. In a power plant for ships, a main power plant for propelling the ship at speeds above cruising speeds, a generator for supplying said main power plant with steam, an additional power plant for propelling the ship at different cruising speeds, said additional plant comprising an internal combustion engine and a steam engine, another generator in which steam is produced by the waste heat of said internal combustion engine, and connections whereby said steam engine may receive steam either from the last-named generator only, in the case of low cruising speed, or from both generators, in the case of high cruising speed.

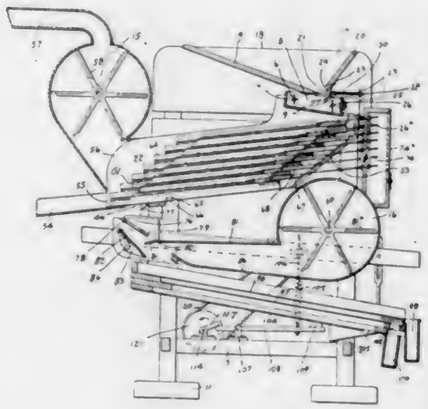
1,632,926. MEANS FOR SUPPLYING LIQUID FUEL TO INTERNAL-COMBUSTION ENGINES. DONALD SCOTT, Glasgow, Scotland. Filed Sept. 17, 1925, Serial No. 56,836, and in Great Britain Sept. 20, 1924. 7 Claims. (Cl. 123—122.)

1. In an internal combustion engine, a member heated by the heat of combustion in the interior of the cylinder and adapted to vaporize heavy fuel admitted to said cylinder in contact with said member, means for governing the admission of fuel and air to the cylinder, a passage for fuel and air leading to said governing means, throttle means controlling said passage, means for preheating the fuel before its admission to said passage, means for regulating the proportion of fuel passing said pre-heating means, and means interconnecting said throttle means and regulating means so as to vary the temperature of the fuel proportionately with the load on the engine.



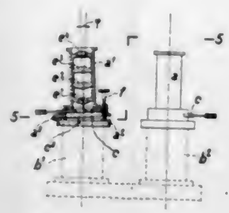
1,632,927. SCREEN-VIBRATING MECHANISM. EDWARD HASKINS SHACKELFORD, Jr., Joplin, Mo., assignor to Hebbard Manufacturing Company, Joplin, Mo., a Corporation of Missouri. Filed Aug. 5, 1926. Serial No. 127,314. 7 Claims. (Cl. 74—14.)

1. In a mechanism of the character described an element to be reciprocated, a reciprocating rod, a yoke connected to the element and including a bumping element



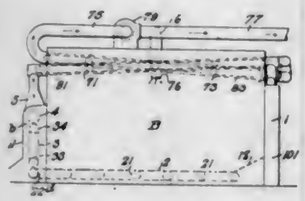
through which the rod loosely passes, springs carried by the rod and bearing against opposite faces of the bumping element to thus resiliently transmit movement of the rod to said yoke, and cushions disposed in the path of movement of said bumping element on opposite sides thereof, the bumping element and the cushions being relatively adjustable toward or from each other.

1,632,928. MANUFACTURE OF PAPER-PULP BOTTLES AND THE LIKE. JAMES SHAW, San Francisco, Calif., assignor to Belle H. Shaw, Lodi, Calif. Filed June 24, 1926. Serial No. 118,152. 5 Claims. (Cl. 92—54.)



1. A method of making a paper pulp vessel in a mold consisting in placing in the mold chamber, a core made of ice, pouring the pulp into the mold around the core, and allowing the core to melt.

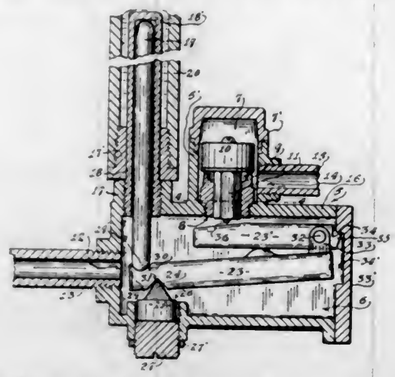
1,632,929. CEREAL CLEANER AND SEPARATOR. CHARLES A. SHULTZ, Monticello, Ind., assignor to Lockwood & Lockwood, Indianapolis, Ind., a Firm. Filed Apr. 19, 1924. Serial No. 707,610. 16 Claims. (Cl. 209—34.)



1. In a cereal cleaning machine, the combination with a fan, and a closed compartment adjacent thereto and communicating therewith including an imperforate bottom, of a discharge outlet near the lowest end of said bottom for the separated cereal grain, a second discharge outlet adjacent but spaced from the former for the longer and refused particles, a third discharge outlet adjacent thereto for the lightest particles and connecting said compartment with said fan, and grain separating means in the compartment separating the grain discharge outlet from the other outlets.

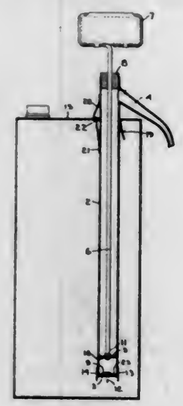
1,632,930. ADDITIONAL DEVICE FOR BINOCULAR MICROSCOPES WITH ONE OBJECTIVE. HENRY SIEDENTOPF, Jena, Germany, assignor to Firm of Carl Zeiss, Jena, Germany. Filed Sept. 22, 1925, Serial No. 57,926, and in Germany Oct. 16, 1924. 3 Claims. (Cl. 88—39.)

1. Additional device for binocular microscopes with one objective, consisting of a pair of astronomical telescopes of like magnifying power, a fastening device for each of the telescopes mounted on the telescope, adapted to fit over the ocular of a microscope, and an eccentric diaphragm disposed in front of the objective of the telescope.



1,632,931. OPENING, MIXING, AND BLENDING COTTON AND OTHER FIBROUS MATERIALS. ROBERT WILLIAM BELL SPARKES, Bolton, England. Filed June 13, 1924, Serial No. 719,900, and in Great Britain June 13, 1923. 15 Claims. (Cl. 19—65.)

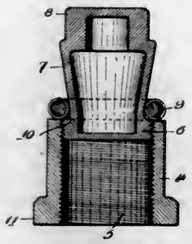
1. In apparatus for opening, mixing, and blending cotton and other fibrous materials the combination of a horizontal feed lattice, a spiked vertical lattice adapted to receive material from the feed lattice, a rotary doffer adapted to remove the material from the vertical lattice, air trunks leading from the vicinity of the doffer to the feed lattice the said trunks being arranged with rectilinear portions, feed lattices mounted within the said rectilinear portions of the air trunks, and means for producing a flow of air in the trunks.



1,632,932. THERMOSTAT. FRANK STRAUB, Los Angeles, Calif. Filed Feb. 2, 1924, Serial No. 690,119. Renewed May 2, 1927. 3 Claims. (Cl. 236—102.)

1. In a device of the character described, a box-like casing open at one end, a removable closure for said end, a bottom wall to said casing, a screw plug in said bottom wall adjustable from the exterior of said casing, a fulcrum element seated loosely on said plug and disposed within said casing, a primary lever in said casing mounted on said fulcrum element, a thermostat rod vertically disposed with an end resting on said lever, a secondary

lever fulcrumed on said primary lever, and a stop element carried by said closure disposed in the path of movement of an end of said secondary lever.



1,632,933. COMBINED PUMP AND CAN OPENER. ROY A. THORNTON, North Weymouth, Mass. Filed Oct. 26, 1925. Serial No. 64,797. 2 Claims. (Cl. 221—83.)

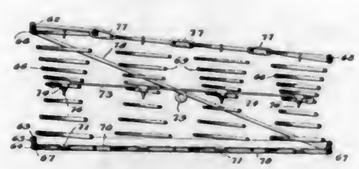
1. A combined pump and can opener comprising a pump cylinder having an inlet port at its lower end, an inlet valve for said port, a piston operating in the cylinder, a can-puncturing centering pin extending from the bottom end of the pump and by which the top of a can may be punctured, and tow cutters extending from the bottom of the pump for cutting an opening in the can as the pump is turned about the centering pin, said cutters being situated in a non-diametrical relation, whereby less than one-half a revolution of the pump will make a circular cut in the can top slightly less than a complete circle so that by bending the material thus cut down into the can a hole is produced into which the pump barrel may be inserted.

1,632,934. GREASE CUP. NICHOLAS W. TRAUTNER, St. Paul, Minn. Filed Apr. 4, 1925. Serial No. 20,656. 4 Claims. (Cl. 184—48.)

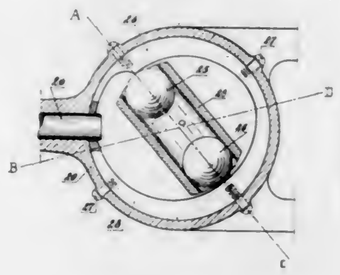
1. A grease cup comprising, a threaded body having an end opening, a plunger threaded to fit said body and adapted to be turned into the same, a conical portion arranged on said plunger to extend, small end foremost, into said opening, and a circular spring disposed about

said conical portion and in engagement with the open end of said body, said spring being arranged to resiliently oppose turning of said plunger in said body.

1,632,935. OIL-WELL UTILITY GIN POLE. CHARLES EDWARD TURNER and GEORGE ROBERT MILTON, Covington, Okla. Filed May 5, 1925. Serial No. 28,201. 1 Claim. (Cl. 254—145.)



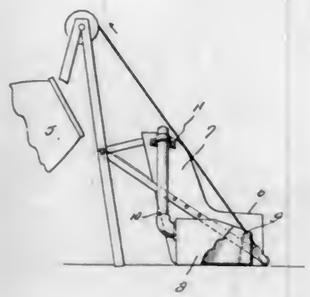
In an oil well utility gin pole, a sectional pole comprising a base member, a top member, and intermediate members, a transverse member connected to the lower end of said base member, inclined brace members engaging on the outer ends of said transverse member and connected to the top of said base member as supporting means for a winch, a sheave rotatably mounted in the end of said top member, a cable guiding means 6, and an auxiliary member 7, said member positioned in working relation with said sheave, a bail pivotally connected to the axle of said sheave, slip joint couplings to receive the ends of said members, an annular flange in said coupling functioning as a stop or bearing for said members, all substantially as shown and for the purpose described.



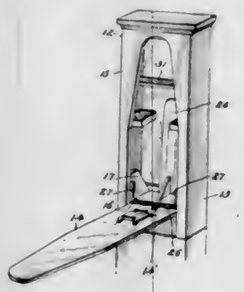
1,632,936. SPRING STRUCTURE. DESIRE H. VAN HOVE, Jackson, Mich., assignor to Reynolds Spring Company, Jackson, Mich., a Corporation of Delaware. Filed June 11, 1921. Serial No. 476,814. 1 Claim. (Cl. 5—252.)

A spring structure including a base, a set of outer border coil springs and a set of inner coil springs mount-

ed upon the said base, the border springs being of greater gauge than the inner springs, each of the springs of both the inner and outer sets having double cone portions of approximately uniform size and of different pitch to form in each spring a relatively stiff lower conical shock-absorbing base portion and a relatively resilient upper inverted conical portion cushioned by the base portion, and connections between the central portions of the springs by which any considerable displacement of the central portion of any one spring is resisted by the resilience of the other springs.



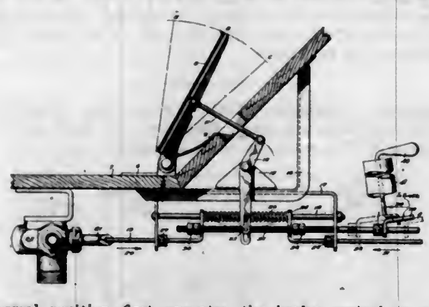
1,632,937. BALANCED ROTARY PERCUSSION IMPLEMENT. GEORGES ERNEST WAGNER, St.-Etienne, France. Filed May 13, 1926, Serial No. 108,931, and in France Jan. 16, 1926. 4 Claims. (Cl. 125—33.)



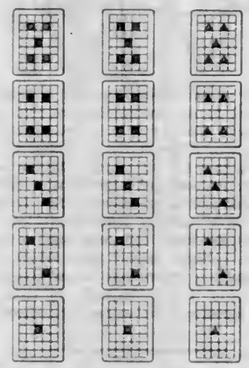
1. A rotary percussion implement, comprising, in combination, a casing; a tool holder mounted therein, a rotary actuating element disposed in said casing; a pair of impact bodies carried by said element and arranged diametrically opposite each other; and a cam within said casing to guide said bodies and permit them to strike the holder during their rotation with the actuating element, said cam imparting to both bodies simultaneously movements which are virtually symmetrical with relation to the axis of rotation of said actuating element.

1,632,938. WATER-SUPPLY ATTACHMENT FOR CONCRETE MIXERS. PAUL W. WILCOX, Troy, Kans. Filed Jan. 22, 1927. Serial No. 162,851. 3 Claims. (Cl. 83—73.)

1. In combination with a concrete mixing machine including the mixing bowl and the swinging material receiving trough provided with a discharge chute; a water tank secured on the side of the trough and a discharge pipe extending from the tank along the side of the chute, the outer end of said pipe extending slightly beyond the discharge end of the chute, so that said end of said pipe will enter the mixing bowl when the trough is swung upwardly to a discharging position, whereby a supply of water will be delivered to the mixing bowl by gravity.



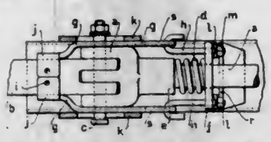
1,632,939. IRONING-BOARD CABINET. WALTER L. WILLIAMS, South Richmond, Va. Filed June 2, 1923. Serial No. 643,040. 4 Claims. (Cl. 68—10.)



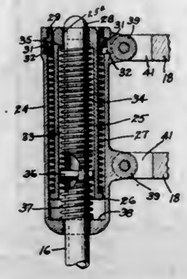
1. In an ironing board cabinet, a shaft extending horizontally across the cabinet above bottom and adjacent the front of the cabinet, an ironing board of less width than the width of the cabinet, a pair of upright brackets one at each side of the ironing board adjacent the rear end thereof, said brackets being mounted on the shaft and supporting the ironing board, the said brackets being spaced from the side walls of the cabinet, and spring means disposed between the brackets and the walls of the cabinet for maintaining the ironing board in upright position.

1,632,940. CONTROL PEDAL. EDWARD A. WRIGHT, Fresno, Calif. Filed Aug. 2, 1926. Serial No. 126,578. 8 Claims. (Cl. 192—3.)

7. A control device for an engine driven vehicle provided with brakes comprising a manipulable member normally held in brake applying position, means connecting the member with the brake control and with the engine control and a lost motion device in said means whereby movement of the member in one direction from normal position first operates the brake control to release the brakes and then operates the engine control to increase the power output of the engine.

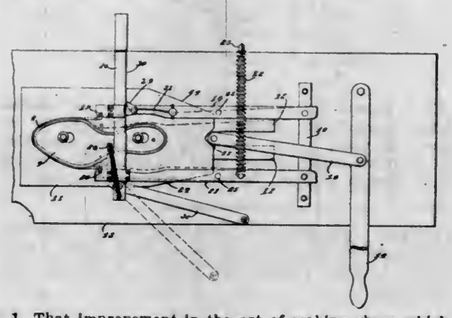


1,632,941. GAME. HARRY S. ABELL, McLean, Va. Filed Apr. 22, 1924. Serial No. 708,238. 7 Claims. (Cl. 273—152.)



1. A game having a plurality of component playing units, the units being divided into three cross groups, each group being designated by a determining factor, the component units of one cross group having determining factors identifying them as being in a definite relation to each of the other cross groups.

1,632,942. REPOSITIONING DEVICE FOR SWINGING COUPLING HEADS ON RAILROAD VEHICLES. MAXIMILIAN ALMA and CARL EGON ALMA, Vienna, Austria. Filed Aug. 30, 1926, Serial No. 132,548, and in Austria June 24, 1926. 6 Claims. (Cl. 213—20.)

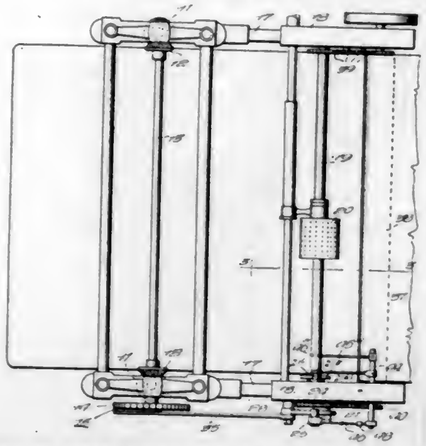


1. A re-positioning device for laterally oscillating coupling heads on railway vehicles, comprising a spring supported on a part of the draw bar mechanism which is displaceable only along the length of the vehicle, a thrust collar for this spring slidable on the said part of the draw bar mechanism, connecting members between this thrust collar and the coupling head shaft, which connecting members are adapted to swing relatively to the said shaft and to the said thrust collar and operate to press said collar against the spring, so that when the coupling head shaft swings outwards, the collar is moved towards the opposing seating for said spring stressing the spring and causing it to tend to replace the parts in their normal positions.

1,632,943. RESILIENT MOUNTING FOR WASHING-MACHINE PLUNGERS. EUGENE F. BEEBE, Minneapolis, Minn. Filed Sept. 14, 1925. Serial No. 56,241. 6 Claims. (Cl. 68—19.)

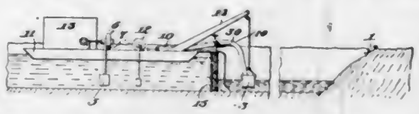
1. A device of the class described including a cylinder having a plurality of telescoping members mounted therein, one of the members having a vacuum cup, and means for yieldably retaining said members in normal retracted position.

1,632,944. PROCESS FOR MAKING SHOES. CHARLES C. BLAKE, Brookline, Mass., assignor to C. C. Blake, Incorporated, Boston, Mass., a Corporation of New York. Filed Apr. 28, 1921. Serial No. 465,131. 4 Claims. (Cl. 12—145.)



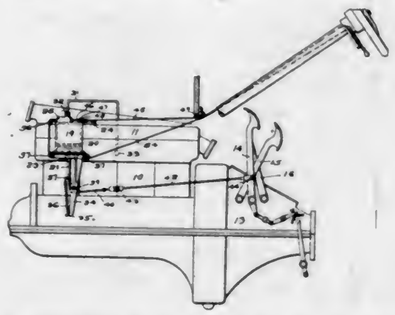
1. That improvement in the art of making shoes which consists in forming a leader, trimming an insole to an outline determined by the leader, applying a piece of material on the leader to form a binder having a definite relation to the edge of the trimmed insole, assembling an upper and the insole on a last, stretching the upper into conformity with the contour of the last about the toe of the last, temporarily securing said upper in stretched position by applying the formed binder, securing the upper directly to the insole by securing means extraneous of the binder, and removing the binder.

1,632,945. SHEET-FEEDING APPARATUS. ALBERT BROADMEYER, Harrisburg, Pa., assignor to The W. O. Hickok Mfg. Co., Harrisburg, Pa., a Corporation of Pennsylvania. Filed Oct. 8, 1924. Serial No. 742,402. 13 Claims. (Cl. 271—62.)



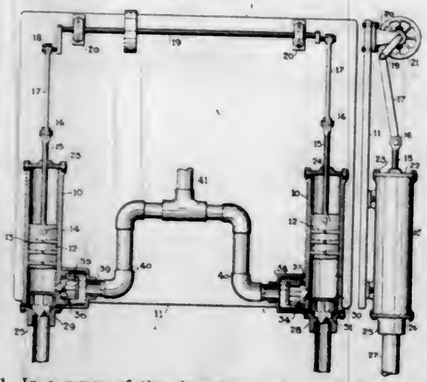
1. In sheet feeding apparatus, the combination with a vertically movable sheet supporting table, of means mounted above one margin of the table for removing sheets therefrom, and automatic mechanism for elevat-

ing the table including a controlling device having a portion that rests upon the pile of sheets placed on the table, and said portion being located alongside the sheet



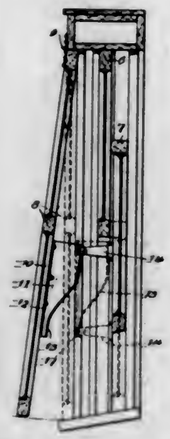
removing means in substantial line therewith and above the same margin of the table over which said sheet removing means is located.

1,632,946. PROCESS FOR THE PRODUCTION OF CANALS. VICTOR BAUMIG, Berlin-Grunewald, Germany. Filed Mar. 11, 1925. Serial No. 14,751. 8 Claims. (Cl. 37—195.)



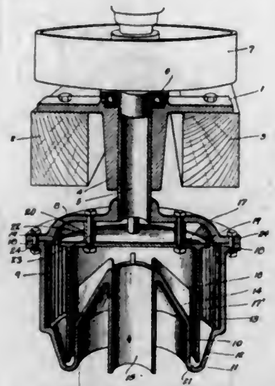
7. A process for building ship, drainage, and similar canals, comprising, washing away material to be removed by water jets in a working place, and separating in a substantially water tight manner, the working place from an adjacent finished portion of the canal.

1,632,947. PNEUMATIC GEAR-SHIFTING DEVICE. CHARLES W. BURTON, Jr., Ocean Park, Calif. Filed July 9, 1924. Serial No. 724,947. 4 Claims. (Cl. 74—81.)



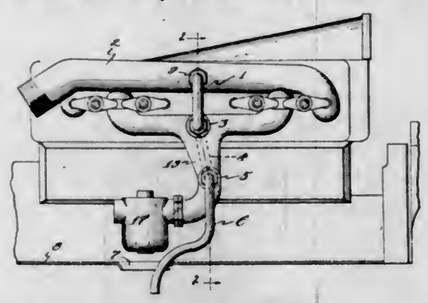
1. In combination an automobile and its transmission gearing, an operating pedal for said gearing, a steering column carried by the automobile for supporting a throttle lever, a cylinder supported upon said engine, a piston operable within said cylinder, flexible means connecting said piston with said operating pedal, means connecting said cylinder with the intake manifold of said engine for creating a suction therein, a valve carried by said cylinder for controlling the suction therein, and means carried upon said throttle lever for controlling the movement of said valve.

1,632,948. WATER PUMP. FRANCISCO CÁRDENAS, Piedras Negras, Mexico. Filed June 16, 1926. Serial No. 116,374. 4 Claims. (Cl. 103—228.)



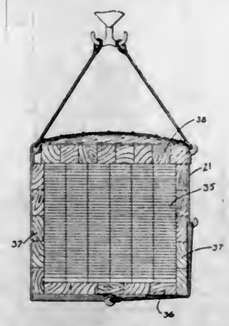
1. In a pump of the class described, a cylinder having a circumferential flange on the bottom end thereof provided with spaced apertures, a valve member comprising a valve seat, a circumferential flange on said valve member having spaced apertures therein adapted to register with the spaced apertures of said cylinder flange for attaching said valve member to the bottom of said cylinder, said valve member being provided with upper and lower screw threaded openings one on each side of said valve seat, a fluid supply pipe screw threaded in said lower opening, a valve cage screw threaded in said lower opening, and a ball disposed in said valve cage adapted to rest upon said valve seat for closing the opening therein.

1,632,949. AUTOMATIC STORM-WINDOW REGULATOR. CHRISTIAN A. CHRISTOFFERSON, St. Paul, Minn. Filed Feb. 8, 1926. Serial No. 86,850. 4 Claims. (Cl. 20—55.)



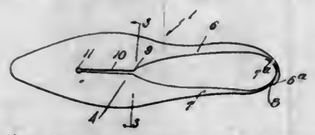
1. The combination with a window having a sliding sash and a pivoted sash, of a movement plate, adapted to be secured to one of said sashes, a cam arranged on said plate to extend obliquely between said sashes, a bracket adapted to be secured to the other of said sashes, means on said bracket adapted to operatively engage said cam, an end of said cam formed to removably receive said engaging means when secured to said sashes, said plate and bracket being adapted to swing said pivoted sash to open position when said sliding sash is opened.

1,632,950. CENTRIFUGAL SEPARATOR AND AMALGAMATOR. WILLIAM C. COLEMAN. Wichita, Kans. Filed Sept. 6, 1924. Serial No. 736,374. 7 Claims. (Cl. 209—199.)



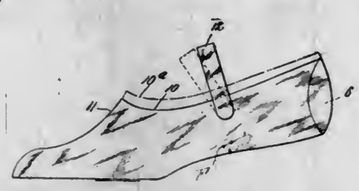
1. A centrifugal separator and amalgamator comprising an outer rotor having an inlet and an outlet, the rotor having a mercury chamber, an inner rotor in spaced relation with the first to divide the first named rotor into two communicating chambers, the two chambers communicating through a vertically constricted passageway at the lowermost part of the outer rotor so as to retard the flow of material through the mercury chamber, the outlet for the outer rotor being within the inner rotor and vanes about the outlet.

1,632,951. FUEL VAPORIZER. ANDREW J. COPPOCK, Detroit, Mich. Filed Jan. 26, 1920. Serial No. 354,096. 3 Claims. (Cl. 257—241.)



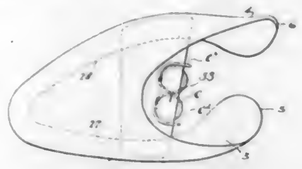
1. A fuel vaporizer comprising the combination with the exhaust and intake manifolds of an internal combustion engine, the intake manifold having a pair of spaced apertures in one wall thereof, of a conduit formed of detachable sections curved in form and of successively decreasing diameter, one of said sections being U-shaped in form and lying within the intake manifold with the ends thereof projecting through the said apertures, the other of said sections being detachably connected respectively to the projecting ends, the section of larger diameter being connected with the exhaust manifold of the engine.

1,632,952. METHOD AND APPARATUS FOR HANDLING LUMBER. CHARLES W. DAUGHS, Alameda, Calif., assignor to Daughs Ship Crane Company, a Corporation of Oregon. Filed Nov. 3, 1923. Serial No. 672,668. 8 Claims. (Cl. 294—74.)



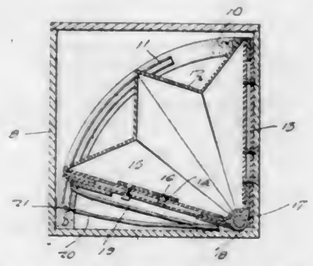
1. A packing device comprising a rigid member including a base portion and a vertically extending portion, a flexible member secured to said rigid member at one end thereof, said flexible member having a part thereof adapted to be arranged parallel to the base portion and another part adapted to be arranged parallel with the vertical portion when the device is in use, a lifting sling attached to the vertically extending portion, said sling including a transversely extending member, a coupling member on said sling, said coupling member including an eye for engaging said flexible member.

1,632,953. HOLLOW SHOE FORM. WILLIAM J. DE WITT, Auburn, N. Y. Filed June 16, 1925. Serial No. 37,486. 12 Claims. (Cl. 12—128.)



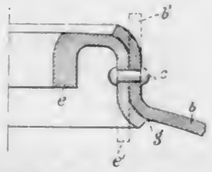
1. A hollow form for insertion into a completed or partly completed shoe, said form having substantially the shape of the external contour of a shoe last and comprising toe and heel portions, the space within the form being substantially unobstructed and capable of receiving a last, the form being open at its top to permit a last to be withdrawn therefrom or reinserted therein, said form having thin and stiffly resilient walls of waterproof material and being open over the major portion at least of its bottom and normally closed at its heel end.

1,632,954. SHOE FORM. WILLIAM J. DE WITT, Auburn, N. Y., assignor to The Shoe Form Co., Inc., Auburn, N. Y., a Corporation of New York. Filed Apr. 8, 1926. Serial No. 100,667. 9 Claims. (Cl. 12—128.)



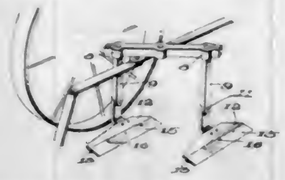
1. A removable hollow form for temporary insertion said form being of thin and stiff material, said material being transparent to permit inspection of the interior of the shoe without removing the form from the shoe.

1,632,955. SHOE FORM. WILLIAM J. DE WITT, Auburn, N. Y. Filed May 12, 1926. Serial No. 108,539. 8 Claims. (Cl. 12—128.)



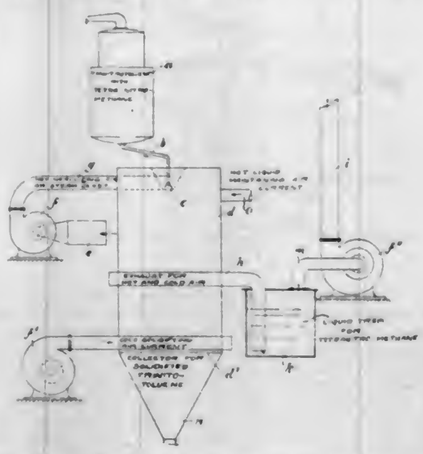
1. A removable hollow form for temporary inspection in a finished or partially finished shoe, said form consisting of a piece of sheet celluloid conforming with substantial exactitude to the size and contour of the forward portion at least of a shoe last, the space within the form being substantially unobstructed and capable of receiving the forepart at least of a shoe last, said form having a permanent unobstructed opening to permit withdrawal of the last from the completed form or its reinsertion therein.

1,632,956. ELECTRIC SWITCH. RAYMOND G. ELY, Trexlertown, Pa. Filed May 15, 1926. Serial No. 109,427. 2 Claims. (Cl. 200—33.)



2. In a structure of the class described, a casing, a bellows in said casing, contacts associated with said bellows, contact tracks mounted in the casing with which said first named contacts are cooperable, spring means for normally maintaining the bellows in a collapsed state, said casing being provided with an arcuate slot, an actuating element carried by said bellows and extending through and beyond said slot, a pivotally mounted vehicle operated ball, and a projection carried by said ball and engageable with said actuator, whereby to operate said bellows from said ball.

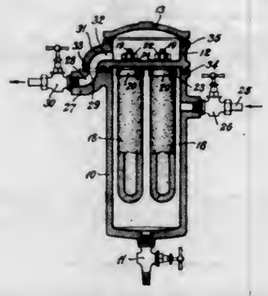
1,632,957. CLOSURE MEANS FOR MANHOLE OPENINGS IN STEAM BOILERS. HERMANN FRANKE, Hanover, Germany, assignor to Schmidt'sche Heissdampf-Gesellschaft m. b. H., Cassel-Wilhelmshohe, Germany, a German Corporation. Filed June 10, 1924. Serial No. 719,142, and in Germany June 11, 1923. 1 Claim. (Cl. 220—73.)



In a steam boiler adapted to withstand a boiler pressure of 20 atmospheres or more, and having a manhole opening in one of its walls, the edge of the material of said wall adjacent said opening being turned outwardly, a seat member against which a manhole cover is adapted to be pressed by the steam pressure within the boiler, said seat member having a peripheral flange bearing against the inner surface of said wall, the said outwardly turned edge having a flange overlying a portion of said seat member.

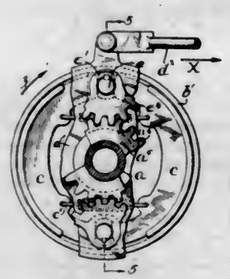
1,632,958. CULTIVATOR BLADE. ALFRED L. FRIEBURG, Gibson City, Ill. Filed July 14, 1926. Serial No. 122,468. 1 Claim. (Cl. 97—207.)

In a cultivator for corn and the like a horizontally disposed ground engaging scraper member comprising a base element of uniform thickness throughout and having a substantially plane top surface and means for attachment to the cultivator frame, said base element comprising a metal stamping having an offset adjacent its forward edge defining a shoulder and a supporting flange, a cutting blade supported upon said flange and having its active edge projecting beyond the forward edge of said flange, the back edge of said cutting blade engaging said shoulder, the said cutting blade being of a thickness equal to the height of said shoulder and the thickness of said base element whereby its upper surface will lie flush with the upper surface of said base element to define a plane unbroken surface, and the lower surface of said assembled blade and base element being of substantially uniform thickness and broken only by said offset, the latter being a substantial distance rearwardly of the active edge of said blade whereby to avoid interference with the action thereof and the free transverse passage of soil and severed weed roots.



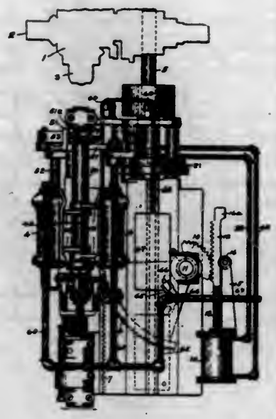
1,632,959. METHOD FOR REMOVING TETRANITROMETHANE FROM TRINITROTOLUENE. RICHARD HANS GÄRTNER, Hamburg, Germany. Filed Dec. 18, 1924, Serial No. 756,830, and in Germany Dec. 31, 1923. 2 Claims. (Cl. 260—142.)

1. A method for removing tetranitromethane from commercial trinitrotoluene comprising, atomizing commercial liquid trinitrotoluene by means of a nonreactive hot gase-



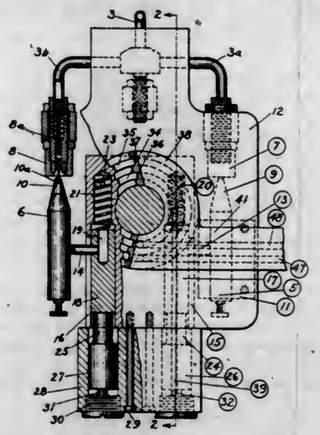
ous stream, subjecting the clouds thus produced to hot nonreactive gaseous streams until the tetranitromethane is vaporized, then subjecting the trinitrotoluene to cold non-reactive gaseous streams by which the trinitrotoluene is solidified, and then withdrawing the hot gases from the presence of the solidified trinitrotoluene.

1,632,960. FILTER. OTTO E. GIESE, Brooklyn, N. Y. Filed July 20, 1926. Serial No. 123,637. 3 Claims. (Cl. 210—120.)



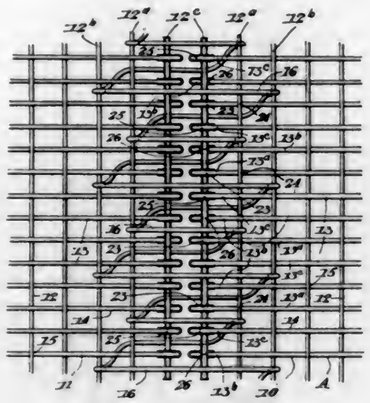
1. A filter of the kind described comprising a container, hollow means for suspending a filtering element in said container, a two-part fixture located respectively upon said container and said hollow means and provided with internal passages adapted to communicate with each other and to establish communication between the interior of said hollow means and the exterior of said filter, and fastening devices whereby said hollow means is removably clamped upon said container and said two-part fixture is clamped together in operative position.

1,632,961. BRAKE MECHANISM. GUSTAVUS HAAG, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 29, 1925. Serial No. 65,528. 5 Claims. (Cl. 188—78.)



1. In a brake, in combination, a stationary shaft, a brake drum rotatable about said shaft, a brake spider rotatable about said shaft, means to rotate the brake spider, a pair of brake shoes within the drum, diametrically disposed cam shafts rotatably mounted on the spider, cams on the cam shafts engaging the proximate ends of the brake shoes, arms rigidly carried with the cam shafts, cams carried with the stationary shaft and engaging the ends of the arms.

1,632,962. METHOD OF COOLING MOLDS. ORIN A. HANFORD, deceased, Columbus, Ohio, by Andrew J. Schlereth, administrator, Columbus, Ohio, assignor to The Federal Glass Company, Columbus, Ohio, a Corporation of Ohio. Filed Mar. 31, 1924. Serial No. 703,128. 1 Claim. (Cl. 49—77.)



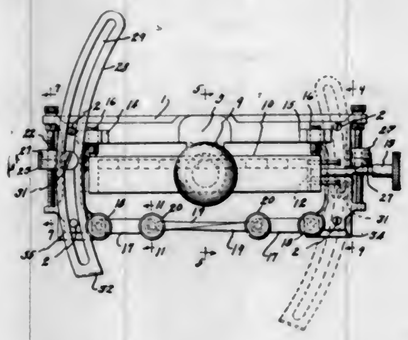
The method of cooling blow molds in the making of glassware which comprises lowering the mold from blowing to inoperative position, spraying the mold with a cooling fluid and raising the mold to blowing position to stop the spraying action.

1,632,963. GLASS-FORMING APPARATUS. ORIN A. HANFORD, deceased, Columbus, Ohio, by Andrew J. Schlereth, administrator, Columbus, Ohio, assignor to The Federal Glass Company, Columbus, Ohio, a Corporation of Ohio. Filed Mar. 31, 1924. Serial No. 703,130. 10 Claims. (Cl. 49—18.)

1. Means for introducing fluid to glass blanks comprising a conduit leading to the blank retaining head, a normally closed valve in said conduit, a nozzle through which fluid is passing continuously and pneumatic means for intermittently moving said nozzle into co-operative relation to said conduit.

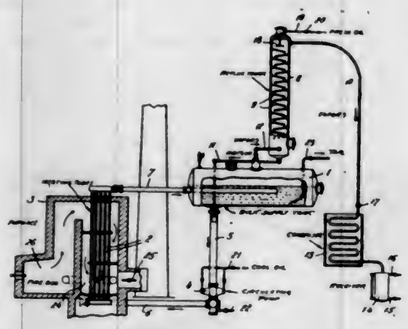
1,632,964. SEAM FOR WOVEN-WIRE FABRICS. ALBERT WILLIAM HARRIS, Glens Falls, N. Y. Filed Dec. 6, 1923, Serial No. 678,961. Renewed Feb. 4, 1926. 4 Claims. (Cl. 245—10.)

1. In a woven wire fabric, adjacent weave sections each comprising warp wires and lay wires, the warp wires being formed with long knuckles on one side of the fabric and short knuckles on the other side of the fabric, said sections having a seam opening between them, and a stitching wire passed over a plurality of lay wires on each side of the seam opening and arranged in stitches of different lengths parallel to the warp wires on the side of the fabric on which the warp wires are formed with long knuckles, said stitches being diagonally inclined on the side of the fabric on which the warp wires are formed with short knuckles.



1,632,965. STAFF SUPPORT. HARVEY G. HAYS, Columbus, Ohio. Filed Oct. 6, 1924. Serial No. 741,846. 3 Claims. (Cl. 189—28.)

1. In a staff support, a spear adapted for insertion into the ground, a socket adapted to receive a staff, and an open constructed member attached to said socket and spaced therefrom for contact with the surface of the ground, said member serving to cause the support to tend to assume an upright position upon insertion into the ground.

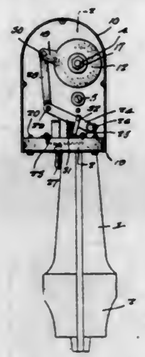


1,632,966. LETTERING DEVICE. PAUL HEINZE, Detroit, Mich. Filed Aug. 7, 1926. Serial No. 127,738. 9 Claims. (Cl. 33—184.6.)

1. A lettering device comprising a base plate having an opening in the center, a vertically movable type holder movable toward the said opening, a support on the base plate for the type holder, a screw shaft at each end of the base plate, a nut on each screw shaft provided with graduations adapted to register with graduations provided therefor on the base plate, adjustable means for

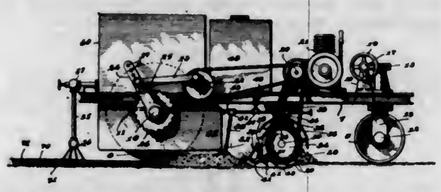
indicating the overall length of the printing faces of the type in the holder, and means for setting the device at any angle to a given line.

1,632,967. PROCESS FOR PRODUCING LIGHT HYDROCARBON LIQUIDS. EUGENE C. HERTHEL, Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed Apr. 4, 1925. Serial No. 20,641. 3 Claims. (Cl. 196—48.)



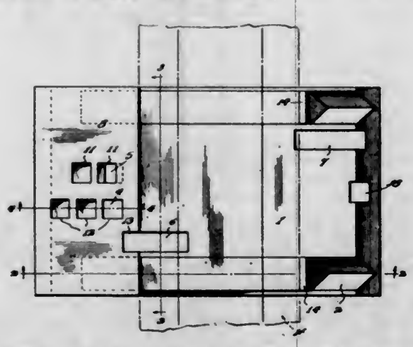
1. A method of cracking heavier hydrocarbon oils for the production of light hydrocarbon oils containing very light constituents in high concentration, which comprises distilling heavier oil under pressure at a cracking temperature, subjecting the vapors of the cracked oil to a refluxing operation, and introducing fresh oil into the refluxing operation in direct contact with the vapors therein at a rate greater than about 190% of the rate at which distillate is taken off.

1,632,968. AUTOMATIC CUT-OFF. MARVIN F. HIPPS, Electra, Tex. Filed Aug. 12, 1925. Serial No. 49,783. 2 Claims. (Cl. 200—52.)



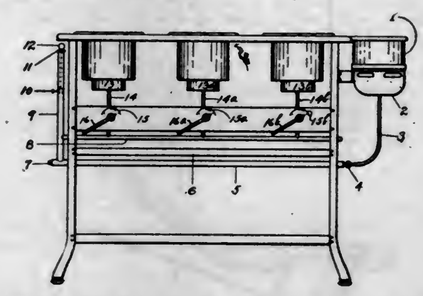
1. In combination with a rotatable reel supporting shaft, of a switch for controlling the circuit to an electric motor, said switch including a pair of spaced contact members, and a pivoted lever adapted to be disposed between said contacts, means arranged on said shaft and operatively connected with said lever for moving the lever into engagement with the contacts when the shaft is rotated, said means comprising a flange arranged on

the rear end portion of the shaft, a pair of discs arranged on the shaft and adapted for frictional engagement with opposed faces of the flange, and a connection



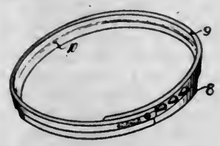
between the discs and the free end of the lever, and means for automatically disengaging the lever from the contacts when the shaft stops rotating.

1,632,969. MACHINE FOR TREATING ROAD-BUILDING MATERIAL. EARL B. HORNER and LAFAYETTE HOLT, Burlington, N. C. Filed Mar. 5, 1923. Serial No. 622,994. 14 Claims. (Cl. 94—44.)



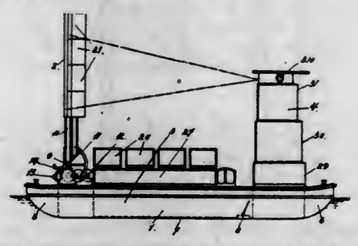
1. A road making machine comprising a rotary member having means thereon for engaging dirt in a roadbed and raising the dirt thereover and returning same to the roadbed as said rotary member is rotated, and means for treating the dirt raised by said rotary member.

1,632,970. ADJUSTABLE TIE PLATE. WILLIAM H. HUFF, Hamlet, N. C. Filed Dec. 21, 1926. Serial No. 156,172. 8 Claims. (Cl. 238—290.)



1. The combination with a tie plate, of a clamping plate slidably mounted thereon, and having arms slidably interlocked with the tie plate and provided with cleats at their inner ends which coact with the inner edge of the plate to confine the base of the rail.

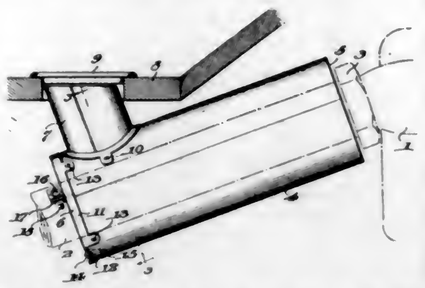
1,632,971. OIL-BURNING STOVE. ALBERT E. JAMES, Natchez, Miss. Filed Oct. 22, 1926. Serial No. 143,478. 2 Claims. (Cl. 158—40.)



1. The combination in an oil-burning stove, of a closed end horizontally disposed fuel distributing pipe, having a downturned end, one or more burners in detachable communication with said distributing pipe, a sediment chamber of tubular form horizontally disposed below said fuel pipe and secured to and in free communication with said downturned end, a detachable conduit connecting one end of said sediment chamber with a source of fuel supply, and a removable threaded plug closing the free end of said sediment chamber, substantially as shown and described.

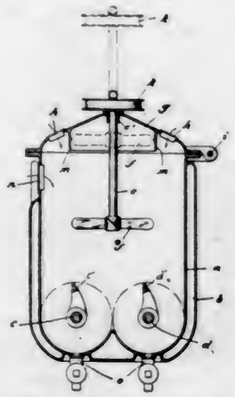
1,632,972. PAN HOLDER. BAILEY L. JEFFERS, Spokane, Wash., assignor of one-half to Horace C. Gay, Spokane, Wash. Filed Dec. 30, 1925. Serial No. 78,310. 1 Claim. (Cl. 53—1.)

A holder for cooking utensils comprising a split base ring the ends whereof are adapted to overlap, said ring having formed integral therewith an upstanding flange of a larger diameter than the ring, said ring at one overlapped end being provided with a pin extended inwardly thereof, the other of the overlapping ends of the ring being formed with a spaced series of key-hole slots adapted for reception of said pin to secure said holder about the bottom of the cooking utensil with the bottom resting within said flange on top of said ring.



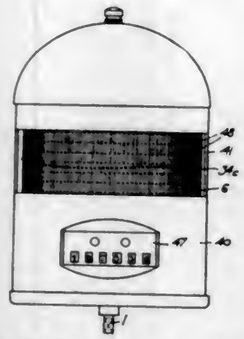
1,632,973. ADVERTISING DEVICE. JAN COENRAAD JOHANKNEGT, The Hague, Netherlands. Filed July 23, 1924, Serial No. 727,817, and in the Netherlands May 10, 1924. 1 Claim. (Cl. 88—24.)

A boat arranged for advertising purposes including a receiving screen, a projecting-apparatus for projecting advertising pictures either stationary or moving onto



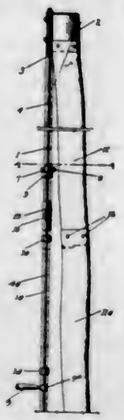
said screen, a telescopic cabin containing said projecting-apparatus, means for raising said cabin high above the deck or lowering same into the body of the ship and means for movably mounting said receiving screen opposite said cabin comprising a supporting structure capable of being lowered onto the deck of the boat.

1,632,974. AUTOMOBILE HEATER. LAWRENCE C. KARCHER and LIONEL ASMAN, Evansville, Ind. Filed Dec. 12, 1924, Serial No. 755,473. Renewed Nov. 26, 1926. 1 Claim. (Cl. 257—241.)



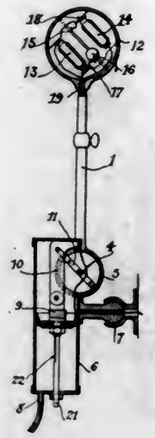
The combination with the exhaust pipe of an automobile engine, of an automobile heater comprising a drum or shell which surrounds said exhaust pipe, is open at its front end, and carries on its side near its rear end an outlet pipe for the delivery of the heated air to an opening in the floor-board of the automobile, said drum or shell being provided at its rear end with a clamp composed of substantially similar arc-shaped sections adapted, collectively, to surround and engage the exhaust pipe, each of said sections having a flange overlapping the end of the drum, the flange of one of said sections being secured to the drum, the other section being hinged to the fixed section aforesaid, ears carried by said sections, bolt and nut means connecting the ears for clamping the movable section around and against the end of the drum and around and on the exhaust pipe of the engine, said sections closing the rear end of the drum, said drum being internally larger than the exhaust pipe.

1,632,975. KNEADING AND MIXING MACHINE. FRITZ KEMPTER, Stuttgart, Germany. Filed Aug. 25, 1924, Serial No. 734,026, and in Germany June 13, 1924. 3 Claims. (Cl. 259—99.)



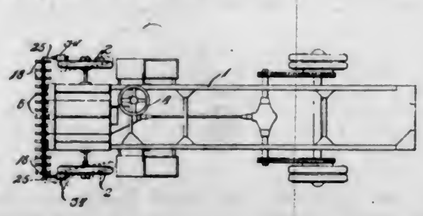
1. Kneading machine comprising a trough, a kneader in said trough and a rotary agitator mounted in said trough for axial displacement above said kneader.

1,632,976. SPEED-INDICATING APPARATUS. PER ANDERSSON KOURTZMAN, Vartan, near Stockholm, Sweden. Filed Nov. 19, 1925, Serial No. 70,098, and in Sweden Nov. 19, 1924. 1 Claim. (Cl. 235—1.)



In a speed indicating apparatus of the character described, the combination of a rotatable drum the circumferential wall of which is composed of a plurality of axially extending spaced lamellæ forming between them axially extending slots, one side surface of each slot being serrated transversely, spring actuated pins arranged radially with respect to said drum and movable axially in said slots and formed with a serrated portion engaging the serrated side surface of the slot, means for rotating said drum, and means for displacing said pins axially so as to adjust them into positions corresponding to the momentary speed of a vehicle.

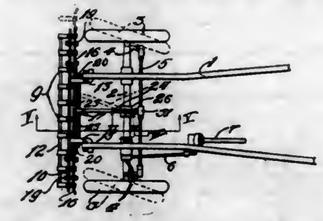
1,632,977. FRUIT-PICKING APPARATUS. JOSEPH I. LAVAGNINO, Angels Camp, Calif. Filed Feb. 27, 1925. Serial No. 11,992. 1 Claim. (Cl. 56—336.)



A fruit picker comprising a rigid support, an annular band secured at one end of the support and adapted to embrace the fruit to be picked, a turnable rod bracketed to the support parallel thereto, a cutting blade fixed to the top of the rod and arranged to sweep across the top edge of the band, hand means applied to the rod for turning the same and manipulating the blade, a collar turnably mounted on the rod separate from the handle, means for holding the collar set at any position about the rod, and a stop member projecting from the collar and positioned to engage the support after the rod has been turned a predetermined distance.

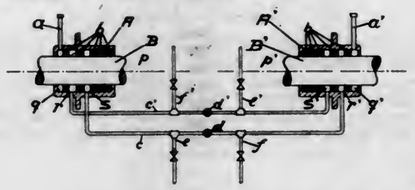
1,632,978. SIGNAL DEVICE FOR MOTOR VEHICLES. HENRI LEGENDRE, Paris, France. Filed Feb. 26, 1926, Serial No. 90,989, and in Germany Aug. 25, 1925. 4 Claims. (Cl. 116—39.)

1. A signal device for motor vehicles comprising at one side of the vehicle a pivoting arm, a crank rigidly connected with the said arm, a spring upwardly urging the said arm into the vertical position, a link pivoted at one end to the said crank, a cylinder, a piston mounted in this cylinder and pivoted to the other end of the said link, a conduit connecting this cylinder with the intake of the motor, a valve device mounted on the said conduit and controlled by the driver and means allowing the external air to enter the cylinder every time the piston reaches the end of its stroke.



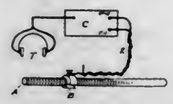
1,632,979. EXTENSIBLE FENDER. GUIDO LOLLI, Chicago, Ill. Filed Oct. 18, 1926. Serial No. 142,330. 16 Claims. (Cl. 293—24.)

3. The combination with a vehicle and the steering wheels thereof, of a main fender section supported on the front end of the vehicle, auxiliary fender sections slidably mounted on said main fender section, and roller mechanisms carried by said auxiliary fender sections and positioned to coact with the steering wheels to cause one of the auxiliary fender sections to be extended when the steering wheels are turned.



1,632,980. EXTENSIBLE VEHICLE FENDER. GUIDO LOLLI, Chicago, Ill. Filed Dec. 20, 1926. Serial No. 155,781. 7 Claims. (Cl. 293—13.)

3. The combination with a vehicle and the steering cross rod thereof, of a main fender section supported on the front end of the vehicle, auxiliary fender sections slidably mounted on said main fender section, and a fulcrumed lever connected with said steering cross rod and

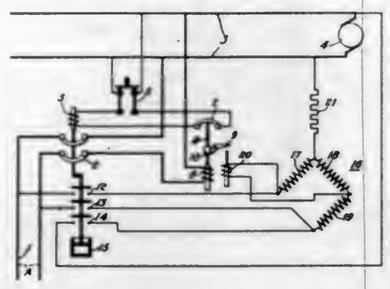


coacting with said auxiliary fender sections to coact therewith to cause one of said auxiliary sections to be extended when the steering cross rod is actuated.

1,632,981. STEAM-TURBINE GLAND WITH MORE THAN ONE PIPE CONNECTION. ANDERS MARIUS PEDERSEN LUNDEGAARD, Copenhagen, Denmark. Filed Feb. 4, 1921, Serial No. 442,482, and in Denmark Feb. 4, 1920. 4 Claims. (Cl. 286—19.)

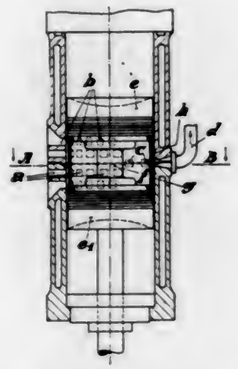
1. A pressure-regulating arrangement for the stuffing boxes of steam turbines comprising a plurality of packing rings in each stuffing box forming a plurality of chambers therein, one chamber of each box being in communication with the atmosphere; a pipe leading from an inner chamber of one box to an outer chamber of the other box; a second pipe leading from an outer chamber of the first-named stuffing box to an inner chamber of the second-named box; and means for equalizing and regulating the pressure in said chambers.

1,632,982. WAVE METER. JOSEPH O. MAUBORGNE and GUY HILL, Washington, D. C. Filed Aug. 6, 1920. Serial No. 401,746. 3 Claims. (Cl. 250—39.)



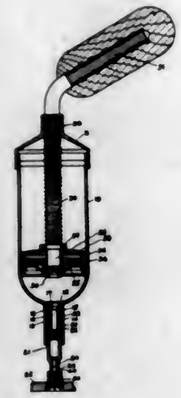
2. In an apparatus for receiving electromagnetic waves the combination of an open circuited and ungrounded resonance wave coil calibrated with respect to frequency along its length and being electrically free at its opposite ends, and capable of being acted upon throughout its entire length by the radiant energy from a transmitting source, a detector, a responsive device connected with said detector, and means closely coupling said detector with said resonance wave coil.

1,632,983. AUTOMATIC CIRCUIT INTERRUPTER. JOSEPH H. PROCTER, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 23, 1920, Serial No. 375,965. Renewed Apr. 27, 1927. 16 Claims. (Cl. 175—294.)



1. In an electrical distributing system, the combination with an interrupter, of means for opening the interrupter to completely disconnect both sides of a circuit and means

thereafter connected to the circuit conductors and rendered operative to preclude the reclosing of the interrupter until the load conditions on the circuit so change



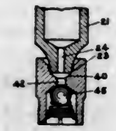
as to preclude current from traversing the interrupter in excess of a predetermined value, said means constituting, with the circuit conductors, a Wheatstone bridge.

1,632,984. DOUBLE-ACTING TWO-STROKE INTERNAL-COMBUSTION ENGINE. WILHELM RIERM, Augsburg, Germany, assignor to the Firm: Maschinenfabrik Augsburg-Nuernberg, Aktiengesellschaft, Augsburg, Germany, a Corporation of Germany. Filed Dec. 23, 1926, Serial No. 156,652, and in Germany, Dec. 21, 1925. 9 Claims. (Cl. 123—61.)

8. A double acting two stroke cycle internal combustion engine of the character described, comprising a cylinder, a piston operating therein to provide a combustion space at each end of the cylinder, said cylinder having exhaust ports and scavenging air admission ports in the wall thereof for each said combustion space, said exhaust ports and scavenging air admission ports being arranged about only a portion of the circumference of the cylinder, and adjacent the transverse center of the cylinder, said piston comprising a disc portion at each end, each of said disc portions being adapted to control the said admission and exhaust ports associated with one of the said combustion spaces, a piston portion of reduced diameter intermediate said two disc portions and providing an annular chamber between said piston and the cylinder wall, said cylinder also having auxiliary ports out of alignment with said air admission and exhaust ports, to permit the discharge of combustion gases leaking past the disc portions of said piston and into the annular chamber about said piston.

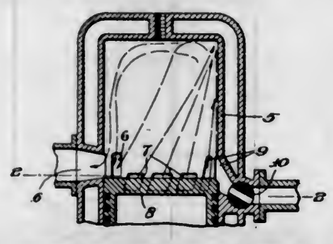
1,632,985. LUBRICATING APPARATUS. OSCAR ULYSSES ZERK, Cleveland, Ohio, assignor, by mesne assignments, to The Bassick Manufacturing Company. Original application filed Nov. 21, 1922, Serial No. 602,465. Divided and this application filed Jan. 2, 1924. Serial No. 683,972. 7 Claims. (Cl. 221—47.4.)

1. In a lubricating apparatus, the combination with a lubricant receiving nipple of a gun for supplying lubricant under pressure thereto, said nipple having an inlet face with a circular passage therethrough providing a surrounding contact edge, said gun having a nozzle element provided with a convexly spherical contact face partially entering the passage in said nipple and engaging the surrounding circular edge when pressed thereagainst, thereby forming a sealed, lubricant conducting connection between said gun and said nipple.



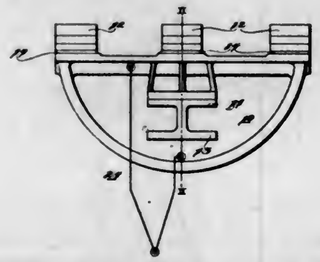
1,632,986. LUBRICATING APPARATUS. OSCAR ULYSSES ZERK, Cleveland, Ohio, assignor, by mesne assignments, to The Bassick Manufacturing Company. Original application filed Nov. 21, 1922, Serial No. 602,465. Divided and this application filed Jan. 3, 1924. Serial No. 684,169. 4 Claims. (Cl. 221—47.4.)

1. The combination with a nipple element having an inlet opening surrounded by a convex spherical portion, of a gun for supplying lubricant under pressure to said nipple, said gun having a nozzle element terminating in a convex conical outer surface, said nozzle element having a substantially cylindrical axial bore intersecting said conical surface to define a contact edge.



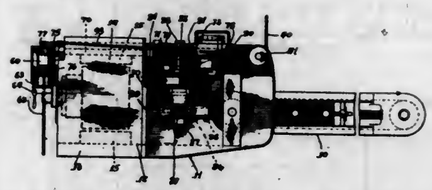
1,632,987. LUBRICATING APPARATUS. OSCAR ULYSSES ZERK, Cleveland, Ohio, assignor, by mesne assignments, to The Bassick Manufacturing Company. Original application filed Nov. 21, 1922, Serial No. 602,465. Divided and this application filed Jan. 3, 1924. Serial No. 684,170. 4 Claims. (Cl. 221—474.)

1. The combination with a lubricant receiving nipple having a part forming an annular protective ridge and a recess providing a spherical concave contact face protected by said ridge, of a lubricant compressor for supplying lubricant under pressure to said nipple, said compressor having a nozzle element terminating in a flat end surrounded by a circular dirt cutting contact edge for co-



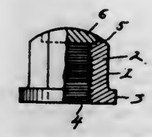
operating with the contact face of the nipple to make sealed contact therewith from any one of a plurality of different angular positions.

1,632,988. INTERNAL-COMBUSTION ENGINE AND METHOD OF OPERATING THE SAME. EDWARD T. ADAMS, Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 7, 1920, Serial No. 401,859. Renewed May 10, 1926. 7 Claims. (Cl. 123—65.)



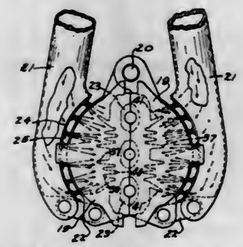
6. An internal combustion engine cylinder provided with a plurality of admission ports having their margins remote from the cylinder head, all in substantially the same plane, some of said ports extending toward the cylinder head beyond other of said ports, and means cooperating therewith, including a valve controlling some of said ports and positioned closely adjacent thereto to prevent dead spaces, whereby all of said inlet ports open simultaneously, after the beginning of the exhaust and before the end of the power stroke, and whereby some of said ports close substantially before the end of the exhaust, and some approximately with the ending of the exhaust.

1,632,989. REDUCTION GEARING. KARL BAUMANN, Urmston, England, assignor, by mesne assignments, to Westinghouse Gear and Dynamometer Company, a Corporation of Pennsylvania. Filed June 22, 1923, Serial No. 647,121, and in Great Britain July 25, 1922. 5 Claims. (Cl. 74—7.)



1. In or for power transmission gearing a floating frame structure comprising a frame and one or more bearings wherein the floating frame is disposed mainly at one side of the center line of the bearing or bearings and means are provided for maintaining a substantially uniform temperature throughout the frame.

1,632,990. MINING MACHINE. GEORGE BODIN, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 26, 1924. Serial No. 758,009. 5 Claims. (Cl. 262—30.)



1. In a mining machine, a motor, a forwardly projecting cutter bar and flexible feed driving mechanism including a feed drum and a multiple speed transmission device, both said cutter bar and feed mechanism being disposed in front of said motor and included substantially within the vertical limits thereof, a tail rope drum rotatable on an axis extending longitudinally of the machine and at the rear end of said motor, power connections between said tail rope drum and said multiple speed transmission device including a shaft extending along one side of said motor casing, and means for selectively actuating either said feed drum or said tail rope drum through said multiple speed transmission device at a plurality of feeding speeds.

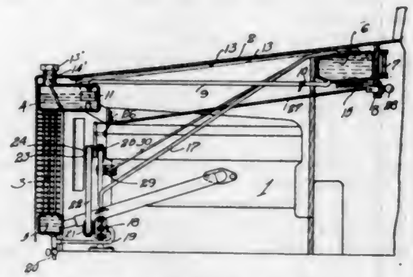
1,632,991. NUT. WILLIAM N. BOOTH, Detroit, Mich. Filed July 31, 1922. Serial No. 578,726. 2 Claims. (Cl. 85—35.)

2. In an acorn nut having an internally threaded inner end portion and a relatively thick flat plug having a press fit into the outer end of said body, the outer ends of said plug and body being rounded in continuation of each other.

1,632,992. MEANS FOR COOLING MOLDS. THOMAS A. BRAGG, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 30, 1926. Serial No. 138,593. 13 Claims. (Cl. 49—40.)

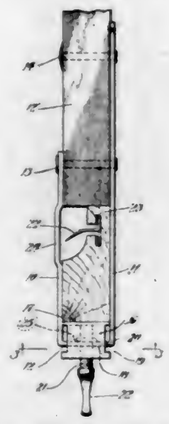
1. A mold having a plurality of mold cavities, flanges extending radially from the upper and lower ends of the mold, and pairs of ribs extending longitudinally of the mold intermedinte the mold cavities.

1,632,993. VEHICLE SPRING. ALANSON P. BRUSH, Detroit, Mich. Filed Dec. 10, 1923. Serial No. 679,824. 13 Claims. (Cl. 267—54.)



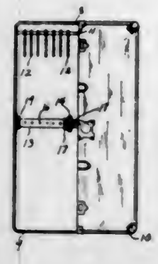
1. The combination with a vehicle frame, of a supporting spring therefor having one end rigidly attached

to said frame, and means adjacent to the point of rigid attachment for controlling the deflection of the spring within safe limits, the said means being so shaped with



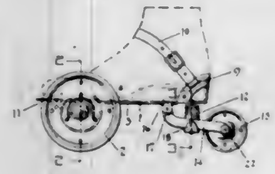
respect to the spring as to produce in the body portion of the spring substantially the same movement as with a pivotal connection at said point of attachment.

1,632,994. COOLING SYSTEM FOR AUTOMOBILES. HERBERT S. BURGESS, Kellogg, Idaho. Filed Nov. 14, 1925. Serial No. 69,023. 2 Claims. (Cl. 123—174.)



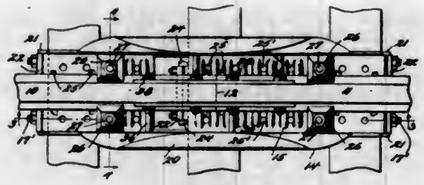
1. In a water cooling system the combination with upper and lower radiator tanks and means for filling the upper tank, of an auxiliary tank elevated above the upper tank and having a gravity feed pipe connected thereto, a float controlled valve in the upper tank for automatically controlling the admission of water from the auxiliary tank, an overflow pipe from the auxiliary tank to the upper tank, a pump and operating means therefor, an intake pipe from the lower tank to the pump and a discharge pipe from the pump to the auxiliary tank.

1,632,995. CURTAIN-STRETCHER CLAMP. CHARLES G. CARLSON, Chicago, Ill. Filed Feb. 6, 1926. Serial No. 86,404. 2 Claims. (Cl. 45—22.)



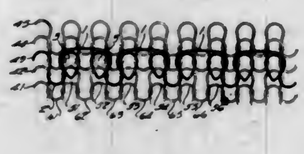
1. In a clamp for curtain frames or the like, the combination of spaced plates connected at their outer ends by a cross head provided with guide slots in its exposed edges, an abutment member comprising a contact face plate subtending the space between the plates and rearwardly extending walls embracing and guided within the slotted edges in the cross head and terminating in laterally extending shoulders projecting beyond the slots in the cross head to limit the sliding movement of the abutment member, and an adjusting screw entered through the cross head and bearing against the rear surface of the abutment member, substantially as described.

1,632,996. TRUNK CUSHION AND RETAINER. WILLIAM C. CHESNET, Racine, Wis., assignor to Hartmann Trunk Company, Racine, Wis., a Corporation of Wisconsin. Filed Sept. 17, 1923. Serial No. 663,262. 3 Claims. (Cl. 190—13.)



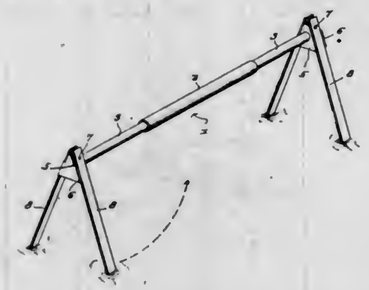
1. The combination with a wardrobe trunk section having garment hangers for suspending wearing apparel therefrom, of a cushion means for the suspended apparel comprising a soft fabric cushion means positioned in the rear portion of the trunk section beneath the garment hangers, a retainer bar adjustably connected to the trunk section and movable toward and away from the rear cushion and having a front soft fabric cushion means extending in horizontal alinement with the rear cushion means, both of said cushion means adapted to engage the wearing apparel suspended from the garment hangers.

1,632,997. WHEEL SKATE. THOMAS J. CONNOLLY, Toledo, Ohio, assignor to The Hiker Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 22, 1925. Serial No. 64,088. 3 Claims. (Cl. 208—175.)



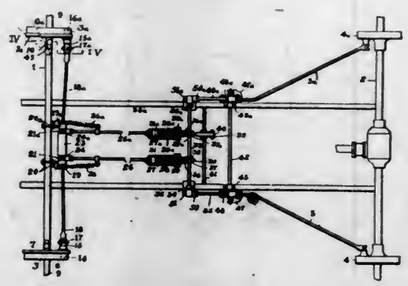
1. In a wheel skate, a pair of wheels connected to the skate and located under the forward part of the skate, a wheel, a lever pivotally connected to the last named wheel and to the skate at a point intermediate the ends of the skate, the lever projecting rearwardly beyond the heel of the skate so as to locate the pivot of the last named wheel to the rear of the heel of the skate, a cushion means located intermediate the lever and the skate for resiliently connecting the last named wheel to the skate at a point well to the rear of the skate.

1,632,998. RAIL-JOINT SUPPORT. WILLIAM G. COUGHLIN, Philadelphia, Pa. Filed May 2, 1925. Serial No. 27,540. 25 Claims. (Cl. 238—210.)



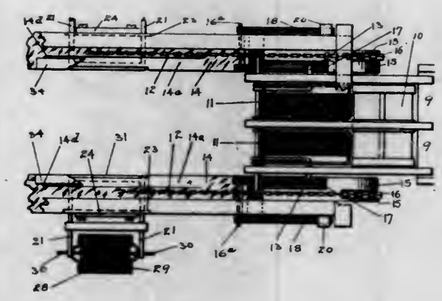
1. A rail joint support having a base materially wider than the base flange of a rail adapted to rest on more than two cross ties, said support being so shaped that the section modulus increases in the same ratio from end to center as does the applied stress.

1,632,999. RUN-STOP COURSE FOR KNITTED FABRICS. JOHN GLADING COUNCIL, Northampton, Mass., assignor to McCallum Hosiery Co., Northampton, Mass., a Corporation of Massachusetts. Filed May 18, 1926. Serial No. 109,845. 10 Claims. (Cl. 66—172.)



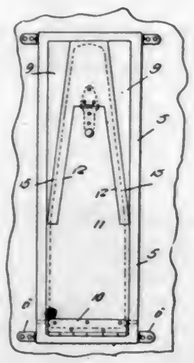
1. In a knitted fabric, a course having alternate sinker wale loops spread and knitted into the adjacent needle wales of the same course at each side.

1,633,000. STREET BARRIER. GUY LA FAYETTE CULVER, Scranton, Pa. Filed Nov. 22, 1926. Serial No. 150,013. 2 Claims. (Cl. 256—64.)



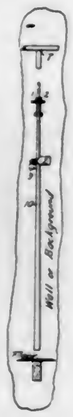
1. In a barrier structure of the class described, a rail comprising a central tube, a pair of cylindrical end sections slidable in said tube, cooperating means between the end sections and tubes for limiting the outward sliding movement of the end sections, heads on the outer ends of said end sections, and supporting legs pivotally connected to said heads, said heads being of a design to dispose said supporting legs in downwardly diverging relation or to allow them to be swung up into parallelism with said rails.

1,633,001. VEHICLE BRAKE. CHARLES J. CUPPETT, Uniontown, Pa. Filed May 14, 1926. Serial No. 109,013. 1 Claim. (Cl. 188—10.)



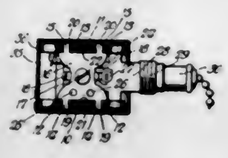
For an automobile, a rock-shaft, an upwardly and a downwardly, projecting arm carried thereby, a front wheel brake, a rear wheel brake, a rod connected to the front wheel brake and the downwardly extending arm so as to operate the latter brake when the rock shaft is rocked forwardly, a rod connected to the rear wheel brake and the upwardly extending arm so as to operate the latter brake when the rock shaft is rocked in the said direction, a second rock shaft, an L-shaped member connected to the latter shaft to operate the rear wheel brake when the latter shaft is rocked rearwardly, the rod sliding idly in the said member when the first rock-shaft is so rocked and idly in the upwardly extending arm when the second rock-shaft is so rocked, and separate means for rocking the rock-shafts, the second rock-shaft having an arm pivoted to one end of the said member while the other end of the same loosely embraces the rear brake rod.

1,633,002. FRUIT GRADER. FRANK W. CUTLER, Portland, Oreg., assignor to Cutler Manufacturing Company, Portland, Oreg., a Partnership. Filed Jan. 15, 1925. Serial No. 2,684. 10 Claims. (Cl. 209—121.)



1. In a fruit grader: an endless traveling chain; a chain sprocket; a track upon which said chain travels; a member pivotally mounted upon said track adjacent said sprocket adapted to support said chain as it travels from said sprocket to said track; and a spring supporting the free end of said member.

1,633,003. CABINET IRONING BOARD. JOSEPH DEARWOOD, Sault Ste. Marie, Mich. Filed Jan. 28, 1927. Serial No. 164,236. 2 Claims. (Cl. 68—10.)



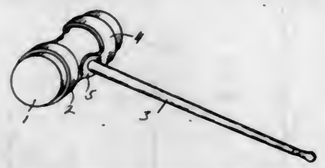
1. In a device of the class described, a cabinet open at its front side, an ironing board pivoted at its lower end within the cabinet and adapted to be swung outwardly of the cabinet and downwardly to a horizontal operative position for use, a lower door section hinged transversely at its lower end to the lower end of the cabinet below said board, and being of less length than the cabinet, an upper door section hinged at its lower edge to the upper edge of the lower door section, and being swingable to a position approximately at right angles with respect to the lower door section when in operative position, the upper end of the upper door section supporting the outer end of said board, when in said position, and side legs extending from the lower edge of the upper door section and adapted to engage the floor.

1,633,004. BILLIARD-CUE, ROD, AND LIKE ARTICLE RACK HANGER AND LOCKER. ARRESTID DEMERS, Sherbrooke, Quebec, Canada. Filed Nov. 17, 1924, Serial No. 750,496, and in Canada Dec. 24, 1923. Renewed May 11, 1927. 7 Claims. (Cl. 273—15.)

1. A cue, rod or the like rack, comprising a rotatable rod having convenient offset portions forming a movable jaw and a working handle, a stationary jaw conveniently secured to a stationary object, bearing means for said rod, said stationary jaw cooperating with said movable jaw, said jaws having a spring so adapted as to normally keep them closed while allowing the placing of an object between them, which is then held in place.

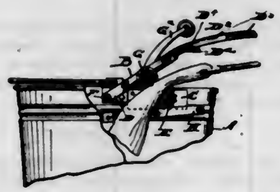
1,633,005. INSULATED MOUNTING FOR ELECTRICAL CONTACTS. VICTOR R. DESPARD, Valparaiso, Ind., assignor to McGill Manufacturing Company, Valparaiso, Ind., a Corporation of Indiana. Filed July 19, 1924. Serial No. 727,042. 10 Claims. (Cl. 200—168.)

1. In a device of the character described a pair of insulating members having openings therein, a pair of metallic members having projections mounted in said openings and a switch mounting engaging said insulating members, said projections being upset against said members to secure said metallic members to said insulating members and to hold said insulating members in definite spaced relation to thereby hold said switch mounting in position.



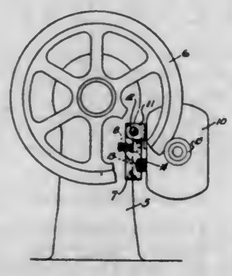
9. In a device of the character described, a pair of conducting members having projections thereon and means for holding said conducting members in definite spaced relation to each other and insulating said members from each other comprising a pair of members of insulating material having openings therein through which said projections extend, said projections having means thereon for securing the same in said openings, said insulating members and said conducting members forming a rigid rectangular framework with one pair of opposite sides of conducting material and the other pair of sides of insulating material, and a switch frame mounted within said rectangular frame and between said insulating members, said switch frame having pairs of projections seated in paired openings in said insulating members.

1,633,006. AUXILIARY LIFTING ARRANGEMENT FOR AEROPLANES. JAMES W. DUNDAS, Detroit, Mich. Filed Nov. 29, 1926. Serial No. 151,319. 4 Claims. (Cl. 244—5.)



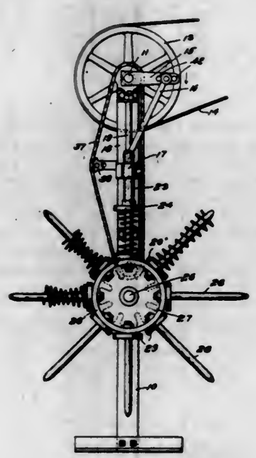
1. In an arrangement of the character described, the combination with an aeroplane having a fuselage and wings attached to said fuselage, of a main casing mounted on the upper side of said fuselage, wing casings on said wings and secured to said main casing, a plurality of gas bags in each of said casings, and a gas line under said bags and connected to them.

1,633,007. MAUL. FRED C. EHINGER, Palmyra, Mich. Filed Sept. 28, 1925. Serial No. 59,153. 5 Claims. (Cl. 145—36.)



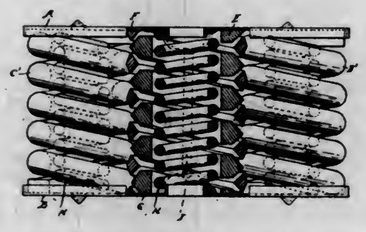
1. In a maul, the combination with a wood head provided with a recess, of a metal casing for said head, the said casing having a malleable portion movable into engagement with the recess in the head for securing the casing to the head.

1,633,008. MOP WRINGER. JAMES M. EIFFE, Fultonville, N. Y., assignor to White Mop Wringer Company, Fultonville, N. Y., a Corporation of New York. Filed Dec. 15, 1926. Serial No. 154,892. 2 Claims. (Cl. 15—262.)



1. In combination with a pail, a mop wringer comprising a fixed and a swinging frame, the swinging frame being hinged to the fixed frame, the fixed frame being adapted to be secured to the pail; a roller journalled in the fixed frame; a roller journalled in the swinging frame; a crank arm secured to the shaft of one of said rollers, whereby it may be manually rotated, said swinging frame having a concave depression adapted to receive the knee of the operator, whereby pressure may be applied to the swinging frame when expressing water from the mop upon manual rotation of the rollers.

1,633,009. MOTOR BRACKET. WILLIAM ERNST, Racine, Wis., assignor to Hamilton Beach Mfg. Co., Racine, Wis., a Corporation of Wisconsin. Filed May 5, 1926. Serial No. 106,979. 1 Claim. (Cl. 74—26.)

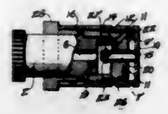


In combination, a sewing machine head carrying a revoluble hand wheel, a block member secured to the side portion of the head, a U-bracket pivotally secured to the end portions of the block member, a motor secured near its upper portion to said bracket, said motor having a pulley wheel adapted for frictional engagement with said hand wheel, and a spring interposed between the block member and the lower portion of the motor for urging the motor outwardly to yieldingly hold the pulley wheel thereof in engaging position.

1,633,010. MACHINE FOR SHORTENING SPRINGS. JOHN A. FINDORA, Pittsburgh, Pa., assignor to Fort Pitt Bedding Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 27, 1923. Serial No. 677,237. 8 Claims. (Cl. 140—89.)

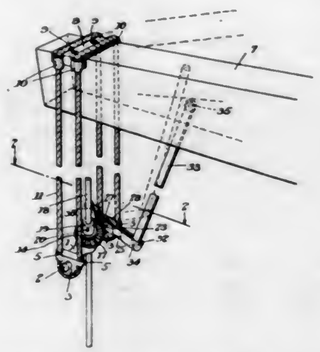
1. A machine for compressing helical springs, having in combination a reciprocable compressor head, a work-holder including a flanged disk, work-supporting fingers projecting from the flange thereof, and means for intermittently rotating said work-holder in synchronism with the reciprocations of said head for successively presenting springs thereto.

1,633,011. SPRING SUSPENSION FOR RAILWAY CARS. HARRY W. FROST, Detroit, Mich. Filed June 14, 1926. Serial No. 115,969. 7 Claims. (Cl. 267—4.)



1. A spring suspension for railway cars, comprising a nest of freely movable or live springs and one or more frictional resistance springs acting in unison.

1,633,012. JET AND SPRAY NOZZLE. FRED GLOVER, Caulfield, Victoria, Australia. Filed Jan. 13, 1927, Serial No. 160,910, and in Australia Jan. 11, 1926. 11 Claims. (Cl. 299—117.)

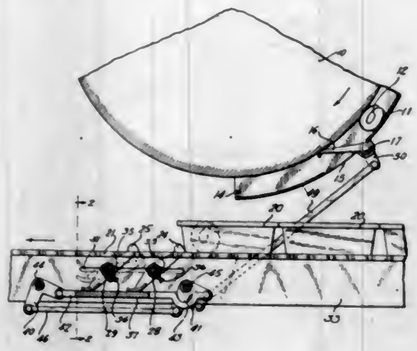


1. An improved jet and spray producing nozzle or device comprising a valve having a hollow stem adapted to slide longitudinally in the direction of the liquid flow

under the pressure of the liquid passing through the nozzle, said valve having an inlet opening to said stem at its rear end; an inlet passage aligning with said inlet opening and controlled by said valve; a manually operable adjusting sleeve enclosing said valve, said sleeve having a discharge orifice formed in alignment with the valve stem through a transverse front wall which is adapted to engage and move said stem in the opposite direction and to retain the valve in various adjusted positions against the action of the liquid pressure; and a

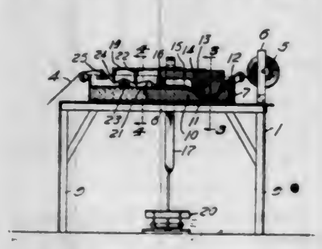
valve-carrying member embodying a partition spaced from said transverse wall and having an opening wherein the valve stem is slidably arranged and also have a series of liquid passages, said valve-carrying member having an internal chamber behind said partition into which said inlet passage and said liquid passages open, communication between said liquid passages and said discharge orifice by way of such space being cut off by the engagement of the front end of the valve stem with said transverse wall.

1,633,013. SUCKER ROD AND PLUNGER ROTATOR. EDWIN L. GLUYAS, Maricopa, Calif. Filed June 28, 1926. Serial No. 119,112. 5 Claims. (Cl. 255—14.)



1. A rotator as described comprising a yoke, means for operatively suspending said yoke from the end of the walking beam of an oil well rig, a vertical sleeve extending through and turnably mounted in said yoke through which sleeve the polish rod of the rig extends, a head on the upper end of said sleeve upon which rests the polish rod clamp, a bevel gear secured on said sleeve head, a shaft journaled on said yoke, a bevel pinion on said shaft in mesh with said bevel gear, and means actuated by said walking beam for rotating said polish rod.

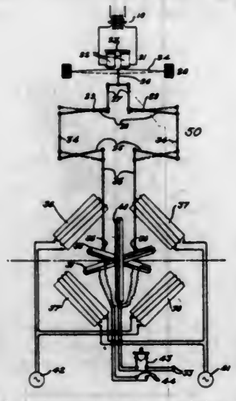
1,633,014. PAN-FILLING MACHINE. LAURENCE S. HARBEN, Saginaw, Mich., assignor, by mesne assignments, to Baker Perkins Company, Inc., Saginaw, Mich., a Corporation of New York. Filed July 8, 1924. Serial No. 724,755. 22 Claims. (Cl. 226—2.)



1. The combination with a loaf depositing mechanism of means for carrying a pan into position to receive a loaf from said mechanism and for holding the same in said position until after a loaf is deposited therein.

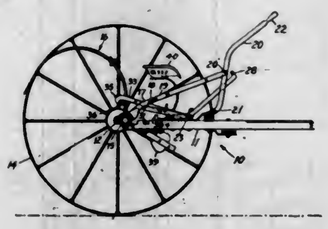
10. In a pan filling machine, a loaf depositing mechanism, means for moving a plurality of pans past said mechanism, means for holding each pan stationary in a position to receive a loaf, and power actuated means controlled by the next succeeding loaf for releasing said holding means.

15. In a pan filling machine, a traveling pan carrier, a loaf-depositing mechanism, a pawl normally acting as a stop for the pans carried by said carrier, and power actuated loaf controlled means for rendering said pawl temporarily inoperative.



1,633,015. FLUXING AND CLEANING APPARATUS. JOSEPH D. HARRIS, Detroit, Mich., assignor, by mesne assignments, to McCord Radiator & Mfg. Co., Detroit, Mich., a Corporation of Maine. Filed Jan. 28, 1922. Serial No. 532,484. 3 Claims. (Cl. 91—70.2.)

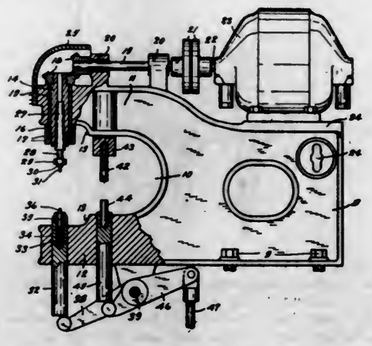
1. A flux applying machine, comprising a tank adapted to contain a fluxing solution, two blocks arranged one above the other, one of said blocks being fixed in said tank and submerged in the solution therein, the other block being movable toward and from said fixed block, said blocks having fabric linings on their opposed surfaces to engage and clean both sides of the sheet metal band or ribbon drawn between them, and upright wipers above the solution in said tank and across which the band passes after leaving said blocks.



1,633,016. ELECTRIC-WAVE-MODULATING SYSTEM. RALPH V. L. HARTLEY, South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 7, 1925. Serial No. 41,914. 9 Claims. (Cl. 179—171.)

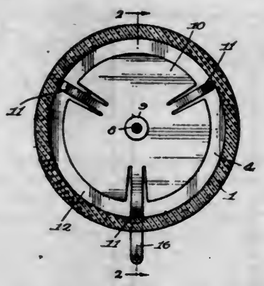
1. The method of modulation which comprises generating a high frequency carrier wave, shifting the phase of said wave to produce sideband frequencies and an unmodulated carrier frequency component, generating a second wave of carrier frequency, shifting the phase of said second wave so as to generate sidebands in phase with said first mentioned sidebands and an unmodulated carrier frequency component opposite in phase to said

first mentioned component, and combining said waves to cause suppression of said first mentioned unmodulated component.



1,633,017. BUNCH RAKE. HENRY P. HENDRICKSON, Santa Rita, Calif., assignor, by direct and mesne assignments, of forty per cent to Joseph L. Del Monte and ten per cent to M. C. Frank, Oakland, Calif. Filed Aug. 6, 1925. Serial No. 48,502. 17 Claims. (Cl. 56—384.)

10. In a rake adapted for hay bunching and having a frame and an axle supported by ground wheels and being provided with a rake-supporting head pivotally mounted on the axle, a member pivotally connected with the head; a second member pivotally connected with the first-mentioned member and also pivotally connected with the frame, said pivotally connected members being adapted to rotate said head so as to lower the rake to raking position or to raise the rake to dumping position; foot-operated means for actuating said members, said means being operable in either rake position by one foot without shifting the foot; and means connected with the frame for limiting the movement of the foot-operated means so as to stop the rake in the raking position, said members in the stopped position forming a toggle joint whereby the rake is locked in the raking position.

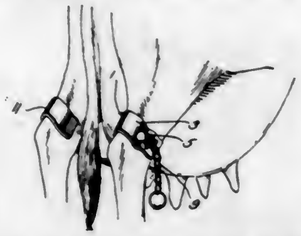


1,633,018. MACHINE FOR LINING BRAKES AND CLUTCHES. JOHN B. HIRD, Seattle, Wash., assignor, by direct and mesne assignments, to Ideal Brake Reliner Company, Seattle, Wash., a Corporation of Washington. Filed Oct. 17, 1922. Serial No. 595,037. 1 Claim. (Cl. 29—26.)

A machine of the class described embodying a frame having a U shaped recess extending inwardly from the front edge thereof, rotary drill and countersink devices journaled in said frame and projecting downwardly into said recess near the open end thereof, a work elevating device slidably mounted in said frame and arranged to project upwardly into said recess in alignment with said drill and countersink devices, means for driving said

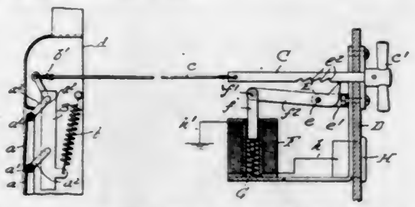
drill and countersink devices, means for lifting said work elevating device, rivet clinching devices operatively mounted in said frame and projecting into said recess, to the rear of said drill and countersink devices and means for operating said rivet clinching devices.

1,633,019. ELECTRICAL CONDENSER. WALTER H. HUTH, Chicago, Ill. Filed Nov. 19, 1925. Serial No. 70,053. 10 Claims. (Cl. 175—41.5.)



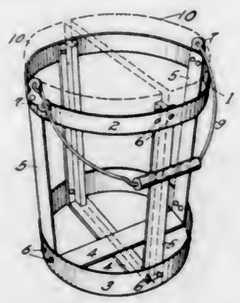
1. In an electrical condenser, the combination of a housing therefor comprising two casing sections secured together to provide a chamber between them, condenser plates and dielectric means in said chamber, held against rotation, with one plate movable and free at its outer edges, instrumentalities to movably position said one plate in said chamber, so that the one plate is movable while remaining flat, and mechanism for regulating the capacity of the condenser, disposed entirely at one side of the movable plate, extending axially through one section of the casing, operative by pressure on the movable plate to vary the distance between the plates.

1,633,020. COW HOPPLE. FLOYD M. INGRAM, Sioux Rapids, Iowa. Filed June 7, 1926. Serial No. 114,253. 1 Claim. (Cl. 24—116.)



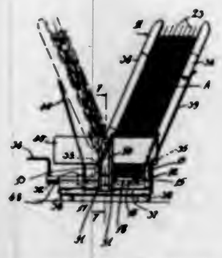
Means for holding a flexible element, comprising a U-shaped grip embodying arms for engaging the object whereunto the flexible element is to be connected, one of said arms having an outwardly extended terminal flange which is curved reversely and of sinous form, the flange being provided with a keyhole slot which is distorted out of flat form by the aforesaid curvature of the flange, the flange having a depressed seat across which the reduced part of the keyhole slot extends, the end of the reduced part of the keyhole slot being disposed

adjacent to the end of the flange; and a flexible element having projections, the reduced part of the keyhole slot being narrow enough so that the projections cannot pass through it, the seat being so shaped as to receive any of the projections and thereby limit the accidental transverse



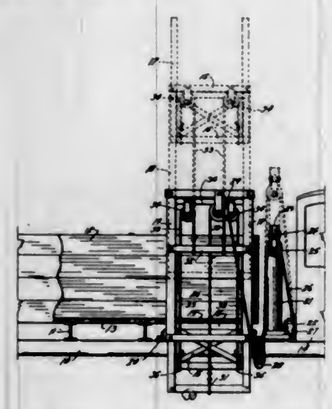
movement of the flexible element from the reduced part of the keyhole slot into the enlarged part thereof, the flexible element being freely movable in the direction of its length in the enlarged part of the keyhole slot when the flexible element has been forcibly moved transversely thereinto.

1,633,021. OPERATING MECHANISM FOR RADIATOR SHUTTERS. FRANK J. IRVING, Buffalo, N. Y., assignor to Irving Engineering Sales Co., Inc., Buffalo, N. Y. Filed Jan. 11, 1924. Serial No. 685,706. 12 Claims. (Cl. 123—174.)



1. The combination with a shutter for the radiator of an internal combustion engine, means for normally closing said shutter, a shutter control device for opening said shutter against the action of said closing means, retaining means for holding said device in a shutter opening position, and means actuated by the stopping of the engine to cause said retaining means to release said shutter control device, to cause the shutter to be closed.

1,633,022. CARRIER FOR BUCKETS AND THE LIKE. LILLIAN JACOBS, Cincinnati, Ohio. Filed Dec. 8, 1924. Serial No. 754,697. 2 Claims. (Cl. 224—45.)

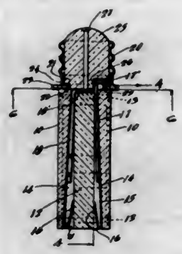


2. A carrier for buckets and the like, comprising a frame, a plurality of buckets in the frame, a bail on each bucket, a bail on the frame, and divisional strips projecting inwardly from the frame to separate the buckets.

1,633,023. TRAY BINDER. JESSE M. JONES and ROBERT R. WEBB, Los Angeles, Calif., assignors to Charles R. Hadley Company, Los Angeles, Calif., a Corporation of California. Filed May 8, 1926. Serial No. 107,563. 14 Claims. (Cl. 129—1.)

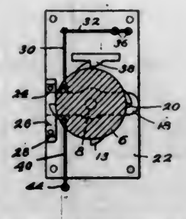
6. A tray binder comprising an expansible binder, and an expansible tray loosely supporting the binder and operable by expansion of the binder to expand the tray.

1,633,024. ELEVATING PLATFORM FOR TRUCKS. EARL J. KOFFORD, Denver, Colo., assignor to Denver Ice & Cold Storage Company, Denver, Colo., a Corporation of Colorado. Filed June 11, 1926. Serial No. 115,228. 4 Claims. (Cl. 214—75.)



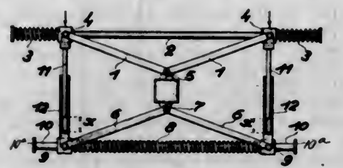
1. The combination with an automobile chassis, of a series of four, upright, connected, angle posts fixed to said chassis; a second series of four, upright, connected, angle posts vertically slidable within said first series; a third series of four, upright, connected, angle posts vertically slidable within said second series; a hydraulic ram carried by said chassis; sheaves arranged to be raised by said ram; second sheaves fixed below said ram; third sheaves carried adjacent the top of said first series of upright posts; and a cable attached to said chassis at one extremity and passing over said first sheaves to a connection with said second series; and a two to one cable and sheave system between said second series and said first series.

1,633,025. SWIVEL PLUG. MICHAEL KRANZ, Chicago, Ill., assignor of one-fourth to Winand H. Nelles, Chicago, Ill. Filed Jan. 6, 1926. Serial No. 79,540. 3 Claims. (Cl. 173—334.)



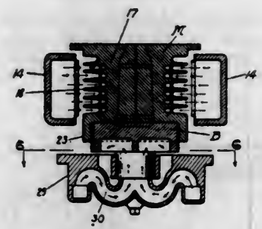
1. A device of the class described comprising a body with a plurality of channels, metallic members with a plurality of contact fingers mounted in said channels

to provide a plurality of electric sockets, contact bars fastened to said metallic members and having their outer ends bent over, one end being spaced from said body, a collar with flange means for engaging under said bent end, operating members mounted on said flange means and



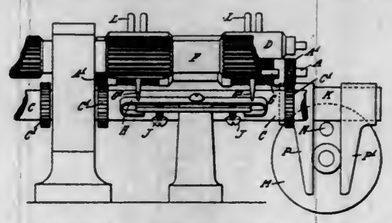
collar for rotating the collar, a neck in said collar and having a notch for engaging over said bent end, and a contact pin extending through said neck and engaging the other bar to retain the neck and collar in position on said body.

1,633,026. CURTAIN FIXTURE. MICHAEL KRATTLI, Kansas City, Mo. Filed Feb. 18, 1925. Serial No. 10,082. 3 Claims. (Cl. 156—35.)



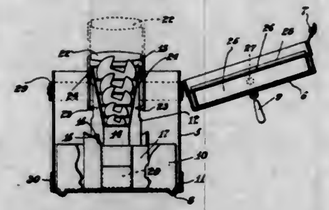
1. A fixture of the character described consisting of a lever for supporting one end of a curtain roller, a bracket upon which said lever is fulcrumed, spaced stops on said bracket and between which the free end of said lever projects, a toothed wheel fixed to one end of the roller, a detent on the bracket, spring means for yieldably holding the toothed wheel in engagement with said detent, and means for causing the lever to disengage the toothed wheel from said detent.

1,633,027. SPRING-SUPPORTING MEANS AND THE LIKE. ERNST KREISSIG, Uerdingen, Germany. Filed Feb. 27, 1926, Serial No. 91,075, and in Germany Sept. 24, 1924. 6 Claims. (Cl. 267—20.)



1. In a spring support for vehicle parts and the like, a system of spring-actuating struts comprising a plurality of relatively movable struts, and means operatively connected to said struts so as to cause certain of the struts to be subject to loading stress ahead of the imposition of the load strain upon the entire system of struts.

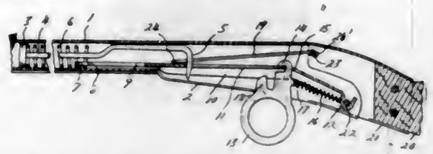
1,633,028. MEANS FOR COOLING MOLDS. RICHARD LA FRANCE, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed June 12, 1922. Serial No. 567,516. 8 Claims. (Cl. 49—68.)



1. A mold formed with a plurality of molding cavities and cooling ribs on the mold, the outline of the mold with the ribs thereon being substantially circular, and the body of the mold at the base of the ribs being reduced in diameter at the portions intermediate said mold cavities.

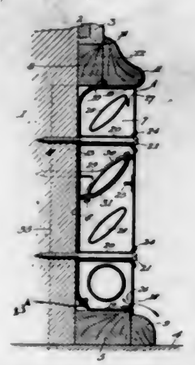
1,633,029. APPARATUS FOR DRAWING TEXTILE FIBERS. GUILLAUME CLEMENT LAURENCY, Twickenham, England, assignor of sixty per cent to Grant McLean, London, England. Filed Mar. 19, 1926, Serial No. 96,039, and in Great Britain June 22, 1925. 14 Claims. (Cl. 19—128.)

1. In apparatus for drawing textile fibers, the combination of a toothed roller forming a filter adapted to retain all the fibers of the roving by means of its teeth alone, a longitudinally-fluted front drawing cylinder located in close proximity to the filter roller, a segment partly surrounding said cylinder, and adjustable spring means for pressing said segment against the flutes of the cylinder; said cylinder acting to draw the fibers separately from the mass of roving, without disarranging the other fibers, by removing them from the teeth of the filter roller and causing them to slide across the inner surface of the segment.



1,633,030. TOOL KIT. CHARLES L. LAWRENCE, New York, N. Y. Filed Jan. 24, 1925. Serial No. 4,409. 5 Claims. (Cl. 206—16.)

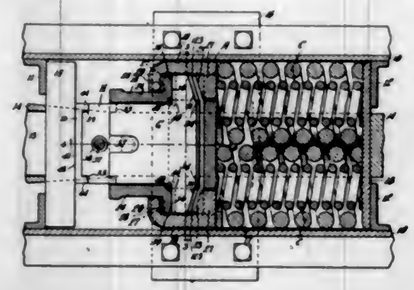
1. A mechanic's tool tray having converging side walls and transverse partitions forming two series of compartments graded in depth from the center toward op-



posite ends of the tray, the deeper compartments near the center being also wider than shallower compartments near the ends and adapted to hold systematically two graded sets of wrenches.

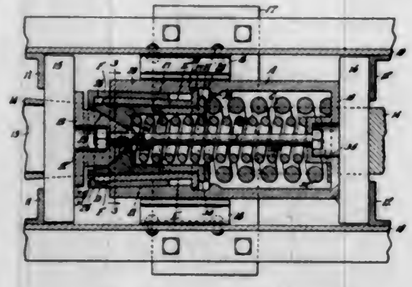
1,633,031. POPGUN. CHARLES F. LEFEVER, Plymouth, Mich., assignor to Daisy Manufacturing Company, Plymouth, Mich., a Corporation of Michigan. Filed Aug. 2, 1926. Serial No. 126,554. 6 Claims. (Cl. 124—8.)

1. In a gun, the combination with the barrel and frame, of a plunger assembly insertable within said barrel and frame and comprising a plunger having a hooked shank, a spring-surrounding said shank and having one end abutting said plunger, a flanged abutment member for the opposite end of said spring having a slot for engagement by the hook of said shank, and a trigger carried by said abutment member and provided with a sear for engagement by the hook of said shank.



1,633,032. BASEBOARD RADIATOR FOR THE ROOMS OF BUILDINGS. FRIDOLF M. NORDLING, Denver, Colo. Filed July 19, 1926. Serial No. 123,529. 8 Claims. (Cl. 257—133.)

5. In a device of the character described, the combination with heating elements, of a housing therefor, simulating a base board and comprising a back plate adapted to lie against a wall, a base strip, a crown molding, and a front plate, said front plate having hook members along its upper edge to engage said crown molding and foot portions to engage said base strip, spacing tubes between the front and back plates, screws extending through said front plate and tubes and back plate and into said wall, and turn buttons on said screws to engage said front plate, said front plate having screw receiving slots of a width to permit the said turn buttons to pass through them when said buttons are turned to be parallel with said slots.

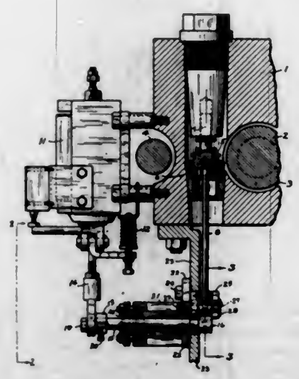


1,633,033. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed May 27, 1925. Serial No. 33,163. Renewed Apr. 18, 1927. 9 Claims. (Cl. 213—24.)

1. In a friction shock absorbing mechanism, the combination with a column element; of a friction shell, said shell and element having limited relative movement; a main spring resistance; a plurality of intercalated friction plates within the shell; lateral pressure creating means co-operating with said plates; pressure transmitting means for forcing said plates inwardly of the

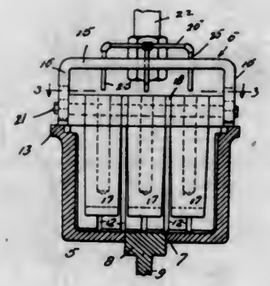
mechanism, said means being anchored to certain of said plates; and means for arresting movement of the remaining plates after a predetermined compression of the mechanism.

1,633,034. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed June 8, 1925. Serial No. 35,700. Renewed Apr. 22, 1927. 12 Claims. (Cl. 213—33.)



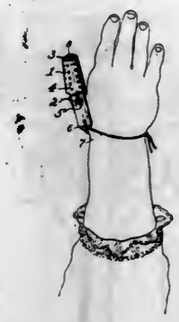
1. In a friction shock absorbing mechanism, the combination with a friction shell; of a plurality of curved friction plates cooperating with the shell, certain of said plates having limited movement with reference to the shell; an abutment face on the shell adapted to engage with the inner ends of said last named plates for limiting the movement thereof while permitting further movement of the remaining plates; lateral wedge pressure-creating means co-operating with said plates; and a main spring resistance.

1,633,035. PUMP LOADING AND UNLOADING MECHANISM. PETER W. RECK, Bettendorf, Iowa, assignor to The Bettendorf Company, Bettendorf, Iowa, a Corporation of Iowa. Filed Dec. 11, 1926. Serial No. 154,128. 10 Claims. (Cl. 103—40.)



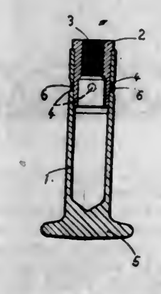
1. The combination with a reciprocating hydraulic pump having a pressure chamber, a suction valve leading thereto, and a push rod for lifting the valve from its seat, of pump unloading mechanism comprising means for imposing predetermined lifting pressure on said push rod of lesser degree than the pressure on the valve during the pressure stage of the pumping cycle whereby said valve is actuated by said mechanism only when the actuating force applied to the push rod is less than the opposing force of the internal pressure of the pressure chamber acting on said valve, said mechanism comprising a bell crank actuated by said pressure means, a cam shaft

on which the bell crank is mounted, a stuffing box through which the shaft extends, a cam carried by the cam shaft remote from the bell crank, and a second piv-



otally mounted cam actuated by the first cam to impose lifting force on the push rod when the cam shaft is actuated.

1,633,036. MULTICELL-BATTERY-BOX MOLD. JAMES K. ROBINSON, Jr., Altoona, Pa. Original application filed Jan. 16, 1926, Serial No. 81,763. Divided and this application filed Oct. 19, 1926. Serial No. 142,635. 3 Claims. (Cl. 49—68.)

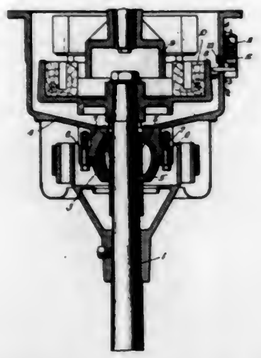


1. A mold for forming a battery box of the type specified, comprising a female unit of box-like configuration, said unit being made up of duplicate half sections, being provided at the center of its bottom with an opening for passage of an ejector, being provided at its top with an outstanding flange having recesses, and a male unit adapted for insertion into said female unit, said male unit comprising a head plate having downturned end portions disposed over said flanges and formed with longitudinally spaced notches, a plurality of downwardly tapered core members having vertical bores opening through their tops, spacing elements arranged between said cores and between the down turned portions of said plates for maintaining said cores in spaced relation, means fastening the end spacing members to said downturned plate ends, bolts extending through said spacing members and through said cores, and an assembly of piping including depending branches extending down through said head plate and terminating in alinement with said bores.

1,633,037. THUMB-SUCKING PREVENTIVE FOR BABIES. HAZEL B. ROOD, Ames, Iowa. Filed Dec. 11, 1926. Serial No. 154,075. 1 Claim. (Cl. 128—133.)

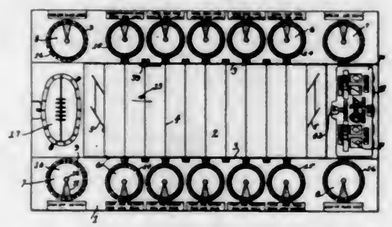
A device of the character described, comprising in combination, an elongated downwardly widened thumb covering having a rigid smooth walled body and a depending integral smooth stem on one side, the upper end of the covering being closed and provided with small apertures, the outer side wall of the covering above and in line with said stem having small apertures, a flexible fastening device connected detachably to the neck part of said stem to fasten the device upon the wearer's thumb releasably, and another flexible fastening device connected detachably to the lower terminal of said stem to fasten the device upon the wearer's wrist releasably.

1,633,038. VALVE TAPPET. LÉON SAIVES, Billancourt, France, assignor to Louis Renault, Billancourt, France. Filed Feb. 25, 1927, Serial No. 170,953, and in France Nov. 17, 1926. 1 Claim. (Cl. 123—90.)



A valve tappet comprising a tubular stem, a base at the under part of and in a single piece with the stem, a threaded socket mounted in the upper part of the stem and of a different metal from that of the stem and base, apertures in the tubular stem, and discs of the same metal as that of the socket placed in the apertures and providing for the fixing of the socket in the tubular stem by electric welding.

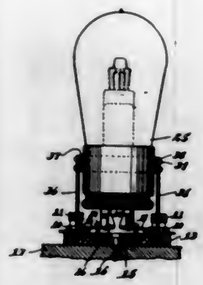
1,633,039. SAFETY SWITCH FOR CENTRIFUGAL MACHINES. LE ROY C. SCHENCK, East Moline, Ill., assignor to Troy Laundry Machinery Co., Ltd., East Moline, Ill., a Corporation of New York. Filed Jan. 7, 1927. Serial No. 159,567. 5 Claims. (Cl. 192—129.)



3. In a centrifugal extractor, in combination, a rotary shaft, supporting means for said shaft permitting a universal movement thereof, a clutch member secured to

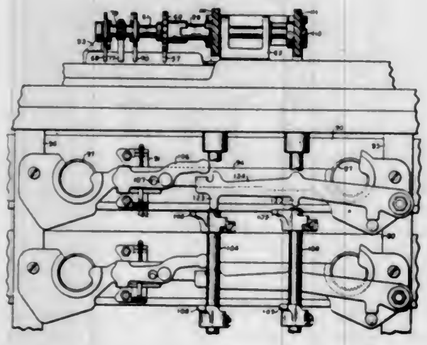
said shaft, a complementary clutch member for communicating the movement to said first mentioned clutch member, an electric switch for controlling the rotation

of said complementary clutch member, said switch having means adapted to be engaged by said first mentioned clutch member to open said switch when said first mentioned clutch member acquires undesirable gyrations.



1,633,040. FOOTBALL-GAME APPARATUS. ADOLPH E. SCHURCH, Los Angeles, Calif. Filed Aug. 30, 1926. Serial No. 132,343. 10 Claims. (Cl. 273—94.)

1. In a football game apparatus having a game board indicating a football field and a pea representing the football, to be placed at different points on the field, the combination of a chance-device with a plurality of different characters located at different points on the same, and any one of which may be indicated when the chance device is operated, a dial having a margin with different characters around the same corresponding to the said different characters of the chance-device, and having an indicating member adapted to be moved into a position corresponding to the character indicated by the operation of the chance device, said dial having means for indicating different plays corresponding to different positions of the said indicating member of the dial.

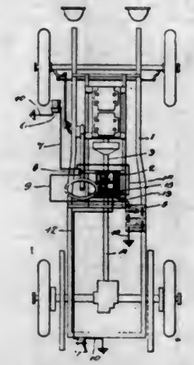


8. In a football game apparatus, a chance device having a continuous raceway and a ball to move along the same, means for projecting the ball along the raceway, said raceway having a plurality of pockets, in any one of which the ball may stop, said pockets having distinctive characters for determining the play to be made, a pivoted plate forming the bottoms of the pockets and having openings corresponding to the different pockets which may align with the pockets when the plate is moved to permit the ball to fall out of the pocket in which it may lodge.

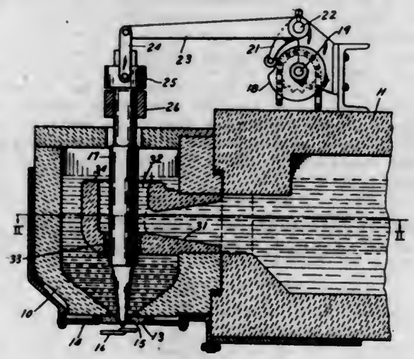
1,633,041. RADIOTUBE-HOLDING DEVICE. ARTHUR E. SCHUFFENHAUER, Chicago, Ill. Filed Apr. 13, 1925. Serial No. 22,520. 1 Claim. (Cl. 173—328.)

An electric bulb socket comprising a nonconducting base, a bulb receiving sleeve mounted thereon, a plurality of horizontally arranged radially disposed resilient arms, a socket element supported intermediate the ends of each arm adapted to receive the electrodes of an electric bulb and provided with a slot at one side, the free end of each of the arms being bent upwardly and extended through one of the slots to resiliently engage the electrodes and thereby firmly hold the latter against the walls of the socket elements.

1,633,042. CASH REGISTER. BERNIS M. SHIPLEY, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed June 30, 1924. Serial No. 723,190. 7 Claims. (Cl. 235—22.)



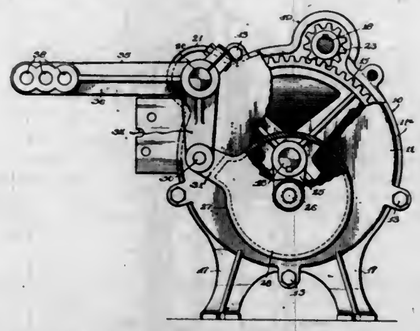
3. In a machine of the class described, the combination of a drawer, a plurality of banks of keys, a differential for each bank of keys, and a single means separately operable by each of said differentials for causing said drawer to be opened.



1,633,043. ELECTRICAL SIGNALING MEANS. HAROLD W. SLAUSON, New York, N. Y. Filed Oct. 18, 1924. Serial No. 744,322. 3 Claims. (Cl. 177—339.)

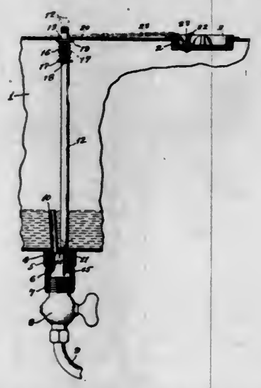
1. In combination with an automotive vehicle, a reversing mechanism therefor, including a control lever, an audible warning device mounted adjacent the forward end of the vehicle and arranged to project sound waves in a forward direction, a second audible warning device

mounted adjacent the rear end of said vehicle and arranged to project sound waves in a rearward direction, manual means for simultaneously operating said warning devices, and means dependent upon the position of said control lever for rendering said second audible warning device inoperative.



1,633,044. APPARATUS FOR FEEDING MOLTEN GLASS. LEONARD D. SOUBIER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 14, 1924. Serial No. 706,318. 7 Claims. (Cl. 49—55.)

2. In apparatus for delivering charges of molten glass, the combination of a container for the glass having an outlet opening in its bottom, a regulating member projecting downward into the glass over the outlet and controlling the discharge, said container having an inlet opening below the normal level of the glass, means for supplying glass to the container through the inlet opening, and means to distribute the entering glass around the regulating member and then cause the distributed glass to move outwardly away from the regulating member before it reaches the said outlet opening.

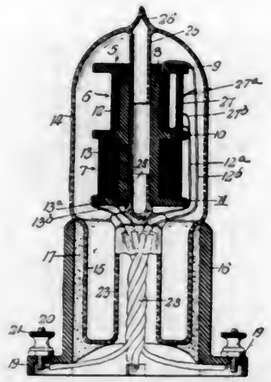


1,633,045. PUMP JACK. TIMOTHY J. STEARNS, Davenport, Iowa, assignor to Red Jacket Manufacturing Co., Davenport, Iowa, a Corporation of Iowa. Filed Oct. 19, 1925. Serial No. 63,204. 5 Claims. (Cl. 74—14.)

1. In a power head, an enclosed casing forming a lubricant-chamber, reduction gearing in said casing, including driving and driven shaft extending through said casing and having bearings therein, said driven shaft having a crank arm carried thereon outside of said casing, an oscillating actuator comprising a shaft extending through said lubricant-chamber and having bearing

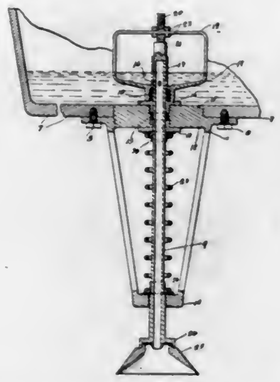
in said casing, and a pair of arms at opposite ends of said shaft adapted for attachment to pitmen, an arm disposed substantially at a right angle to said first named arms, and a link connecting said last named arm with said crank arm.

1,633,046. MEANS FOR MAINTAINING A RESERVE SUPPLY OF FUEL IN FUEL TANKS. HOWARD DEAN STARR, Long Beach, Calif. Filed Mar. 25, 1925. Serial No. 18,146. 3 Claims. (Cl. 158—46.5.)



1. In combination with a tank, a fitting mounted in said tank, said fitting having an opening above the bottom of said tank and a second opening at the bottom of the tank, a rod seated in said second opening and extending through the top of the tank, resilient means normally holding said rod seated; a pin adapted to extend through said rod to hold it unseated, a filler cap, a flexible connection between said pin and said cap, said connection being adapted to retract said pin when the cap is being removed.

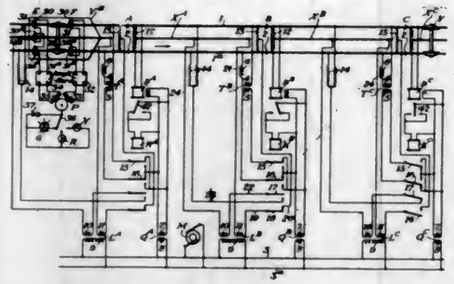
1,633,047. TRANSFORMER. ROBERT T. ST. JAMES, Chicago, Ill. Filed Apr. 12, 1924. Serial No. 705,966. 1 Claim. (Cl. 175—361.)



A transformer comprising, a sealed vessel having centrally disposed standard including a tubular extension, a tubular bobbin having a centrally disposed bore mounted on said standard with said extension projecting into one end of said bore, said vessel including an opposed tubular extension which projects into the other end of said

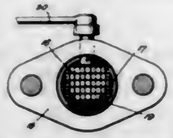
bore, a base on which said vessel is mounted which base includes binding posts, primary and secondary windings on said bobbin and conductors leading from said wind-

ings and sealed in and passing through said standard and connected to said binding posts, said bobbin and windings together with the interior of said vessel being dehydrated.



1,633,048. BOTTLE-FILLING DEVICE. RONALD F. THOMSON, Chicago, Ill. Filed Oct. 12, 1925. Serial No. 61,908. 5 Claims. (Cl. 226—102.)

2. A device of the class described comprising a container, a tube slidably mounted therein, a cup mounted on said tube, there being valve openings in said tube to be moved into open or closed position, means coacting with said openings for controlling the flow therethrough, and means for adjustably connecting said cup and tube to vary the exposable part of said valve openings.



1,633,049. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HOWARD A. THOMPSON, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed May 22, 1926. Serial No. 110,923. 8 Claims. (Cl. 246—63.)

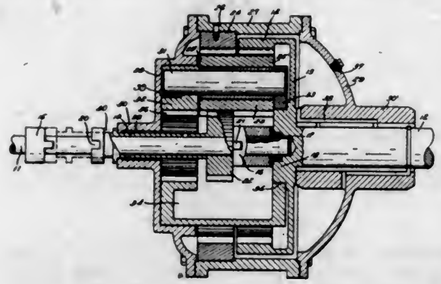
1. In combination, a stretch of railway track having an auxiliary conductor, means for supplying the stretch with loop current which flows at a given instant in one direction in the rails of the stretch and in the other direction through the conductor, a train carried receiver comprising three windings one in inductive relation with each rail and one in inductive relation with said conductor, said windings being connected in series in such

manner that the voltages induced therein by loop current flowing in the trackway are additive, and governing means responsive to the voltages induced in said windings.

1,633,050. MIXING DEVICE FOR INTERNAL-COMBUSTION ENGINES. ELIZABETH THORNTON, Detroit, Mich. Filed May 25, 1925. Serial No. 32,598. 2 Claims. (Cl. 48—180.)

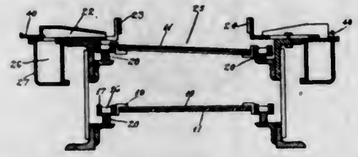
1. A mixing device insertable between the intake pipe and cylinder of an internal combustion engine for the screening of wet gases entering the said cylinder, comprising a gasket having an orifice for the passage of gases therethrough, and a vertically disposed screen carried by said gasket and extending across the orifice thereof, said screen being of closer mesh adjacent the margins of said orifice than towards the center thereof, and the wider meshed portion of said screen being disposed substantially towards the upper margin of said orifice.

1,633,051. METHOD OF GENERATING GEARS. NIKOLA TESOJEVICH, Detroit, Mich. Filed Nov. 20, 1922. Serial No. 602,036. 13 Claims. (Cl. 51—278.)



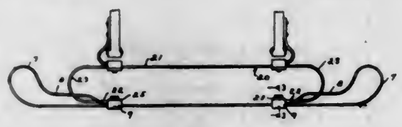
1. The method of indexing or division of the circumference of a work piece into equi-spaced segments comprising the movement of the work in a closed orbit relative to a cooperating member located in predetermined relation with said orbit, and the simultaneous rotation of the work about an axis co-planar with the axis of said orbit in timed relation with said orbital movement, whereby said cooperating member once in every cycle periodically engages a different portion of the circumference of the work.

1,633,052. REDUCING GEAR AND TRANSMISSION CONTROL. JOHN S. WATTS, Los Angeles, Calif. Filed Jan. 18, 1926. Serial No. 81,979. 1 Claim. (Cl. 74—34.)



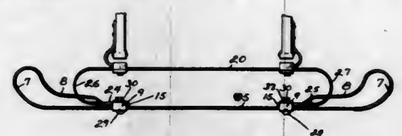
In a transmission of the general character described: a drive shaft; a shaft to be driven therefrom at a different angular velocity; a primary main gear provided

with means for holding the same against free rotation; a second main gear secured to one of said shafts; a composite gear member disposed eccentrically of and engaging both of said main gears; means whereby rotation of said drive shaft causes said composite gear member to roll on said primary gear member and to impart to said



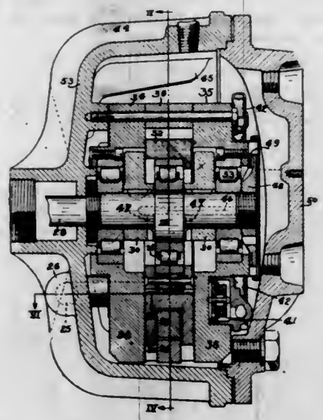
driven shaft, through said second main gear, a velocity of rotation different from that of said drive shaft; said gears being confined within a housing having a slot and said main gear being provided with means for its detention by a finger which is movable transversely thereof throughout said slot.

1,633,053. CONVEYING MECHANISM. PERCY Q. WILLIAMS, Cincinnati, Ohio. Filed Mar. 3, 1924. Serial No. 696,444. 4 Claims. (Cl. 198—29.)



1. In a device of the class described the combination with a frame of a pair of tracks carried by the frame, the tracks having undulating upper surfaces, the undulations bearing a relation such that the raised portion of one track is disposed oppositely to the low portion of the other track, a belt supported at its edges upon the tracks, and air nozzles for directing blasts of air transversely of the belt.

1,633,054. AUTOMOBILE BUMPER. FRED WILLIAMSON, Chicago, Ill., and PAUL P. RUNNELS, Indianapolis, Ind.; said Runnels assignor to Oscar E. Stokes, Streator, Ill. Filed May 5, 1924. Serial No. 711,126. 5 Claims. (Cl. 293—55.)

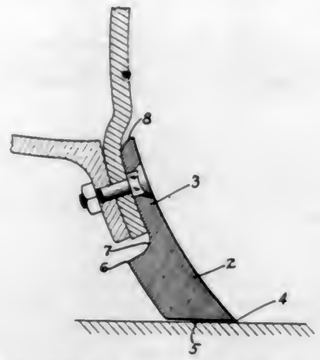


1. In a device of the character described, the combination with a supporting bar, of a retaining clamp having a body portion and mutually spaced arms respectively connected with the ends of the body portion in spaced relation thereto, said supporting bar being receivable between the ends of said arms substantially to close the space therebetween, upper and lower buffer bars having portions disposed respectively between the arms of said clamp and body portion thereof, and a plate bolted to both of said buffer bars and to said supporting bar.

1,633,055. AUTOMOBILE BUMPER. FRED H. WILLIAMSON, Chicago, Ill., assignor to Oscar E. Stokes, Streator, Ill. Filed Mar. 16, 1925. Serial No. 15,880. 10 Claims. (Cl. 293—55.)

1. In a device of the character described, the combination with a pair of vertically spaced buffer bars, of a C-shaped supporting member having its ends extending toward each other and formed with recesses, said bars having protuberances in interlocked relation with said recesses.

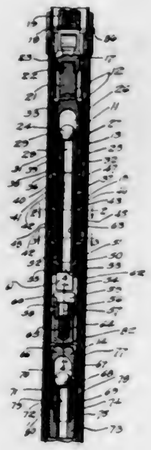
1,633,056. ROTARY-COMPRESSOR REFRIGERATING MACHINE. HAROLD H. WISHART, Hollywood, Calif., and WILLIAM WISHART, Clinton, Iowa, assignors to Climax Engineering Co., a Corporation of Delaware. Filed Jan. 23, 1925. Serial No. 4,148. 17 Claims. (Cl. 230—30.)



1. In a compressor of the class described, a cylinder, a shaft journalled therein, an eccentric on said shaft, a piston on said eccentric, a rocker adjustably mounted in the cylinder to maintain sealing engagement therein, and a blade secured to said piston and slidably engaged in said rocker.

4. In a device of the class described a casing having internal and external cooling fins, a rotary compressor mounted within said casing, a bath of lubricant partly submerging said compressor and a discharge valve for said compressor having an outlet extending above the level of the lubricant within said casing, and an oil trap adapted to receive the discharge from the compressor comprising a receiver and a gas collecting tube leading from a high point in the receiver, said receiver being adapted to drain back into said casing.

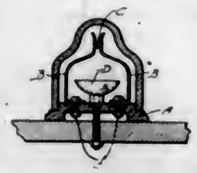
1,633,057. CUTTING SECTION FOR ROAD-SCRAPER BLADES. CARL O. WOLD, Minneapolis, Minn. Filed July 15, 1926. Serial No. 122,587. 2 Claims. (Cl. 37—143.)



1. A scraper blade cutting section formed integrally and comprising a lower portion having a flat wearng surface of substantial area adapted to rest, when in use, upon the road surface, with a cutting edge at the front of the wearing surface, an upwardly extending plate por-

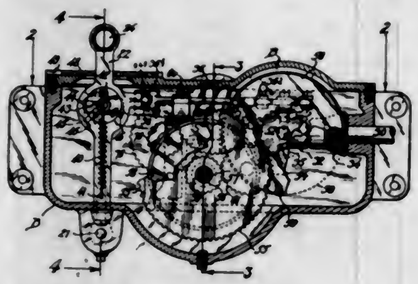
tion of reduced thickness having its forward surface forming with the forward surface of the lower portion an unobstructed curved face over which material may freely pass, and the rear surface of the upper portion provid-

ing an off set with the rear surface of the lower portion, the whole forming a structure capable of being produced at a single operation by passing a billet of requisite dimensions between suitable rolls.



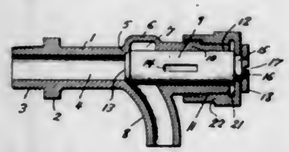
1,633,058. PUMP PLUNGER. JOHN A. ZUBLIN, Los Angeles, Calif. Filed Nov. 11, 1924. Serial No. 749,132. 10 Claims. (Cl. 103—225.)

1. A reciprocating pump comprising: a pump barrel; and a plunger reciprocable in said barrel, said plunger consisting of a section having a plunger sleeve and means secured to said section for providing a fluid-tight relationship between said barrel and said plunger so that it is only laterally adjustable relative to said means.



1,633,059. CRYSTAL DETECTOR. HARRY C. ADAM, St. Louis, Mo. Filed Mar. 12, 1923. Serial No. 624,521. 2 Claims. (Cl. 250—31.)

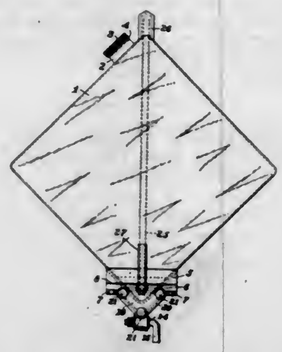
1. A crystal detector composed of two substantially disk-shaped conducting members arranged in parallel relation, one of said members being rigid and the other member being relatively limber and having a flexible or resilient central portion, a small-sized particle of material having rectifying properties interposed between said resilient portion and the opposed part of the rigid member, an insulating means positioned between said



members, and a housing arranged in overlapping relation with said limber member and secured to said rigid member.

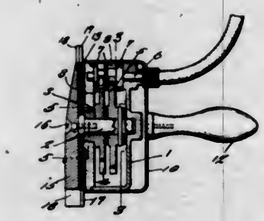
1,633,060. GRINDING MACHINE. WILLIAM J. BAUMBERGER, Davenport, Iowa, assignor to Micro Machine Company, Bettendorf, Iowa, a Corporation of Iowa. Filed June 28, 1923. Serial No. 648,238. 11 Claims. (Cl. 74—50.)

1. In combination, a reciprocable table, a gear drive therefor, a clutch for said gear drive movable to positions for driving the table in opposite directions, a shiftable member having a lost motion connection with said clutch, a rack for actuating said member, a pinion for actuating the rack, said pinion having a relatively stationary axis and means connected with the pinion for causing a quick movement thereof in each direction beyond a dead center position, said shiftable member being actuable in both directions by said table to cause movement of said pinion to a position of dead center.



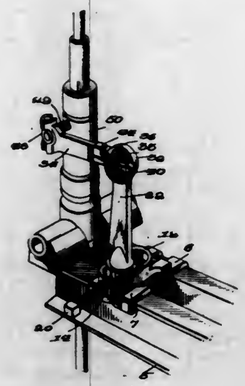
1,633,061. VALVE. WERNER BAUMGARTNER, Elgin, Ill. Filed May 22, 1926. Serial No. 111,003. 1 Claim. (Cl. 251—43.)

In a valve and in combination, a casing body having a bore and a valve seat at the forward end of the bore and also having a lateral chambered swell immediately in front of said valve seat and a lateral spout also in front of the valve seat, the portion of the casing body in front of the swell and the chamber therein and the spout, being provided with a circular bore of even diameter throughout its length and being open at its forward end and



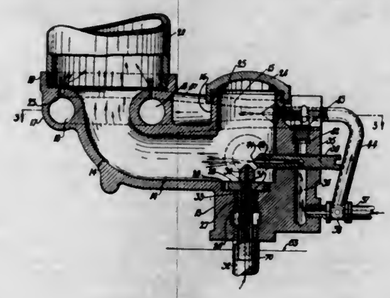
being also provided with an exterior thread, a rectilinearly movable valve body circular in cross section and of even diameter throughout its length disposed in the bore in the forward portion of the casing body and having its inner end beveled and opposed to said valve seat and also having a longitudinal slot in its side and further having a circular reduced portion adjacent to its forward end and a further reduced and threaded forward end, an inwardly projecting portion carried by the casing body and disposed in the slot of the valve body, a combined nut and hand wheel interiorly threaded and engaging the forward exterior thread of the casing body and having an end wall in which is a central circular aperture snugly receiving the circular reduced portion of the valve body, and further having a knurled circumferential portion, and a nut mounted on the threaded end portion of the valve body and opposed to the said end wall of the combined nut and hand wheel.

1,633,062. FUEL TANK. SAMUEL J. BENS, New York, N. Y. Filed Feb. 4, 1925, Serial No. 6,815. Renewed Nov. 16, 1926. 4 Claims. (Cl. 158—46.)



1. A fuel tank substantially rectangular in cross section, and having one of its diagonals arranged vertically, a feed fixture affixed to the lower corner of said tank, including a constant level chamber, and means to admit air to the top of the tank above the liquid level controlled from said constant level chamber.

1,633,063. HAIR-CUTTING MACHINE. LOUIS BERNARDUCCI, Bronx, N. Y. Filed Sept. 11, 1925. Serial No. 55,837. 4 Claims. (Cl. 30—1.)

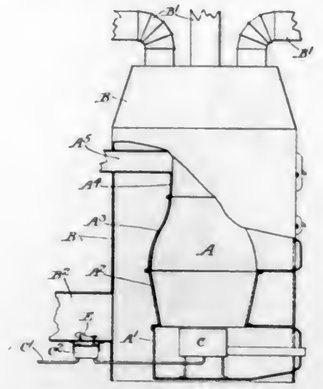


1. A hair cutter, comprising a frame, a pair of cutting disks, contacting with each other and supported by the frame to have rotary movement, cutting teeth on each disk and means for alternately rotating the disks step by step.

1,633,064. POLISHED-ROD ROTOR. ALEXANDER BOYNTON, San Antonio, Tex. Filed June 29, 1926. Serial No. 119,329. 12 Claims. (Cl. 255—14.)

1. A base plate for polished rod rotors comprising a pair of sections having beam engaging means, one of the sections overlapping the other section, the section which is overlapped being provided with a boss extending through the overlapping portion of one of the sections and adapted to receive the actuator of a rotor.

1,633,065. HEATING DEVICE. JAMES L. BREESE, Jr., Chicago, Ill., assignor to Oil Devices Corporation, Chicago, Ill., a Corporation of Illinois. Filed Dec. 17, 1923. Serial No. 681,671. 2 Claims. (Cl. 158—28.)

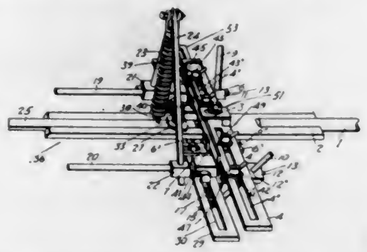


1. In a heating device, a fuel mixing chamber, a baffle wall forming part thereof, a liquid fuel nozzle projecting into said mixing chamber and a fuel supply pipe associated therewith, atomizing means adapted to spray the fuel delivered by said nozzle into said mixing chamber, the normal level of said fuel being substantially below the tip of the fuel nozzle, and means for returning the unvaporized liquid fuel directly to said supply pipe, comprising longitudinal draining grooves along the exterior of said fuel nozzle.

1,633,066. OIL-BURNING FURNACE AND THERMOSTATIC CONTROL THEREFOR. JAMES L. BREESE, Jr., Chicago, Ill., assignor to Oil Devices Corporation, Chicago, Ill., a Corporation of Illinois. Filed Feb. 8, 1926. Serial No. 86,696. 10 Claims. (Cl. 236—9.)

1. In combination with a heating system comprising a furnace, a fuel burner therein, a fuel line thereto, a

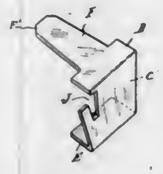
control valve in said fuel line, an air enclosing housing about said furnace, hot air outlet means extending therefrom and a return cold air duct thereto, a thermostatic



control means for said fuel line comprising in part a thermostatic element responsive to the temperature of the air of the return duct.

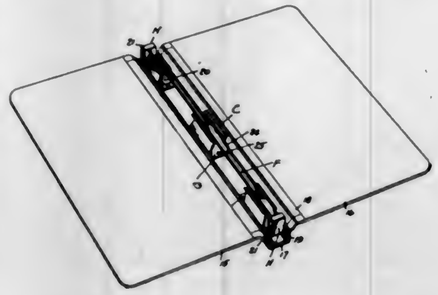
1,633,067. FIREPROOFED PRODUCT AND THE PRODUCTION THEREOF. CHARLES E. BURKE, Wilmington, Del., assignor, by mesne assignments, to Du Pont Viscoloid Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 2, 1926. Serial No. 79,037. 13 Claims. (Cl. 106—37.)

1. A fireproofed product comprising as a fire-retardant, a hydrated carbonate of magnesium.



5. A composition comprising a cellulose ester, a plasticizing agent, and a hydrated carbonate of magnesium.

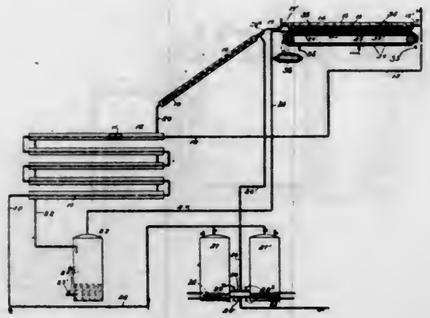
1,633,068. COIL-FORMING MACHINE. LORNE A. COLE, Brantford, Ontario, Canada. Filed Apr. 10, 1925. Serial No. 22,146. 7 Claims. (Cl. 140—92.2.)



1. In a coil forming machine, a rotatable member, a loop forming device carried by the rotatable member, and on which a closed loop is formed having parallel sides, and comprising loop end forming and carrying members between which the parallel sides of the loop extend, a supporting structure adapted to resiliently hold the loop end carriers apart, and in which the carriers move freely transversely of the loop, means stationary in relation to the rotatable member and engaged by one longitudinal loop side at points spaced from the ends of the loop as the loop is formed, means movable in relation to the rotatable member laterally of the loop for engaging the other longitudinal loop side at points also spaced from the ends of the loop, whereby by the outward movement of the movable member the loop sides are spread apart, and the ends drawn in a corresponding direction into alignment with the longitudinal centre of the completed loop and towards each other against the aforesaid resilient holding means.

1,633,069. SHADE-ROLLER BRACKET. FRANK COONEY, Detroit, Mich. Filed Oct. 9, 1925. Serial No. 61,442. 2 Claims. (Cl. 156—24.)

1. A stamped sheet metal bracket comprising a U shaped body having a central portion formed with an opening for engagement by a shade roller, and having substantially parallel upper and lower portions projecting equally from said central portion, and further comprising a tapering tongue integrally projecting centrally from said upper portion, having a blunt end and having a lesser width than said upper portion, and constituting the sole support for the bracket.

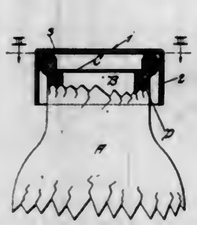


1,633,070. TEMPORARY BINDER. FRANK H. CRUMP, Los Angeles, Calif. Filed July 13, 1926. Serial No. 122,236. 6 Claims. (Cl. 129—38.)

1. A temporary binder comprising a cover having a back member, a plurality of longitudinally alined brackets secured to the back member and having flexible portions between which the bound portion of a magazine is adapted to be received and flexible fastening members disposed within and extending from one bracket to the other, said members being detachably secured within the brackets and adapted to extend between the leaves of a magazine in a manner to retain the latter within the brackets and to cause the brackets to restrain the magazine against turning movement between the fastening members.

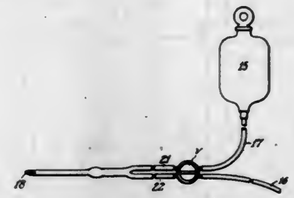
1,633,071. METHOD OF PRODUCING CARBON BLACK. LEWIS J. DALES, Mount Vernon, N. Y. Filed Apr. 4, 1921, Serial No. 458,370. Renewed Aug. 27, 1924. 13 Claims. (Cl. 134—60.)

13. The method of producing carbon black from natural gas, which comprises taking the raw gas, passing the same through an elongated heating chamber, then through a condenser, utilizing the raw gas as a cooling medium whereby to separate the gas from the condensible hydrocarbons present therein, then conducting the separated gas to a point below said elongated heating chamber and burning said gas whereby to heat the interior of said heating chamber and to form a deposit of carbon black upon the outer surface of said heating



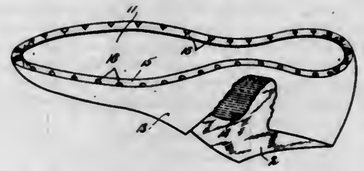
chamber, and finally scraping the carbon deposit from the outer surface of said heating chamber and conveying the same to a point of collection, substantially as specified.

1,633,072. STENCIL SHEET. ALEX BROOKING DAVIS, Cincinnati, Ohio, assignor to A. B. Dick, Chicago, Ill., a Corporation of Illinois. Filed Mar. 26, 1924. Serial No. 702,148. 10 Claims. (Cl. 41—38.6.)



1. A stencil sheet including, as a principal ingredient of its coating, an organic polymer of elastic character, water insoluble and amorphous in structure.

1,633,073. BOTTLE COVER. JOSEPH W. DAWSON and JAMES L. HEROLD, St. Louis, Mo., assignors to Barry-Wehmiller Machinery Company, St. Louis, Mo., a Corporation of Missouri. Filed July 27, 1922. Serial No. 577,983. 3 Claims. (Cl. 215—38.)



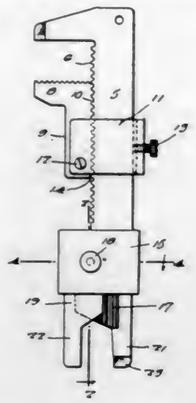
1. In a device for protecting the closure of a milk bottle submerged in a Pasteurizing liquid, a relatively heavy member impervious to moisture and supported by the upper portion of the milk bottle, within which member air is trapped, said member being provided with a top wall contacting with the upper edge of the neck portion of said bottle, and an annular downwardly extending side wall surrounding said neck portion of said bottle, said top wall being parallel throughout its width with said upper edge of the neck portion of said bottle, said annular downwardly extending side wall of said member being spaced from the adjacent side face of the bottle neck, said member being of sufficient weight to offset the tendency of said liquid to displace said member when in use, and said member being retained in place on the bottle by gravity only.

1,633,074. SURGICAL DEVICE. RICHARD H. DE MOTT, Tenafly, N. J. Filed Aug. 6, 1925. Serial No. 48,459. 4 Claims. (Cl. 128—240.)

1. In a device of the character specified, the combination with a tubular body portion having a longitudinal partition dividing it interiorly into two ducts, of a tubular nozzle in communication with one of the said ducts extending from the body and formed at its end with an orifice, the structure at the region of juncture between the body portion and the nozzle being circumferentially enlarged for holding the device in position in the cavity being treated, the wall of the body at the said region of juncture being formed with an orifice for the other of the said ducts.

1,633,075. PROCESS OF PREPARING FOOTWEAR. WILLIAM J. DE WITT, Auburn, N. Y., assignor to The Shoe Form Co., Inc., Auburn, N. Y., a Corporation of New York. Filed June 16, 1925. Serial No. 37,485. 3 Claims. (Cl. 12—142.)

3. The process of preparing shoes for market which comprises applying a stiff non-metallic thin walled hollow form open at top and bottom to a shoe last of substantially usual type, lasting the shoe about said hollow form, withdrawing the last leaving the form within the shoe, completing the shoe and trimming off the upper edge of the form substantially flush with the upper edge of the finished shoe, and packing the shoe with the form therein for shipment.



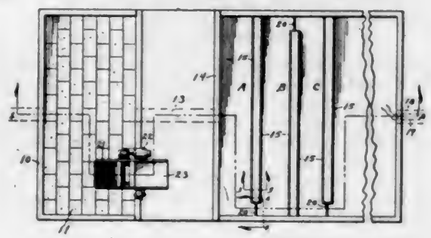
1,633,076. DUSTER. FARNUM F. DORSEY, Rochester, N. Y. Filed June 15, 1922, Serial No. 568,649. Renewed Nov. 6, 1926. 1 Claim. (Cl. 87—23.)

A duster comprising textile material with a microscopic coating of faktis on the individual fibers thereof.

1,633,077. TOOL. JEROME J. B. DREESEN, Jefferson, Tex. Filed Apr. 13, 1926. Serial No. 101,737. 1 Claim. (Cl. 81—132.)

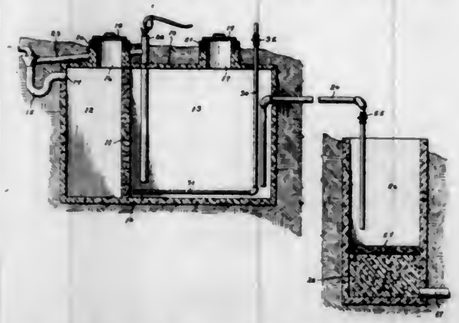
A wrench of the class described including a jaw having a shank extending therefrom and provided with rack teeth on one edge, a second jaw having a shank, said shank of the second jaw being provided with rack teeth throughout the length of one edge meshable with the first-mentioned rack teeth, a yoke, means pivoting the end of the shank of the second jaw remote from said second jaw to extreme corners of the sides of the yoke, and a set-

screw threaded through the bight of said yoke for engaging the other edge of the first-mentioned shank for holding the movable jaw in different adjusted positions in



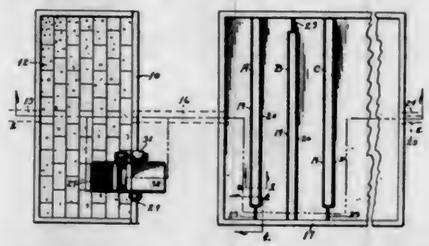
relation to the fixed jaw, the inside corner of the second shank being rounded for the purpose of permitting the swinging of the second shank towards said pivot means.

1,633,078. PROCESS OF DISPOSING OF WASTE MATERIAL AND UTILIZING COMPONENTS THEREOF. ANDREW ENGLE, Newton, Iowa, assignor of one-half to James Maine, Des Moines, Iowa. Filed Aug. 24, 1925. Serial No. 52,193. 2 Claims. (Cl. 71—8.)



1. A process for disposing of sewage, night soil, garbage and the like, which consists in introducing such materials into a closed and sealed tank having a substantially porous partition through which the liquid portions may pass, permitting the solid and liquid portions to remain in said tank for a considerable time while nitrate-producing bacteria act thereon and therein, and utilizing some of the liquid portions from time to time for flushing the entrance of new material to the tank.

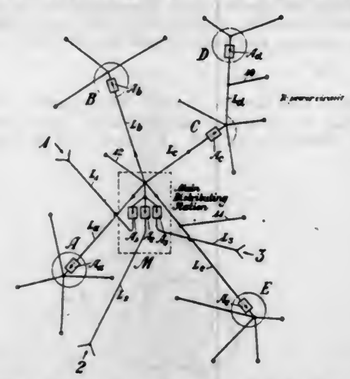
1,633,079. PROCESS OF DISPOSING OF WASTE MATERIAL AND UTILIZING COMPONENTS THEREOF. ANDREW ENGLE, Newton, Iowa, assignor of one-half to James Maine, Des Moines, Iowa. Filed Aug. 24, 1925. Serial No. 52,194. 4 Claims. (Cl. 71—8.)



1. A process of disposing of waste material such as sewage, night soil, garbage and the like, which consists in separating the liquid from the solid portions thereof, filtering the liquid portions, permitting said liquid portions to be subjected to the action of nitrate-producing bacteria, destroying the bacteria, and again filtering such liquid portions.

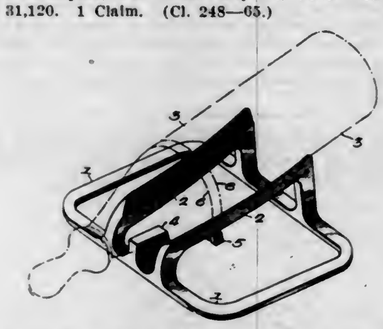
1,633,080. MEANS OF DISPOSING OF WASTE PRODUCTS AND UTILIZING COMPONENTS THEREOF. ANDREW ENGLE, Newton, Iowa, assignor of one-half to James Maine, Des Moines, Iowa. Filed Aug. 24, 1925. Serial No. 52,195. 1 Claim. (Cl. 210—8.)

In a means for disposing of waste materials and utilizing components thereof including a closed tank divided into two compartments, a supply means comprising an inlet pipe provided with a trap for introducing waste materials to the initial compartment, a part of the liquid component being permitted to pass to the second compartment, and a pump device communicating with the second compartment and adapted to discharge liquid therefrom to the inlet pipe for the purpose of flushing it and the trap and thereby preventing undue dilution of the contents of the tank.



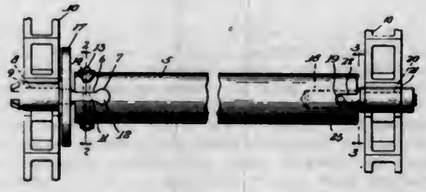
1,633,081. MEANS FOR DISPOSING OF WASTE MATERIAL AND UTILIZING COMPONENTS THEREOF. ANDREW ENGLE, Newton, Iowa, assignor of one-half to James Maine, Des Moines, Iowa. Filed Aug. 24, 1925. Serial No. 52,196. 3 Claims. (Cl. 210—8.)

1. In a device of the class described, a separate unit comprising a shell open at its top and having perforated side walls, spaced bars connecting lower portions of said side walls, a filtering material filling the lower portion of said shell, and a bacteria harboring medium such as soil superposed on said filtering material and adapted to receive bacteria-carrying liquid by capillary action therefrom.



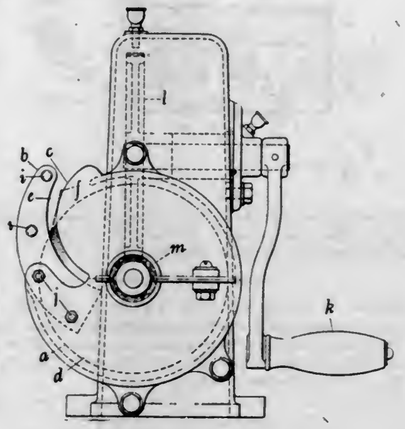
1,633,082. DISTRIBUTION OF INTELLIGENCE. LLOYD ESPENSCHIED, Queens, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 25, 1922. Serial No. 531,863. 24 Claims. (Cl. 179—15.)

1. In a system for distributing amusement, news and the like, a central station, a plurality of subscribers' stations, subscribers' lines extending from said central station to said subscribers' stations, a common terminal at the central station to which said lines are connected in multiple, means to translate intelligence into high frequency carrier currents, means to apply said carrier currents to said common terminal for simultaneous transmission over a plurality of said lines to a plurality of said



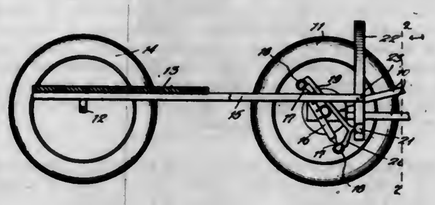
subscribers' stations, and detectors at said substations for simultaneously detecting the same intelligence from said carrier currents at a plurality of said substations.

1,633,083. BOTTLE HOLDER. JOHN E. FITE, Jr., Philadelphia, Pa. Filed May 18, 1925. Serial No. 31,120. 1 Claim. (Cl. 248—65.)



A bottle support comprising an annular base member having at one side substantially vertical uprights and on the other side correspondingly arranged uprights greater in height than those first mentioned, a bar extending from the top of each of the uprights on one side to the respective uprights on the opposite side providing an inclined cradle adapted to hold the bottle, and a stop member intermediate the smaller uprights adapted to retain the bottle in an inclined position in the cradle.

1,633,084. SPINDLE. JOHN J. FLANIGAN, Oak Park, Ill. Original application filed Apr. 6, 1925, Serial No. 20,890. Divided and application filed Nov. 30, 1925, Serial No. 72,088. Divided and this application filed May 17, 1926. Serial No. 109,622. 10 Claims. (Cl. 242—68.)

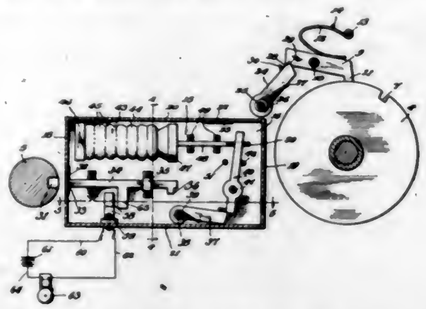


2. A gelatin roll spindle for hectograph machines having a longitudinal bore at one end and a transverse slot intersecting said bore and extending through that end of the spindle, and a transverse slot in the other end of the spindle aligned with said first mentioned slot.

1,633,085. KNIFE-SHARPENING MACHINE. RICHARD FORSHAW, Weaste, near Manchester, England. Filed Dec. 19, 1923, Serial No. 681,664, and in Great Britain July 6, 1923. 1 Claim. (Cl. 51—102.)

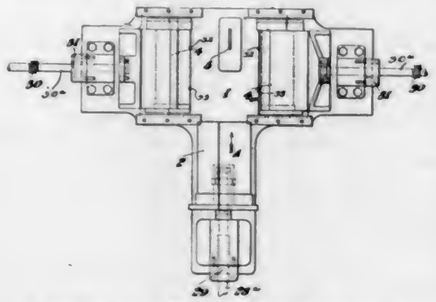
In knife sharpening machines, the combination comprising a single grinding wheel, an enclosing casing for said wheel having a gap exposing a portion of the wheel sides and periphery, and a pair of burr removing members detachably fixed to the said casing adjacent the said exposed portion of the wheel and forming in association with the casing a receptacle and guide directing the knife blade into grinding contact with the periphery of the wheel notwithstanding the reducing diameter of the latter due to wear.

1,633,086. MOTOR CYCLE TRAILER ATTACHMENT. WERNER J. FOX, New Orleans, La. Filed June 18, 1926. Serial No. 116,901. 6 Claims. (Cl. 208—45.)



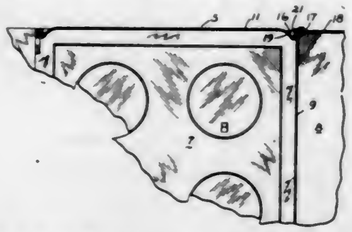
1. In a device of the class described, the combination of inclined posts, outwardly and forwardly directed members having their inner ends pivoted to opposite ends of said posts, ball and socket joints at the outer ends of the members, and a link connecting the ball and socket joints.

1,633,087. LOCK MECHANISM. MCCLELLAN C. FULLENLOVE, Toledo, Ohio, assignor of one-half to Peritz Jacob, Toledo, Ohio. Filed Apr. 22, 1926. Serial No. 103,925. 9 Claims. (Cl. 109—3.)



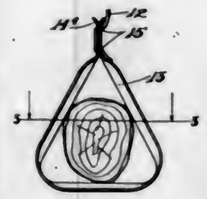
1. In lock mechanism, a vacuum chamber, a fluid-tight expansible and contractible actuating unit within the chamber containing a gaseous fluid and normally expanded through the sustained expansion of the fluid due to the pressure difference between the fluid and the

vacuum, a locking member within the chamber supported for projection through a wall of the chamber to engage a part to be locked, and means interposed between the



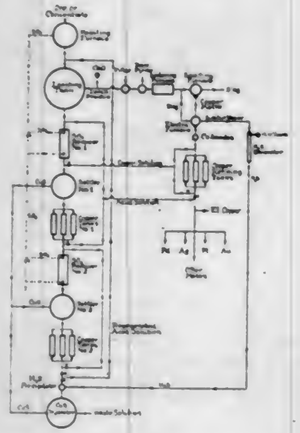
said actuating unit and the locking member operable to actuate the member upon contraction of said unit upon the admission of air into the chamber.

1,633,088. MACHINE FOR CASTING BOXES AND OTHER HOLLOW METAL ARTICLES. JOHN ALFRED FULLILOVE, Market Harborough, England. Filed Aug. 1, 1925, Serial No. 47,503, and in Great Britain Aug. 6, 1924. 6 Claims. (Cl. 22—92.)



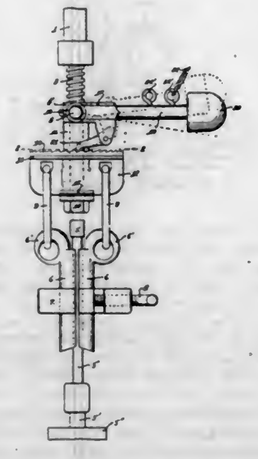
1. A machine for casting boxes and like hollow articles comprising a withdrawable water cooled mould core, separable water cooled mould parts adapted to be closed upon and to position the core automatically, a reservoir for molten metal under releasable pressure, means for injecting the metal into the mould under sudden pressure in the direction of air vents or outlets in the mould, and means for releasing the pressure substantially as specified.

1,633,089. SPLASHER BACK FOR STOVES. FREDERICK A. GERCICH, Oakland, Calif. Filed Aug. 1, 1925. Serial No. 47,409. 7 Claims. (Cl. 126—39.)



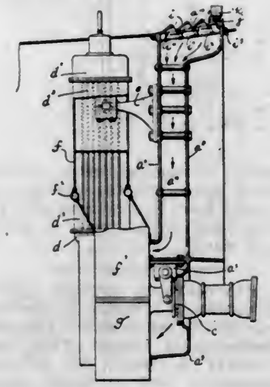
1. In a stove having a cooking top and an oven positioned laterally of and extending above the level of the cooking top, a splash plate arranged to lie at the rear of the cooking top with the major portion thereof substantially coplanar with the oven back and having an intermediate portion arranged to contact with a side of said oven forwardly of said plane and having an end portion adjacent said intermediate portion fixed to said oven.

1,633,090. CLAMPING BAND FOR TREE LIMBS. CHARLES D. GILMAN, Oakland, Calif. Filed July 27, 1926. Serial No. 125,177. 1 Claim. (Cl. 47—42.)



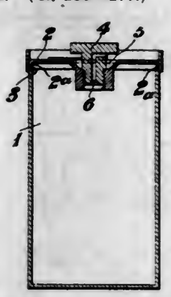
Means for attaching a tie wire to an object to be supported comprising a clamping band triangular in plan and formed with convex side walls, one end of the clamping band being open, opposed lugs at this end of the band, said lugs being formed with spaced apertures in alignment whereby to permit a wire to be passed through one set of aligned openings and returned through another set of alingned openings and thence drawn to clamp said lugs together to close the open end of the band and then bent substantially parallel to said lugs to lock the same together.

1,633,091. METALLURGICAL PROCESS. WILLIAM E. GREENAWALT, Denver, Colo. Filed Sept. 7, 1926. Serial No. 134,099. 20 Claims. (Cl. 75—18.)



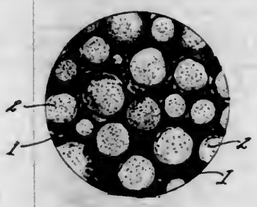
1. A process of treating copper concentrate containing rare or precious metals comprising, roasting the concentrate, leaching the roasted concentrate with a solvent for the copper, than when the desired amount of copper has been extracted from the roasted concentrate by leaching, smelting the residue to concentrate the residual copper and the rare or precious metals into a matte, heating the matte to dissociate copper and sulphur, subjecting the resulting crude copper containing the rare or precious metals to electrolysis to deposit the copper as the electrolytic metal, and recovering the rare or precious metals from the residual slime.

1,633,092. SUCKER-ROD TURNER. ELMER T. GAIBBLE, Coalinga, Calif., assignor of one-half to Robert E. Richard, Coalinga, Calif. Filed Jan. 9, 1926. Serial No. 80,388. 9 Claims. (Cl. 255—14.)



1. A sucker-rod turner comprising a clamp-member adapted for connection with a sucker-rod string; a ratchet-member adapted for rotatable suspension from a walking-beam; members connecting said clamp-member and said ratchet-member for unisonal rotation; a gravity lever; a pawl carried by said lever and arranged to engage and turn said ratchet-member upon the gravity stroke of said lever and to slip the ratchet-member upon the reverse stroke; and means dependent upon the operation of the walking beam for lifting and relieving said lever.

1,633,093. VEHICLE DASH. ERVING R. GURNEY, Beechhurst, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 19, 1924. Serial No. 756,870. 2 Claims. (Cl. 180—93.)

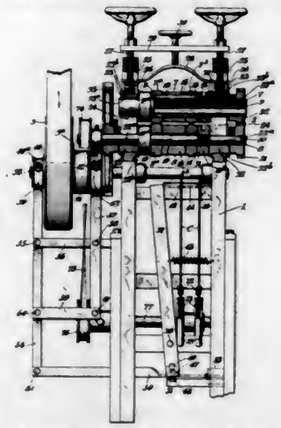


1. In a motor vehicle, the combination with the radiator and fan having a housing, a unitary dash, means mounting the main brace of the radiator thereon, a passage in the dash open to the atmosphere at its upper extremity and leading to the fan housing, and means to control the flow of air in the passage.

1,633,094. ELECTRIC ACCUMULATOR CASING. WALTER HADDON, London, England. Filed Jan. 15, 1926, Serial No. 81,575, and in Great Britain Jan. 19, 1925. 1 Claim. (Cl. 136—177.)

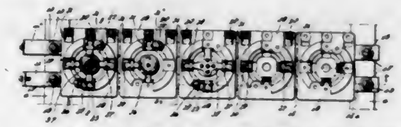
In combination, an accumulator casing proper formed with an interior horizontal ledge, a cover formed with a filling hole adapted to rest on said ledge, and a plug, formed with a vent hole, adapted to fit removably in said filling hole, the upper surface of said cover being below the upper edge of said casing proper, said filling hole at its upper end being expanded so as to provide a sunken annular clearance around said plug and, at its lower end, being adapted to provide a sufficiently inexact fit with said plug to permit of the draining back of acid from said upper surface of said cover, and said vent hole coming out above said upper surface of said cover so that acid can not drain back through said vent hole.

1,633,095. WOOD PRESERVATIVE. RALPH HOWARD HANDY, Berkeley, Calif. Filed Feb. 3, 1925. Serial No. 6,650. 3 Claims. (Cl. 134—78.6.)



1. A wood preservative consisting of a water-in-oil emulsion wherein a water soluble antiseptic is contained within the water, and cresylic acid contained within the oil to act as an antiseptic to wood destroying fungi.

1,633,096. ROLLING MACHINE. HARRY J. HAON and HARRY BOICE, Newburgh, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 1, 1921. Serial No. 457,642. 6 Claims. (Cl. 154—1.)

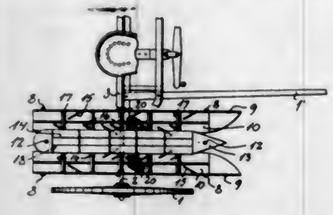


1. In a machine for making folded strips, a pair of matched rollers to receive the folded strip between them and press the fold, each roller having a pressing portion upstanding therefrom to give relief to a fold at each side of the strip, and mated with and opposite the pressing portion of the other roller; each of said rollers comprising a flange of greater radial dimension than the body of the roller at each side of the flange thereof to present

said upstanding pressing portion with relief at each side, and also comprising devices whereby other flanges

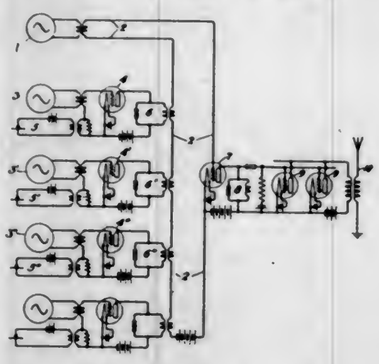
of widths different from that of said flange may be substituted for such flange; and means for driving said rollers.

1,633,097. SWITCH MOUNTING FOR ELECTRIC RANGES. GEORGE HEGEMAN HART, West Hartford, Conn. Filed June 11, 1924. Serial No. 719,455. 2 Claims. (Cl. 175—298.)



1. In an electric range, bus bars, a plurality of switches mounted on and carried solely by said bars, means for detachably securing said switches on said bars, and means for detachably securing said bars in said range, whereby said bars and switches may be attached to and detached from said range as a unit.

1,633,098. LIGHTNING-ARRESTER SYSTEM. HENRY HEESE, Jersey City, N. J. Filed Jan. 26, 1925. Serial No. 4,876. 2 Claims. (Cl. 173—31.)

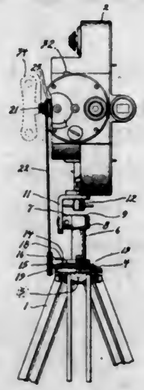


1. In a connection for use in conjunction with a lightning arrester system for chimneys which includes a plurality of lightning rods, a ground wire extending along the outer wall of the chimney, the upper portion thereof encircling the upper portion of the chimney to provide a conductor wire, said connection comprising a pair of upper and lower complementary sections, the upper section being provided with a socket for receiving and supporting the lower end of a lightning rod, the inner opposed faces of said sections having cooperating transversely extending grooves formed therein for receiving the free end of the conductor wire, the inner opposed faces of the complementary sections being further provided with diagonally arranged grooves for receiving the adjacent portion of the ground wire, and means for detachably securing the complementary sections together.

1,633,099. MACHINE ADAPTED TO CATCH AND DESTROY BUGS AND SIMILAR NOXIOUS VERMIN ON PLANTS AND BUSHES. CARL HEILMANN, Skelskor, Denmark. Filed Mar. 26, 1925. Serial No. 18,576, and in Denmark Aug. 5, 1924. 2 Claims. (Cl. 43—133.)

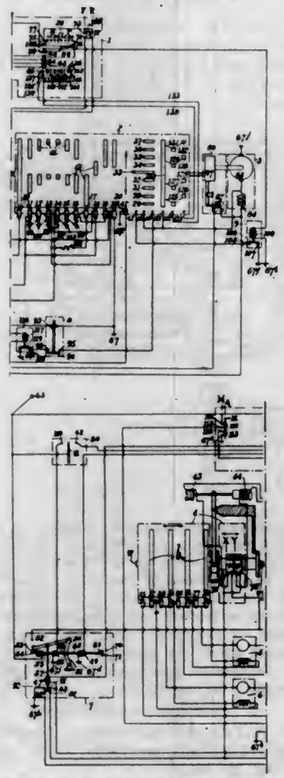
1. In a machine for catching and destroying weevils, beetles, bugs and other vermin on plants and bushes growing in rows, the combination of a pair of supporting wheels, a pair of vertical catching plates arranged between the said wheels parallel thereto, a horizontal collecting gutter arranged along the lower edge of each such plate on its side facing the corresponding plate, and between said pair of plates an adjustably supported, long, horizontal catching body, tapering towards its front end and having on its upper face a collecting gutter adapted to separate and pass between the branches of a plant and having on its two side faces shaking rods, said collecting gutters completely covering the ground included between each pair of plates below the foliage on said plants.

1,633,100. PLURAL CHANNEL SIGNALING. RAYMOND A. HEISING, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 3, 1916. Serial No. 81,980. 63 Claims. (Cl. 250—9.)



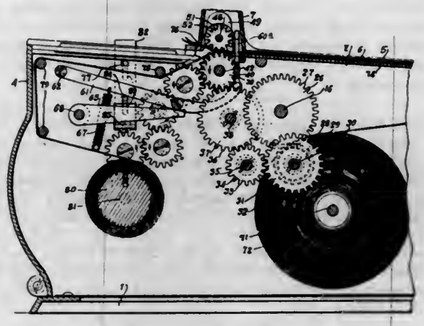
6. The method of signaling which comprises producing two different waves at a transmitting station, modulating one of said waves in accordance with a signal, and modulating the other of said waves in accordance with said modulated wave.

1,633,101. PANORAMING DEVICE FOR PHOTOGRAPHIC CAMERAS. ALBERT S. HOWELL, Chicago, Ill., assignor to The Bell & Howell Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 6, 1925. Serial No. 48,544. 8 Claims. (Cl. 88—16.)



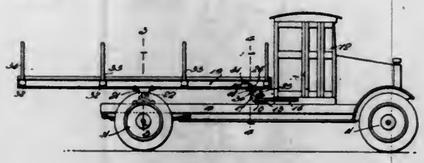
1. The combination with a motion picture camera having a spring motor for operating the same and including a revoluble primary spindle by means of which the spring of the motor is wound up and the camera is operated by the spring of the motor, said spindle having a clutch formation adapted for detachable engagement with a winding key for winding up the motor, of means

for supporting the camera for panoraming movement, and means driven from the motor for automatically



panoraming the camera during operation thereof including a revoluble member detachably engaged with said clutch formation for driving from said spindle.

1,633,102. ELECTRIC MOTOR CONTROL SYSTEM. ALBERT HENRY JACKSON, London, England. Filed Mar. 5, 1926, Serial No. 92,592, and in Great Britain Aug. 18, 1925. 14 Claims. (Cl. 172—179.)



1. In combination with a system of electric motor control in which a pilot-motor-driven switch mechanism is remotely operated from a master controller and "automatic acceleration" of the main motors is obtained by the employment of a maximum current relay, an additional relay and controlling means for said additional relay, said controlling means including two additional train lines and contacts therefor and being operable by said master controller, the arrangement being such that when said additional relay is brought into operation the maximum current relay is rendered inoperative.

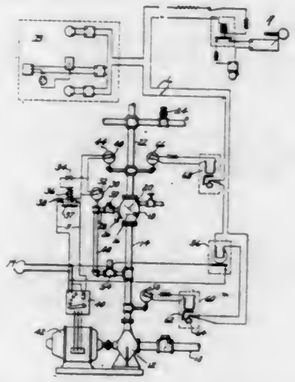
1,633,103. AUTOGRAPHIC REGISTER. PHILIP A. JACKSON, Dayton, Ohio, assignor to The Egry Register Company, Dayton, Ohio, a Corporation of Ohio. Filed July 6, 1925. Serial No. 41,470. 11 Claims. (Cl. 282—21.)

1. In an autographic register containing a plurality of superimposed sheets having spaced perforations, an actuating means, a paper ejecting means adapted to grip the paper to hold it steady and to eject it, paper aligning means adapted to ride on the paper and to drop into spaced openings in the paper, means connected to the paper aligning means to render inoperative the ejecting and holding means when the aligning means enters the perforations in the paper and means connected to the aligning means and the ejecting means to operate them synchronously from the common actuating means.

1,633,104. DUMP TRUCK. MELVIN JOHNSON, Danville, Ill. Filed Aug. 16, 1926. Serial No. 129,527. 2 Claims. (Cl. 298—38.)

1. In a dump truck, a chassis frame including longitudinal side bars; a transverse bar secured upon said side bars, horizontally alined bearings secured to a side of said transverse bar toward one end of the truck, a transverse shaft rockably mounted in said bearings and provided with upstanding arms having hooks at their ends facing one end of the truck, a body-supporting frame above the chassis frame and hinged to the latter for dumping, said body-supporting frame including longitudinal side bars and a transverse bar under and secured to the same, the last named transverse bar resting on the first named transverse bar; U-shaped yokes rigidly secured to the side bars of the body supporting frame and having their transverse portions spaced below the same to underlie the aforesaid hooks, and a handle secured to and projecting from one end of said shaft for turning the latter to release the hooks.

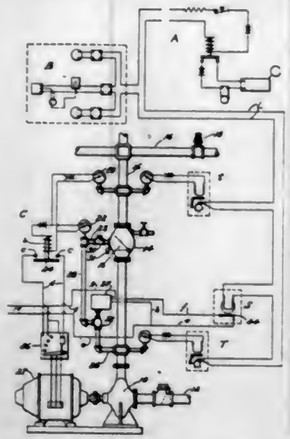
1,633,105. CONTAINER FOR POWDERED SUBSTANCES. ALONZO H. KARWATH, Davenport, Iowa. Filed Nov. 16, 1925. Serial No. 69,456. 2 Claims. (Cl. 221—64.)



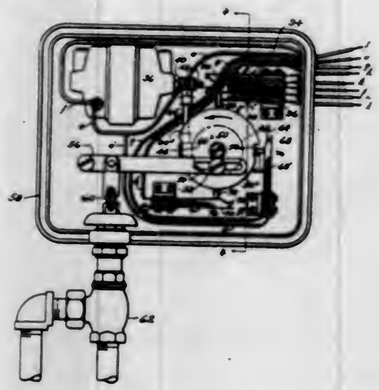
1. A powder container comprising a body having a perforated cap secured thereto, a depression formed in the outer face of the fixed cap, a hairpin-shaped spring seated in the depression with ends projecting slightly outwardly therefrom, a movable cap revolvably mounted upon the fixed cap and having corresponding perforations, and also having a segment of its side wall extended outwardly and forming shoulders adjacent the projecting ends of the spring.

1,633,106. PAINT-IMPROVING COMPOSITION AND SIZE. CHARLES B. KELLY, Seattle, Wash. Filed May 24, 1926. Serial No. 111,378. 2 Claims. (Cl. 134—46.)

1. A paint improving and waterproofing composition prepared by intimately mixing water, linseed oil, an alkali and starch, the starch and linseed oil being present in about equal quantities by weight, the alkali being present in a small amount as compared with the starch or linseed oil, and the water being present in sufficient quantity to give the composition at least a paste like consistency.



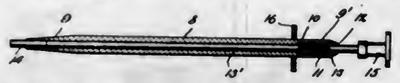
1,633,107. TESTING DEVICE FOR BOOSTER-PUMP DRY-PIPE SYSTEMS. IRA W. KNIGHT, Cranston, R. I., assignor to General Fire Extinguisher Company, Providence, R. I., a Corporation of Delaware. Filed Mar. 28, 1925. Serial No. 19,184. 7 Claims. (Cl. 103—25.)



1. Supervisory testing apparatus for a system having a booster pump comprising, in combination with the system, a device adapted to respond to rise of pressure to start the pump, and means operable independently of the operation of the system for admitting pressure to said device.

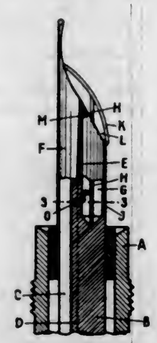
1,633,108. VALVE APPARATUS. IRA W. KNIGHT, Cranston, R. I., assignor to General Fire Extinguisher Company, Providence, R. I., a Corporation of Delaware. Filed June 8, 1925. Serial No. 35,837. 7 Claims. (Cl. 103—25.)

1. Valve apparatus comprising a valve seating in the direction of its axis; a rotating element adapted in a single rotation to effect a complete cycle of operations of the valve; means connecting the valve and the said element for converting rotary motion of said element to motion of translation of said valve; power means for rotating said element; means for energizing said power means; and means controlled by said element for de-energizing the power means at the end of a complete rotation of said element.



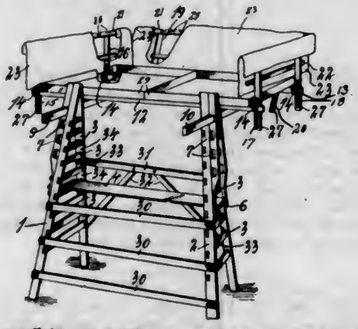
1,633,109. VALVE APPARATUS. IRA W. KNIGHT, Cranston, R. I., assignor to General Fire Extinguisher Company, Providence, R. I., a Corporation of Delaware. Filed June 15, 1925. Serial No. 37,336. 10 Claims. (Cl. 103—25.)

1. Valve apparatus comprising a valve; a movable element having operating connection with the valve and adapted in a single complete movement to effect a complete cycle, of operations of the valve; means for setting the element in motion through a predetermined portion of its complete movement to a stopping position with partial operation of the valve; and other means whereby a predetermined result of said partial operation of the valve puts the element in motion from said stopping position to complete its movement.



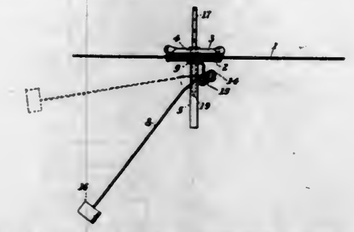
1,633,110. VALVE-PIN REPLACER. JOHN F. KOONS, Alexis, Ill. Filed Apr. 30, 1925. Serial No. 27,050. 1 Claim. (Cl. 29—86.1.)

A pin setter including an elongated body portion having a bore extending centrally therethrough and disposed longitudinally thereof, said bore having an enlarged end portion defining shoulders, a rod disposed within the bore, a coiled spring on the rod and positioned within the enlarged portion of the bore, said coiled spring being connected with the rod, one end of the body portion being turned in to engage the rod and provide a stop for one end of the spring, said spring adapted to exert a pressure



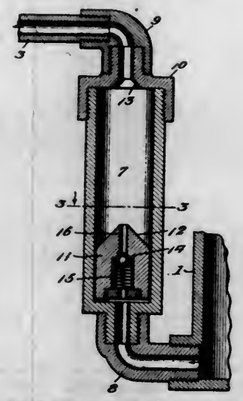
on the rod to normally hold the rod so that one end thereof will lie within the bore and in spaced relation with the end of the body portion, a finger piece on one end of the rod, a washer on the body portion and in spaced relation with the finger piece, and said body portion adapted to accommodate a valve pin to be positioned.

1,633,111. RESERVOIR PEN. THEODOR KOVÁCS, Berlin, Germany. Filed July 9, 1926, Serial No. 121,458, and in Germany July 11, 1925. 10 Claims. (Cl. 120—50.)



1. A reservoir pen comprising a holder, a feed-bar adapted to project therefrom, a nib adapted to bear against one side of the outer end portion of the feed-bar, an air channel extending along the nib side of the feed-bar and having capillary ink grooves along the bottom of said channel, side chambers in said feed-bar to receive overflow ink, and an overflow chamber in that part of the projecting portion of the feed-bar away from the nib, said overflow chamber being adapted at its outer end to receive overflow ink and having an air inlet at its inner end.

1,633,112. SCAFFOLD. NIELS KULBECK, Oslo, Norway. Filed Dec. 3, 1925, Serial No. 72,994, and in Norway Dec. 11, 1924. 2 Claims. (Cl. 304—5.)

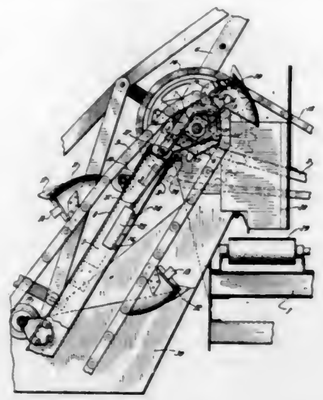


1. A scaffold comprising a pair of standards, a plurality of parallel laterally projecting arms supported by said standards adjacent the upper ends thereof, a frame secured to the outer ends of said arms, a plurality of cross members supported by said arms, a frame secured to each end of said members, and a flexible member supported by said frames, said flexible member forming a protective shield surrounding three sides of said scaffold.

1,633,113. LIQUID-LEVEL INDICATOR. CLYDE A. LAKE, Detroit, Mich. Filed Aug. 11, 1926. Serial No. 128,563. 3 Claims. (Cl. 73—82.)

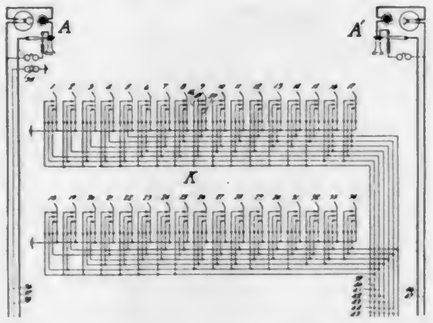
1. A liquid level indicator comprising a plug having a passage therethrough, a tubular member extending through said passage and supported by said plug, said member having vertical slots therein from its lower end, an angle bracket secured around said member under said plug, bearings integral with said angle bracket, a lever arm extending through said vertical slots, an eye on one end of said lever arm, said eye being pivotally attached to said bearings, a float on the other end of said lever arm, and a calibrated pointer adapted to move vertically in said tubular member and resting on said lever arm.

1,633,114. SAFETY CHECK DEVICE. CLYDE E. LOOSE, Baltimore, Md. Filed May 11, 1923. Serial No. 638,377. 5 Claims. (Cl. 188—152.)



4. A device of the character described including a main source of fluid supply, check-cylinders in communication therewith, a piston in each check cylinder, having a valve-controlled orifice therein, fluid pressure brake mechanism, pipes extending from the main source of fluid supply to the brake mechanisms, the cubical area of each check cylinder being in excess of the cubical area of the brake mechanism to which it is connected.

1,633,115. TRENCHING MACHINE. TRULS LOKEN, Kenosha, Wis., assignor to Austin Machinery Corporation, Chicago, Ill., a Corporation of Illinois. Filed Feb. 11, 1924. Serial No. 691,957. 5 Claims. (Cl. 198—144.)



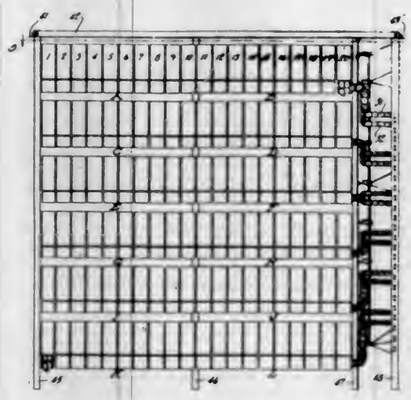
2. In a trenching machine the combination of, an endless conveyor, a plurality of buckets carried by said end-

less conveyor, and a bucket cleaner, said cleaner being arranged to pass through the buckets of the conveyor during operation and to remove material therefrom by

impact therewith and being provided with means for delivering an impact in proportion to the speed of the buckets.

1,633,116. TELEPHONE SYSTEM. CLARENCE E. LOMAX, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 16, 1923. Serial No. 619,377. Renewed Nov. 26, 1926. 35 Claims. (Cl. 179—18.)

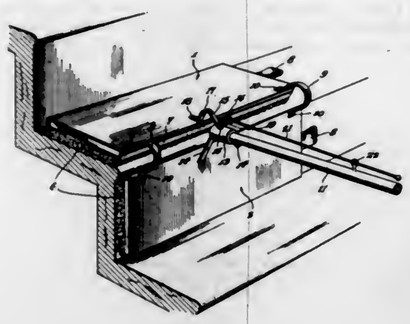
1. In a telephone system, a subscriber's line extending from a substation to the exchange and having two branches, switching arrangements for extending one of said branches to any desired line in the exchange, a switching device in which the other branch terminates, circuit connections by means of which a limited number of said lines are made accessible to said switching device, and means by which the subscriber on said first mentioned line controls said switching device.



1,633,117. METHOD OF AND APPARATUS FOR PRODUCING BIFOCAL LENSES. MICHAEL R. MCDANAL, Denver, Colo. Filed June 21, 1921. Serial No. 479,295. 9 Claims. (Cl. 49—82.1.)

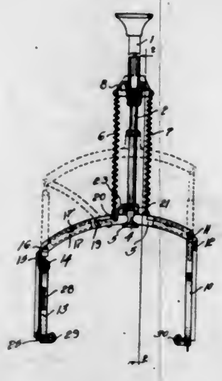
1. The method of manufacturing lenses from lens blanks having one finished surface consisting of bringing the lens blank to a sufficiently molten condition to permit of the bending thereof, exerting, on the unfinished surface of the blank, pressure at the area desired to be bent and exerting counter-pressure on the finished surface of the blank, such counter-pressure being limited to points constituting a relatively thin line on the finished surface not within the confines of the field to be formed in the lens.

2. A device of the class described including a support for a lens blank having a relatively thin lens supporting edge defining a cavity therein and molding means for engaging the upper face of the lens blank when the blank is in a semi-molten condition whereby the lens may be depressed within the cavity of the supporting member.



1,633,118. BANK AND TRUNK CABLE MULTIPLING SYSTEM. HARLEY B. MCELYEA, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Dec. 18, 1922. Serial No. 607,485. Renewed Dec. 4, 1926. 25 Claims. (Cl. 179—98.)

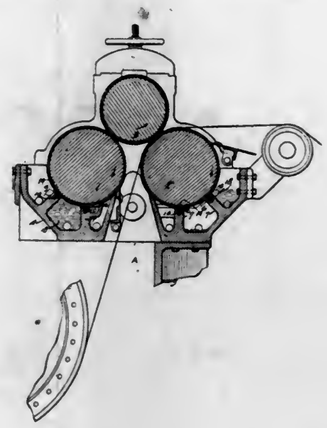
1. A distributing frame comprising substantially parallel rows of terminal strips, terminals mounted in said strips and protruding outward therefrom on the front and rear thereof, certain of said terminals being multipled together throughout a plurality of said strips by conductors which extend along the front of said frame, other terminals mounted on said frame, outgoing conductors secured to said other terminals, and jumpers connected between the rear of said multiply connected terminals to certain ones of said other terminals.



1,633,119. STAIR CLEANER. LURLINE E. MACKAY, Burlington, Iowa. Filed Apr. 7, 1926. Serial No. 100,400. 9 Claims. (Cl. 15—210.)

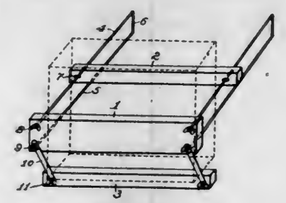
1. A cleaner of the character described comprising companion cleaners each including a back and cleaning means carried thereby, resilient means connecting said cleaners and normally holding the cleaners with their cleaning means in facing relation to each other, and means se-

cured to the back of one cleaner and pivotally connected with the back of the other cleaner and adapted to move said cleaners into diverging relation to each other for operative engagement with surfaces to be cleaned.



1,633,120. ADJUSTABLE MIRROR. WILLIAM E. MILLER, Mullan, Idaho, assignor to Miller Beauty Mirror Company, a Corporation of Idaho. Filed Jan. 27, 1925. Serial No. 5,006. 1 Claim. (Cl. 45—99.)

The combination with a stem of a swiveled cross head comprising arms and a mirror pivoted on one arm, a slidable, telescopic extension on the other arm and retaining means therefor, a pivotal joint in the last mentioned arm between the telescopic extension and cross head, a link pivoted at the free end of the extension, and a mirror pivoted on the link.



1,633,121. VACUUM SEAL AND APPARATUS. OGDEN MINTON, Greenwich, Conn. Filed Mar. 26, 1926. Serial No. 97,592. 9 Claims. (Cl. 34—48.)

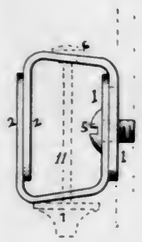
1. A packing or wiper comprising a contact member, the upper surface of which is provided with a depression bounded on the sides by flat portions for contact with the face of a rotating member, and on the ends with other flat portions for contact with the roof of a slot in the frame, the under surface of said contact member

being provided with a semi-circular opening to receive a tube, and fluid means to press said contact member into contact with the rotating member.

1,633,122. ADJUSTABLE MARKING GUIDE. CARL H. MOLINE, Waterloo, Iowa. Filed Aug. 21, 1926. Serial No. 130,729. 3 Claims. (Cl. 33—174.)

1. A device of the character described, comprising a pair of opposed bars with like edges in the same plane, looped rods with parallel members in different planes, spaced apart and terminally secured to the end parts of one bar, the other bar being loosely slidably mounted upon said rods to be adjustably moved to and from the first-mentioned bar.

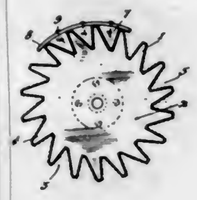
1,633,123. PRODUCTION OF BENZIDINE AND DERIVATIVES. RALPH A. NELSON, Buffalo, N. Y., assignor to National Aniline & Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed June 22, 1920. Serial No. 390,887. 17 Claims. (Cl. 260—130.5.)



1. The method of producing compounds of the benzidine series from hydrazo compounds, which comprises subjecting a solution of the hydrazo compound in an organic solvent immiscible with water to the action of strong hydrochloric acid of appropriate strength and amount to effect the formation and separation of the benzidine compound in an aqueous paste containing the hydrochloride in a solid form, and separating the solvent.

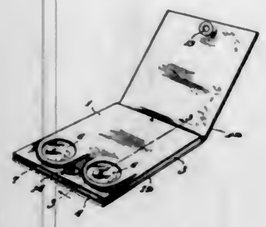
1,633,124. EXERCISING APPARATUS. ROY H. NOE, Memphis, Tenn. Filed Oct. 28, 1925. Serial No. 65,402. 5 Claims. (Cl. 272—79.)

1. An exerciser of the character described comprising a pair of hand grip members, an elastic strip adapted to be stretched longitudinally and pairs of adjustably connected substantially flat cooperating jaws for connecting the ends of said strip with said hand grip members.



1,633,125. SHUTTER-RELEASE HOLDER. LARRANCE PAGE, Berkeley, Calif. Filed Sept. 14, 1925. Serial No. 56,356. 3 Claims. (Cl. 24—243.)

1. A shutter release holder consisting of two U-shaped members, each of said members having a short slot in one arm and a long slot in the other arm, the said long slots extending part way across the bottoms of said U-members, the open ends of said members telescoping into each other so that the long and short slots of one member register respectively with the long and short slots of the other members, and a clamp screw passing through the two short slots.



1,633,126. ROTARY SIEVE. ALBERT J. PAYNTER, Osborne, Kans. Filed Mar. 17, 1926. Serial No. 95,365. 1 Claim. (Cl. 209—406.)

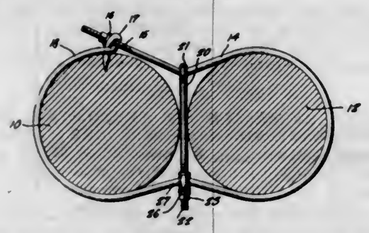
A rotary sieve comprising a cylindrical body of foraminous material, circular heads in the ends of said body, said heads being formed with centrally disposed alined shaft receiving openings and having their peripheral portions formed with radially disposed recesses having marginal faces diverging towards the open outer ends of the recesses, one marginal face of each recess extending along a radius of the head and the other marginal face thereof extending semi-tangentially of the head, said body being crimped longitudinally to form inwardly ta-

pered pockets conforming transversely to the contour of the recess having their end portions seated in the recesses of said heads in close contacting engagement with the marginal faces thereof, filler blocks fitting snugly in the ends of said pockets and forming closures for the ends of the pockets and completing members for the circular heads, bands extending circumferentially about said heads in overlying relation to said blocks, and fasteners securing said band to said blocks.

1,633,127. COIN HOLDER. VINCENT PEPE, Brooklyn, N. Y. Filed June 9, 1926. Serial No. 114,819. 3 Claims. (Cl. 133—6.)

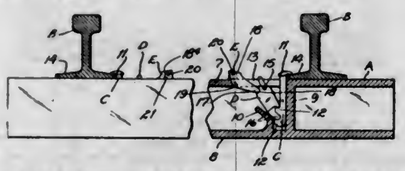
3. A coin holder of flat form having a coin way to receive a row of coins in flat position, said coin way having an exit and a finger opening in a side adjacent the exit, and having a marginal portion pressed outwardly from the finger opening at the side adjacent the exit and vanishing at the side remote from the exit and a flat spring within the coin way terminating opposite the finger opening and having the end portion deflected laterally to press an edge portion of the coin into engagement with the inner shoulder formed by the outwardly pressed portion of the side of the holder in which the finger opening is formed.

1,633,128. POWER-DRIVEN BRUSH. JOHN W. RICHMAN, Gilroy, Calif. Filed Dec. 27, 1923. Serial No. 682,932. 1 Claim. (Cl. 15—23.)



A power driven brush comprising a handle, a flange on the outer portion of said handle, an electric motor, a casing therefor, a flange on each end of said casing, one

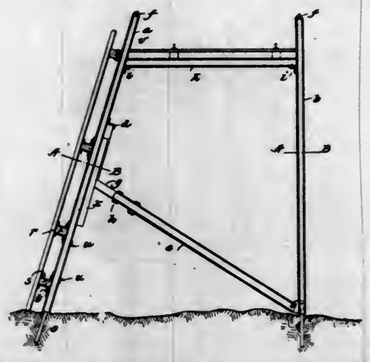
of said flanges of the casing being adapted to abut against the flange on the handle, a tube, a flange thereon,



other flange of the casing, a shaft extending thru said tube and operatively connected to said motor and a cleaner operatively connected with said shaft.

1,633,129. POLE CLAMP. JOHN PEMBERTON SNAPP, Limestone, Tenn. Filed May 7, 1926. Serial No. 107,481. 5 Claims. (Cl. 24—68.)

1. A device of the class described, comprising a loop member, one end of said member being threaded and the opposite end being formed with an eye, the threaded end passing thru the eye, a spike formed on the end carrying the eye member, and a nut adapted to engage the threaded end adjacent to the eye portion.

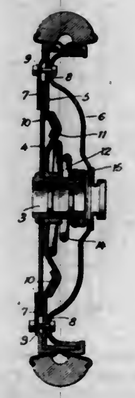


1,633,130. RAILWAY-TIE MECHANISM. ALBERT V. RUDD, East St. Louis, Ill. Filed Jan. 14, 1926. Serial No. 81,148. 1 Claim. (Cl. 238—375.)

In a railway tie mechanism, in combination with a tie, a spike having locking projections; a lock arranged to engage said projections; and a wedge arranged to hold said lock in engagement with said spike.

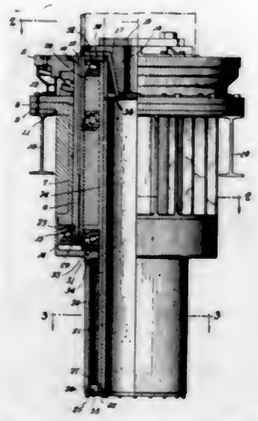
1,633,131. KNOCKDOWN COFFERDAM. KARL SCHOEN, Wuerzburg, Germany. Filed Apr. 24, 1926, Serial No. 104,359½, and in Germany Sept. 9, 1924. 5 Claims. (Cl. 61—34.)

1. In a cofferdam structure, a frame comprising a plurality of spaced supporting posts provided with openings extending through their entire length, and means mounted in said openings for fixedly anchoring said posts, said means comprising a pipe section having its lower end slit



and a wedging member extending through said pipe section adapted to expand the slit end of said pipe section as the said member is moved relative to the said section.

1,633,132. PROCESS FOR PREPARING A MATERIAL FOR THE MANUFACTURE OF ARTIFICIAL STONE AND OTHER STONE OR ROCK PRODUCTS. ROBERT SCHOENHOEFER, Brunswick, Germany. Filed Apr. 28, 1924, Serial No. 709,650, and in Germany Sept. 30, 1920. 2 Claims. (Cl. 106—24.)

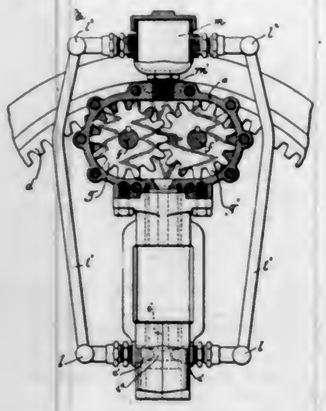


1. A process for preparing a self-setting and self-hardening material for the manufacture of artificial stone in the absence of cement or other binding mediums, comprising the admixture of the residual ash of a solid combustible substance and slag with a relatively small amount of water, kneading, rolling and stamping the mixture while in a moist condition until lumps are formed, and exposing the mixture to steam at a pressure substantially greater than atmospheric pressure for the purpose of hardening said mixture.

1,633,133. COMBINED RESILIENT TRANSMISSION AND BEARING. BENJAMIN F. SEYMOUR, Washington, D. C. Filed Dec. 13, 1924. Serial No. 755,736. 5 Claims. (Cl. 152—44.)

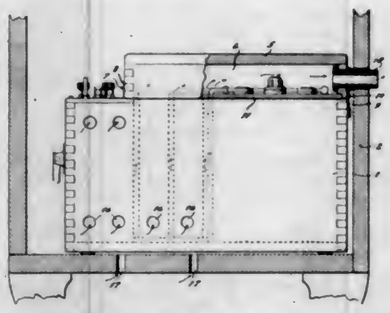
1. In a combined resilient transmission and bearing for vehicle wheels, the combination of a hub portion, a wheel rim mounted to have limited relative movement thereon, and elliptically shaped cone elements arranged co-operable therewith.

1,633,134. WELL DRILLING. WALDO SHELDON, Greenwich, Conn. Filed May 9, 1924. Serial No. 711,982. 24 Claims. (Cl. 255—22.)



1. In well drilling apparatus, a rotary table having a dependent sleeve extension, an elongated tubular bearing for said sleeve, an annular cylinder supported by said bearing in stationary relation below the rotary table and an annular piston operating in said cylinder having an annular piston rod projecting upwardly within the dependent sleeve extension of the rotary table and a sleeve shiftably engaged by said annular piston rod, said engaged sleeve being slidably keyed in the table sleeve and provided with means of connection with a drill stem.

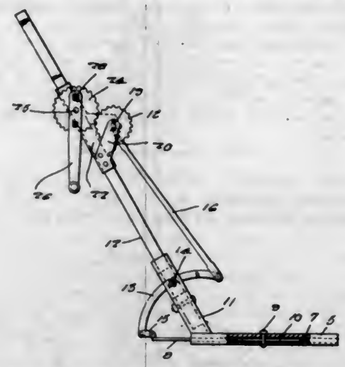
1,633,135. PENCIL CLIP AND ERASER HOLDER COMBINED. GEORGE TILLMAN SHELEY, Indianapolis, Ind. Filed Dec. 3, 1924. Serial No. 753,669. 8 Claims. (Cl. 120—38.)



1. A device comprising a hollow member, one end of which has a spring tension for gripping the normally upper end of a conventional lead pencil when the pencil is entered therein, the other end of said member being tubular; an eraser holder adapted to snugly fit said tubular end, said eraser holder having outwardly sprung portions adapted to be forced inwardly in engagement with an eraser means contained in said holder when the holder is entered into said hollow member, said holder having an opening in its normally lower end, thru which added pieces of eraser material are inserted as the normally upper eraser portion is worn off.

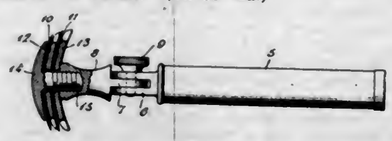
1,633,136. BRAKE. HENRY B. SHIELDS, Freeport, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 28, 1924. Serial No. 752,501. 6 Claims. (Cl. 188—92.)

1. The combination with a wheel, of a fluid pump, means to actuate the pump from the wheel, a continuous circuit for the fluid including cooling means therefor, and means to control the flow of fluid in the circuit.



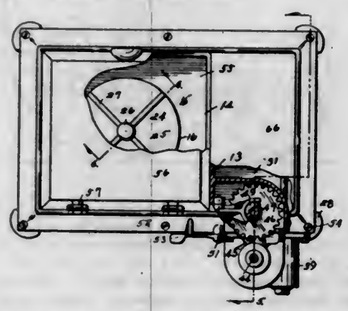
1,633,137. APPARATUS FOR VENTILATING RECTIFIERS, BATTERIES, AND THE LIKE. ALMOND H. SNYDER, Lancaster, N. Y., assignor, by mesne assignments, to Gould Storage Battery Company, Inc., New York, N. Y., a Corporation of New York. Filed July 17, 1924. Serial No. 726,582. 5 Claims. (Cl. 136—180.)

1. In combination, a plurality of electrolytic cells, a container therefor having air inlets, a cover for said container providing space above said cells, an outlet in said cover extending beyond said cover wall and heat transmitting means adjacent a portion of said cells adapted to cause a circulation of air from within said container to a point removed from said cover.



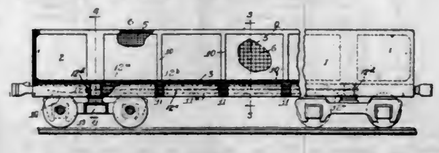
1,633,138. GRASS CUTTER. ROBERT E. LEE SPARKS, Pemberton, W. Va. Filed May 13, 1926. Serial No. 108,889. 3 Claims. (Cl. 30—11.)

1. A device of the class described including, in combination, a cutting mechanism, a tubular extension inclining upwardly and to one side of the cutting mechanism, a shank operatively associated with the cutting mechanism, a link on the shank, a lever pivotally mounted on the tubular extension, a handle bar extending from the tubular extension, and telescopically associated therewith, a pitman pivotally engaged with the other end of the



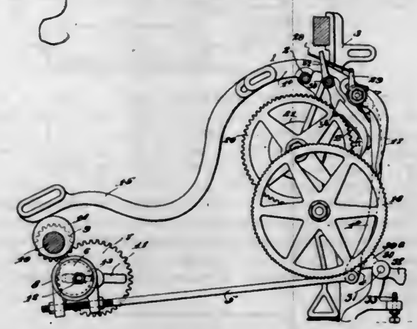
lever, a bracket on the handle bar adjacent the upper end thereof, a pair of arms projecting from the bracket, a shaft journaled in the arms, a gear on said shaft, a crank extending from said shaft, and operatively engaged with the pitman, and means for operating the gear.

1,633,139. SAFETY RAZOR. RUDOLPH C. G. STAATSOELS, Brooklyn, N. Y. Filed July 31, 1926. Serial No. 126,152. 2 Claims. (Cl. 30—12.)



1. A razor including a guard, and a clamping plate cooperating with said guard to clamp a blade therebetween, said guard and plate having opposed transversely curved faces with the curvature of said faces being gradually increased from adjacent ends thereof toward their opposite ends and being adapted to correspondingly flex said blade.

1,633,140. WASHING MACHINE. BERT A. STOCKING, Audubon, Iowa, assignor to F. R. Steelsmith, trustee, Des Moines, Iowa. Filed July 20, 1925. Serial No. 44,805. 6 Claims. (Cl. 259—101.)

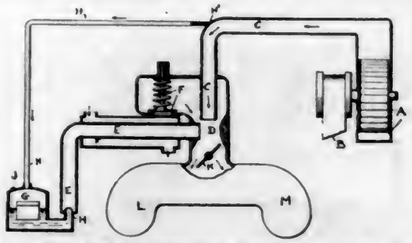


1. In a washing machine, a tub having side and end members, a bottom member, said bottom member being provided with a central recess, an upright stub shaft in said recess, a sleeve rotatively mounted on the upper end of said shaft, a dolly mounted in said recess, means for detachably connecting said dolly with said sleeve, and means for imparting oscillatory movement to said sleeve.

1,633,141. CONCRETE VEHICLE BODY. JOSEPH B. STRAUSS, Chicago, Ill., assignor of one-half to Charles Weinfeld, Chicago, Ill. Filed Apr. 20, 1918. Serial No. 229,711. 30 Claims. (Cl. 105—405.)

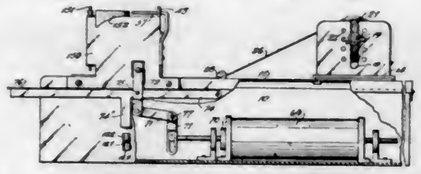
1. A concrete car body comprising a reinforced concrete floor, longitudinal and transverse concrete beams integral with said floor, metal members at the ends of the car for transmitting the draw bar pull into the floor and walls thereof and connecting parts on said members for connecting the car body to the trucks the whole forming a unitary self-sustaining structure from truck to truck.

1,633,142. TAKE-UP MOTION FOR LOOMS. EVARISTE E. TALBOT, Fall River, Mass. Filed May 27, 1924. Serial No. 716,117. 3 Claims. (Cl. 139—313.)



1. A take-up motion having a sand-roll; a train of gears comprising a sand-roll gear, a change-pinion gear, and a change-ratchet gear; a ratchet pawl; a source of power, acting at one speed; a source of power acting at a different speed; means for connecting and disconnecting said ratchet pawl from one source of power; and means for connecting and disconnecting said ratchet pawl with said other source of power, for operating said sand-roll at any one of said different resulting speeds; and detent and let-back mechanism; the chain of gears and sand-roll reversing their rotation, during the release of the detent and let-back mechanism from the change-ratchet gear, by the tension of the warp threads of cloth being woven and engaging the sand-roll.

1,633,143. SUPERCHARGER FOR INTERNAL-COMBUSTION ENGINES. STANLEY M. UDALE, Detroit, Mich. Filed Aug. 1, 1925. Serial No. 47,455. 2 Claims. (Cl. 123—119.)

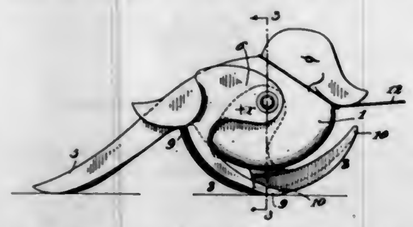


1. In combination with an internal combustion engine, a mixing chamber having an air entrance and a Venturi tube, a mixture outlet, a throttle valve therein, a constant level fuel supply chamber discharging into said Venturi tube and connected to a fuel nozzle, an additional air supply passage discharging into the throat of the Venturi tube and communicating with an engine

operated supercharger, a communication between said chamber and said supercharger, whereby as the throttle is opened and the engine speed increases an increased fuel

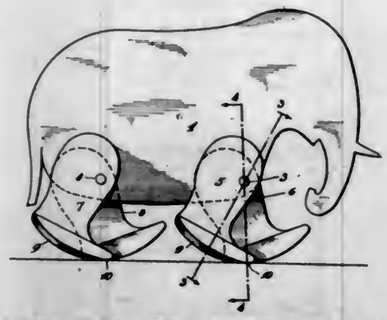
and air supply is automatically available, and the mean effective pressure of the engine is maintained at high engine speeds.

1,633,144. GUMMED-TAPE-SERVING MACHINE. WILLIAM A. UTTZ, Sr., Fort Worth, Tex., assignor, by mesne assignments, to Perfection Package Sealer Company, a Corporation of Texas. Filed Mar. 2, 1927. Serial No. 172,188. 27 Claims. (Cl. 211—33.)



5. In a machine for dispensing lengths of tape, a base over which the tape is moved, a cutter frame swingingly mounted on the base, a severing blade carried by the cutter frame, a tab cutter carried by the cutter frame and arranged to cut a tab in the unsevered portion of the tape simultaneously with the severing of a portion of said tape, a tab bend' g device operable by the movement of the cutter frame and arranged to force the cut tab upwardly from the base, the bending device being further arranged to double the tab upon itself, and means to support the tab against downward movement during the cutting operation.

1,633,145. GAUGE. JOHN WAHL, Rosedale, and OTTO MELZER, Hollis, N. Y., assignors to A. Schrader's Son, Inc., Brooklyn, N. Y., a Corporation of New York. Original application filed July 5, 1924, Serial No. 724,359. Divided and this application filed May 29, 1926. Serial No. 112,489. 3 Claims. (Cl. 73—111.)

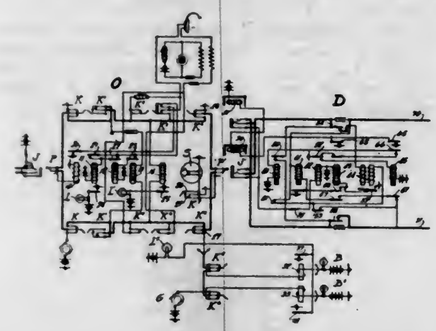


1. A pressure gauge comprising a pair of telescoping members, one of which has means at its bottom for engagement with a tire valve or the like and pressure-responsive means within said member for moving the second member outwardly with respect to the top of the first, the exterior of one of said members having a calibrated scale thereon adapted to co-operate with one edge of the other member to indicate pressure, and adjustable means extending through the top of the second telescoping member and operable from the exterior of said member after the gauge parts have been assembled for adjusting the normal position of the top of the movable member with respect to the top of the pressure-responsive means to insure proper registering of pressures.

1,633,146. WADDLE WALKING TOY. ARTHUR L. WHITESIDE, Bayshore, N. Y. Filed Nov. 11, 1922. Serial No. 600,282. 2 Claims. (Cl. 46—40.)

1. A toy figure comprising a body portion and relatively short supporting limbs, pivotally connected at opposite sides thereof, said limbs being characterized by each having the greater mass of its upper portion so located as to cause it to hang pendent with its heel adjacent to a supporting surface, said limbs having parallel tread portions, disposed near the central, longitudinal, vertical plane through the figure, whose base surfaces have, respectively, the contours of cone surfaces in concentric relation with the limb pivots, with major inner arcs, and each having a cylindrical surface at the extreme forward edge, the radius thereof corresponding to the radius of said major arc and a transition area intermediate said conical and cylindrical surfaces adapted to interrupt the smooth rolling action of the tread at the end of its travel.

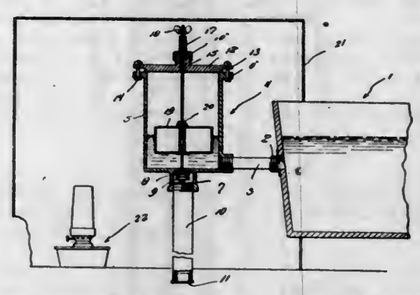
1,633,147. WALKING TOY. ARTHUR L. WHITESIDE, Bayshore, N. Y. Filed Oct. 23, 1923. Serial No. 670,251. 2 Claims. (Cl. 46—40.)



1. A four-footed toy figure, comprising a body portion having two pairs of limbs pivotally connected at opposite sides thereof, the limbs on the same side having parallel tread portions, disposed near the central, longitudinal, vertical plane through the figure, whose base surfaces are respectively conoidal in concentric relation with their pivots, with major inner arcs, from their heels to near their toes, and are transversely cylindrical in concentric relation with their pivots at their toes.

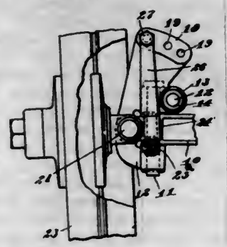
1,633,148. SPOTLIGHT. CAMERON A. WHITSETT, Chicago, Ill. Filed Dec. 26, 1922. Serial No. 608,906. 7 Claims. (Cl. 240—61.)

1. In an inside-control spot light, the combination of an operating shaft adapted to extend from the inside to the outside of the car body, a housing over the outer end of said shaft, an operating handle on the inner end of said shaft, said shaft having rotational and rectilinear motions, a bevel gear on said shaft within said housing, a second bevel gear driven by said first bevel gear, a bracket rotated by said second bevel gear, a spot light pivotally mounted on said bracket, a reciprocable stem, means for operatively connecting said stem with said spot light for inclining said light, and means for transmitting motion from said shaft to said stem comprising an arm pivoted within said housing and operatively connected with said shaft and said stem.



1,633,149. AUTOMATIC TELEPHONE SYSTEM. JOHN WICKS, Oak Park, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed July 6, 1921, Serial No. 482,765. Renewed Dec. 24, 1926. 21 Claims. (Cl. 179—6.3.)

1. In a telephone system, a toll board and a local exchange, two conductor trunk lines extending from said toll board to said exchange, cord circuits at the toll board and automatic switches at the exchange whereby toll lines and subscribers' lines may be connected over said trunk lines, paystation equipment at the stations on the subscribers' lines, a source of direct current in said cord circuits, and means whereby the toll operator can connect one or the other pole of said current in circuit with the called subscriber's paystation equipment to cause the same to collect or refund deposited coins over said trunk lines.

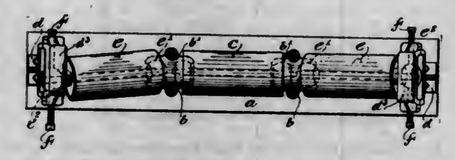


1,633,150. WATERING TROUGH. HENRY WIEBEN, Reinbeck, Iowa. Filed Oct. 7, 1925. Serial No. 61,044. 1 Claim. (Cl. 119—73.)

In a structure of the class described, in combination, a water trough, a float controlled water supply device connected with one end of the trough, a housing enclosing said water supply device, said housing being provided in one end with an opening through which an adjacent end portion of the trough extends, said housing being

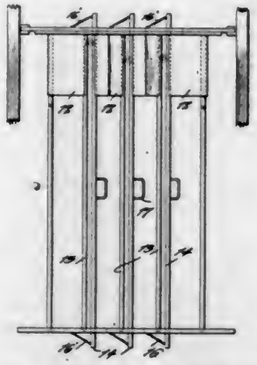
slidably connected with the trough in order that it may be slid over the trough to regulate the available water space.

1,633,151. LEANING WHEEL. ROY J. WINSOR, Bucyrus, Ohio. Filed Jan. 2, 1926. Serial No. 78,805. 2 Claims. (Cl. 280—93.)



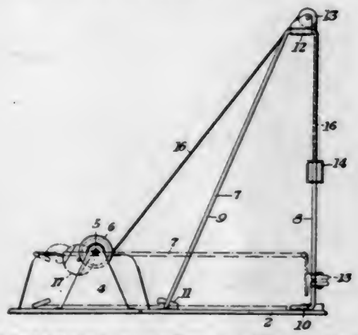
1. An improved leaning wheel device, comprising an axle, a steering knuckle rotatably mounted thereon, a wheel spindle mounted on said knuckle, means for adjusting the wheel spindle relative to the steering knuckle, and means for maintaining the wheel spindle rigidly in its adjusted position.

1,633,152. PROCESS OF FINISHING FABRICS AND TO THE FABRIC AND COMPOSITION. WILLIAM WITTE, Providence, R. I., assignor to The United States Finishing Company, New York, N. Y., a Corporation of Connecticut. Filed June 29, 1926. Serial No. 119,472. 7 Claims. (Cl. 41—41.)



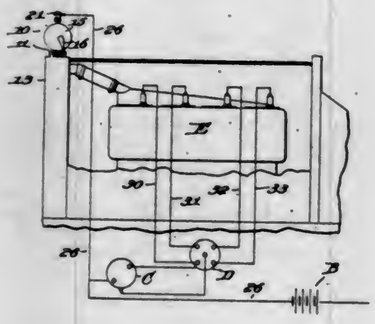
1. The process of treating viscose fibres to remove lustre which comprises treating the alkalized fibre with para-toluene-sulphochloride.

1,633,153. BELT CONVEYER. CHARLES S. WRAY, Atlantic Highlands, N. J. Filed Aug. 10, 1925. Serial No. 49,201. 7 Claims. (Cl. 198—192.)



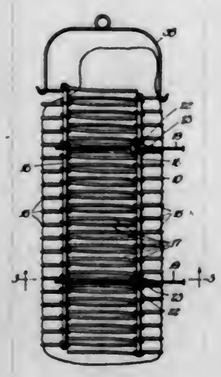
1. In an idler for belt conveyers, comprising a plurality of pulleys, means to move one of said pulleys angularly with respect to the course of the belt and the vertical plane of the transverse axis thereof.

1,633,154. NAIL MAGAZINE. TOMOJI YAMAKISHI, Bellevue, Wash. Filed May 19, 1926. Serial No. 110,267. 1 Claim. (Cl. 1—49.6.)



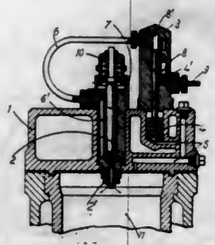
In a nail sorting machine a frame, a hopper secured at the upper end of the frame and inclined toward the frame, the bottom of the hopper next the frame being interrupted to provide an outlet, a sorting frame arranged below the hopper and inclined oppositely therefrom said sorting frame including end plates, wires connecting said plates in frame forming relation, and a series of nail holding members carried by the plates, each of such nail holding members including a fixed wire arranged in the plates and a movable wire slidably mounted in slots formed in the plates, said movable wire projecting in both directions beyond the respective plates, a spring connecting each projecting portion to a plate whereby the movable wire is held in predetermined spaced relation to the adjacent fixed wire and is capable of being separated therefrom to the limit of the slots and against the tensions of the springs, and guide plates cooperating with each pair of wires, said guide plates being arranged beneath the outlet of the hopper and inclined downwardly toward the space between each pair of wires, the outlets between each pair of guide plates registering with the space between each pair of wires when the latter are in operative positions, whereby the nails delivered from the hopper will be directed into the space between each pair of wires.

1,633,155. TOY PILE DRIVER. CHARLES ZABEL, Coraopolis, Pa., assignor, by mesne assignments, to Tosca Zabel, Feura Bush, N. Y. Filed June 15, 1926. Serial No. 116,113. 9 Claims. (Cl. 46—37.)



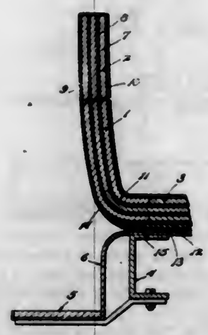
1. A mechanical toy including a base member, a rotatable drum carried on the base member, a driving motor on the base member, means operatively interposed between the driving motor and the drum for intermittently driving the latter, a vertical support on the base, a weight member slidable on the vertical support and a cord connecting the weight and the drum, guiding means for the cord being provided adjacent the upper end of the support.

1,633,156. COMBINED ENGINE STOP MOTION, VISUAL ALARM, AND CONDENSER FOR MOTOR-DRIVEN VEHICLES. ALBERTO ANTUNES, Boston, Mass., assignor to Vincente Gonsalves, Boston, Mass. Filed Jan. 19, 1922. Serial No. 530,328. 7 Claims. (Cl. 123—174.)



1. In a device of the class described, in combination, a motor; a radiator; a chamber removably mounted thereon adapted to condense steam; said chamber having an outlet that is normally closed; a closure device for said outlet; and means whereby a movement of said closure device will cause stoppage of said motor.

1,633,157. APPARATUS FOR RESHAPING HAMS. JOSEPH H. APPLETON, Oshkosh, Wis., assignor to Allied Packers, Inc., Chicago, Ill., a Corporation of Illinois. Filed Feb. 20, 1926. Serial No. 89,538. 6 Claims. (Cl. 100—57.)

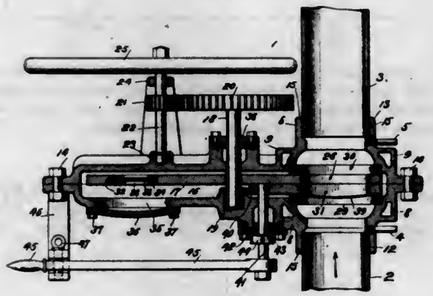


1. In apparatus of the character described, a substantially cylindrical container consisting of two hinged sections, each of which is substantially semi-cylindrical and is composed of a plurality of circumferentially extending stiff wire ribs which lap opposite the hinging axis with the ribs of the other section in crossed relation to the same and in such a way as to maintain a gradual curvature of the inside of the container at the point of crossing when the container is closed.

1,633,158. CYLINDER HEAD OF INTERNAL-COMBUSTION ENGINES COMBINED WITH FUEL INJECTORS. VADIME ARCHAOULOFF, Boulogne-sur-Seine, France. Filed Nov. 14, 1924, Serial No. 749,985, and in France Dec. 21, 1923. 1 Claim. (Cl. 123—32.)

In an internal combustion engine, in combination, a main cylinder, a head therefor provided with a cylindrical chamber and also provided with a passageway leading from a point in communication with the cylinder to the inner end of the chamber, a differential spring loaded injection valve mounted centrally through the head and in communication with the main cylinder, a member mounted on the main cylinder-head provided with a bore in communication with the cylindrical chamber, valve controlled fuel supply means mounted in the member and traversing the bore and connected with and in communication with the seat of the injection valve, a differential piston the lower portion of which operates in the chamber of the head, while the upper portion operates in the bore of the member, said differential piston being responsive to the main cylinder and acting in timed relation with the operation of the injection valve for controlling the passage of the solid fuel into the main cylinder, and a jacket provided in the main cylinder head, chamber passageway and injection valve, substantially as and for the purposes set forth.

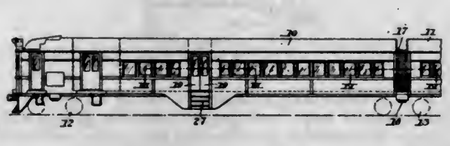
1,633,159. VEHICLE BODY. HARRY N. ATWOOD, Monson, Mass., assignor to Rubwood, Inc., Lawrence, Mass., a Corporation of Massachusetts. Filed Aug. 23, 1923. Serial No. 658,948. 6 Claims. (Cl. 296—31.)



1. A vehicle body comprising an integral structure of body plies of wood and intervening bonding plies of rubber material, the body having a facing upon its exterior of rubber material, the facing extending onto the under side of the bottom of the body and entirely covering the same and providing a cushioning medium between the said bottom of the body and the frame structure upon which the body is to be supported.

1,633,160. FINISHED FABRIC AND PROCESS OF MAKING SAME. JOSEPH BENNETT, North Adams, Mass., assignor to Consolidated Textile Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 26, 1926. Serial No. 131,800. 12 Claims. (Cl. 41—41.)

1. The process of ornamenting fabric of regenerated cellulose, which comprises subjecting the same to local treatment in pattern of caustic alkali of delustering strength.

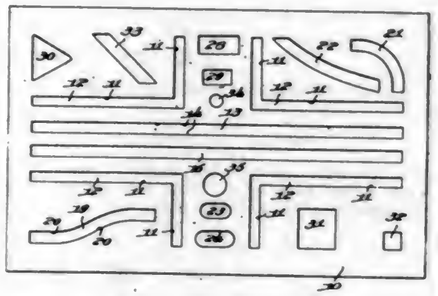


8. A fabric of regenerated cellulose fiber having localized area of lustreless surface.

1,633,161. REVOLVING-DISK VALVE. FRANK CAVENAGH, Seneca Falls, N. Y. Filed June 8, 1922. Serial No. 566,891. 2 Claims. (Cl. 251—86.)

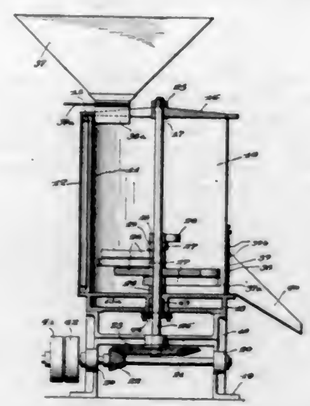
1. In a valve of the class described, a casing with inflow and outflow openings, a perforated, rotary disk mounted therein, means for turning said disk perforations either into or out of registration with the inflow and outflow openings and locking and unlocking means for said disk including a perforated wedge through which fluids pass and a cam ring.

1,633,162. RAILWAY-CAR CONSTRUCTION. ANDREW CHRISTIANSON, Butler, Pa., assignor to Standard Steel Car Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 20, 1926. Serial No. 142,919. 8 Claims. (Cl. 105—4.)



1. A railway passenger car body having a platform at its mid portion, steps extending downwardly from one edge of the platform, toward one side of the car, a trap door movable into horizontal position over the steps, and vertically disposed half-door sections disposed above the trap door and movable in opposite directions to permit access to the platform from a point exteriorly of the car.

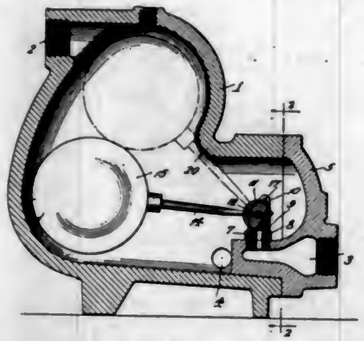
1,633,163. DRAFTING IMPLEMENT. STEDMAN P. CROUSE, West Somerville, Mass. Filed Dec. 24, 1925. Serial No. 77,425. 2 Claims. (Cl. 33—1.)



1. A stencil for use in producing diagrammatic drawings of street intersections and the like made from a piece of stiff thin sheet material, said piece of material

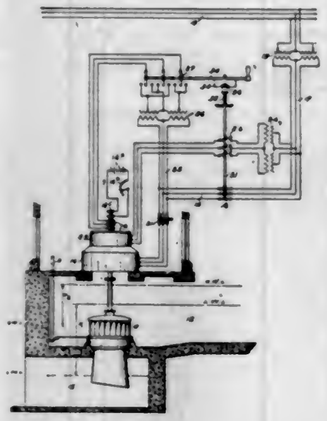
being formed with a pair of parallel track slots; two pairs of right-angled sidewalk slots, one at each side of said track slots, one leg of each sidewalk slot being

perpendicular to said track slots and the other leg of each sidewalk slot being parallel with said track slots, the perpendicular legs of said sidewalk slots being adjacent the middle portion of said track slots.



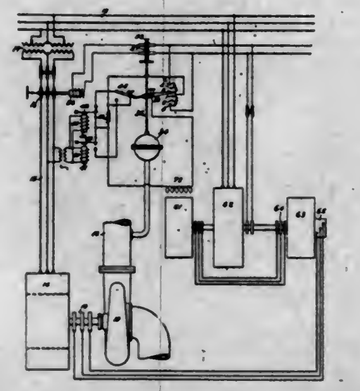
1,633,164. PULVERIZING MACHINE. WARBURTON KERR CRUICKSHANK, Regina, Saskatchewan, Canada. Filed Sept. 28, 1926. Serial No. 138,268. 4 Claims. (Cl. 83—11.)

1. In a pulverizing apparatus, a casing comprising inner and outer walls concentrically disposed and forming a space therebetween, a pulverizing mechanism positioned within said casing and comprising rotary and stationary cutters alternately disposed and positioned at varying angles with respect to each other, a tortuous conduit mounted in the space defined by said walls, said conduit having inlet and outlet openings and adapted to convey heat to the material within said casing, and a second form of heat-producing means positioned below the base of said casing and having inlet and outlet openings and adapted to convey heat to the material in its last stages of pulverization.



1,633,165. STEAM TRAP. HOWARD C. DAVIS, Elizabeth, N. J. Filed Apr. 22, 1926. Serial No. 103,783. 5 Claims. (Cl. 137—103.)

1. In a steam trap, an annular valve seat surrounding a discharge passage, uprights on opposite sides of said seat, a spherical valve having a portion thereof cut away and an axial opening extending therethrough, a pin of smaller diameter than said opening connecting said uprights and extending loosely through said opening, and



means actuated by variations in the level of the water in said trap for oscillating said valve on its seat to open and close said discharge passage.

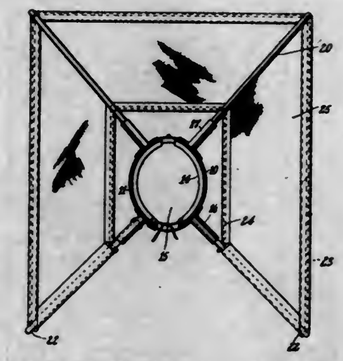
1,633,166. POWER INSTALLATION. RAE W. DAVIS, West Allis, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 3, 1922. Serial No. 548,905. 12 Claims. (Cl. 290—7.)

1. An electric power installation for the generation of alternating current of constant frequency under conditions of widely varying speed of prime mover, comprising an alternating current generator unit, a source of energy of variable available supply, a prime mover mechanically connected to said unit and operable from said source of energy to drive said unit at a plurality of different speeds dependent upon the supply of energy available, a distribution circuit the frequency of whose current is definitely established by means other than said generator unit, and means operative to insure the supply of electrical energy from said generator unit to said distribution circuit independently of the particular one of said speeds at which said prime mover drives said generator unit, said means comprising a variable ratio frequency converter having a rotary alternating current element connected in driven relation to said prime mover.

1,633,167. POWER INSTALLATION. RAE W. DAVIS, West Allis, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 17, 1922. Serial No. 553,447. 22 Claims. (Cl. 290—7.)

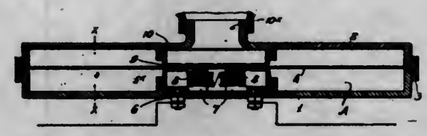
2. A power installation, comprising an alternating current generator, a variable speed turbine for driving said generator at a plurality of different speeds, a distribution circuit whose frequency is definitely established by means other than said generator, a source of variable frequency electrically connected to said generator, and means for varying the frequency of said source in accordance with the speed of said generator whereby said generator is enabled to produce energy of the definite frequency of said line circuit independently of the particular one of said speeds at which said generator operates.

21. A hydro-electric installation for operation under conditions of widely varying turbine speed, comprising an alternating current generator, a turbine operable to drive said generator at a plurality of speeds below synchronous speed, and means for causing the frequency of the energy supplied by said generator to be maintained substantially constant in spite of operation of said turbine at said plurality of fixed speeds, said means being responsive to a condition attendant upon the supply of hydraulic energy available for conversion by said turbine.



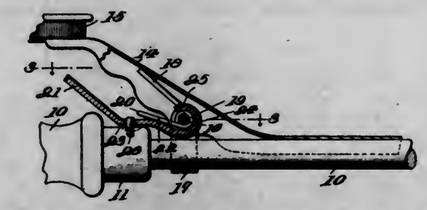
1,633,168. MUSHROOMING BULLET. JOHN A. DICKERMAN, Bridgeport, Conn., assignor to Remington Arms Company, Inc., a Corporation of Delaware. Filed Feb. 4, 1922. Serial No. 534,176. 14 Claims. (Cl. 102—28.)

5. In a mushroom bullet the combination of a bullet body, a forwardly projecting collapsible or deformable point attached to said body and a coating of protecting and reinforcing material deposited on said forwardly projecting point.



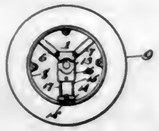
1,633,169. SWIMMING SHOE. JOSEF FEINAUER, New York, N. Y. Filed Oct. 23, 1926. Serial No. 143,540. 3 Claims. (Cl. 9—21.)

3. In a swimming shoe, a pair of hingedly joined semi-oval shell sections, housings extending radially from said sections, said housings being semi-circular and having a closed end, studs mounted in said housings, rods slidable in said housings, hooks formed on the ends of said rods, said hooks being mounted on said studs, and textile material secured on three sides of said shell sections



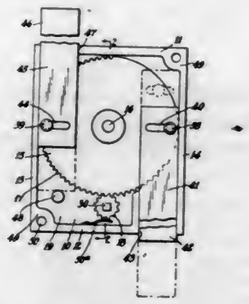
between said rods, said shell sections being lined with cork or the like and straps and harness for securing said shell sections to the foot.

1,633,170. ELECTRICAL SOUND TRANSMITTING AND RECEIVING APPARATUS. HERMANN FISCHER, New York, N. Y., assignor to Tower Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 12, 1925. Serial No. 62,075. 2 Claims. (Cl. 179—115.)



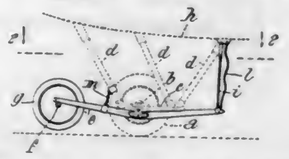
1. An electrical sound transmitting and receiving apparatus, comprising a casing, a diaphragm supported in said casing, an electromagnet, and opposed co-acting fulcrum members for the opposite faces of the diaphragm disposed intermediate the pole piece of the magnet and the outer margin of the diaphragm and dividing the latter into two zones, the lesser zone being intermediate the magnet and the fulcrum members.

1,633,171. CURLING IRON. MAURICE F. FITZGERALD, Winsted, Conn., assignor to The Fitzgerald Mfg. Company, Winsted, Conn., a Corporation of Connecticut. Filed Jan. 19, 1926. Serial No. 82,302. 4 Claims. (Cl. 132—37.)



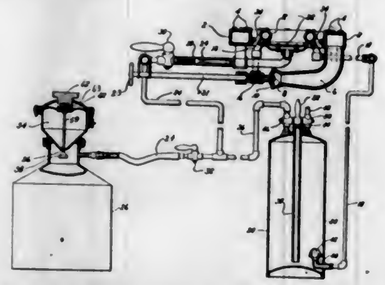
1. In a curling iron, a handle and a tong rigidly assembled together, a guard, a stirrup fitting about said tong, a pivotal connection between said stirrup and said guard intermediate the length of the latter, a lifter pivoted about said connection and a wire spring coiled about said pivotal connection and having projecting portions engaging said lifter and guard to force the operative portion of said guard into engagement with said tong.

1,633,172. LOCKING DEVICE. SAMUEL R. FRAIM, Lancaster, Pa. Filed Oct. 24, 1925. Serial No. 64,674. 6 Claims. (Cl. 70—90.)



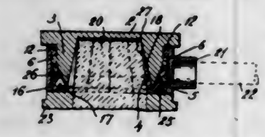
1. In combination with a rigid base member, a pair of elements adapted to be superimposed one upon the other and upon said base member and maintained in such position by a pair of separate detachable retaining members, means for locking said pair of elements together and to said base member, said means comprising a shackle passing through said two retaining members in such a manner as to prevent the release of said pair of elements from each other and from said base, said shackle extending in overlapping relation with and in contact with one of said elements, and a padlock mounted on said shackle to maintain said shackle in the desired position.

1,633,173. LOCK. HYMAN FREEDMAN and HARRY BORSKY, New York, N. Y. Filed Aug. 28, 1926. Serial No. 132,088. 4 Claims. (Cl. 70—74.)



1. In a lock, a casing, a spur gear rotatable in said casing, a pinion in the casing meshing with said spur gear, locking bars extending from said casing and being extensible and retractable out of said casing, diametrically opposed pins on opposite sides of said spur gear, said locking bars having slots therein, said pins engaged in said slots, the spur gear when rotated arcuately extending or retracting said locking bars, and means for independently actuating said locking bars from either side of a door.

1,633,174. LANDING GEAR. JULES FRITSCH, Paris, France. Filed Oct. 21, 1926, Serial No. 143,122, and in Belgium Oct. 26, 1925. 7 Claims. (Cl. 244—2.)



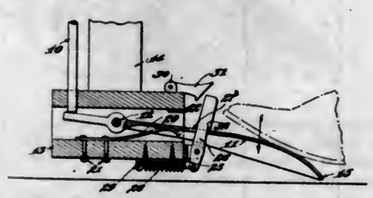
1. An apparatus of the class described comprising in combination an aeroplane body, a landing chassis, a main landing support associated with said chassis, an auxiliary landing support mounted on said chassis, resilient shock absorbing means associated with said auxiliary landing support, and means associated with said shock absorbing means for limiting the movement thereof relative to said main landing support.

1,633,175. HYDROCARBON BURNER. HENRY J. GIESEKE, Elizabeth, N. J., assignor to Mrs. Katherine Goodyear, New York, N. Y. Filed May 18, 1923. Serial No. 639,932. 3 Claims. (Cl. 158—36.5.)

1. In a fuel burner system, an acetylene gas generator, a liquid fuel tank, a pipe connecting the acetylene gas generator with the fuel tank, a liquid fuel burner, a pipe leading from the liquid fuel tank to the liquid fuel burner, an acetylene gas burner, a branch pipe leading off from the pipe connecting the acetylene gas generator with the liquid fuel tank, said pipe supplying acetylene gas to the acetylene gas burner, and means in said pipe for cutting off the supply of gas to the acetylene gas burner, and separate means for cutting off the supply of acetylene gas to the liquid fuel tank.

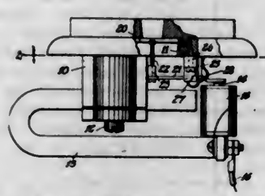
1,633,176. BATTERY-TERMINAL CONNECTER. EDWARD FORD GOELLER, New York, N. Y. Filed Dec. 22, 1925. Serial No. 76,949. 8 Claims. (Cl. 173—259.)

1. A connecter for mounting on a battery terminal which comprises the combination of a ring member adapted to be fitted over the terminal, and having a portion adapted to engage the terminal, a cap member cooperating with the ring to lock the latter to the terminal, a chamber formed between the cap and ring for holding a quantity of non-permeable material, and an outlet from the chamber through which the non-permeable material may pass to form a seal around the base of the terminal when the connecter is in place thereon.



1,633,177. DOOR HANDLE. BERTRAM J. GOLDSMITH, New York, N. Y., assignor, by mesne assignments, to Perfect Window Regulator Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed July 25, 1924. Serial No. 728,083. 3 Claims. (Cl. 292—347.)

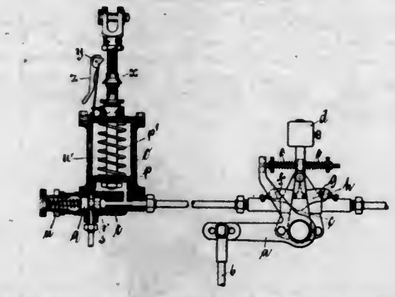
1. A rectangularly-shaped sheet metal handle having an open side, a filler member comprising a removable and separately molded and hardened block in said handle and



held in position therein by a portion of said handle bent over into engagement therewith and means associated with said handle for receiving a connecting member.

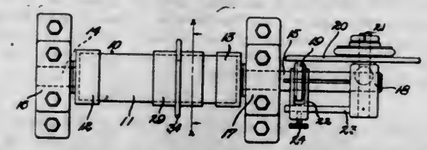
1,633,178. PEDAL LOCK. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Nov. 30, 1925. Serial No. 72,099. 3 Claims. (Cl. 74—81.)

1. A piano pedal for operating a utility comprising a fixed horizontal shaft, a rocking lever loosely mounted thereon for rotation in a vertical plane, the inner end of said lever being operatively connected to the utility, a spring for normally maintaining said lever in position so that its outer end is at the upper end of its travel, said lever having a slot, a pivoted arm extending through said slot and having a notch to engage the lever when the outer end of the lever has been depressed, a retractile spring for maintaining the pivoted arm in position so that the notch engages the lever, and a pivoted latch for engaging a free end of said arm to maintain the arm in inactive position.



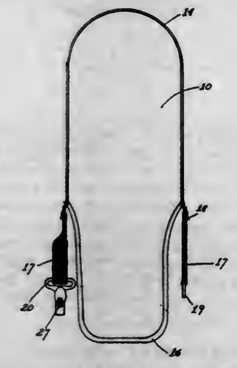
1,633,179. LOUD-SPEAKER UNIT. GEORGE F. C. HOUGHTON, Flushing, N. Y. Filed May 7, 1925. Serial No. 28,573. 2 Claims. (Cl. 179—108.)

1. An electric loud speaking receiver unit, comprising a permanent magnet having poles located in proximity to each other, a frame secured thereto, a solenoid about one of the poles of the magnet, a diaphragm carried by said frame, an armature lever having one end rigidly connected with the said diaphragm and its other end under the influence of the said solenoid pole piece, a bracket secured to the frame and having outwardly directed pivot points, a pivot bar secured to the lever and bearing on said points and provided with oppositely directed arms, and a pair of oppositely directed springs having free ends bearing upon the pivot bar arms and their other ends being secured to the bracket.



1,633,180. GOVERNING DEVICE. THOMAS JACKSON, London, England, assignor to Glendora Bessie Ramsay, Folkestone, England. Filed Aug. 24, 1923, Serial No. 659,077, and in Great Britain Aug. 31, 1922. 2 Claims. (Cl. 137—140.)

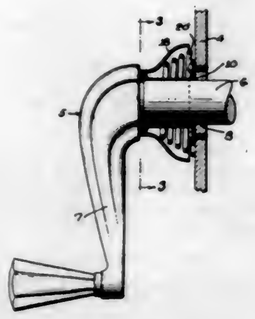
1. An improved governing device having in combination a pivoted lever continuously oscillated by the apparatus the speed of which is to be controlled, a pivoted lever rigidly carrying a mass adapted to be oscillated by the first named lever through two oppositely disposed yielding resistances, a bifurcated pivoted lever having two abutments, said bifurcated lever being adapted to be angularly displaced when the lever carrying the mass contacts with either of the abutments, a source of motive fluid under constant pressure, a valve device mechanically associated with and operable by the bifurcated lever adapted to permit passage of motive fluid under pressure when the bifurcated lever is angularly displaced, a fluid pressure



operated control device connected to the delivery from the valve device, said control device acting against an increasing yielding resistance and returning to its initial position on interruption of the supply of fluid pressure.

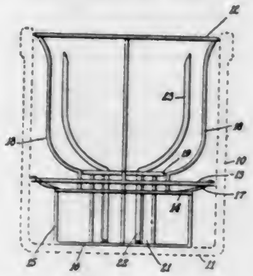
1,633,181. MECHANISM FOR WORKING PULPOUS MATERIAL. HELGO WIOGO JESPERSEN, Western Springs, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 16, 1924, Serial No. 713,703. Renewed Nov. 18, 1926. 25 Claims. (Cl. 92—41.)

1. In a mechanism for working pulpous material on a core, a forming member yieldingly engaging the pulpous material, means for causing relative movement between the forming member and the pulpous material, and means operable during said movement for adjusting the forming member.



1,633,182. HAIR NET. ANTON KNOLL, New Bedford, Mass. Filed Nov. 19, 1926. Serial No. 149,389. 3 Claims. (Cl. 132—49.)

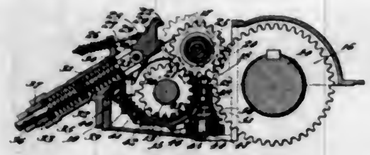
1. In a hair net, a spherically formed piece of netting, a band sewed to one edge of said netting, elastic ribbons attached to the ends of said band, a ring on one of said ribbons, a normally closed hook secured to the opposite elastic ribbon, said hook comprising an ear and a resili-



ent tongue extending parallel to said ear being joined thereto by a return bend, and a disk rotatably mounted on said tongue closing the mouth of said hook between said tongue and ear.

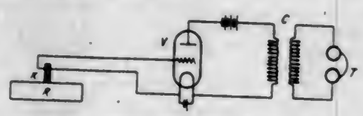
1,633,183. MOUNTING CONSTRUCTION. EMIL KOEB and BERTRAM J. GOLDSMITH, New York, N. Y., assignors to Perfect Window Regulator Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 16, 1925. Serial No. 23,613. 10 Claims. (Cl. 292—356.

1. In combination with a support, an operator, means for detachably securing said operator to said support, said means including a securing member operatively connected to said support and adapted to interlock with said operator, and a spring pressed slidable shield adapted to operatively engage said securing member to hold the same in its interlocked position.



1,633,184. MOISTURE FEEDER FOR FLOWERPOTS. FRANK LUIPERSBEK, Boundbrook, N. J. Filed Oct. 23, 1926. Serial No. 143,590. 2 Claims. (Cl. 47—38.)

1. In combination with a flower pot, a cage serving for retaining soil, a raised seat supporting said soil above the bottom of said flower pot, legs supporting said seat, said flower pot being adapted to be filled with water to the lever of said seat, a second seat raised above the first-named seat, legs supporting said second-named seat, prongs extending from said second named seat upwardly and downwardly, said prongs absorbing water from beneath said first-named seat, the prongs passing thru said second seat to a position below said first-named seat.



1,633,185. ENTRAINMENT GEARING. JAMES P. MADDEN, Bethlehem, Pa. Filed Aug. 25, 1925. Serial No. 52,260. 9 Claims. (Cl. 74—7.)

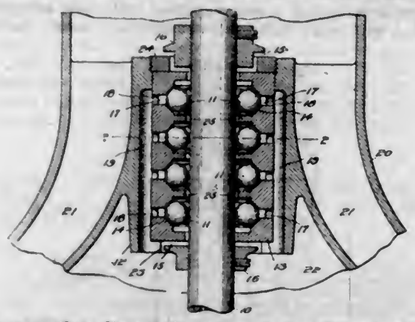
1. In gearing mechanism, the combination of a driving gear, a driven gear, a tumbler gear constantly in mesh with the driving gear, a carrier for the tumbler gear for confining translatory motion of the latter to meshed and demeshed positions with respect to the driven gear, a rocker member having teeth thereon at different radial distances from the axis of the rocker and the tooth there-

of spaced a minimum distance from such axis being adapted to engage between teeth of the tumbler gear when the latter is in its demeshed position, and resilient means for supporting the rocker member.

1,633,186. ARRANGEMENT FOR CONVERTING ACOUSTIC ENERGY INTO ELECTRICAL ENERGY. ALEXANDER MEISSNER, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed May 29, 1924, Serial No. 716,533, and in Germany June 25, 1923. 6 Claims. (Cl. 179—1.)

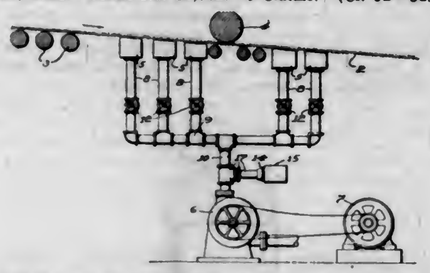
1. A device for converting sound waves into electrical impulse undulations, which comprises a plurality of piezo-electric bodies adapted to produce electrical impulse undulations in accordance with the variation in pressure exerted thereon, means associated with certain of said bodies adapted to produce variations in pressure on certain of said bodies in response to sound waves, means associated with certain others of the said piezo-electric bodies adapted to produce variations in pressure on said last mentioned bodies, amplifying means associated with said piezo-electric bodies, and means to render the separate outputs of the several amplifiers additive.

1,633,187. HOLLOW METAL ARTICLE AND METHOD OF PRODUCING THE SAME. ALLEN B. NORTON, Cleveland, Ohio, assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 13, 1926. Serial No. 80,902. 7 Claims. (Cl. 29—156.5.)



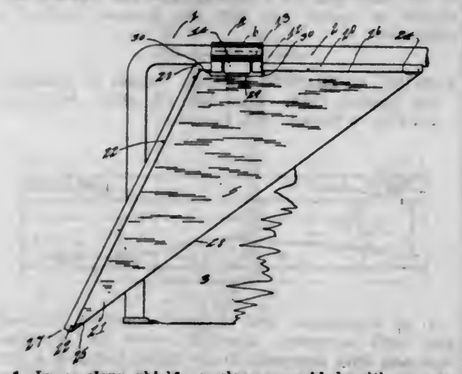
1. A piston having a skirt split longitudinally and having mechanically induced compression stresses in the metal adjacent the inner surface of the lower part of the skirt.

1,633,188. PUMP BEARING. IMMANUEL ALVIN OLIVER, Pomona, Calif., assignor to The Pomona Manufacturing Company, Pomona, Calif., a Corporation of California. Filed Oct. 5, 1926. Serial No. 139,692. 6 Claims. (Cl. 308—231.)



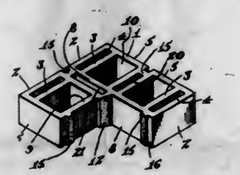
1. In a bearing for rotatable pump shafts and the like, a cage for said bearing, a plurality of raceways in said

cage, and a series of rubber ball bearings in each of said raceways contacting with said shaft, each raceway hav-



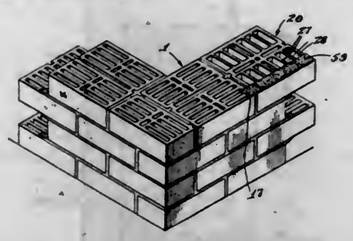
ing an outlet adjacent the bottom thereof through which gritty substances and other foreign matter will be eliminated from said raceways and cage.

1,633,189. PAPER-MAKING MACHINE. ERNEST POIRIER, Waterville, Me., assignor of forty-nine one-hundredths to John W. Stoble, Waterville, Me. Filed Aug. 21, 1925. Serial No. 51,702. 6 Claims. (Cl. 92—51.)



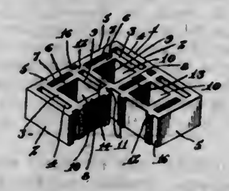
1. In a paper making machine, the combination of a travelling carrier on which the paper stock is deposited, a suction box in contact with said carrier, a vacuum pump, pipe connections leading from said box to said pump, a valve of slight inertia for automatically controlling the vacuum at said box, and means for operatively supporting said valve to partially overcome the inertia effect thereof whereby to cause it to maintain a substantially constant vacuum in said box.

1,633,190. GLARE SHIELD. MARION A. RADER, Walla Walla, Wash. Filed Oct. 20, 1925. Serial No. 63,599. 2 Claims. (Cl. 296—97.)



1. In a glare shield, a clamp provided with a supporting clip and a horizontally extending portion terminating in a shaped lower jaw, and provided with a yieldingly operable upper jaw cooperable with said first mentioned jaw, a shield comprising a transparent piece formed to an obtuse angled triangle, said piece being adjustably mounted in said clamp adjacent to the obtuse angle, and in a position of balance between the two acute angles, and means to prevent longitudinal movement of the shield in said clamp.

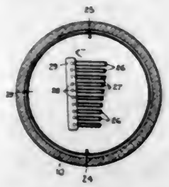
1,633,191. HOLLOW BUILDING UNIT. GEORGE D. REAGAN, Oklahoma City, Okla. Filed Feb. 25, 1926. Serial No. 90,642. 2 Claims. (Cl. 72—41.)



1. A rectangular hollow building tile of the kind described, comprising a plurality of separable units, each unit being defined at the exterior faces of said tile by kerfs formed by offset transverse webs uniting said units and a single connecting web located centrally of said tile.

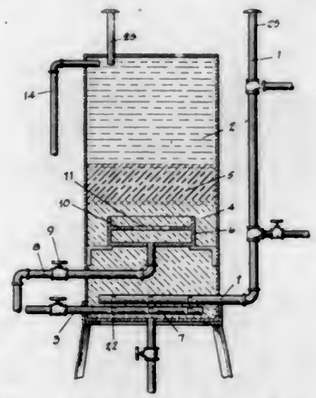
1,633,192. REENFORCED HOLLOW FRACTURABLE BUILDING UNIT. GEORGE D. REAGAN, Oklahoma City, Okla. Filed Mar. 10, 1926. Serial No. 93,698. 4 Claims. (Cl. 72—41.)

1. A divisible building unit of the kind described, comprising half sections united by fracturable connections along a distinct longitudinal line of fracture, each half section being divisible into quarter sections along distinct lines of fracture laterally of said first line of fracture, and each quarter section having a plurality of equally spaced transverse webs forming a plurality of equally spaced transverse voids.



1,633,193. HOLLOW BUILDING UNIT. GEORGE D. REAGAN, Oklahoma City, Okla. Filed Mar. 10, 1926. Serial No. 93,699. 2 Claims. (Cl. 72—41.)

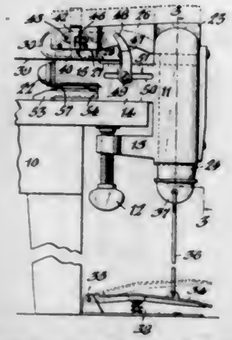
2. A rectangular hollow building block or tile, comprising double outer walls on each side, said block being divisible along distinct lines of fracture into four sepa-



rable building units, each unit having two double walls and two single walls, and each unit being joined to an adjacent unit by a plurality of fracturable transverse webs.

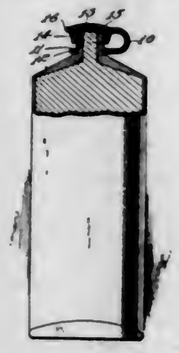
1,633,194. TELEPHONE RECEIVER. DR ELBERT A. REYNOLDS, Yonkers, N. Y. Filed Feb. 19, 1925. Serial No. 10,166. 10 Claims. (Cl. 179—109.)

1. In a telephone receiver, an electro-magnet, a set of reeds having a common magnetic base mounted in contact relation with one pole of an electro-magnet, the free ends of said reeds being disposed in magnetic relation to the other pole of said electro-magnet and means for electrically attracting the free ends of said reeds.



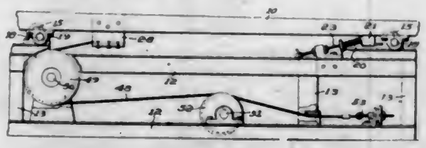
1,633,195. SCRUBBER FOR DRY-CLEANING SYSTEMS. MAURICE M. SCHWAB and SAMUEL S. SCHWAB, Toledo, Ohio. Filed June 4, 1923. Serial No. 643,160. 5 Claims. (Cl. 210—47.)

1. In a dry cleaning system, a water scrubber vat for scrubbing gasoline, a pipe for introducing the gasoline into the bottom of the vat, an outlet for drawing gasoline from the top of the vat, an inlet water pipe for introducing water into the bottom of the vat, a basin located at a fixed point substantially half way between the top and the bottom of the vat, and in spaced relation to the sides, bottom and top of the vat, an outlet water pipe connected to the basin for drawing off the water from the vat through the basin, the water pipes having valves for maintaining the level of the water above and near the upper edge of the basin, the gasoline inlet pipe having a means for distributing the gasoline over the bottom of the vat as it enters the vat.



1,633,196. MACHINE FOR CUTTING BUTTONHOLES. JOHN SIARKOWSKI, Buffalo, N. Y. Filed July 12, 1926. Serial No. 121,912. 6 Claims. (Cl. 164—2.)

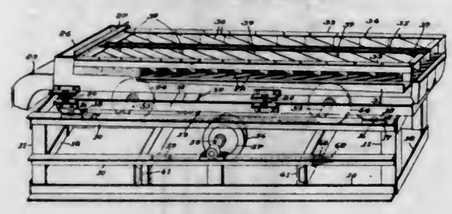
1. A button-hole cutting machine, comprising a frame having an upright guideway and an arm terminating at its free end in a pair of spaced supports on which the garment is adapted to be placed, a width-gage disposed in the space between said supports, a vertically-slidable cutter-head having a part engaging said frame-guideway and a part overhanging said width-gage, a knife applied



to the last-named cutter-head part and arranged to cooperate with the width-gage to form a button-hole in the garment, and means for actuating said cutter-head into and out of its operative position.

1,633,197. CLOSURE FOR RECEPTACLES. WILLIAM J. SNYDER, Newark, N. J. Filed July 28, 1925. Serial No. 46,513. 3 Claims. (Cl. 221—60.)

1. A closure for receptacles comprising a rubber strip with a perforated enlargement on one end and a socket on the other end, the socket having walls that are stiff enough to receive and hold the threaded end of a receptacle.

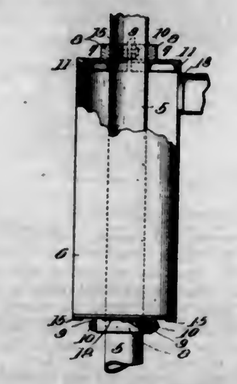


1,633,198. OPERATING MEANS. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Dec. 20, 1924. Serial No. 757,174. 6 Claims. (Cl. 74—14.)

1. In combination with a frame supported for back and forth movement, operating means for imparting back and forth movement to the frame, including a pair of cables each anchored at one end and having its other end secured to the frame, an operating shaft provided

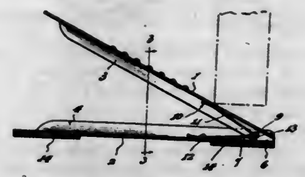
with an eccentric portion that extends lengthwise of the shaft a substantial distance, two sheaves rotatably mounted upon said eccentric portion in spaced relation to each other and each positioned to engage an intermediate portion of one of the cables, collars secured to the eccentric portion to hold the sheaves from moving lengthwise thereof, and means for rotating the shaft to actuate the sheaves so that they will alternately pull and slack off their respective cables to actuate the frame.

1,633,199. CONCENTRATOR TABLE. ALBERT H. STEBBINS, Los Angeles, Calif. Filed June 15, 1926. Serial No. 116,100. 8 Claims. (Cl. 209—467.)



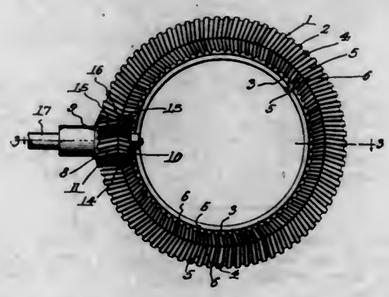
1. A concentrator table comprising in combination, a supporting frame, a deck casing mounted upon the frame for vibratory movement and having a deck surface, riffles extending diagonally over the deck surface, means for vibrating the deck to effect a movement stratification of the materials upon the deck surface, and scrapers extending across the riffles and supported in spaced relation to the riffles to provide an unobstructed clearance space therebetween in which an intermediate stratum of the materials flows while the concentrates are directed by the riffles to one side of the deck and the tailings are directed by the scrapers to the other side of the deck.

1,633,200. TREATMENT OF LIME NITROGEN. JOB MORTEN AUGUST STILLESEN, Niagara Falls, N. Y. Filed Aug. 8, 1919, Serial No. 316,038. Renewed Nov. 9, 1926. 6 Claims. (Cl. 260—125.)



1. The process which consists in treating calcium cyanamid with water and with expanding carbon dioxide at a temperature of about 135° C.

1,633,201. HEATING DRUM. LYMAN R. SWETT, Boston, Mass. Filed Nov. 16, 1923. Serial No. 675,117. 2 Claims. (Cl. 257—169.)

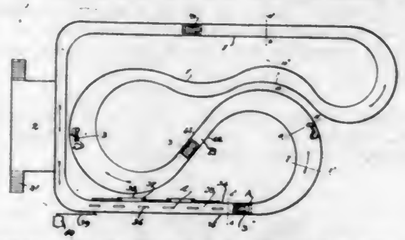


1. In a heating drum, the combination with a smoke flue of a tubular drum surrounding the flue, sectional heads, each section being provided with a semi-circular hub at its inner edge, the hub of each section of a head being mounted upon the flue, and means carried by the hubs for fastening the hubs of a head together on the flue, and flanges formed on the inner faces of each section of the heads for engaging the inner wall of the drum for supporting the drum in spaced relation to the flue.

1,633,202. DOOR HOLDER. LELAND W. WILLIAMS, San Antonio, Tex. Filed Nov. 24, 1926. Serial No. 150,564. 2 Claims. (Cl. 292—343.)

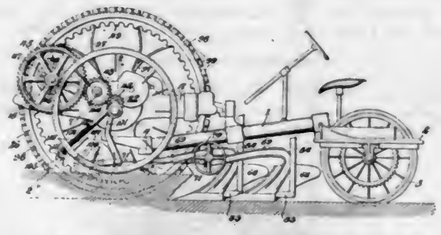
1. A door holder comprising a pair of pivotally connected plates, said plates having side marginal flanges, the ends of the flanges of one of the plates being beveled to provide stops for engaging the companion plate to limit the swinging movement thereof in one direction.

1,633,203. GEARING FOR REAR AXLES OF AUTOS. JOHN E. YEAGER, Poyntelle, Ky. Filed July 10, 1924. Serial No. 725,230. 1 Claim. (Cl. 74—7.)



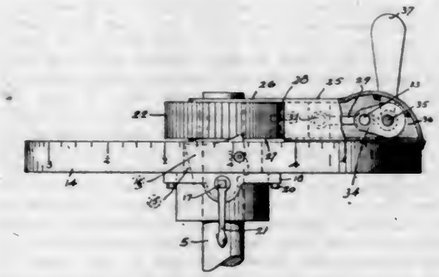
In a mechanism of the sort specified, a ring gear having teeth, each tooth comprising outer and inner members, the outer member of each tooth of the gear being longer than the inner member thereof, the outer and inner members of each tooth slanting with respect to each other, circumferentially of the gear, to form an apex, the outer and inner members of each tooth slanting with respect to each other, at an angle to the plane of the gear, to said apex: and a pinion having teeth which mesh with the teeth of the ring gear, each tooth of the pinion comprising outer and inner members, the outer member of each tooth of the pinion being longer than the inner member thereof, the outer and inner members of each tooth of the pinion slanting with respect to each other toward the axis of the pinion to form an angle, the outer and inner members of each tooth of the pinion slanting with respect to each other circumferentially of the pinion to the apex of said angle.

1,633,204. AMUSEMENT DEVICE. JOHN N. BARTLETT, Winnipeg, Manitoba, Canada. Filed Oct. 14, 1926. Serial No. 141,648. 10 Claims. (Cl. 104—63.)



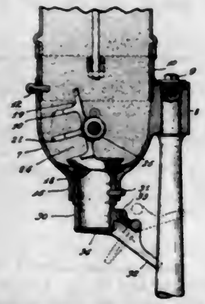
2. In an amusement device, in combination, a runway having bends therein and the bends banked, a pas-

senger carrier provided with forward castor wheels and means for projecting the carrier onto the runway at a



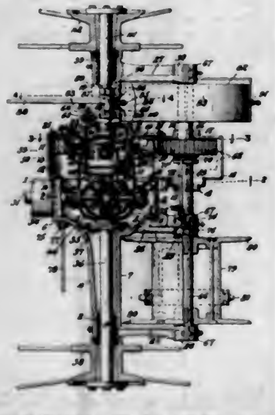
comparatively high velocity, the amount of banking at the bends of the runway being such that the passing carrier is self steering throughout its travel.

1,633,205. TRACTOR PLOW. MARTIN R. BRUNER, Buckland, Ohio. Original application filed Jan. 8, 1925. Serial No. 1,244. Divided and this application filed May 28, 1926. Serial No. 112,330. 5 Claims. (Cl. 97—40.)



1. In a tractor implement, the combination of a wheel supported main frame, plows carried thereby, a transverse shaft journaled in front of the plows and having colter disks thereon, trash feeders on said shaft, and means for positively rotating said shaft to feed the trash rearwardly as the tractor advances over the field.

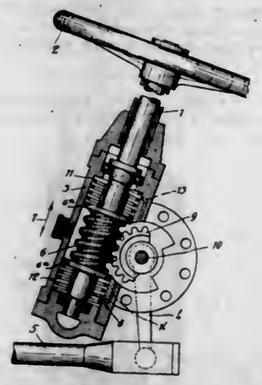
1,633,206. SAWMILL SETWORK. THOMAS CARMICHAEL and JOHN E. BOWLIN, Fort Bragg, Calif. Filed Mar. 29, 1926. Serial No. 98,249. 3 Claims. (Cl. 143—124.)



1. A set works having a stop shaft, a toothed wheel fixedly secured to the said shaft, a stationary plate surrounding the shaft, a radially disposed frame rotatably mounted on the shaft and adapted to be moved manually in one direction, means carried by the frame and adjustable into engagement with the toothed wheel for causing the frame to move with the stop shaft in an opposite direction, an oscillating stop connected to the plate and having two oppositely disposed portions respectively adapted to be alternately projected into the path of movement of the frame, one of said portions being adapted to intercept the frame when the same is moved angularly in one direction and for a predetermined distance by the shaft, said portion being further adapted to yield under pressure of the frame when the same is moved manually and in another direction and for a distance of not less than 360°.

1,633,207. DISPENSING MACHINE. SIGVORT HANSON, Racine, Wis. Filed June 27, 1924. Serial No. 722,862. 15 Claims. (Cl. 221—95.)

3. In a dispensing machine embodying a material containing chamber having an outlet, a discharger in said chamber comprising a plurality of measures for apportioning material in varying quantities and discharging the same from said chamber through its outlet, and means associated with said discharger for actuating the same.

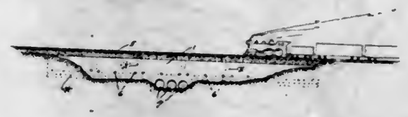


1,633,208. POWER-DELIVERING ATTACHMENT FOR AUTOMOBILE TRUCKS OR TRACTORS. LEO HAUBERT, Tulsa, Okla., assignor of one-third to John C. Bennett and one-third to John A. Wolfe, Tulsa, Okla. Filed Nov. 14, 1924. Serial No. 749,915. 5 Claims. (Cl. 74—7.)

1. In a power delivering attachment for motor vehicles, a pair of separate drive axles, one of said axles being shorter than the other, differential gearing located between the inner ends of the axles, the longer axle being directly connected thereto, a short shaft extending from the differential to the shorter axle, means for connecting or disconnecting the said shaft and axle, a gear ring surrounding and forming part of the differential, means for driving the gear ring, a concentric collar carried by the said ring, said collar extending laterally of the machine to and beyond the inner end of the short axle, a

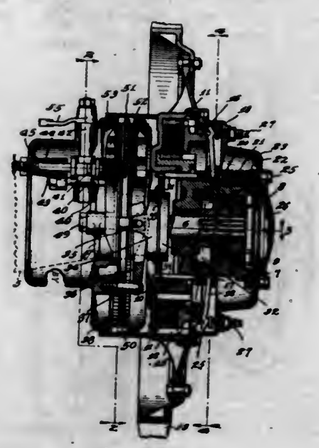
stationary housing carried by the vehicle frame and surrounding the gearing and collar, an inwardly directed sleeve carried by the housing and extending within the collar to provide an external bearing for the outer end of the collar and an internal bearing for the said short shaft, a gear wheel secured to the outer end of the collar, a drum shaft mounted on the vehicle frame and having a drum, and a pinion slidably mounted on the shaft to be moved into or out of meshing engagement with the said gear wheel, to wind the drum either when the differential is connected to or disconnected from the said shorter drive axle.

1,633,209. STEERING GEAR FOR AUTOMOBILE VEHICLES. ALBERT BERTHOLDT HENNINGER, Berlin, Germany. Filed Apr. 28, 1926, Serial No. 105,274, and in Germany Mar. 21, 1922. 2 Claims. (Cl. 74—79.)



1. Steering gear for automobiles comprising, in combination, a steering pillar rotatable by the hand of the operator, a casing entirely surrounding the steering pillar, a cylindrical worm on said pillar and rotating with the latter and freely slidable to either side on the same in the casing, guiding discs at either side of said worm for guiding said worm with respect to the steering pillar in the casing, a transmission member in engagement with said worm adapted to transmit its movement caused by the turning of the steering pillar and of the worm upon the steering wheels of the motor vehicle, springs acting immediately with the inner ends upon said guiding discs and with the outer ends abutting against parts of the casing, adapted to damp the shocks which act on the steering wheels keeping the shocks from the steering post and its bearings and returning the freely slidable worm into its normal position after the displacement.

1,633,210. GAME APPARATUS. IRA HERBISON, Plessis, N. Y. Filed Nov. 30, 1926. Serial No. 151,738. 1 Claim. (Cl. 273—119.)

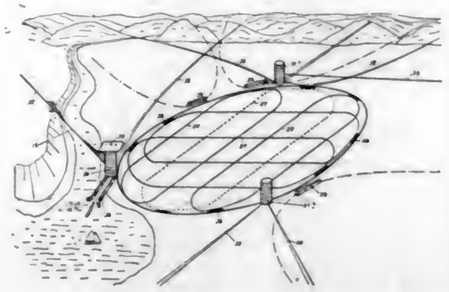


A game apparatus comprising a member provided at its top portion with a grooved surface, a pellet adapted to traverse such grooved surface, means for mounting an impelling spring at one end of such grooved surface, and means for mounting a target at the opposite end of such surface, said member at each end portion being provided with a recess, the spring being insertible in one of the recesses and the target engageable within the other.

1,633,211. ROADWAY EMBANKMENT. EDWIN A. JENKS, Alderpoint, Calif. Filed June 30, 1924. Serial No. 723,303. 5 Claims. (Cl. 238—3.)

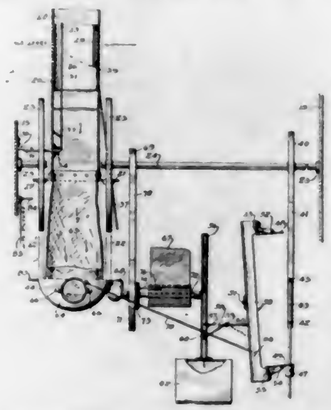
1. Spaced longitudinal concrete walls extending across a canyon, an arroyo or the like, said walls being adapted to retain earth which fills up said canyon, arroyo or the like between said walls, and which carries a roadway or railroad thereon, and transverse walls spaced apart between the ends of, and connecting the first mentioned spaced walls.

1,633,212. TRACTOR. ALFRED C. JOHNSON, Racine, Wis., assignor to Belle City Manufacturing Company, Racine, Wis., a Corporation. Filed Nov. 3, 1925. Serial No. 66,543. 27 Claims. (Cl. 192—18.)



3. In a tractor, an axle, a hub secured thereto, a wheel-hub rotatably mounted on said axle-hub, clutch-disks between said hubs, means for shifting said disks into engagement, yielding means for actuating said shifting means, a collar movable by said yielding means, brake mechanism adapted to engage said collar, and means for actuating said brake mechanism to permit the disengagement of said clutch disks.

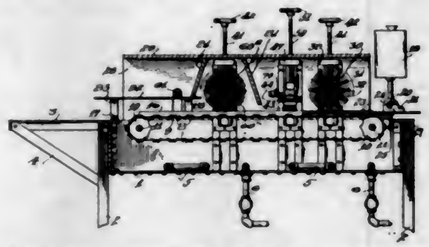
1,633,213. CHEMICAL COMPOSITION. JOSEPH FRANCIS KING, Brooklyn, N. Y., assignor to Herman A. Metz, New York, N. Y. Filed Jan. 19, 1926. Serial No. 82,348. 3 Claims. (Cl. 8—2.)



1. A composition of the character described, comprising 300 pounds sodium perborate, 50 pounds cornstarch, 30 pounds sodium triphosphate, 25 pounds aluminum sulphate powder, 75 pounds Epsom salts, and 20 pounds denatured alcohol.

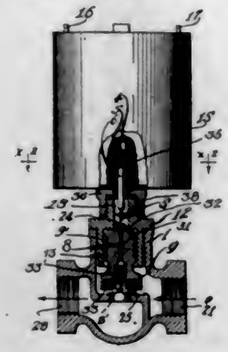
1,633,214. METHOD FOR OVERCOMING GREAT DIFFERENCES OF HEIGHT WITH HIGH-SPEED PASSENGER TRAFFIC. FRANZ KRUCKENBERG, Heidelberg, Germany. Filed Jan. 24, 1925, Serial No. 4,571, and in Germany Nov. 28, 1924. 6 Claims. (Cl. 104—91.)

1. Means for handling traffic in a congested area comprising a continuously travelling railway surrounding such area and provided with stations at suitable intervals, and also located on such railway a tower-like station structure of many stories and having a spirally arranged means for access to any story.



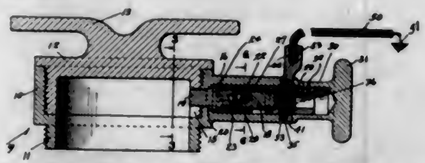
1,633,215. VENDING MACHINE. LOUIS E. LA CROIX, Baltimore, Md. Filed Nov. 14, 1925. Serial No. 69,064. 8 Claims. (Cl. 194—37.)

1. A vending machine comprising a vertically movable receptacle having a pivoted bottom, a vertically movable operating member connected to the receptacle for raising the same, coin controlled locking means for holding the operating member in position with the receptacle raised, dispensing means including a device for releasing the bottom of the receptacle upon upward movement of the latter, and means for releasing said operating member when the dispensing means is operated.



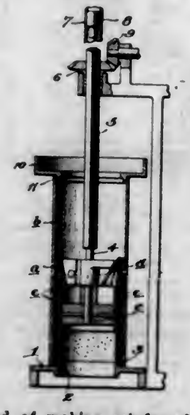
1,633,216. MACHINE FOR CLEANING ELECTROTYPE PLATES. WILLIAM R. LAKEMAN, Rochester, N. Y. Filed Mar. 23, 1922. Serial No. 546,202. 10 Claims. (Cl. 15—77.)

1. In combination with means for moving an electrotype plate, three scrubbing elements, one movable transversely of the line of movement of the plate, and the other two operating longitudinally of the line of movement on opposite sides of the first named scrubbing element, the one nearest the intake of the machine operating in the direction of the line of movement of the plate



and at a greater speed than the plate, the other of said last two mentioned scrubbing elements operating in a direction opposed to the line of movement of the plate.

1,633,217. VALVE. EDGAR EARLE LITTLEFIELD, Los Angeles, Calif. Filed Mar. 18, 1922. Serial No. 544,878. 13 Claims. (Cl. 137—139.)



3. A valve mechanism comprising a casing having main inlet and outlet openings, a main valve seat and a water chamber in said casing, a main valve for said seat with by-passes communicating respectively with the casing inlet and outlet, one of the by-passes being a small passage through the main valve and having a valve seat at its upper extremity, an electromagnet having a tubular core, a valve stem extending into said core and formed at its lower end into a valve cooperative with the by-pass valve seat in the main valve.

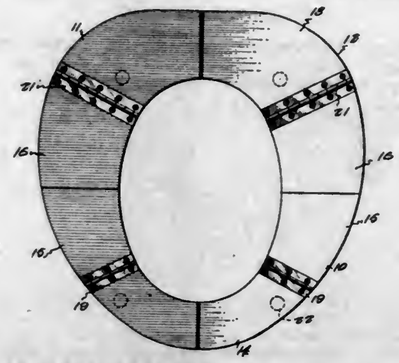
1,633,218. CLOSURE-CAP LOCK. FRANK A. MCDONALD and FERDINAND G. WELKE, San Francisco, Calif. Filed Jan. 21, 1926. Serial No. 82,816. 2 Claims. (Cl. 220—24.)

1. In a device of the character described, a first tubular member adapted to be attached to a container, a removable cap for closing the opening in said first tubular member, a second tubular member extending from said first tubular member, a non-rotatable slidable bolt in said second tubular member, said first tubular member and said cap being adapted to receive an end portion, of said bolt, resilient means normally pressing said bolt into locking engagement with said cap and said first tubular member, said bolt being threaded, a key having a threaded end portion adapted to threadedly engage said bolt and having a shoulder adapted to abut against the end of said second tubular member, a ring rotatably encircling said key and held thereto and an electrical conductor secured to said ring at one end and grounded at its other end.

1,633,219. METHOD OF FORMING PIPE. GEORGE C. MARTIN, Los Angeles, Calif. Filed Dec. 17, 1926. Serial No. 155,476. 3 Claims. (Cl. 25—154.)

1. The method of making reinforced pipe which consists in forming a mixture of plastic material and relatively small lengths of reinforcing metal, pouring the same into a hollow mold and then subjecting the mass of plastic material and metal to a rotary troweling pressure exerted radially of the mold.

1,633,220. PROCESS OF DYEING FILAMENTS AND FILMS FORMED FROM VISCOSE. WILLIAM MENDEL, Beverly, N. J., assignor to Samuel A. Neidich, Edgewater Park, N. J. Filed May 23, 1925. Serial No. 32,450. 5 Claims. (Cl. 8—5.)

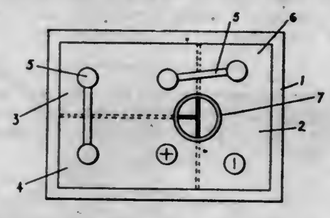


1. The method of manufacturing dyed articles from viscose (sulphocarbonate) which consists in subjecting viscose to the action of a coagulating material and of trisodium phosphate (Na_3PO_4) and of a dyeing element in aqueous solution before drying such articles.

1,633,221. PROCESS OF DYEING FILAMENTS AND FILMS FORMED FROM VISCOSE. WILLIAM MENDEL, Beverly, N. J., assignor to Samuel A. Neidich, Edgewater Park, N. J. Filed May 23, 1925. Serial No. 32,451. 3 Claims. (Cl. 8—5.)

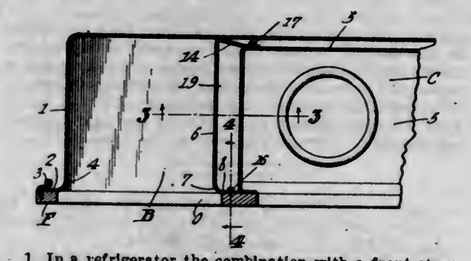
1. The method of manufacturing dyed articles from viscose (sulphocarbonate) which consists in subjecting viscose to the action of a coagulating or precipitating element and then subjecting the precipitated articles to the action of tri-sodium phosphate (Na_3PO_4) and of a dyeing element in the same aqueous solution, before drying such articles.

1,633,222. AUXILIARY TOILET SEAT. ESTHER M. NOBLE, Boise, Idaho. Filed July 2, 1926. Serial No. 120,216. 2 Claims. (Cl. 4—239.)



1. An auxiliary toilet seat including a pair of lateral sections, each section comprising two end segments and two intermediate segments, a hinge connecting the adjacent ends of the intermediate segments of each section at one side of the segments to provide for relative folding of said segments to position with their said sides in contact, a hinge connecting each intermediate segment of each section with the adjacent end of the respective end segment, at the opposite side of the segments to provide for relative folding of the end segments, with relation

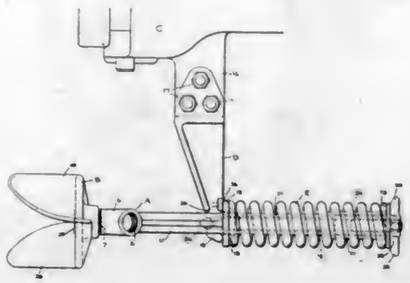
to their respective intermediate segments, to position with their sides, at which the hinges are located, in contact, and means upon the respective end segments of the two sections for separably connecting the same to each other.



1,633,223. [WITHDRAWN.]

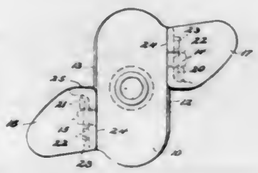
1,633,224. STORAGE BATTERY. CLARENCE E. OGDEN, Cincinnati, Ohio, assignor to The Kodel Radio Corporation, a Corporation of Ohio. Filed Dec. 31, 1926. Serial No. 158,337. 2 Claims. (Cl. 136—162.)

2. In a storage battery, a case, a cell located transversely at one end of said case, two cells located longitudinally in the remaining portion of said case contiguous to said first cell, and a filling opening in the upper portion of said case extended over contiguous portions of all of said cells.



1,633,225. REFRIGERATOR. RUDOLPH A. RIEK, Rhinelander, Wis. Filed Mar. 27, 1925. Serial No. 18,853. 4 Claims. (Cl. 62—89.)

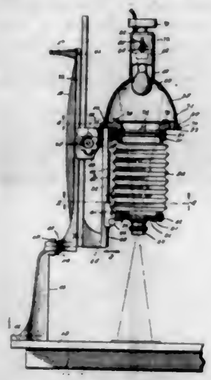
1. In a refrigerator the combination with a front structure having an opening therein for a door, of a porcelained metal lining mounted back of said structure and



having its front edge portions convex and visible at the sides of the door opening, the maximum width of the compartment between opposed sides of the lining being less than the width of the door opening.

1,633,226. AUTOMATIC TRAIN-PIPE CONNECTER. JOSEPH ROBINSON, New York, N. Y. Filed Apr. 9, 1921, Serial No. 459,926. Renewed Nov. 10, 1926. 18 Claims. (Cl. 285—58.)

1. In an automatic train pipe connecter, the combination with a car coupler, of a coupling head and a support for suspending the head from said coupler, said support comprising a bracket and a spring, which said spring is adapted to be constrained when said coupling head is in the coupled position with a mating head, and means to permit said coupling head to be disconnected from a mating head while said car couplers remain coupled, said means comprising a device to maintain said spring constrained while effecting such disconnection.

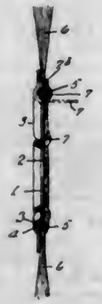


1,633,227. CONNECTER HEAD. JOSEPH ROBINSON, New York, N. Y. Filed Apr. 12, 1921, Serial No. 460,774. Renewed Nov. 10, 1926. 11 Claims. (Cl. 285—58.)

1. An automatic train pipe coupling head comprising in combination, a base having a projecting flange provided with an aperture therethrough, a guide having a recess to receive said flange and an aperture therein to be brought into register with the aperture in the flange, and a member adapted to be inserted into said registering apertures to secure the guide to the base.

1,633,228. PHOTOGRAPHIC ENLARGER. ELWOOD C. ROGERS, Indianapolis, Ind. Filed Apr. 8, 1926. Serial No. 100,537. 25 Claims. (Cl. 88—24.)

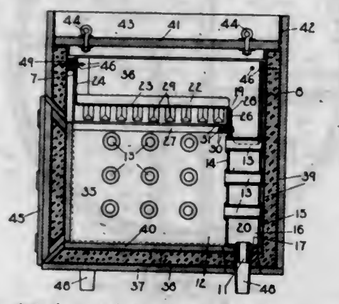
17. In a photographic enlarger, a negative holder, a lens, a light bulb having a light-diffusing surface, a reflector for said light bulb, the light-diffusing surface of said light bulb being located to intercept light rays from the bulb to the reflector, said reflector having a non-



diffusing reflecting surface and being arranged to reflect rays of light from the light bulb through a negative in the negative holder and thence through the lens.

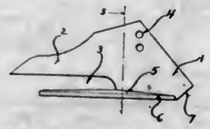
1,633,229. PAPER BOX AND PROCESS OF MAKING THE SAME. SAM ROSENTHAL, New York, N. Y., assignor to The Pony Fruit Corporation, New York, N. Y. Filed Aug. 2, 1926. Serial No. 126,581. 4 Claims. (Cl. 229—14.)

1. A flat paper form which can be folded into a rectangular box for packing materials which comprises a portion which can be folded into an exterior and another portion integrally attached thereto which when folded will form a completely rounded liner completely encircling the contents of the box, said liner being of such construction that it will overlap a portion of itself, said overlapping portion being unsecured.



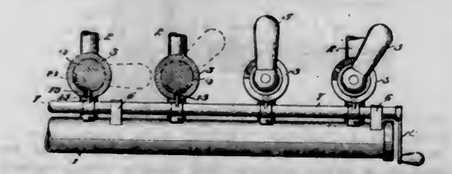
1,633,230. ROTARY BRUSH. HENRY C. SCHLUETER, Cleveland, Ohio, assignor to William Elsey, Detroit, Mich. Filed Aug. 21, 1926. Serial No. 130,670. 4 Claims. (Cl. 15—179.)

1. A rotary brush comprising a plate having an annular rib extending from one side thereof and located within and spaced from the outer edge thereof, tongues



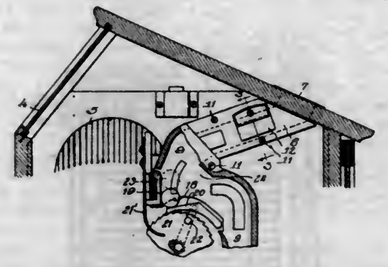
struck from said plate and extending in the opposite direction from said rib, and a brush member comprising a ring and bristles thereon secured by said tongues within the concave seat provided within the said rib.

1,633,231. REFRIGERATOR. HENRY SCHOTT, Longmeadow, Mass. Filed Apr. 14, 1926. Serial No. 101,889. 14 Claims. (Cl. 62—69.)



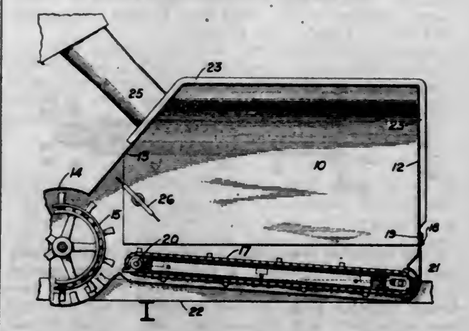
1. An interior casing, of a refrigerator, comprising hollow side and rear sections and a roof section provided with attaching means whereby the same are held together to form the top and three sides of a cooling chamber, and tubular members extending transversely of said side and rear sections, opening at their inner ends into said chamber, and closed at their outer ends.

1,633,232. CULTIVATOR BLADE. AUGUST D. SIEVERS, Somers, Wis. Filed Aug. 21, 1926. Serial No. 130,695. 2 Claims. (Cl. 97—206.)



1. A cultivator blade comprising a vertical blade having a forwardly extending portion and having a relatively long rearwardly extending tail guard provided with a cut-away lower portion, a cutter blade extending laterally from said vertical blade, said cutter blade having a downwardly slanting body portion and having a rearwardly slanting cutting front edge, said tail guard having a lower edge spaced upwardly above the cutter blade, whereby said cutter blade will break earth and the vertical blade will guard the plant from damage while the flat cutaway portion of the tail guard will permit the passage therethrough of only relatively fine powdered earth.

1,633,233. LOCK FOR GAS-STOVE VALVES AND OTHER VALVES. CALVIN SMITH, Somerville, N. J. Filed Jan. 28, 1926. Serial No. 84,369. 6 Claims. (Cl. 126—42.)

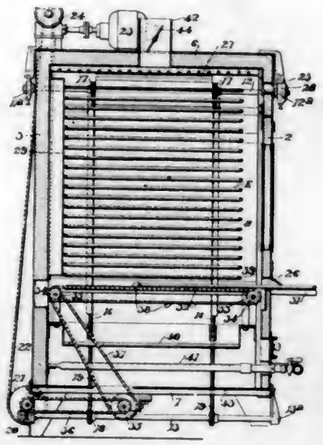


1. A lock for gas stove valves comprising a rotary shaft, means for operating said shaft, a plurality of valves, and a plurality of members mounted on said shaft for independent movement on said shaft for locking said valves.

1,633,234. COIN CHUTE. PERCY C. SMITH, Chicago, Ill., assignor to John F. Meyer, Chicago, Ill. Filed Apr. 2, 1924. Serial No. 703,639. 1 Claim. (Cl. 194—102.)

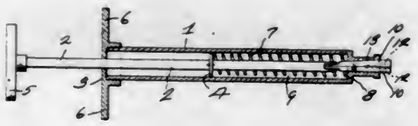
A coin chute, comprising a grooved member, a projection on the inner side of said member at the top thereof to space the upper edge of the grooved member from a support and maintain said member in an inclined position, a cover plate on the inclined side of said member and having an opening therein, and interchangeable plates on the inclined side of said cover plate and cooperating with said opening to vary the size thereof and to permit coins of improper size to fall therethrough.

1,633,235. FEEDER MECHANISM AND HOUSING FOR COMBINED HARVESTERS. LOWELL H. THORN, Stockton, Calif., assignor, by mesne assignments, to Western Harvester Co., San Francisco, Calif., a Corporation of California. Filed May 1, 1924. Serial No. 710,423. 7 Claims. (Cl. 130—1.)



1. In a combined harvester having header and thresher mechanism, a housing for the thresher mechanism, an endless conveyer for feeding grain from the header to the thresher mechanism, a conveyer housing receiving the conveyer, and a feed house overlying the feed conveyer and mounted upon the conveyer housing and connected with and forming a continuation of the thresher housing and having one side open for the admission of grain from the header mechanism, said feed house being formed with a back side curving gradually into a top or roof portion.

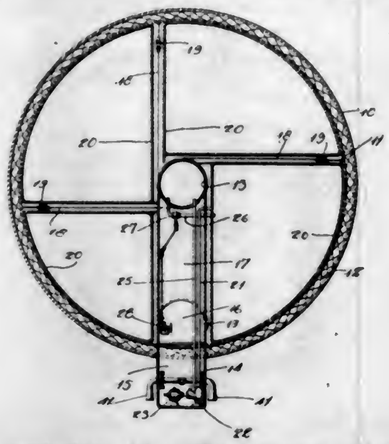
1,633,236. BAKING OVEN. ARTHUR E. TROIEL, Berkeley, Calif. Filed Sept. 4, 1923. Serial No. 660,737. 7 Claims. (Cl. 198—163.)



1. A carrier of the character described comprising a pair of opposed interspaced carriers, each carrier consisting of interspaced endless sprocket chains supported

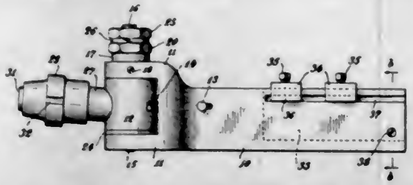
by upper and lower sprocket gears, a plurality of interspaced supporting lugs on each chain, the lugs on the respective chains aligning horizontally and forming a plurality of four point supports, means for driving the

chains in unison, and a pan receiving and temporary supporting device rotating in unison with the sprocket gears and automatically delivering the pans one by one to the supporting lugs on the chains.



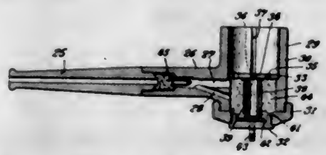
1,633,237. VALVE-PIN EXTRACTOR. JAMES G. WHITLOW, Cornelius, N. C. Filed Feb. 7, 1923. Serial No. 617,501. 1 Claim. (Cl. 81—3.)

A pin extractor comprising a cylinder, a shaft slidably mounted in said cylinder, a reduced extension carried by one end of said cylinder and having a tapered bore therein, gripping jaws disposed in said tapered bore and cooperating with said tapered bore when moved therein by the shaft, a spreader spring between said tapered jaws, said tapered jaws being segmentally shaped in transverse cross section, the inner ends of said jaws having flattened reduced portions, spaced arms carried by the shaft and between which the reduced portions of the jaws are disposed, said reduced portion of the jaws being disposed between said arms, a pin extending through the arms of the shaft, and on which the jaws are pivotally mounted, said shaft arms upon extreme outer movement of the shaft and jaws cooperating with the outer sides of the reduced portions of the jaws whereby the spreading apart of the jaws is limited when said jaws are in extreme outer position.



1,633,238. DIRIGIBLE BALLOON. FRED H. BASSETT, Washington, D. C. Filed Oct. 31, 1925. Serial No. 66,064. 4 Claims. (Cl. 244—6.)

2. In a dirigible balloon, a double shell consisting of spaced inner and outer shells, partitions extending across said inner shell adjacent the ends thereof to provide a forward compartment, a central compartment, and a



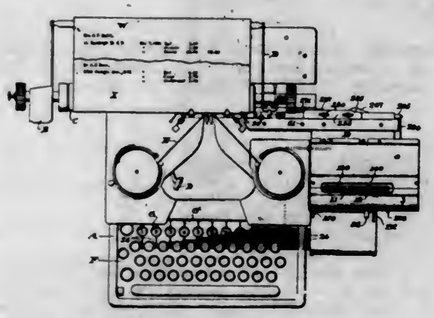
rear compartment, and a tubular backbone forming a tank for compressed levitating gas and extending between said partitions.

1,633,239. TOOL HOLDER. HUGO BLIDSOE, New York, N. Y. Filed Oct. 9, 1925. Serial No. 61,393. 4 Claims. (Cl. 29—98.)

1. A tool holder as described, comprising in combination with the turnable head thereof, a vertical axle formed with said head, a bushing for rotatably receiving said axle, a collar on said bushing having a depression on one of its faces, and gear cuts on said face, a coil spring in said depression, means for retaining said axle in said bushing, and a means co-operating with said collar and spring for permitting the exertion of a turnable movement on said axle and head.

1,633,240. PIPE AND CIGAR HOLDER FOR THE PURPOSE OF ELIMINATING THE NICOTINE. HUGO BLIDSOE, New York, N. Y. Filed Apr. 13, 1926. Serial No. 101,618. 1 Claim. (Cl. 131—12.)

A pipe, comprising a mouthpiece adapted to be inserted in a lower member, said member being formed with a seat for a detachable chamber having a tube integrally connected thereto, said tube being tapered into a sharp end point and having perforated walls to admit the smoke; the said lower member being provided with two tubes leading into a pipe, the head of said pipe com-



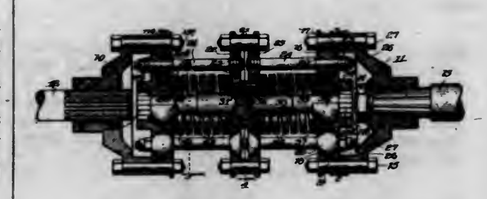
prising three sections, an upper larger one, having a circular shoulder located intermediate thereof, and adapted to support a disc, provided with apertures, an enlargement on said disc and a corresponding recess in the head of the pipe to permit of an up and downward sliding movement of said disc, an extensible telescopic tube, having its upper endpiece integrally attached to said disc and means for locking said tube members together when in extended position; a middle section screwed into said upper section and forming a chamber with said disc, said chamber being filled with an absorbent substance; and a bottom section screwed into said middle section and adapted to support a flange on said extensible tube when the latter is in collapsed position.

1,633,241. ARTIFICIAL TOOTH. GILDEROY O. BURLEW, Newark, N. J. Filed Apr. 3, 1926. Serial No. 99,435. 1 Claim. (Cl. 32—9.)

An artificial tooth having a transparent lingual surface, a cervical surface and a flat substantially vertical backing surface interposed between the two said surfaces, said backing surface being provided with a recess and a flat substantially vertical backing plate provided with a straight angularly projecting pin rectangular in cross section to loosely engage the said recess, the pin projecting through and beyond the rear surface of the plate, the flat surface and loose fit of the pin permitting lateral and rotary adjustment.

1,633,242. ADDING ATTACHMENT FOR TYPEWRITING MACHINES. GUSTAVE O. DEGENER, Hartford, Conn., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 10, 1924. Serial No. 736,896. 119 Claims. (Cl. 235—59.)

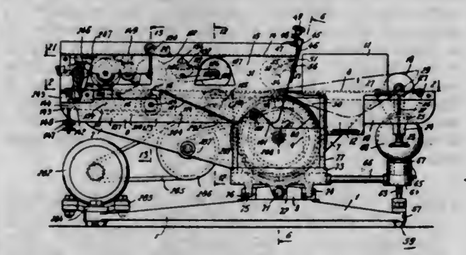
1. In a combined typewriting and computing machine, the combination of a travelling carriage, a computing attachment comprising a travelling register, a detent geared to said register, and a slidable pick up dog on the carriage for engaging said detent at a certain predetermined point and thereby connecting the carriage and the register.



21. In a computing machine, the combination of a register, a train of gearing for operating the same, a key for operating the train of gearing, full stroke mechanism associated with a member of said train of gearing, and two keys for disabling the full stroke mechanism.

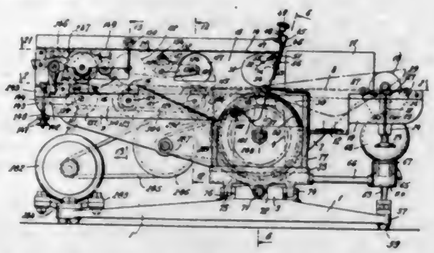
47. In a computing machine, the combination of a register, a key, a train of connections between the key and the register comprising a gear, a unit pinion normally out of register with said gear, a unit pinion pawl, means operated by the initial movement of the gear to cause the pawl to engage the pinion to properly position the same, and means operated immediately following by the gear to move the pinion into register with the gear.

103. In a combined typewriting and computing machine, the combination of a travelling register, positive means for returning the register to home position, and means for preventing rebound thereof comprising a rotating disk having a radial face and a lever having a tooth brought momentarily into engagement with said face when the register reaches home position.



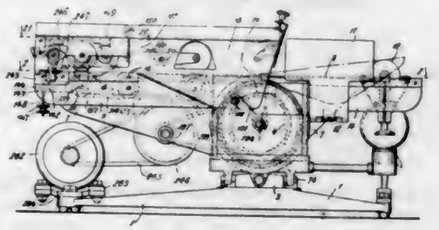
116. In a computing machine, the combination of a travelling totalizer, error check mechanism, and means whereby the error check mechanism is rendered operative by a movement of the totalizer to clearance position and becomes effective at the beginning of a clearing operation.

1,633,243. FLEXIBLE COUPLING. GEORGE F. ECKART, South Bend, Ind., assignor to George A. Chritton, trustee. Filed Oct. 8, 1925. Serial No. 61,235. 4 Claims. (Cl. 64—96.)



1. In a flexible coupling, end and central flanges, a shaft secured to the central flange and flexibly connected to the end flanges, a series of tension members spaced about said shaft and flexibly connecting said flanges, and springs tending to force said flanges apart.

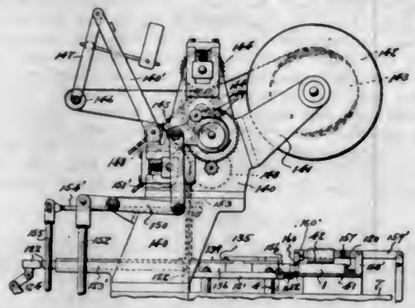
1,633,244. ENVELOPE-SEALING MACHINE. JOHN W. ESKHOLME, Glen Ridge, N. J., assignor to Red Star Appliances, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 9, 1925. Serial No. 14,045. 19 Claims. (Cl. 120—6.)



1. In a machine of the character described, the combination of a moistening device having a well for liquid and a fountain of the constant level type for replenishing the liquid in such well, said fountain having a cup with an air inlet and a separate water outlet, and an inverted water bottle with its mouth below the level of said air inlet, said bottle being removable for replenishing and having a reversible soft rubber check valve therein, substantially as described.

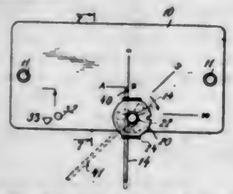
1,633,245. STAMP-CANCELING MACHINE. JOHN W. ESKHOLME, East Orange, N. J., assignor to Red Star Appliances, Inc., New York, N. Y., a Corporation of Delaware. Original application filed Mar. 9, 1925, Serial No. 14,045. Divided and this application filed Nov. 17, 1925. Serial No. 69,593. 7 Claims. (Cl. 101—235.)

4. In a machine of the character described, a pair of driven sealing rolls and a printing drum, a driven lower roll co-operating with said printing drum, means for successively feeding envelopes between said sealing rolls, said lower roll being driven at a higher peripheral speed than said sealing rolls, and said sealing rolls being driven through an overrunning clutch, whereby said envelopes may be rapidly withdrawn from said sealing rolls by said printing drum.



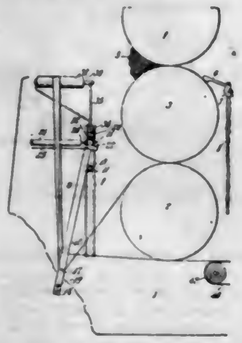
1,633,246. STAMP-CANCELING MACHINE. JOHN W. ESKHOLME, East Orange, N. J., assignor to Red Star Appliances, Inc., Stamford, Conn., a Corporation of Delaware. Original application filed Mar. 9, 1925, Serial No. 14,045. Divided and this application filed May 29, 1926. Serial No. 112,487. 8 Claims. (Cl. 101—235.)

1. In a machine of the character described, the combination of a stationary shaft, a sleeve on said shaft, a pulley fixed to said sleeve, a printing drum journaled on said sleeve and having a frictional engagement therewith, a power driven lower roll having a driving connection with said pulley, means for holding said printing drum stationary with respect to said sleeve, means for at times releasing said holding means, and a rubber faced flange on said printing drum for at times establishing a driving connection between said drum and said lower roll.



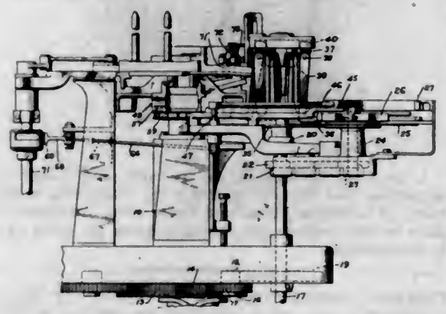
1,633,247. MECHANISM FOR LINING CARTONS. HARRY L. EVANS and GEORGE I. HOHL, Newport, R. I., assignors to Cartoning Machinery Corporation, Newport, R. I., a Corporation of New Jersey. Original application filed July 10, 1924, Serial No. 725,177. Divided and this application filed Jan. 28, 1926. Serial No. 84,308. 15 Claims. (Cl. 93—36.)

1. A mechanism for pre-forming and inserting linings into cartons, comprising a reciprocable mandrel, tucking and folding elements intermediate which said mandrel reciprocates, means for supplying lining material intermediate said mandrel and said tucking and folding elements, means for holding the cartons with their open ends directed toward said mandrel, a stationary spreader finger for engaging and deflecting one side tab of the open carton end out of the path of the mandrel, a movable



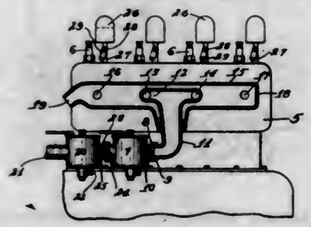
spreader means for engaging and deflecting the opposite side tab of the open carton and out of the path of the mandrel after the carton is disposed in lining receiving position.

1,633,248. BUS-BAR BENDER. FREDERICK W. GEISSENHAINER, Freehold, N. J., and MATTHEW S. CUMNER, Brooklyn, N. Y., assignors to Nestor Manufacturing Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 5, 1924. Serial No. 696,951. 6 Claims. (Cl. 153—45.)



1. In a bending device, a base plate, a round pin projecting upwardly therefrom, a lug on said plate spaced from said pin a distance substantially equal to the width of the material to be bent and a tool provided with a flat portion having an opening for receiving said pin and having a lug depending therefrom and similarly spaced from said opening and engageable with the element to be bent.

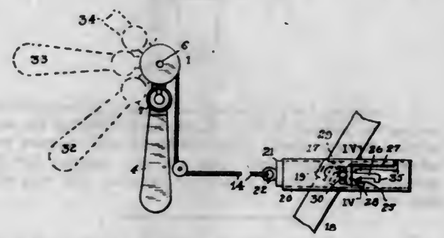
1,633,249. ATTACHMENT FOR CALENDERS. NATHAN R. GOODWIN, Trenton, N. J. Filed Feb. 7, 1923. Serial No. 617,527. 5 Claims. (Cl. 154—1.)



1. An attachment for calenders comprising, a freely rotatable roll for receiving tread strips from a calender, another freely rotatable roll for superposing such strips upon each other and compacting them without otherwise applied pressure, said rolls being actuated by the movement of the strips in contact therewith, and means for delivering said superposed strips to a desired point, said delivering means serving to pull upon the strips for causing them to actuate the rolls.

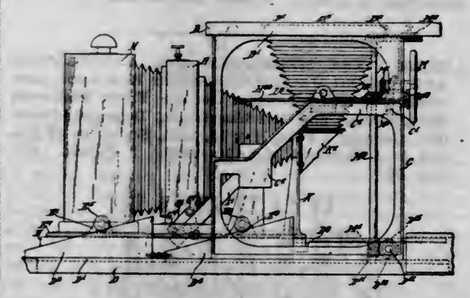
1,633,250. CAN-CAPPING MACHINE. HENRY L. GUENTHER, Los Angeles, Calif. Filed July 8, 1925. Serial No. 42,237. 11 Claims. (Cl. 113—14.)

1. A device for feeding cans and caps to a rotary turret high-speed double seaming machine, comprising a cap feed device, means for timing cans with relation to each other and carrying them through the feeding device and to the double seaming machine at a gradually accelerated rate of speed while passing the cap feed device, and automatically operated means in the path of travel of the cans separately and successively operated by the traveling cans causing actuation of the cap feed device when engaged by a can.



1,633,251. INTERNAL-COMBUSTION ENGINE. NICHOLAS L. HEINZ, Walworth, Wis.; Elizabeth S. Heinz administratrix of said Nicholas L. Heinz, deceased. Filed Sept. 29, 1922. Serial No. 591,404. 1 Claim. (Cl. 123—25.)

In a device of the class described, in combination, means for atomizing hydrocarbon fuel, means for atomizing water, means for delivering said atomized fuel and water into a common chamber, said chamber diverging in the direction of path of travel of the mixture, means for heating said chamber to expand and gasify said atomized fuel and water, means for delivering said gasified mixture into an internal combustion engine and means for relieving the compression of a unit charge of said mixture, said means including a chamber in communication with said cylinder.



1,633,252. SIGNALING APPARATUS FOR MOTOR VEHICLES. SMITH A. HOOD, Rices Landing, Pa. Filed Nov. 10, 1924. Serial No. 748,870. 1 Claim. (Cl. 74—39.)
